

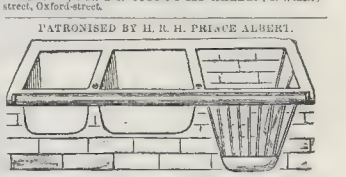
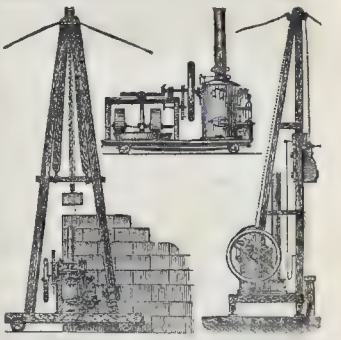
53, 54, & 55, WYCH-STREET, STRAND.
Illustrated Catalogues post-free on receipt of six postage-stamps.

JAMES MICHIE, Engineer, &c. Battersea-park, Nine Elms, manufacturer of all kinds of STEAM-ENGINES (portable and stationary), Sawing Machinery, Pumps, Cranes, Crabs &c.
N.B. Several high-pressure Steam-engines for Sale.



CAST-IRON PIPES, IRON-WORK FOR OVENS, &c.
RAIN PIPES, &c.—F. A. TIDDEMAN and CO. St. Ann's Wharf, Earl-street, City, near Blackfriar-bridge, keep a large stock of Rain Pipes, Heads, Shoes, Elbows, &c. half-round and O G Gutters, Socket Pipes for Water or Gas, Flange Pipes, Hot Water Pipes and Connections, Sash Weights, and other cast-iron work for Bakers' Ovens of every description, latter complete, to be had in sets or in parts.—Prices equal to all competition. Contracts taken to any extent. Goods landed. A powerful crane.

COTTAM'S NEW PATENT for STABLE REQUISITES.



COTTAM and HALLEN, of Wigley-street, are the ORIGINAL INVENTORS of this arrangement of MANGER, RACK, and WATER-TROUGH in ONE PIECE; it is now extensively approved of, and obtained the Great Exhibition Prize Medal. The New Patent embodies all the improvements which long practical experience, have been found to make. No well-managed stable should be without these fittings. Economy, durability, appearance, cleanliness, safety, comfort to the horse whilst feeding, are being rendered impervious to infection, are some of the advantages of Cottam's Improved Fittings. May be had either plain, galvanized, or enamelled. Every article for the Harness-room and Stable kept in stock. Designs, price lists, and estimates on application to COTTAM and HALLEN, 7, Wigley-street, Oxford-street.

PATRONISED BY H. R. H. PRINCE ALBERT.

S. HOOD and CO.'S REGISTERED STABLE-FITTINGS, with FRONT REVOLVING ROLLER, plain or enamelled.
Castings Warehouse, 81, Upper Thames-street.

A SAVING of TIME and MATERIALS, with Solidity of Building.
HENRY GOUGH'S PATENT PORTABLE STEAM ENGINES of two, three, four, and six horse power, for grinding mortar, raising building materials, driving piles, circular-saws, pumps, &c. 46, Albert-street, Manchester.
TESTIMONIAL
"Thorn Island Battery Works, Milford Haven,
"Mr. Gough, "Jan. 12, 1855.
"Sir.—The three-horse power steam-engine purchased from you in 1852 for the purpose of hoisting stone and other material for the building of the above battery, has answered the purpose for which it was required remarkably well, and from its portableness was found very convenient to remove from one part of the building to another. The consumption of coals was about 4 cwt. in 10 hours.
"I am, Sir, yours truly, for THOMAS JACKSON,
"THOMAS SWAIN."

NEW PATENT MACHINE for MORTISING and TENONING HARD or SOFT WOOD, and BORING WOOD or IRON. House and Coach Builders, Joiners, Cabinetmakers, and others, doing similar work, are invited to call at the Patentees, POWIS, JAMES, and Co.'s Wholesale Builders and Cabinet Makers, Ironmongers Establishment, 26, Watling-street, City, and see in action this very simple, powerful, and expeditious machine, which is the only one yet brought out, for performing these three separate kinds of work by one machine; and as it is self-feeding, it does not require any skill or care in using like the older inventions introduced. It can either be worked by a boy, or made to go by steam power.
P.S. Steam Engines and Machinery contracted for.

SAW-MILL MANUFACTORY, Chelsea, London.—WORSSAM and CO invite the attention of all concerned in sawing, planing, and moulding wood to the simplicity and compactness of their machines over those now in use, which are both cumbersome and expensive. Drawings and prices sent on application. Estimates given for complete saw-mills for exportation or otherwise

TO IRONMONGERS, BUILDERS, &c.
PATENT WROUGHT-IRON WELDED TUBE for GAS; galvanized ditto for water; high-pressure cocks, &c. Manufacturers of Dr. Arnott's improved ventilators.—HULETT and CO. 55, High Holborn.

THE BUILDER.

TO IRONMONGERS AND THE TRADE GENERALLY.

And every material required in the building, bell-hanging, upholstery, and brass-foundry trades on the most reasonable terms.

List of Prices had on application at the Warehouse, or by letter prepaid.

TO BUILDERS, MASONS, AND OTHERS.

THE largest STOCK in England of MARBLE in Blocks and Slabs, veined, Bardilla, dove, black, black and gold, Sienna, St. Anne's, statuary, serpentine, verd antique, &c. Portland, Harehill, Park Spring, and other stone, in blocks, slabs, landings, and head-stones. Yorkshire paving, granite curb, &c. All goods carefully packed and forwarded to any part of England.—THOMAS JACKSON, Marble and Stone Sawing-Mills, Commercial-road, Pimlico, London.

MARBLE.—Mr. B. FABBRICOTTI, of Carrara, Italy, Proprietor of Marble Quarries, and the only person in the United Kingdom selling Italian Marble the produce of his own quarries, begs to inform the gentlemen connected with the Marble Trade that he has established, in London, the most extensive Depôt of Statuary, Veined, Sicilian, Dove, and Black and Gold Marbles, at CARRARA WHARF, THAMES BANK, PIMLICO, the foot of Vauxhall-bridge.

TO THE MARBLE TRADE.

MR. B. FABBRICOTTI begs to inform the public that he has REMOVED from the office lately held by him at No 8, Crescent-terrace, Millbank, to offices on the own premises, at Carrara Wharf, Thames Bank, Pimlico, where he continues to carry on the marble trade solely on his own account, Mr. Thompson being no longer his agent.

Mr. B. Fabbricotti hopes that the trade will continue to favour him as usual, as, being the absolute proprietor of the quarries at Carrara, he can supply at better advantage and quality than any one else.

N.B. The well-known qualities of Mr. Fabbricotti's marble are celebrated throughout all Italy, England, and America.

MARBLE and STONE CHIMNEY-PIECES.—A SALE of the above will take place on TUESDAY, the 13th of MARCH, consisting of a great variety of statuary, Bardilla, black, vein, and Sicilian marbles—Catalogues, or any information, by post, one week previous to sale. A large portion of the stock is ready, and can be viewed at any time at HUNTLEE'S Marble and Stone Sawing Mills, Cambridge-heath, Hackney.

MARBLE.—THOMPSON and HOLMES, Marble, Stone, and Timber Brokers, Contractors, and Builders' Agents, beg to inform the gentlemen connected with the marble trade, that their STOCK of MARBLE is received direct from the principal quarry-owners in Italy and Belgium, for SALE on COMMISSION ONLY, and that they can supply orders entrusted to the Trade with the finest marbles at the lowest prices. Sawn Slab, Mortars, Vases, &c.; Yorkshire and Portland Stone for sale on commission.

The Marble Wharf, Thames-bank, Pimlico, adjoining Vauxhall-bridge.

MARBLE SLABS.—MARBLE and STONE SAWING-MILLS, 8, NORTH WHARF-ROAD, PADDINGTON. The proprietors of the above mills beg to offer to masons and the building generally, their extensive assortment of vein, Sicilian, and statuary marble, in slab and block, at prices never before offered. JAMES SIMMONS, Manager.

MARBLE CHIMNEY-PIECES WANTED. Three sets, second-hand, to be handsome, and lowest price, with description, and address to be sent to A. B. 16, Marklane.

BANGOR WHARF, King's-road-bridge, Camden-town.—STRINGFIELD and COOPER, late W. W. Rawlins, beg to call the attention of Builders and others to their stock of Bangor slates, laths, plaster, Roman, Portland, and Keene's cements, blue lias, Dorking, and chalk lime, plasterers' hair, Yorkshire plain, pan, and ridge tiles, glazed sewer pipes, closet-pans, and traps, Welsh fire-bricks, gravel and shells for garden paths, ballast, sand, &c. Materials landed, wharfed, and carted.

CAEN and AUBIGNY STONE.—P. FOUCARD, Stone Merchant and Quarryman. Cargoes shipped to order from Caen to any port. Contracts taken for any quantities. Depôt—Granite Wharf, East Greenwich; and St. Paul's Waterloo-bridge. Offices: 946, High-street, Southwark, near the Townhall

CAEN and AUBIGNY STONE.—GATES and GEORGE (late Luard, Beedham, & Co.), General Stone Merchants. Caen Wharf, Rotherhithe, are supplying the above and Bath, Portland, Yorkshire, Granite, and other stones from their depôt, at current prices by land and water carriage; also by vessel direct from the quarries, at moderate ship freight to any part of the United Kingdom.

N.B. Heavy goods landed, transhipped, or carted with despatch, and at moderate charges.

ANCASTER STONE, from the celebrated quarries of Mr. John Wilson, Ancaster, who has appointed GATES and GEORGE, Stone Merchants, his sole consignees for the London district, Ancaster Stone, so generally esteemed by the building profession, for its great durability, economy, and general utility, as to require but a trial to secure the approval of architects and others for its more extended use in building. Samples, and other information can be obtained at the Great Northern Depôt, King's-cross; Caen-wharf, Rotherhithe; and Hibernia-chambers, London Bridge, Borough; or forwarded to address, free of charge.

GODSTONE STONE.—GATES and GEORGE beg to solicit the attention of architects, engineers, and builders to the above stone, as being suitable for all purposes of construction, either as a substitute for brickwork, or in connection therewith, the price in most respects being about the same as ordinary brickwork. It can be obtained in large quantities, and to specified sizes, in rubble or rough square blocks, direct from the quarries.—Information and samples given at Caen wharf, Rotherhithe, and Hibernia-chambers, London-bridge, Borough.

GRANITE.—The Cheesewring Granite Company, Liskeard, Cornwall. London Agents—TREGELLES and TAYLOR, 3, Pinner's-court, Old Broad-street. Manager—JAS. J. TRATHAN, Liskeard. This Granite is selected for the New Westminster-bridge.

MARKET-WHARF, REGENT'S-PARK-BASIN.—WEST-END DEPOT, for Yorkshire Paving, Portland and Derby Stone, Bangor Slates, Slabs, &c. Also Bricks, Lime, Cements, Plaster, Tiles, Laths, and Fire Goods. Seasoned flooring at extremely low prices. St. Pancras Saw Mills, Cambridge-street, Old St. Pancras-road.

ACORN TIMBER WHARF, Canal-bridge, Old Kent-road.—RICHARD MAY respectfully thanks the building public for the patronage and support he has received during the past year, and solicits a continuance of those favours, and an inspection of the well-selected Stock of Timber, Deals, Planks, and Battens, which are now for Sale at the lowest remunerative prices for cash.

The extensive Saw-mills, fitted with the improved machinery, and the Drying Warehouses, enable him to keep a large Stock of *Dry* prepared Floor boards, Matchboarding, and Cut Deals and Planks, ready for immediate use.

30,000 Planks Deals, and Battens.
3,000 Pieces Foreign Fir Timber.
50,000 Prepared Floor and other Boards.

All kinds of English Oak, Elm, and Ash Planks, Boards, and Scantlings, Plasterers' Laths, Mouldings, and Sash-sills, on Sale.

A Monthly Price Current is published, and will be forwarded on application.

N.B. Timber Goods received for Sale on Commission, Landing, Warehoused, Sawn, and Carted.

TO FANCY-WOOD MERCHANTS.

VENEER CUTTING-MACHINE (by knight only), by which process double the number of veneers can be produced more than by the ordinary method. For specimens of work and particulars of price, apply to J. CHACK, Sole Patentee. Veneer Cutting Works, 44, Robert-street, adjoining the King's-road Saw-mills), Chelsea.

TIMBER and DEAL YARD.—A large CONSIGNMENT of PREPARED FLOORS (dry) DEALS, BATTENS, &c. for SALE on COMMISSION, at very low prices for cash. Timber Deals, &c. received for Sale on Commission. THOMPSON and HOLMES, Wood and Stone Brokers, the Marble Wharf, Thames-bank, Pimlico, adjoining Vauxhall-bridge.

ARUNDEL SOCIETY.—FIFTH YEAR'S ISSUE to SUBSCRIBERS.—SIX LARGE WORKS ENGRAVINGS, by Messrs. DALZIEL, from Mr. W. OLIVER WILLIAMS'S Series of Drawings, from the frescoes, by GIOTTO, in the Arena Chapel, Padua being the continuation of the Engravings from the same Series issued for the fourth year, together with a NOTICE of GIOTTO and his WORKS at PADUA, by JOHN RUSKIN, Part I.—Annual subscription to the Arundel Society, 1*l.* 1*s.*

24, Old Bond-street. JOHN NORTON, Secretary.

ARCHITECTURAL SURVEYING and ENGINEERING DRAWING CLASSES, 24, Charles-street, Berners-street. Conducted by experienced Professional Masters in each department.

The Course of Instruction comprises the complete study of Ecclesiastical and Domestic Architecture; also Perspective, Ornamental Drawing and Colouring, Land Surveying, Taking Quantities, Valuation of Artificers' work, &c. &c.

Terms very moderate.

THE ARCHITECT'S, BUILDER'S, CIVIL ENGINEER'S, and MACHINIST'S DRAWING ESTABLISHMENT, for giving practical instruction in Architecture, Civil Engineering; measuring and valuing Buildings, Land, Timber, &c.; also for teaching Architectural, Mechanical, and Water-colour Drawing, every description. Morning Class, Ten till Four; Evening ditto, Six till Nine, or Seven till Ten. Saturdays excepted. Detail prospectuses on application at the Offices, 16, Old-street, City-road. These pupils attending the classes are principally the sons of some of the first architects and builders in London. See *Educational Exponitor*, January 1855.

THOMAS J. HILL, Architect, Conductor of the Classes.

CLASSES for the study of CONSTRUCTION, ARCHITECTURAL, MECHANICAL, and ORNAMENTAL DRAWING, are held at the LONDON MECHANICS' INSTITUTION, Moorfields, and Finsbury, Evening through the year. Charge to Members of the Institute, 4*s.* per quarter; Non-Members, 6*s.* per quarter.

Secretary, Mr. T. E. KNIGHTLEY.

February 15th, 1855.

PATENT SOLID SWISS PARQUETERIE. This beautiful, unique, economical, and elegant description of Flooring, so extensively used in Paris and other continental cities, is now introduced into this country: an extensive assortment of specimens of patterns commencing at 1*s.* per foot superficial, together with every particular of its cost and adaptation, can be obtained of Mr. BURT, 3, Charlotte-row, Mansion House; or Messrs. ARROWSMITH and CO. 80, New Bond-street.

PAPER-HANGINGS.—The CHEAPEST HOUSE in London for every description of PAPER HANGINGS is GROOM'S WHOLESALE WAREHOUSE, 19, GREAT PORTLAND-STREET, Oxford-street, where you can select from the LARGEST and MOST EXTENSIVE Assortment in the Kingdom, at ONE PER CENT. CHEAPER than any other house in the trade. Builders, Decorators, Dealers, and large consumers will do well to visit this establishment.

THE PERMANENT WAY COMPANY, 26, Great George-street, Westminster, beg to call the attention of Civil Engineers, Contractors, and others interested in the construction of railways to the present low price of iron, which a saving may be effected of nearly 50*l.* per mile, singly in the adoption of Mr. W. H. BARLOW'S Patent Wrought-iron Permanent Way over that of the ordinary road. Every information can be obtained on application to

WILLIAM HOWDEN, Secretary.

PATRON: H. R. H. PRINCE ALBERT.

TO ARCHITECTS, BUILDERS, CONTRACTORS, AND OTHER CONSUMERS OF GLASS.

HARTLEY'S PATENT ROUGH PLATE GLASS,

1-8th of an inch thick, or 2 lbs. to the foot; 3-16ths, or 3 lbs.; and 1-4th or 4 lbs. is now universally used for

RIDGE AND FURROW ROOFS, GREENHOUSES, RAILWAY STATIONS, MILLS, MARKET HALLS, BATHS AND WASH-HOUSES, FACTORIES, WORKSHOPS, SHIP-BUILDING SHEDS, AND OTHER EXTENSIVE BUILDINGS.

By a carefully prepared Estimate, it has been ascertained that FOUR-FIFTHS of the ROUGH PLATE, or non-transparent Glass, consumed in the United Kingdom in 1854, was manufactured by HARTLEY'S PATENT—thus affording the most incontestable evidence of its superiority over every other article of the kind, and as being the only description of Glass suitable for the purposes above named. It combines size and strength with economy of cost, and is manufactured in sizes expressly for RIDGE and FURROW ROOFS, giving a SPAN of TWELVE FEET, at a price not exceeding, weight for weight, that of Common Crown Glass. Its non-transparency renders BLINDS UNNECESSARY, and no scorching occurs in Greenhouses glazed with it; hence the preference given to this Glass for all Horticultural purposes.

For further particulars, apply to

JAMES HARTLEY AND CO. SUNDERLAND; AND PURFLEET WHARF, EARL-STREET, BLACKFRIARS, LONDON.

Sole Manufacturers of Lockhead's Patent Perforated Glass for Ventilation.

*** *Hartley and Co.'s Glass Tariff Newspaper will be forwarded gratis, on application.*

January 1, 1855.

Transparent blinds in great variety. Engravings, with prices and discounts to builders and the trade, forwarded on application, post free.

WILLIAM HARRIMAN and CO. FIRE-BRICK and SANITARY TUBE WORKS, BLAYDON, NEWCASTLE-UPON-TYNE.

GUTTA PERCHA TUBING.—May be buried for years, without injury, and it is therefore valuable for conveying water, chemicals, &c. It is peculiarly valuable for liquid manure, drain, and soil pipes. Being a non-conductor, it is not affected by the frost of winter or drought of summer, like metal or leaden pipes. Its strength is extraordinary; the small half-inch diameter tubing having resisted a pressure of 250 lbs. on the square inch, without bursting. The smaller sizes may be had in 100 feet, and the larger in 50 feet lengths. The joints are easily made. As a conductor of sound it is most valuable for conveying messages in lieu of bells. ELECTRIC TELEGRAPH WIRES INSULATED WITH GUTTA PERCHA. The GUTTA PERCHA COMPANY, Patentees, 18, Wharf-road, City-road, London.

GUTTA PERCHA.—Notice is hereby given, that we, the undersigned, are the sole patentees and proprietors of the principal patents for the manufacture of Gutta Percha;—that under the original patent granted to our Mr. CHARLES HANCOCK, May 13th, 1844 was secured to us the exclusive right of manufacturing Gutta Percha unwrought, Gutta Percha moulded, Gutta Percha in sheets, solution, &c.; that we have granted no license for the manufacture of such articles thereunder; and that all parties who make, use, or vend the same, other than manufactured by us, and sold by us or our Agents, and bearing our stamp, will be treated as infringers of our said rights.

N.B.—All applications for licenses to work this or other of our patents must be addressed to us as below. A liberal discount to shippers and dealers.

THE WEST HAM GUTTA PERCHA COMPANY, West-street, Smithfield, London.

Manufacturers of all articles in Gutta Percha.

I.

EDUCATION, SCIENCE, AND GENERAL LITERATURE.

Numerous Portraits, free by post to any one writing for it,

A Descriptive Catalogue of Works of Education and Works on Science and General Literature, published by WALTON and MABERLY

The object of this Catalogue is to convey a more satisfactory notion of the contents of the Books than can be drawn from recommendations, or from extracts from reviews, general lists, or even from the chief subjects and most prominent peculiarities of the books. The publication is designed to put the reader, as far as possible, in the same position as if he had inspected for himself, all and each person by the works described, and, with this view, care has been taken, in drawing up the notices, merely to state facts, with but little comment, and no exaggeration whatever.

II.

DR. LARDNER ON THE TELEGRAPH.

Now ready, 1 volume 12mo. 290 pages, price 3s. cloth lettered,

The Electric Telegraph Popularised, with One Hundred Illustrations.

By DIONYSIUS LARDNER, D.C.L.

From the "Museum of Science and Art."

"The reader will find the most complete and intelligible description of Telegraphic Apparatus in Dr. Lardner's admirable chapters on the subject."—*North British Review.*

III.

LARDNER'S MUSEUM.—DOUBLE VOLUMES.

Now ready, Vols. I. to IV. strongly and handsomely bound, two vols. in one, with fulness, red cloth lettered, price 3s. 6d. each double volume.

Dr. Lardner's Museum of Science and Art: a Miscellany of Instructive and Amusing Treats on the Physical Sciences, and on their Application to the Uses of Life. Illustrated by numerous cuts on wood.

Contents of Vols. I and II. (together), price 3s. 6d. cloth.

Volume I. price 1s. 6d.

The Planets. Are they Inhabited Globes?
Weather Prognostics.
Popular Fallacies. Questions of Physical Science.
Latitude and Longitude.
Lunar Influences.
Meteoric Stones and Shooting Stars.
Railway Accidents.—Light.

Volume II. price 1s. 6d.

Common Things. Air.
Locomotion in the United States.
Common Things. Water.
Common Things. Time.
The Potter's Art.
Common Things. Fire.

Contents of Vols. III and IV. (together) price 3s. 6d. cloth.

Volume III. price 1s. 6d.

Locomotion and Transport, their Influence and Progress.
The Moon.
Common Things. The Earth.
Electric Telegraph. Six Chapters.
Terrestrial Heat.
The Sun.

Volume IV. price 1s. 6d.

Earthquakes and Volcanoes.
Electric Telegraph, concluded. Eight Chapters.
Barometer. Safety Lamp and Whitworth's Micrometric Apparatus.
Steam.

Volume V. price 1s. 6d., in handsome boards. March 1.

Part XIII. price 3d.	Part XIV. price 3d.
52. The Steam Engine. Chap. I.	57. Steam Engine. Chap. II.
54. The Eye. Chap. I.	58. Time. Chap. II.
55. The Atmosphere.	59. The Eye. Chap. II.
56. Time. Chap. I.	60. Pumps.

Part XV. price 6d.

61. Steam Engine.—Chap. III. | 64. Time.—Chap. IV.
62. Time. Chap. III. | 65. Spectacles.
63. Eye. Chap. III. | Kaleidoscope

"'Dr. Lardner's Museum,' one of the few works of the kind which can be recommended as at once popular and accurate."—*Sir David Brewster.*

"The world, which will form quarterly eighteenpenny volumes, is, we are disposed to think, the best literary investment of a penny a week ever made."—*Examiner.*

"A clean and interesting publication, alike informing and attractive. The papers combine subjects of importance with great scientific knowledge, genius, creative inductive powers, and a popular style of treatment."—*Spectator.*

*** The Work is continued in Weekly Numbers at 1d.; Monthly Parts, at 6d.; Quarterly Volumes, at 1s 6d.; and Half-yearly Volumes, at 3s. 6d. cloth lettered.

IV.

Familiar Letters on Chemistry; in its Relations to Physiology, Dietetics, Agriculture, Commerce, and Political Economy. By JUSTUS VON LIEBIG. Complete in One Volume, foolscap 8vo. price 6s. cloth.

V.

Gregory's Handbook of Inorganic Chem-istry. For the use of Students. By WILLIAM GREGORY, M.D. Professor of Chemistry in the University of Edinburgh. Third Edition, revised and enlarged. 12mo. 5s. 6d.

"A young man who has mastered these few and by no means closely printed pages, may venture to face any board of examiners on chemistry without fear of being posed by any fair question."—*Association Journal.*

Gregory's Handbook of Organic Chem-istry; being a New and greatly Enlarged Edition of the "Outlines of Organic Chemistry, for the Use of Students." One Volume, large 12mo. 8s. 6d. cloth.

VII.

First Book of Natural Philosophy; or, an Introduction to the Study of Statics, Dynamics, Hydrostatics, and Optics, with numerous Examples. By SAMUEL NEWTH, M.A. Fellow of University College, London. 12mo. 3s. 6d.

VIII.

Elements of Mechanics and Hydro-statics. By SAMUEL NEWTH, M.A. Second Edition, small 8vo. 7s. 6d. cloth.

IX.

Dr. Lardner's Handbook of Astronomy. From the "Handbook of Natural Philosophy." 37 Plates and 200 Woodcuts. In 1 vol. 12mo. 10s. 6d. cloth.

X.

Barlow's Tables of Squares, Cubes, Square Roots, Cube Roots, and Reciprocals, up to 10,000. Stereotype Edition, examined and corrected. Under the superintendence of the Society for the Diffusion of Useful Knowledge. Royal 12mo. cloth, 8s.

XI

Tables of Logarithms, Common and Trigonometrical, to Five Places. Under the superintendence of the Society for the Diffusion of Useful Knowledge. Fcap. 8vo. cloth limp, 1s. 6d.

Now Ready, with Portrait and Plates, 3 vols. 8vo. 45s.; or Large Paper, in 4to. 84s.

THE ORIGIN AND PROGRESS OF THE MECHANICAL INVENTIONS OF JAMES WATT,

ILLUSTRATED BY HIS CORRESPONDENCE WITH HIS FRIENDS, AND THE SPECIFICATIONS OF HIS PATENTS.

WITH INTRODUCTORY MEMOIR.

BY JAMES P. MUIRHEAD, M.A.

JOHN MURRAY, Albemarle-street.

HANDBOOK TO THE PICTURE GALLERY.

This day, with a Chart, post 8vo. 6s. 6d.

BIOGRAPHICAL DICTIONARY OF ITALIAN PAINTERS.

With a TABLE of the CONTEMPORARY SCHOOLS of ITALY; designed as a HANDBOOK to the PICTURE GALLERIES of ITALY.

BY A LADY. Edited by RALPH N. WORNUM.

JOHN MURRAY, Albemarle-street.

In 8vo. with above 3,000 Woodcuts, 3l. 13s. 6d.

AN ENCYCLOPÆDIA of CIVIL ENGINEERING, HISTORICAL, THEORETICAL, AND PRACTICAL.

Complete in One Volume.

By EDWARD CRESY, F.S.A. C.E.

"A desideratum in the literature of engineering science is supplied by the publication of this volume. There is not a member of the community, from the highest engineer to the humblest surveyor, who will not find here materials to enrich his mind and extend his knowledge."—*Irish Railway Gazette.*

London: LONGMAN, BROWN, GREEN, and LONGMANS.

NEW and CHOICE BOOKS.—All the best NEW WORKS may be had in succession from MUDIE'S SELECT LIBRARY, by every Subscriber of One Guinea per annum, and to all first class Country Subscribers of Two Guineas and upwards. For prospectuses apply to CHARLES EDWARD MUDIE, 510, New Oxford-street.

A TREATISE on the SCREW PROPELLER: with various Suggestions of improvement. By JOHN BOURNE, C.E. A New Edition, thoroughly revised. Edited by WYNDHAM BOURNE. 4to. 30s. &c. price 27s. THE ARTISAN CLUB'S TREATISE on the STEAM ENGINE. Lond.: LONGMAN, BROWN, GREEN, and LONGMANS.

In fcp. 8vo. price 5s. 6d.

THE SUBJECT-MATTER OF A COURSE OF SIX LECTURES on the NON-METALLIC ELEMENTS, delivered before the Members of the Royal Institution, by Professor FARADAY, D.C.L. F.R.S. &c. Arranged, by permission, from the Lecturer's Notes, by J. SCOFFERN, M.B.

To which are appended Remarks on the Quality and Tendencies of Chemical Philosophy, on Allotropism, and on Ozone: together with Manipulative Details relating to the Performance of Experiments.

By the same Editor, price 7s. 6d.

SUBSTANCE of PROFESSOR BRANDE'S LECTURES on ORGANIC CHEMISTRY, as applied to Manufactures. London: LONGMAN, BROWN, GREEN, and LONGMANS.

The Third Edition, in 12mo. price 6s. 6d.

Dedicated, by permission, to H.R.H. the Princess Royal

WILMOT'S ABRIDGEMENT of BLACKSTONE'S COMMENTARIES on the LAWS of ENGLAND. A New Edition, revised and brought down to the present day By Sir JOHN E. EARDLEY WILMOT, Bart. Recorder of Warwick, and Judge of the Bristol County Court. London: LONGMAN, BROWN, GREEN and LONGMANS.

MR. MACAULAY'S WORKS.

THE HISTORY of ENGLAND, from the Accession of James II. Vols. I. and II. 8vo. 32s. CRITICAL AND HISTORICAL ESSAYS. LIBRARY EDITION. 3 vols. 8vo 36s. COMPLETE IN ONE VOLUME. Square crown 8vo. 21s. IN VOLUMES FOR THE POCKET. 3 vols. fcp. 8vo. 21s. THE PEOPLE'S EDITION. 2 vols. crown 8vo. 8s. LAYS OF ANCIENT ROME. ILLUSTRATED EDITION Fcp 4to. 21s. WITH IVRY AND THE ARMADA. 16mo. 4s. 6d. SPEECHES, corrected by Himself. 8vo. 12s. SPEECHES ON PARLIAMENTARY REFORM, in 1832 and 1833. 16mo 1s. London: LONGMAN, BROWN, GREEN, and LONGMANS.

New Edition, in 3 pocket vols price 21s

SIR JAMES MACKINTOSH'S MISCELLANEOUS WORKS, including his Contributions to the *Edinburgh Review*—A Library Edition, complete in 1 vol square crown 8vo. 31s.; calf by Hayday, 50s.

*** Sir JAMES MACKINTOSH'S HISTORY of ENGLAND, from the Earliest Times to the Establishment of the Revolution, 2 vols. 8vo. price 21s. London: LONGMAN, BROWN, GREEN, and LONGMANS.

This day, with copious illustrations, post 8vo. 10s. 6d.

A HAND-BOOK for YOUNG PAINTERS. By C. R. LESLIE, R.A. Author of the "Life of Constable." JOHN MURRAY, Albemarle-street.

This Day, with Woodcuts 8vo. 7s. 6d.

HISTORICAL MEMORIALS of CANTERBURY. The Landing of Augustine—The Murder of Becket—Becket's Shrine—The Black Prince. By Rev. A. P. STANLEY, M.A. Canon of Canterbury. JOHN MURRAY, Albemarle-street.

HANDBOOK TO CHURCH AND STATE.

This day is published an entirely new and thoroughly revised edition, post 8vo 9s.

MURRAY'S OFFICIAL HANDBOOK; being an Historical Account of the Duties and Powers of the Principal Authorities of the United Kingdom and the Colonies.

JOHN MURRAY, Albemarle-street.

PROFESSOR PHILLIPS' YORKSHIRE.

This day second Edition, with 8 of Plates, 8vo. 15s

THE RIVERS, MOUNTAINS, and SEA COAST of YORKSHIRE. With Essays on the Climate Scenery, and Ancient Inhabitants of the Country. By JOHN PHILLIPS, F.R.S. Deputy Reader of Geology in the University of Oxford. JOHN MURRAY, Albemarle-street.

Just published, second Edition, illustrated with Maps. 8vo. cloth price 7s.

ON the MODE of COMMUNICATION of CHOLERA. By JOHN SNOW, M.D.

"Now, touching impure water, our present more immediate purpose is to direct attention to a book recently published by Dr. Snow, on the part which is played by the water supply in the spread of cholera and other diseases." *Builder*

London. JOHN CHURCHILL, New Burlington-street.

The following valuable and interesting works may be had for a short time, at the same moderate very low prices:—

JOHNSON'S RELIQUES of ANCIENT ENGLISH ARCHITECTURE, a series of highly finished views of the most elegant Churches in England. Half-bound, neat, with index, in Nos. 2l. 10s. The plates sold singly, at 1s. each, or 7s. per dozen.

LORD MONSON'S VIEWS in the ISERE, the HIGH ALPS. Plates, finely executed in lithography, imperfect, half-bound in roan, 35s. (published at 3l. 3s.) The plates sold singly, 12s. each.

THE HAND-BOOK of MEDIÆVAL ALPHABETS and DEVICES, by H. SHAW. 4 plates, antound, 7s. 6d. or in numbers, 6s. The plates sold singly, at 6d. each.

THE DRESSES and DECORATIONS of the MIDDLE AGES, by H. SHAW. 2 vols. 8vo. unbound, reduced 2l. 10s. or half-bound in morocco, by WRIGHT, 3l. 6s. The plates sold singly, 1 year ago, at 2l. 2s.

D'AGINCOURT, HISTOIRE DE L'ART par les MONUMENS, translated from the French, by OWEN JONES. 3 vols. 4to. with 325 engravings. 3 vols. in 1, folio boards, 2l. 5s.

*** This is a most valuable and reasonable work to possess a thorough knowledge of Architecture, Sculpture and Painting, and at the price quoted, is one of the very cheapest works ever laid before the public.

BOUTELL'S CHRISTIAN MONUMENTS in ENGLAND and WALES. Royal 8vo cloth boards, 5s.

BOUTELL'S MONUMENTAL BRASSES and SLABS. Royal 8vo cloth boards, 5s. 6d.

A. E. EVANS and SONS, 264, Strand, London.

SEVENTEENTH YEAR.

Now ready, price 5s. with a Portrait of the Astronomer Royal,

THE YEAR-BOOK of FACTS in SCIENCE and ART, for 1852, exhibiting the most important Discoveries and Improvements of the Past Year in all Branches of Science and the Arts.

By JOHN TIMBS, F.S.A.

"This book does for us what we have not done for ourselves—stores up very many facts and events which would be forgotten, of local societies, or announced through scientific and newspaper journals."—*Globe*

DAVID BOGUE, Fleet-street.

ROBERTS'S HOLY LAND, EGYPT, and NUBIA. The entire remainder of imperfect sets of these separate Parts, both plain and coloured, from these magnificent works, have recently been purchased by A. E. EVANS and SONS, and are now sold at reduced prices.

*** In many instances not more than four or five impressions were taken, and the drawings being traced from the stones, the valuable and finely executed records of Architectural remains in the east, must become scarce and greatly enhanced in price.

A. E. EVANS and SONS, 264, Strand, London.

THE FREEMASONS' MONTHLY MAGAZINE. Price 1s. A Specimen Number will be sent on receipt of six postage-stamps (the cost of postage). No. II. for February, just published.

GEO. ROUTLEDGE and CO. Farringdon-street, and 10, Ivy-lane.

BUILDING ACCOUNTS, Measurements, Valuations, Surveys, Quantities, Land Surveys, &c. Architects, Builders, or Employers, in want of any part of the country, requiring a practical and experienced SURVEYOR would find prompt and unbiassing attention to any business of this nature, combined with a scale of moderate charges, on application to Mr. A. ANDERSON, Office 8, 32, St. Martin's-lane, Act.-Inst.

DRAWING, CARTRIDGE, TRACING, and MOUNTED PAPERS, TRACING LINEN, CARTOUCHE CARTRIDGE, &c. &c. for the use of Architects, Engineers, Surveyors, Builders, &c. are sold by EDWARD STANFORD, Mapseller and Stationer, 6, Charing-cross.—A list of samples and prices may be obtained on application, or per post for six stamps.

The Builder.

SATURDAY, FEBRUARY 17, 1855.

THE "Curiosities of London!" such is the title of Mr. Timbs's closely printed book of 800 pages about the great metropolis, the result of long researches, joined with nearly fifty years' personal recollection.* He wrote the title so long ago as 1828, and since then has never lost sight of the subject. It is not *exactly* the right title, because by "curiosities" we understand rare and exceptional matters, whereas this book has a wider scope, and treats of every-day London,—wonderful enough, it is true,—its streets, squares, churches, clubs, parks, houses, and people. It is, in fact, a second "Handbook," supplementing Mr. Cunningham's excellent volume. So vast and wonderful is London, with its two millions and a half of people thronging its miles of houses,—its 27,000 shoemakers, 20,000 tailors, 21,000 carpenters, 34,000 professional men, and 120,000 female servants,—that let what may be said about it, the subject is never exhausted.

"With what proud and exciting feelings," says a great novelist, "an Englishman ought to enter London after a prolonged absence in other countries! The public buildings are few, and for the most part, mean,—the monuments of antiquity, not comparable to those which the pettiest town in Italy can boast,—the palaces are sad rubbish!—the houses of our peers and princes are shabby and shapeless heaps of brick. But what of all this? The spirit of London is in her thoroughfares,—her population! What wealth—what cleanliness—what order—what animation! How majestic, yet how vivid is the life that runs through her myriad veins! How as the lamps blaze upon you at night, and street after street glides by your wheels, each so regular in its symmetry, so equal in its civilization,—how impressively do you feel, that you are in the metropolis of a *free people*, with healthful institutions, and exulting still in the undecayed energies of national youth and vigour."†

There is much that needs alteration, but we let that pass. The extent of London and its fulness of life are even oppressive, and in the case of foreigners and others visiting it for the first time, prevent examination. Scoff at it as they may on a superficial view, and in too many cases with justice,—as a whole, it gradually excites wonder, and commands their admiration. Fenimore Cooper writes,—"Were London to fall into ruins, there would probably be fewer of its remains left in a century than are now found in Rome. All the stuccoed palaces and Grecian façades of Regent-street and Regent's-park, would dissolve under a few changes of the season. The noble bridges, St. Paul's, the Abbey, and a few other edifices, would remain for the curious; but I think few European capitals would relatively leave so little behind them of a physical nature, for the admiration of posterity. Not so, however, in matters less material. The direct and familiar moral influence of London, is probably less than that of Paris, but in all the higher points of character, I should think it unequalled by that of Rome itself."‡

The alterations and improvements effected in London within the last fifty years are perfectly amazing, and will be even greater in the next. A hundred years ago (1752), a highwayman frequented the road between *Knightsbridge and Kensington*, and used to stop the "chaise to Devizes," every now and then, near the "Half-way House," which we all remember. Look at our docks, all formed within the last fifty years, at the cost of many millions of pounds;* the piles of houses in the suburbs, and our railway termini, erected within the last ten years.

Hurrying from these, a countless throng of life fills the pavements; while vehicles of all descriptions block up the roadways. It is difficult to give a clear notion of the extent of this traffic. It may aid, however, to say, that in 1850, when the City surveyor instituted some inquiries on the subject, it was found that in twelve hours 7,741 vehicles passed through Temple-bar, or nearly eleven in a minute; while, on London-bridge, in the same space of time, 13,099 vehicles passed, or eighteen per minute; and the number now must be very much greater.

Take a night a few weeks ago, and look at the people. There was a full meeting of the Royal Society and the Society of Antiquaries; Exeter-Hall was filled to the ceiling with listeners to an oratorio; and Covent Garden with the friends of Jullien. Drury-Lane was full, and so was the Lyceum,—we saw them: the other theatres doubtless had their share. Passing over Waterloo-bridge, we found the "New-cut" literally full of people; and inside the "Vic" rows of grimy faces, tier above tier, filled pit, boxes, and gallery,—while the papers, next morning, told of dinners and meetings, at each of which "all the world were present." London by day, London by night; London before the world, London in its inner life, has ever been to us a source of inexhaustible pleasure and thrilling interest. Those who know nothing of London out of Belgravia and St. James's have a large museum of curiosities yet to explore. Dismantled houses, with each a hundred people in them,—a room occupied by six families,—rookeries ill-drained and fetid,—must not be overlooked by those who would know London. There is life everywhere, with a substratum of good feelings ready to thank those who would raise it out of the dirt.

And how is all this mighty host supplied with food? the demand and supply equalized? This is in truth a curiosity. It gives no very definite idea to say that they eat up every year more than half a million of oxen, and two millions of sheep; that they squeeze sixty millions of oranges, and open 500 millions of oysters. But when we find, according to a calculation in the "Quarterly" (CXC. p. 305), that the barrels of beer annually consumed in London, piled up in Hyde-park, would form a thousand columns not far short of a mile in height; that if looking from the top of one of these we could see the oxen who are to be eaten up in the twelve months, placed ten abreast, on the Great Northern-road, they would occupy it for seventy-two miles out; and that if the sheep, also ten abreast, were placed on the other side, the dog worrying the last of them would be in Bristol, or 121 miles from our pillar of butts; that were the game, poultry, and wild fowl to rise simultaneously in judgment against their destroyers, they would form a black pall equal in area to the whole enclosed portion of St. James's-park, or fifty-one acres; that the half-quartern loaves consumed in the metropolis, with the foregoing mass of flesh of fowl,—say on calculation, 420 millions of them,—if piled up, would form a pyramid 200 feet square at its base, and three times the height of St. Paul's,—something to out-top old Cheops;—we begin to realise the magnitude and enormousness of the demand.

London is best seen from the bridges, Blackfriars and Waterloo. From the latter you get the campanile thus sonnetized by Maginn:—

"In London, queen of cities, you may see
Facing the lordly house of Somerset,
A goodly, tall round tower. Its base is wet
With Thames' fair water: rolling quietly.
Who was it built this tower? what may it be?
Say was it piled by Druid hands of old?
Or reared by Eastern magi, there to hold
The sacred flame, type of their deity?
Was it a hermit's calm retreat? or pile
Where hung sonorous the resounding bell?
Or is it such as in green Erin's isle
We see, whose uses nobody can tell?—
'Twas answered:—Who 'twas built it, know I not,
But 'tis, I know, the tower for Patent Shot."

The Thames—the fishful river, as it was anciently called—like other parts of London, has changed its character. Though Time writes no wrinkles on its brow, he leaves his mark on its banks and frequenters: where the boatman plied, the steamer rushes, and the river's own poet, John Taylor, could scarcely sing now with certainty, as he did while the first Charles reigned,—

"But noble Thames, whilst I can hold a pen,
I will divulge thy glory unto men;
Thou in the morning, when my *coin* is scant,
[Not 'corn,' Mr. Timbs.]
Before the evening doth supply my want."

And this reminds us that we have scarcely given our readers a fair taste of the book which led us to these observations. Let us remedy the omission, and, as an example of the style, extract a portion of our author's account of Gray's Inn, on the north side of Holborn:—

"Lord Burghley entered at Gray's Inn in 1541, and made genealogy his special study. Sir Nicholas Bacon kept his terms here, was called to the bar in the Society, and was elected treasurer 1552; and his son Francis, Lord Verulam, was admitted here, and made an antient in 1576: here he sketched his great work the 'Organon,' though law was his principal study. In 1582, he was called to the bar; in 1586, made a bencher; in 1588, appointed Reader to the Inn; and in 1600, the Lent double Reader: in the interval he wrote his 'Essays,' dedicated 'from my chamber at Graie's Inn, this 30 of Januarie, 1597.' In 1583, he stood among the barristers at Temple-bar to welcome Queen Elizabeth into the City. Bacon had chambers in Gray's Inn when Lord Chancellor; and here he received the suitors' bribes, by which his name became tarnished with infamy. After his downfall and distress, when he had parted with York House, he resided, during his visits to London, at his old chambers in Gray's Inn; whence, in 1626, on a severe day, he went in his coach to Highgate, took cold in stuffing a fowl with snow as an anti-putrescent, became too ill to return to Gray's Inn, and was carried to the Earl of Arundel's house at Highgate, where he died within a week. Lord Bacon is traditionally said to have lived in the large house facing Gray's Inn garden-gates, where Fulke Greville, Lord Brooke, frequently sent him home-brewed beer from his house in Holborn. Basil Montagu, however, fixes Bacon's chambers on the site of No. 1, Gray's-inn-square, first floor: the house was burnt Feb. 17, 1679, with sixty other chambers. ('Historian's Guide,' 3rd edit. 1688.) Lord Campbell speculatively states that Bacon's chambers 'remain in the same state as when he occupied them, and are still visited by those who worship his memory.' ('Lives of the Lord Chancellors,' vol. ii. p. 274.) The association with Bacon is recorded in 'Verulam-buildings:'—

'Whene'er through Gray's Inn porch I stray,
I meet a spirit by the way;
* * * * *
He tells me truly what I am—
I walk with mighty Verulam.'

Town Lyrics, by C. Mackay, 1848.

David Jones, the patriotic Welsh judge, *temp.* Charles I. was of Gray's Inn; Romilly was also a member; and Southey was entered here on leaving Oxford. The students were formerly often refractory. Pepys writes in May 1667: 'Great talk of how the barristers and students of Gray's Inn rose in rebellion against the benchers the other day, who outlawed them, and a great deal to do: now they are at peace again.'

* Curiosities of London: exhibiting the most rare and remarkable objects of interest in the metropolis. By John Timbs, F.S.A. London: David Bogue. 1855.

† Ernest Maltravers.

‡ England. 1837.

* The London Docks alone cost more than four millions.

Within Gray's-inn-gate, next Gray's-inn-lane, lived Jacob Tonson, who published here Dryden's 'Spanish Friar,' 1681, said to be the first work published by the Tonsons: Jacob was the second son of a barber-chirurgeon in Holborn. At Gray's-inn-gate, also lived Thomas Osborne, the bookseller, who gave 13,000*l.* for the *books* from the Harleian Library, for the binding of a portion of which Lord Oxford is stated by Dibdin to have paid 18,000*l.*

The *Gray's Inn Journal*, in the style of the *Spectator*, was started by Arthur Murphy in 1752, and continued weekly two years. Murphy studied the law, was refused admission to the societies of the Temple and of Gray's Inn because he had been an actor, but was admitted of Lincoln's Inn."

The book contains a large amount of interesting information pleasantly put together, and will doubtless command a continuous sale. Mr. Timbs has been an industrious labourer in the field of literature for many years, and the list of subscribers to his book shows the consideration in which he is held by many well-known to the public.

COUNTY AND PAROCHIAL ASSESSMENT.

The re-assessment of the county of Middlesex, as will be seen from a document which has recently emanated from Hicks's Hall, or rather from the magistrates in conclave assembled, has occasioned much consternation among the parochial functionaries of various districts of the metropolis. This subject is now rendered of greater importance from the fact that Sir Benjamin Hall, M.P. for Marylebone, proposes to bring in a Bill to regulate local legislation, as well as to secure the due administration of those immense funds now annually collected, and better known as *rates*, in contradistinction to *taxes*, the latter being a Government impost; whereas the former is exclusively of a parochial nature. Meetings have already been held in Marylebone, Shoreditch, St. Pancras, Paddington, &c. which have proclaimed loudly the evils resulting from the present system of parochial jurisprudence generally; but more particularly as regards *parochial assessment*. Each successive meeting the more glaringly exhibits the striking defects in all existing arrangements; but none suggests a remedy for them. All appear to be fearful of approaching the task of correcting the *wrong*, as they seem unable or unwilling to direct the course which is actually *right*, and which ought now and for the future to be followed. One party advocates a national rating; another the *union* rating; while the more moderate party, who are for letting matters rest more as they are at present, contend that the adoption of the *Parochial Assessment Act* is best. Still the actual question is left untouched, for until that first principle is determined, viz., what is the correct datum or standard of assessment? or rather, what should constitute the basis upon which every rate ought universally to be founded?—whether *union*, *parochial*, or *national*, the actual question must necessarily remain open, and the correct decision of the *vexata questio* will continue as far off as ever.

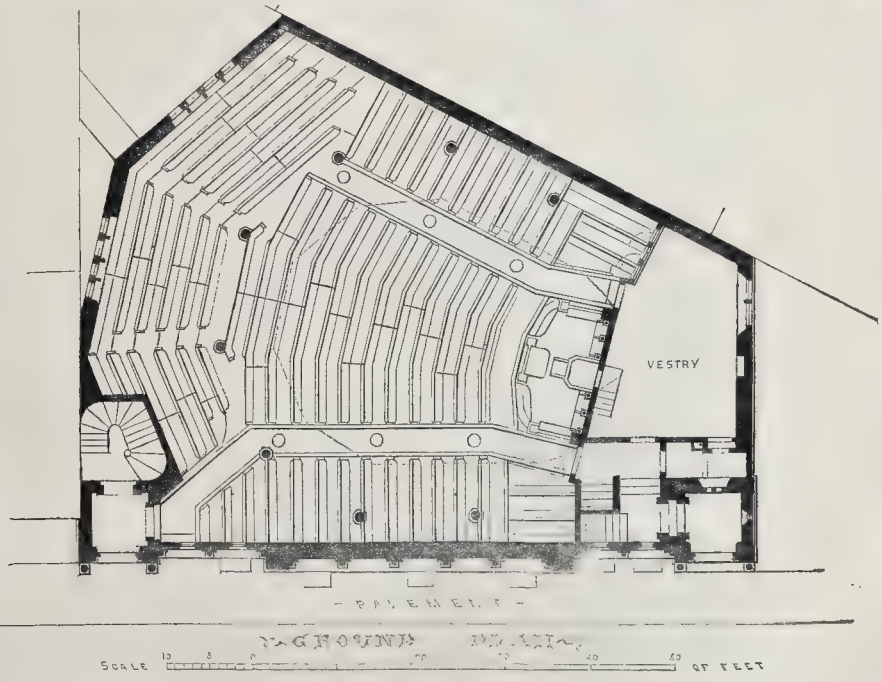
The Parochial Assessment Act, 6 and 7 Wm. IV. cap. 96 (Mr. Poulett Scrope's Act), was originally designed to set the matter at rest; but instead, and most unfortunately in its present state, this enactment renders confusion more confounded, from the various anomalies which directly present themselves even in the very enactment itself. To wit, this statute enacts that "No rate for the relief of the poor in England and Wales" (and this rate is adopted as the basis of every other rate, whether paving, police, highway, Board of Health, or any other rate) "shall be valid or shall be allowed by any justices, or be of any force, which shall not be made upon an estimate of the *net annual value* of the several hereditaments, &c. rated thereunto." Now, associated with parochial or county assessment, more especially with the increase recently imposed by the justices themselves, of upwards of one million annual rateable value, and distributed throughout the country, and upon which all contributions will in future be levied, is this glaring fact, that these very justices, from time to time allow parochial rates to continue, although known to be wrong, and to be made and collected upon assessments which they, themselves, by this very addition, proclaim are not made upon the real "net *annual value;*" and which otherwise made, the Act itself declares shall be void and of none effect: in short, such rates are made in contravention of the very Act itself, which directly conveys to justices the power of legally *allowing* the rate itself to be made. This fault (if any)—and every "*inequality, unfairness*, or *incorrectness*" is a fault—must therefore rest with the justices themselves, who allow the rate, since they have the power delegated to them of amending any rate, or of disallowing it altogether; and every rate not made in accordance with the *Parochial Assessment Act* must necessarily be defective. In such a case the justices have the power of adding a nominal sum (which they have recently done to the assessment of most of our metropolitan parishes), say 20,000*l.* per annum, to any parish in its assessment to the county rate, as some years since they did to St. Clement Danes, whereby the total rateable value of that parish was proclaimed to be 80,000*l.* per annum, and then left the parishioners to decide the difference among themselves in the best way they could; and which they did by ordering a re-survey of the parish by a competent professional party, who made the result so produced 84,000*l.*; thus showing that the magistrates were not much out. But this course, how fair soever at the first glance the method may appear to be as regards the parish itself, is fraught with the greatest injustice towards parishioners, when it is remembered that the justices have, by another public document, declared that the adjoining parish of St. Mary-le-Strand is assessed in no less a sum than 53 per cent. below its own actual "net annual value," or rather below that sum at which, when fairly assessed, the parish ought to be rated; and the parish of St. Ann, Soho, in the same union, is almost as much, whereby St. Clement Danes, St. Paul's Covent-garden, &c. are made to contribute so much more than their fair quota to all the police, county, and other rates; while the former parishes pass off comparatively scot free, to the extent of nearly 50 per cent. per annum, and yet the defective rate and rate-books of these parishes are from time to time allowed by the very justices themselves, who are cognizant of the fact in special and quarter sessions. So it is with the City of London, the wealthy parish St. George's Hanover-square, St. Margaret's Westminster, &c. and many others.

The parish of St. Marylebone, recently, by a large majority, in vestry determined that the property-tax returns should form the data of their assessment, after deducting therefrom in each case 10 per cent.

Now, no principle of assessment individually can be more unfair and unjust than this, however, in its collective capacity, in the gross result it may approach towards general accuracy, since one house may be let on lease, the next at a tenancy from year to year, and the next may, by premium, have liquidated a portion of its rental. These houses may all be precisely the same, and in each case the return of rental may widely differ, even by a per centage quite as great as that which exists between the rentals of St. Mary-le-Strand and St. Martin, or any other parish which may have placed itself within the pale or under the jurisdiction of the *Parochial Assessment Act*. Hence the house-tax, based on property-tax returns, of themselves alone can present no authentic data of assessment. The actual remedy for the existing evil will only be obtained by a *boná fide* professional and impartial survey and valuation. Those interested in parochial jurisprudence will immediately cry out and declaim against the mode of proceeding, on account of its cost. But they would not do this were they better acquainted with the actual facts of the case, better illustrated in the survey of Bethnal-green, or in the more recent survey of St. Luke's, Chelsea, and many others, wherein the extra contribution drawn from and occasioned by the correct assessment of the water and gas companies, railway companies, and other public bodies (all of whom can afford to pay), more than paid the entire cost of such survey within the first twelve months, as the vestry clerks of these parishes have publicly and frequently declared in their respective vestries. On these grounds, no parish can plead cost and expense as its excuse for non-compliance with the statutable enactment. From these observations, it will be apparent that while other parishes, such as St. Pancras, Paddington, St. George's, St. Margaret's, &c. remain upon their present assessments, the vestry of Marylebone, in ignorance, and trying to do right, will have to contemplate the infliction of a wilful injury upon themselves as ratepayers, to the great prejudice of their own pockets, which will have to sustain the full charge of all county, police, and other rates, while the contribution of many other parishes pay little more than half the sum at the low rate after which they are now so unfairly charged. Facts such as these, when once generally known, must, sooner or later, address themselves to the Legislature, and thus suggest their own remedy; and publicity to statements such as these, when fully obtained, must necessarily tend to hasten the consummation so devoutly to be sought after.

One item further, I beg to state, for the satisfaction of all, which is, that the justices have deemed it expedient to make no alteration in the total annual assessments of ratings from those parishes which have undergone a professional survey, which fact at least exhibits, by direct inference, that such parishes as these are assessed upon their "net *annual* value," and are so assessed to their own prejudice, as far as the police and county rates are concerned, so long as others continue to adopt an arbitrary or voluntary principle of partial assessment, or rather no principle at all, but utterly at variance with the principle of the Parochial Assessment Act, as it is with all that is "*fair, just, and equal.*" Now, as regards parishes in this respect, they should be advised to look more to one another than they do at present, and then they would, in the result, reap all these advantages collectively, which individually, as parishioners, they now seek for in vain, and the search would call forth much less vituperation and personality than now, and all invidious comparison of one assessment with another would thereby be effectually avoided.

"Pro Rata."



PERCY CHAPEL, BATH.

This chapel, which is designed in the Lombard style of architecture, has just been erected for the Congregationalists. The peculiarity of the site chosen determined the mode of treatment, and the effect inside is said to be successful. The decagonal lantern is supported on ten semicircular stone arches, 30 feet high, springing from ten polished Purbeck columns, only 1 foot in diameter. The capitals are carved, and vary in foliage. The height to the summit of the roof of lantern is 54 feet. There are three wheel windows similar to the one in the front, one corresponding on the opposite side and the other facing the pulpit. The whole is built of Bath stone, and the walls inside are lined with ashlar. The windows throughout are filled with stained glass in mosaic patterns. All the roofs are open and made ornamental. The roof of the centre lantern is constructed independent of the walls, and has only a vertical pressure,—there being no horizontal tie. The pulpit is of stone, and the enclosure of communion of polished Purbeck marble. The centre turret is arranged for ventilation. The church seats 1,000 persons, with the galleries, which are very capacious and form a principal feature in the interior arrangement. The seats are all open, without doors, and all the woodwork is varnished. The front of communion-table is laid with Maw's encaustic tiles, and there are border tiles in the aisles. It is heated by hot air. The organ is placed over the vestry, behind the pulpit. The cost was about 4,000*l.*

Architects' Benevolent Society.—We think it right to state that the annual meeting of the Architects' Benevolent Society will be held on the 7th of March. The architects throughout the country have all a special interest in this society, and should feel it a duty to make common cause with their professional brethren of the metropolis. Let us help one another.

THE PERCY CHAPEL, BATH.

ON THE CONSTRUCTIONS NOW IN COURSE OF EXECUTION BETWEEN THE LOUVRE AND THE PALAIS ROYAL AT PARIS.*

The works now carried on at Paris under the direction of the Emperor constitute one of the most remarkable features of modern times: indeed, I cannot recall to mind any period since the time of the Roman emperors when works of such magnitude, magnificence, and essential utility were executed at once. It is not mere flattery to say, that, in all these public improvements he is the great ruling genius: everything originates with him, and the opinions of all the other authorities are subordinate to his decision, which is carried out, because it is supported by a well understood and very firm will. Many present have of course seen the continuation of the Rue de Rivoli, lately opened in connection with the buildings at the Louvre, which I described to a meeting of the Institute at the beginning of last year. Having visited these works recently, I have thought it might be interesting to the members if I were to communicate briefly some of the observations which I made on the occasion.

Our honorary and corresponding member, M. Hittorff, was so kind as to show me the lithographed contract drawings for the works, prepared by himself and his colleagues, and he has, with their sanction, very kindly contributed a copy for the Institute. As they are drawn to the scale of $\frac{1}{96}$th, or very nearly $\frac{1}{8}$-inch to the foot, they are sufficiently large to enable us to understand and appreciate all the details. On the general plan of the locality are indicated the portion of the Louvre erected by Napoleon I. and Louis XVIII. and the new continuation, together with the garden beyond it, next the Colonnade of Perrault. The Rue de Rivoli has been greatly widened by the removal of a number of misshapen houses, narrow streets, and inconvenient thoroughfares. It has been supposed in this country that such alterations and improvements are effected at a much cheaper rate in Paris than in London; but the truth is, that on the contrary they are, if possible, more expensive in that city, and for this reason, that if an amicable arrangement for the purchase of the property required cannot be made, the promoters have not only to go before a jury, and buy up the ground-rents, the intermediate interests, and all the good-wills, as with us, but also to buy out the occupants of all the floors up to the very top; consequently there are numerous interests to combat, and compensation must be given to all the various parties carrying on their separate trades in the different stories. It is seldom in London that we have to treat with lodgers who have such specific trade interests. Therefore, although the value of ground in Paris is not to be estimated at such a rate as 400,000*l.* an acre, as it is for some plots in the City of London, the price to be paid is still very high, and ground is more valuable, generally speaking, than here. However, the property in question in Paris was bought up, all the persons interested were remunerated, and many retired with very good fortunes. The space gained has been used to widen the Rue de Rivoli, and carry it on beyond the Hôtel de Ville, and also to widen the Rue St. Honoré which runs parallel with it. The new Rue de Rivoli is only 72 feet 6 inches wide, exclusive of the arcade, under which there is a broad footway. This width is hardly sufficient for a grand leading thoroughfare, but it has been restricted by unavoidable circumstances, and by the old part serving as a guide. The Rue St. Honoré has been widened from 46 feet to 65 feet 6 inches, and it thus relieves the Rue de Rivoli of a portion of the heavier traffic, which would otherwise pass through it.

In consequence of the immense space occupied by the Louvre, it is necessary for the convenience of the public, to permit the passage of carriages through the building; and to facilitate this line of communication the Emperor has determined that the Rue Richelieu shall be extended to intersect the Rue St. Honoré and the Rue de Rivoli, and widened, so that there shall be a direct and easy access, adapted for an immense thoroughfare, from the Boulevard to the Louvre. The traffic of Paris has so much increased of late years, that it is difficult for vehicles to traverse the city, and the great principle adopted has been to provide wide thoroughfares from the stations of the railways, instead of those formerly required from the Barrières. The Louvre may be considered a focus in which these communications concentrate, consequently the thoroughfares in its vicinity are left spacious enough to enable the traffic to be carried on with all requisite facility. Thus it will be seen on the plan, that opposite the Palais Royal an open space is left, called the Place du Palais Royal. The large block of building, which adjoins it on the right of the spectator, is to be called the Hôtel des Chemins de Fer, or the Hôtel du Louvre.

The total frontage of the ground opposite the Louvre is 2,030 feet; 620 being occupied by streets, and the Place du Palais Royal; and 1,410 by houses; and of this length 1,285 feet are devoted to the Hotel and other erections, under the direction of M. Hittorff and his colleagues.

It has been said that the French are not an enterprising people, and that they are deficient in mutual commercial confidence. We know, however, that great sums of money were formerly hoarded by individuals, who have discovered of late, that they can apply them to realise a good interest; and a society called *La Société Immobilière*, or Freehold Building Society, has been formed expressly to cover this ground with buildings, at a cost of about 500,000*l.* In order to accomplish this object within six months, they thought it necessary to appoint four architects, and they selected MM. Armand, Hittorff, Rohault de Fleury, and Pelechet. A committee of directors meet twice a week. The contracts are made for all the works together, and consequently the full benefit of the magnitude of the operations is gained in the price. Their intention is that the whole mass shall be built, and the hotel finished and furnished when the Great Exhibition opens in May.

I propose to direct your attention chiefly to this hotel, as a work of very great importance, the length being 501 feet, and the depth varying from 184 feet to 124 feet.

There are several entrances, so that the hotel may be divided into two parts. No part of the ground floor, or of the entresol, except those occupied by the entrances, is to be appropriated to hotel purposes, but these portions of the plan are to be appropriated to shops, and the accommodation of the shopkeepers; therefore it is *au premier* that the hotel begins. Part of the first floor is appropriated to princes and ambassadors, and other distinguished persons; and it comprises numerous suites of apartments, with separate staircases. Here is one grand staircase of stone (the flight of steps 9 feet wide), with two other principal staircases to the right and left; and there is a place for taking in luggage, and a carriage entrance to a court about 66 feet square, which is to be covered with glass. The under part is for carriages in waiting—the stables being in another part; and there are other carriage exits into the Rue St. Honoré, and the Rue de Rivoli.

The first floor contains a grand saloon for the general ity of visitors, 133 feet long by 21 feet 6 inches wide; two reception rooms, 37 feet by 24 feet, and 33 feet by 24 feet; a coffee-room and dining-hall, 125 feet by 45 feet; twenty-nine large rooms, about 30 feet by 20 feet, and ninety-six smaller rooms, making a total of 125 rooms, besides the gallery and the dining hall for the *table d'hôte*; six principal and eight secondary staircases; and above twenty water-closets: the passages are 7 feet 6 inches and 8 feet wide.

There is an arcade with shops under it on the sides next the Rue de Rivoli and the Place du Palais Royal, but on the other two sides there are no arcades. There is a great deal of merit in the arrangement of the private apartments, especially as to the facility of access and egress.

On the second floor, the general arrangements are similar to those below, and there are 168 rooms of various sizes, from 13 feet or 14 feet to 10 feet wide, and from 11 feet to 20 feet long; these rooms are of handsome proportions, and larger than in our own ordinary hotels.

There is another story above this, which is arranged in the same way; and there are two stories in the roof. In the lower of these the walls are upright and the rooms are good, and those above are for servants. There is no division of the servants' apartments into groups, but they all communicate with one common passage.

The total height of the building, from the pavement of the street to the ridge of the roof, is 90 feet. From the level of the street to the top of the cornice, the height is 66 feet, leaving 24 feet for the roof. The heights of the different apartments are as follow:—Entrance floor, 12 feet 2 inches; entresol, or mezzanine, 9 feet 2 inches; first floor, 14 feet 6 inches; second floor, 11 feet 5 inches; third floor, 9 feet 6 inches; two stories in the roof, each 8 feet 6 inches: these dimensions, with about 7 feet for the thickness of the floors, make the total height of 90 feet.

The roof plays an important part in the design, and I certainly think that a great deal of the majesty of French buildings is derived from these lofty roofs. If the roof were to be taken off the Tuileries, it would reduce the building to the humble proportions of an English Palace; and if the Palace of Versailles had such a roof, it would not look, from the gardens and terraces, so mean and poor as it now does. Moreover, we must bear in mind that the French do not object as we do to an extra flight or two of stairs.

With reference to the construction of this building, it may be mentioned that the basement is vaulted with arches of brick or stone, and the builder has excavated to a great depth (in some part 25 feet below the surface) to remove the old foundations. Part of it is appropriated to kitchens, and part to stores for goods. The walls in the basement are built of wrought stone at the angles and openings, to give strength and solidity, with moellon, or rubble work, in the intermediate spaces. The outer walls above the basement are all of good free-stone, left rough, but to be dressed and carved hereafter. In the floors, the fire-proof construction, which is very popular in Paris, and which the Emperor wishes to be used, is adopted. It consists of I-shaped rolled iron-girders from 6 to 8 inches deep, and 2 feet apart, kept together by saddle-bars. Boards are placed beneath the girders, and the space is filled in with pieces of stone, and the excellent plaster of Paris. This concrete sets in a very few hours, and the boards are removed, the mortar being sufficiently tenacious to hold the mass together. There are long diagonal iron tie bars at the angles of the walls, to keep the whole construction compactly together.

In the upper floors, the staircases are mostly circular. In this country we generally consider such staircases as dangerous to descend, but they are not objected to in France, and they certainly economize space. The roof is of wrought iron, very light, and put together with great skill; and there are outside galleries along the upper cornice, which serve for the exercise and convenience of the occupants.

Mr. Donaldson proceeded to describe some other private houses, part of the new buildings shown on the general plan, but distinct from the great hotel. In illustration of these he referred, in detail, to the plans, elevations, and sections; and remarked particularly on the comparatively small number of bed-rooms connected with the principal suites of apartments.

He further called the attention of the meeting to the improvement of the Bois de Boulogne, another work of the Emperor, now almost completed; and to a project for the erection of first-rate houses around the Arc de l'Etoile, in accordance with a design by M. Hittorff. He referred, in conclusion, to the works recently executed at the Luxembourg, and particularly to the Salle de Reception, formed out of the old Salle des Conferences and two other apartments belonging to the former Chamber of Peers, which had been thrown into one magnificent hall, 200 feet long, resplendent with marble, paintings, and gilding, in perfectly refined taste. For all this magni-

* The following is the substance of the paper read by Mr. T. L. Donaldson, at the Institute of British Architects, January 22, already referred to.

ficence the French people were indebted to the Emperor, who was a great friend to architecture, and had judiciously given much profitable employment to the working classes, at the same time that he rendered Paris the first city in the world for the magnificence of its monuments, the ample and commodious lines of its thoroughfares and public streets, the improvement of its salubrity, and a centre of attraction to the people of every other country, in fact, of European arts and civilization; thus by the judicious and not parsimonious outlay of a few millions, contributing to the prosperity of the people, and the promotion of their commerce and manufactures.

In the course of the discusion which followed Mr. G. R. Burnell stated that, in his opinion, nothing had yet been erected to equal, in magnitude and completeness, some of the great hotels of the United States; in which the arrangements for carrying up goods, washing, and cooking, were carried out by the aid of steam, in a very successful manner. The great length of the galleries in the French Hotel was an objection which would perhaps be felt more by English than by French visitors; and the same remark would apply to the appropriation of the ground floor and mezzanine to shops, obliging visitors to ascend a greater number of stairs. Very good rooms were shown upon the plans at a height of 80 feet from the ground, requiring 160 steps to arrive at them. The laws which regulated building in France rendered it necessary that the cornice should not be more than 66 feet from the pavement;—above that height it was allowed to build in the roof, but the roof itself must be bounded within a portion of a circle of a certain radius. This law was enacted in the time of Louis XIV. and the Mansard Roof was invented for the purpose of evading its provisions. These roofs did not add to the grandeur of the buildings, but on the contrary, they had a clumsy and heavy effect, especially when seen continuously in the long streets of the Continent; and the rooms in them were necessarily uncomfortable. It was a very grave question in his mind, how all these expensive improvements were to be paid for. Many large houses in and near London, originally occupied by the nobility and gentry, were now let as offices; and that, if this appropriation of them should increase, it would be much better at once to adopt the French system of living in separate floors, and to build accordingly.

Mr. Ashton confessed that he was not much struck with any great advance which had been made by the French over the English in the new works in question, so far as Mr. Donaldson had explained and illustrated them. He concurred with Mr. Burnell in thinking the effect of the French roofs, surmounting stone walls with a heavy black mass, was very little short of ugly. The limit of 66 feet for the height of the cornice from the ground was very objectionable, and might prevent any grand architectural effect. He had himself lately built houses in Victoria-street, which were 80 feet in height from the pavement to the top of the cornice. The height, indeed, was a question of ground-rent; it being necessary to build such houses as would pay the expense of making new streets, and substituting large thoroughfares for narrow and crowded streets; and this argument applied as forcibly to Paris as to London.

DINNER-TABLE OBSTRUCTIVES.

WHILE all your daily and weekly contemporaries are fighting the country's battles at home and abroad, we should have the arts of peace and domesticity entirely overlooked were it not for such publications as the *Builder*. I write, therefore, to you, as the only publication that does not raise our blood to fever heat, to join in the general fashion, and get up a row or revolution on—the dinner-table. The dining season is beginning; and, as internal decoration is a subject kindred to your pursuits, I earnestly request you to use your powerful influence to smash the prevailing mode of dinner-table decoration. Perhaps you will better understand what I desire, if I narrate an actual fact. Being "somebody," I was invited, with my wife, by the Lord Mayor, to the dinner on the 6th inst. and a very elegant affair it was; but that need not be said by any one who knows the present chief magistrate. The arrangements, with one exception, were perfect: an elegant and well-dressed company partook of a most liberal hospitality—good cookery, choice wines, and all that sort of thing; but above all, there were the principal guests,—a live lord from the Crimea! and a dead lion from the Baltic!! Now, do you not think that it was at least an excusable curiosity to desire to see these and other of the illustrious guests, while sitting at table; to say nothing of the cheerful face of the Lord Mayor himself? The table was, however, so overloaded with artificial flowers, vases, and pink ivory cakes turned up with white, that it was impossible to see more than two or three couples opposite, your next neighbours, and the usual line of noses to the right and left. Mark me! I do not object to flowers, ornaments, and cakes, in the abstract: I only object to their being placed obstinately in the line of sight. The principal part of the conversation near me was, "Now look, between that cake and the camelia, you can just see his moustache: no, he is gone again." "Now, now, the full-faced man, just through that opening." "Where?" "There! four this side the Lord Mayor." "But where is the Lord Mayor?" and so on. It cannot be denied, that notwithstanding the evident pains that had been taken, the early part of the affair was cold and too quiet, all owing, in my opinion, to the impossibility of seeing and being seen. Surely the ornaments can be placed on the table so as to decorate without obstructing the view,—so low or so high as to leave a clear space for recognition and conversation. I take the liberty of specifying the case, which was very glaring, at the Mansion-house, because the well-known taste of Lord Mayor Moon will, in addition to his official duties, acquit him of having anything directly to do with the arrangements; but in many private houses the grievance is deserving of censure. You will recollect, sir, on a recent occasion (one of us having entered the drawing-room late), we sat three hours at dinner-table entirely ignorant that each other was present, till we joined the rest re-entering the drawing-room, and yet one at least of us was invited to talk,—yes, to talk to jardinières, massive silver obstructions, and a centre-piece with half a dozen sprawling arms holding up, just on a level with the eyes, preserved ginger, and other confiture—sweet indeed to the tooth, but gall and wormwood to the tongue and eyes. These floral and metallic obstructions are also unjust in hiding the eyes, jewels, and dresses of the ladies, than which nothing can be more ornamental at the dinner-table. Let it be reformed altogether: let no ornament whatever rise higher than 10 inches from the table, and let none be suspended lower than 26 inches above it.

CHATTERBOX.

ADVICE FROM MELBOURNE.

THE journals I receive from England, including the *Builder* which is specially welcomed, contain so many articles and communications in reference to Australia in general, and Melbourne in particular, that I am induced to offer a few remarks on the present aspect of colonial affairs.

In addressing you on this subject, I do not seek to captivate your readers with a romantic history of this extraordinary place: my wish is simply to state a few plain facts for the guidance of the working classes.

On the present occasion, I shall restrict my remarks to the question of emigration, so far as the interests of the artizan are concerned. The professional experience I have had in this colony tempts me to intrude my opinions upon your attention, in the hope that some of your readers may be benefited thereby. The mail which brings this, will carry a great mass of letters and newspapers to the friends of those who have recently arrived here, and who have been attracted by the glowing accounts of prosperity and success that have been forwarded to England, both by the press and residents in the colony generally.

I am quite prepared to hear that three-fourths of the letters that have been sent home during the last four months are of a very gloomy and cheerless kind, and that the recent arrivals in Victoria find themselves in a state of isolation and despondency, if not actual distress.

The truth is, that hundreds of mechanics are now out of employment, although wages have fallen within the space of three months from an average of 30s. down to 15s. per day.

Public meetings of the working classes have lately been held, and resolutions passed with a view to ameliorate their condition. Much talk has been expended, and loud complaints have been made against our leading journal, the *Argus*, for misleading emigrants by holding out temptations which they have failed to realise. The Government has also been assailed for not throwing the Crown land more freely into the market, to enable persons with small means to obtain leases with a right to purchase. The latter proposition should be carried out without delay, as it would afford profitable occupation to the unskilled workman at present idle.

But I presume the majority of those who are inclined to emigrate have no ambition to travel 16,000 miles to commence an agitation on the rights of labour: they have been taught to believe that here there was a scarcity of that commodity which in England was not over-well remunerated, and that a qualified artizan could readily obtain employment as soon as he landed. A man who has served an apprenticeship to a respectable trade, and who has laboured year after year to acquire a proficiency therein, may feel no particular wish to commence a new line of business, or to throw away all his previous knowledge, to turn digger or ploughman.

The principal safety-valve for the unemployed mechanic is breaking stones for the various new roads. The stone chiefly used belongs to the basaltic formation, and is very similar in colour and texture to the Carline-nose stone from Scotland. A "crack hand" can break from two to three yards per day; but an amateur would find it difficult to accomplish more than one yard. Hundreds of good masons are now at this convict-like occupation, and hundreds cannot even get employment at this ignoble work.

This colony has not grown at the ordinary rate of progress. The discovery of its great mineral resources suddenly constituted it the richest and most envied place in the world: its wants immediately increased, and the stocks of necessaries and luxuries in the adjoining colonies were soon consumed. The inhabitants neglected their ordinary avocations: gold-digging and speculating superseded everything; and at one time it was feared we should fall short of provisions before supplies could arrive. A cry for goods and labour soon arose: behold, it is now satisfied! all the stores in Melbourne are full to repletion, and much of their contents is rotting away. Goods are almost a drug. Labour has declined one-half within four months, and a strange anomaly is that as it becomes cheaper, the demand seems to diminish.

It would appear that the machinery which should regulate the supply of goods is sadly unmanageable, for I am certain that the remittances that have been made during the last six months cannot entice the continued stream of articles that still continue to pour into our already glutted market. The case is somewhat different in regard to labour, for the difficulty of obtaining employment has only been experienced by recent arrivals.

I am not so desponding as to suppose that we shall not recover from the present depression, nor do I in any way seek to prevent hardy, persevering, and industrious persons trying their fortunes in Victoria. I only wish to inform them, through you, that they must expect to "rough it" for a time. I would say to the skilled workman, "Should you land in Melbourne, three months after you read this, wages will probably be about 10s. per day, the necessities of life a little, and the comforts a great deal dearer than in England. You will find a vastly increasing city, but you may discover that there are plenty of hands already waiting to carry out its extension. You may have to do as you have done before, tramp to the next township, and, may be, from thence to the next, before you can obtain employment. All this is nothing more than you have probably undergone in England, but, perhaps, you don't expect such hardships in a gold country. Think well, I would advise you, before you give up anything like good, steady, remunerative employment; but should you determine on a trial, come with a stout heart: don't grumble if at the outset you have to endure similar trials to those you suffered in England. Remember that Victoria comprises a vast extent of country, and that little has yet been done to develope its various resources. England *is*—Victoria *has to*

be—built up. To accomplish this, capital is required as well as labour; and there should be some attraction in the fact that money can be safely invested at 15 to 20 per cent."

I have written the above with the object of correcting the extreme statements, both *pro* and *con.* which I have known to be made in regard to this colony.

Having been three years in the midst of the building operations in and about Melbourne, I feel in a measure qualified to offer the above remarks to your notice. And in order that those for whose benefit I am now writing may know that I am in a position to give disinterested advice, and that I am not a disappointed adventurer, I beg to state that I am of the firm of Knight and Kemp, architects, whose designs for Government House, Legislative Council Chambers, Royal Exchange, &c have been approved and selected by the Government; and that, in conjunction with Mr. Robert Adams, C.E. (late of the West-India Docks), I have gained the first premium for a design for the proposed Melbourne Ship Canal and Docks.

John George Knight.

PROVINCIAL NEWS.

Brighton.—We are requested by Mr. Harmer to state, that the intimation in the *Brighton Gazette*, which we quoted last week, to the effect that the dinner given at the Race Hill Inn was as a mark of confidence in parties connected with the undertaking is not exactly correct: the writer says it was "from quite a different motive."

Toddington.—Wesleyan day-schools have been opened here, with sermons and subscriptions in aid of the building fund.——For a similar object, on behalf of the new national schools, a performance of sacred music was held last week in the parish church. These latter schools are nearly completed.

Stansted Mountfitchett.—A central hall for lectures and other meetings, and for the purposes of the local literary institution, has been erected by a building company, who raised 550*l.* for the purpose, in 5*l.* shares. Mr. Glasscock, of Bishop's Stortford, was the builder. The hall was opened on Thursday before last, with a *soirée*, in connection with the literary institution. It is situated on the Chapel-hill (an elevated site, midway between what is called Stansted Chapel and the town, called the Street). The front elevation has four Ionic columns, forming a portico, and supporting a pediment, perforated in the centre for a clock. Right and left of the entrance-hall are two small rooms, the former 13 feet 6 inches by 12 feet 6 inches, let as the post-office, and the latter 13 feet 6 inches by 10 feet, let as a library and reading-room to the literary institution. The assembly or lecture-room is 44 feet in length by 25 feet wide, and 17 feet 9 inches high. Corresponding in form and size with the small rooms in front of the building, and over them, are two chambers occupied by the postmaster, who is also librarian of the institution. There are a kitchen and offices below the ground-floor.

Headley.—The new parish church here was opened on Friday in last week by license of the Bishop of Winchester, after which a collection was made for the fittings and stalls in the chancel, designed and executed by Mr. William Shearburn, of Dorking, architect. Mr. Howard, of Ashtead Bank, provided the funds with which the church was built.

Portland.—The breakwater works now extend to a distance of three-quarters of a mile from the shore. The stageing erected for the purpose of depositing the stone has a frontage of 150 feet: the piles composing it are 80 feet in length, and the iron shoes affixed to the end, for the purpose of screwing them into their places, weigh upwards of half a ton each. The piles are required of this length owing to the depth of water (60 feet) at the part now reached. The stone is being deposited at the rate of 1,500 tons a day. No less than seventy vessels were, a short time ago, anchored in Portland roadstead, under cover of the breakwater.

Birmingham.—It appears from the report of the town council meeting that Mr. Ingram's proposal to decorate the hall has been accepted.

Chesterfield.—The design selected for the market hall is by Mr. J. Davies, of Halifax.

Elvaston.—A new church is to be erected in this village, on the site of the old one, which is being taken down. The contractor for the new building is Mr. G. Thompson, of Derby, and the amount of the contract is said to be a little more than 1,400*l.*

Rochdale.—A meeting of the parishioners was held on Thursday before last, at the vestry of the parish church, "to consider plans for the further improvement and restoration of the church, including the removal of the present galleries, the erection of a new west gallery, the rebuilding of the north aisle, and the reseating of the remainder of the nave and aisles," when a resolution was passed, all but unanimously, to the effect that the vestry approved of the proposed works, and consented to the vicar and churchwardens executing them, on condition that the cost be defrayed entirely by voluntary gifts, and the parishioners not subjected to any rate or charge in respect thereof. The subscription list is already in progress, and additional exertions are now to be made to increase the funds thus to be realized. Mr. Clarke, the architect, has reported on the unsound, if not unsafe, condition of the piers and arches on the south side of the church, which shows itself now that they are uncovered. He considers that the south gallery ought at once to be removed, and that a thorough repair and reinstatement should take place of the piers, &c. one or more of them requiring to be taken out and replaced. Although this, he remarks, is not a matter of imminent importance, as affecting the future stability of the building, yet he feels he has no power to order the work necessary to be done, as it will involve additional cost. In the mean time he regards it as his duty to make this report to save himself from any responsibility. The work of restoration, both internal and external, has been commenced, as reported to the vestry meeting referred to.

Liverpool.—The dock committee have accepted the tender of Messrs. Jones and Jump to take down the shed on the south quay of the Bramley-Moore Dock and re-erect it on the quay of the Huskisson Dock, for 300*l.* The offer of the Messrs. Thorneycroft to supply Staffordshire iron plates, and of Mr. G. W. Armstrong to fix up the steam and hydraulic machinery in the new Wapping warehouses, for 11,745*l.* has also been accepted.

Shields.—Under the heading "Who stops the way?" the Gateshead *Observer* quotes a paragraph from the Shields *Advocate*, to the following effect: "It has been our duty previously to point out the slow progress of the piers, and to urge more energy in their construction. It was elicited in evidence on Tuesday, before the Royal Commission, that the River Tyne Commission has been most urgent in its duties on this subject of life and death, and that the delays of the works since December, 1853, have been owing entirely to the Admiralty; that the railway, it appears, over which the Admiralty has no control, is already about completed, and ready to commence the south pier; that thirty-six acres of rocks have been bought for their construction; that plans and specifications have been lying for some time at the Admiralty, for their sanction, which the Pier Act insists on, before the piers can be made, and which sanction the Admiralty refuses, absolutely refuses, without Mr. Walker, their engineer, is employed, who demands a remuneration of 2½ per cent. upon the cost of the works, which, if they amount, as they are likely to do, to half a million sterling, will put in the said Mr. Walker's pocket 12,000*l.* When it is known that this engineer had been already appointed by the Tyne Commissioners their consulting engineer for the piers, at a salary of 200*l.* a year, we think the public will agree with us in repudiating this conduct of the Admiralty, and sustaining the determination of the commissioners to resist this venal dictation of the Admiralty." The Gateshead *Observer* remarks on this paragraph that, "The commissioners and their clerk were accused of obstructing the appointment of a resident superintendent of the works;" and asks, "Has no other obstructive stood in the way?"——The Methodist Free Church about to be erected at South Shields, from the designs of Mr. T. Oliver, jun. is in the Norman style of architecture. The front gable is filled by a recessed arch, and terminated by a belfry. The columns are carried above the galleries, and the roof is divided into three compartments. Accommodation is provided for 800 persons, with schools for children below.

Wigan.—The burial board were last week preparing to receive tenders for the erection of three chapels, two lodges, entrance gates, bridges to cross the railway, and other works. The land is situated about 1¼ mile from the market-place. It will consist of eighteen acres, which have been thus apportioned,—eight for the Church of England, six for Roman Catholics, and four for Dissenters. Three chapels are to be erected, similar in size and cost, as well as in general style of architecture, which is Geometric Decorated. Two lodges are to be provided, for superintendent and sexton, containing suitable accommodations, with office and waiting-room for cemetery business. The cemetery is to be ready on 1st July next.

THE BANK OF AUSTRALASIA, THREADNEEDLE-STREET, LONDON.

The west end of Threadneedle-street has been widened and greatly improved by the removal of a block of old houses on the south side of it, and the erection of three structures, partly on the site of the former, and partly behind it, extending from the Royal Exchange-buildings to Finch-lane. The easternmost building, at the corner of Finch-lane, is for the Bank of Australasia, and has been erected from the designs of Mr. P. C. Hardwick, on ground the property of St. Thomas's Hospital. The contractors are Messrs. Lucas, of the Belvedere-road. The amount of this contract is 13,436*l.* inclusive of a portion of the building in Finch-lane, which is to be let as offices.

The Bank of Australasia is one of the most important corporations connected with the colonies, and its transactions are very extensive: the present offices are in Austin-friars. The fronts are wholly of Portland stone, and are remarkable for the boldness of the projections, and a considerable amount of carving effectively executed. It is to be regretted that this new range of buildings has unfortunately repeated a too frequent fault in London, and are erected without any attempt at unity of style, or even an effort at picturesque relative arrangement. This is to be attributed to the hurry in which all our buildings are built, preventing the study required for combination of design, rather than to any want of appreciation of the desirableness of endeavouring to make adjoining buildings assist each other, and, whether of the same style or not, produce one fine combination of architectural forms. In this same street are the Sun Fire-office, designed by Mr. Cockerell, the Hall of Commerce, and some other large buildings. Had the money here expended been laid out with a view to a whole, what a magnificent effect might have been produced. We shall give views of the buildings adjoining the Bank of Australasia in an early number.

Other great changes in this street are in prospect, for the site of the celebrated South Sea House, on the other side of the way, at the end where it enters Bishopsgate-street, is to be brought to the hammer on the 27th. The stately colonnade and grave court, which Charles Lamb so graphically describes,—"The long passages hung with buckets appended in idle rows to walls whose substance might defy any, short of the last, conflagration;—with vast ranges of cellarage under all, where dollars and pieces of eight once lay, an "unsunned heap," for mammon to have solaced his solitary heart withal,—long since dissipated or scattered into air at the blast of the breaking of that famous Bubble,"—will now doubtless soon give place to modern residences and new speculations.

Threadneedle-street was originally called Three Needle-street, from the charge on the shield of the Needle-makers' Company's arms; or, according to Pennant, from the halls of the Merchant Tailors, Tailors, and Linen Armourers in the street.

THE BANK OF AUSTRALASIA, THREADNEEDLE-STREET, LONDON.—MR. P. C. HARDWICK, ARCHITECT.

ARCHITECTURAL DRAWINGS FOR THE PARIS EXHIBITION.

WE think it right to remind architects that all drawings intended for the Paris Exhibition must be delivered at Gore House by this Saturday, the 17th.

We have already given the regulations under which the selection of works will be made. We would repeat, however, that artists can contribute to the Universal Exhibition works which have been previously exhibited; but there cannot be admitted,—

1st. Copies, excepting such as may reproduce a work in a different manner on enamel, by drawing, &c.

2nd. Pictures, and other objects, without frames.

3rd Sculptures in unbaked clay.

THE FLOW OF WATER THROUGH PIPES AND ORIFICES.

INSTITUTION OF CIVIL ENGINEERS.

ON the 6th inst. the paper read was "On the Flow of Water through Pipes and Orifices," by Mr. J. Leslie. The author having been professionally called upon to report on a small scheme of water-supply, in which it was proposed to lay down a pipe with an unusually small declivity, was induced to have a set of experiments made on the discharge of a new lead pipe of $2\frac{1}{2}$ inches diameter, and 1,086 feet in length, with heads varying from $\frac{1}{16}$ths of an inch to 10 feet. This pipe was laid in a coil of about 70 feet in diameter, and was afterwards successively shortened into lengths of 540 feet, 270 feet, 100 feet, 25 feet, and 10 feet. Other experiments were also made with pipes of $1\frac{1}{4}$ inch, and $1\frac{3}{4}$ inch diameter.

As much care as possible was taken to ensure the escape of air, but the results were in some cases so anomalous as to induce the belief that complete success had not, in this respect, been always obtained.

The object of the author having been to institute a comparison between the deductions of hydraulicians and the results of direct experiment, he had adopted, as a standard of comparison, a formula which he believed to be due to Du Buat, and from that had calculated "the ratio of actual discharge to Du Buat's formula."

The formula employed was thus expressed:—

$$v = \frac{3000\sqrt{d}}{\sqrt{\frac{l}{h}}}$$

in which v was the velocity per minute, l the length of the pipe, increased by fifty diameters, and d the diameter of the pipe, all in feet.

For the discharge (D), in cubic feet per minute, this formula became

$$D = \frac{2356{\cdot}2\ d^{\frac{5}{2}}}{\sqrt{\frac{l}{h}}}$$

Adopting this formula, the results differed very considerably from those of the observed discharge.

[It was shown in the discussion, which was only commenced, that the formula relied upon by the author was not that of Du Buat, which when applied gave results more closely approximating to those of the experiments, than were obtained by the formula employed in the construction of this table.]

Numerous experiments were also made on simple orifices,—on short tubes placed sometimes vertically, and sometimes horizontally,—and on vertical pipes, from which coefficients of discharge, greatly at variance with accepted data, had been deduced; but it was afterwards discovered, that the apparent anomaly disappeared, if the active head were measured by the difference of level between the surface of the water in the cistern and the point of exit from the pipe, or the difference of level of the water in the upper and the lower cisterns.

The "Colinton pipe" was 16 inches diameter, 29,580 feet long, with a differential head of 420 feet. The mean of fifteen observations gave an actual discharge of 571 cubic feet per minute, whereas the formula required that the discharge should have been 575 cubic feet per minute. This pipe was only eight or nine years old.

A new iron pipe of $2\frac{5}{8}$ inches diameter, and 1,150 feet long, with about 11 feet of fall, yielded about what was due by formula to a pipe of $2\frac{1}{2}$ inches diameter.

Observations were also made on the Dundee conduit, which was 2 feet broad, with rectangular sides and a bottom of smooth stone slabs, with the following results:—

Fall 1 *in* 1,000.

Depth.	Calculated Discharge.	Actual Discharge.	Actual Average ascertained Velocity.	Velocity by Floats at Surface.
Inches	Cubic Feet.	Cubic Feet.	Cubic Feet.	Cubic Feet.
6	109	110 09	110 09	128·5
7	134·	134 83	116	129·7
8	160·	162·16	121 6	133 1
9	186·	184·61	123·	136 7
10	213·	214 28	128 6	138·1
11	240 3	240·	131·	140·
12	268·	266 6	133 3	146 7

The formula used in this instance might be thus expressed:—

$1\frac{1}{2} \surd$ hyd. mean depth × fall in feet per mile = velocity in miles per hour.

The author's conclusions were, that while "Du Buat's" formula gave very accurate results at moderate rates of inclination, it gave a great deal more than the actual discharge with very low gradients, and very considerably less with steep gradients.

METROPOLITAN CEMETERIES.

WHEN professionally employed in the neighbourhood of Highgate, it frequently occurs that I hear the opinion of residents in that hitherto favourite district, as to the great cemetery there, now nearly replete with defunct mortality.

Already the depreciation of property there, occasioned by the obtrusion of a Campo Santo upon an extended scale, surpasses the calculation of those not interested therein. So far as the precincts extend, and that is to the whole southern slope of the hill, a great loss has been sustained by proprietors and old residents, who, finding the position elevated, picturesque, and healthful (as well as the most proximate and convenient), rural retirement from the City, still hold on, despite the funereal aspect of the vicinage. Bad, however, as the effect has been of the first enclosed burying-ground, worse is still menaced, if it is not already put in actual operation. The Cemetery Company has purchased fourteen acres more, adjacent to their present preserves, extending lower down the hill, and approximating to the numerous newly-erected detached mansions, and to that noble public institution the Small-pox Hospital! If this be carried out, and the whole cityward side of this really beautiful suburb be converted into a necropolis for the million, what is to become of the old inhabitants and their property? That it will be further depreciated, none can doubt. Some avoid such neighbourhoods, perhaps apprehending a vitiated atmosphere; others, on account of funereal processions and the evidences of monumental (although sometimes florid and ornate) sarcophagi. This feeling extends even to the northern side of the hill, which is only approachable by the same causeways.

Local opposition has essayed in vain to resist the fixture of a cemetery in this truly beautiful and commanding suburb—once the resort of holiday folks, and equally with Hampstead, the solace of those who, restricted to one day's relaxation, sought for rural and sylvan scenery within a six-mile scope.

To resist the threatened invasion, there is now no hope, unless the editor of the *Builder* lend the aid of his pen and the assistance of his universal columns to sustain the right, and to repel the wrong.

The discontinuance of intramural sepulture, under the new sanitary movement, is doubtless a great boon to the neighbourhoods so benefited; but the enclosure of our suburbs, and the restriction of improvement in the very best, and otherwise most favoured positions, is a suicidal oversight. In legislation, this evil has yet to be provided against, for it will be some time before Woking Cemetery can be made to accord with popular predilections, so as to come into general use. The more distant those extended cemeteries are from the metropolis, the better. This age cannot approve the Mezentian judgments which decreed that the living should be tied to the dead.

There is now a movement throughout all the Cemeteries.—Kensall Green Company has purchased eight acres, also to be inclosed. This stands certainly at a respectful distance; but Brompton Cemetery is much too near. There can be no doubt as to the imprudence and impolicy of establishing that of Abney-park, in a low and densely populated neighbourhood, and it is certainly most desirable that an authoritative check be given to companies speculating in mortuaries and sepulchral rests within the bills of mortality; if they are allowed to increase with the growth of population, an oppidan desirous of a day's refreshment on a holiday excursion, will soon have no other alternative than to be hilarious amongst the tombs.

ARCHITECT.

COMPETITIONS.

ASSIZE COURTS, TAUNTON.

WITH reference to a paragraph on this subject in our journal of the 3rd, we have received a letter from Sir Peregrine Acland, denying that any blame can attach to an architect whom he had directed to prepare a plan showing certain modifications of the county surveyor's design, and which plan led to the open competition now pending. We expressed no opinion on the complaints forwarded to us. Our remark (and we take leave to repeat it) that, "*If* architects do not behave honourably towards each other, they can scarcely expect much consideration from the public," was a general one. We shall wait the result of the competition to see the necessity for its application.

THE SHEFFIELD SCHOOL OF ART COMPETITION.

Several correspondents comment in strong terms on the deceptions practised by competitors in the preparation of their designs,—wrong scale, showy colours, and palpably incorrect estimates.

IPSWICH.

The council have been discussing the payment of a bill amounting to 148*l.* for *repairs* to Queen Elizabeth's Grammar School, built not long ago. The competition and the selection of the architect were discussed at some length in our pages, as our readers will doubtless remember. The building gave way during its erection, but was set right, and has since required what the council called "strengthening plasters!"

BRIDGNORTH.

We are informed, with reference to the designs for New Public Buildings and Markets, Bridgnorth, the directors have awarded the first premium to Mr. Barry, of Liverpool.

LYNN.

The plan of Mr. Maberly, of Lynn, has been accepted for the new workhouse. There were twenty-six competitors.

ARCHITECTURAL AND ART-LITERATURE IN GERMANY.

WHATEVER the King of Prussia may be in a political point of view, he is a patron of literature, however distracted the "fatherland" may be as to what shall be its course in the present great struggle, in order that its trampled nationality may arise and vindicate a right to a foremost place among the powers which govern the world, —Germany, true to her philosophical and æsthetic fame, never for one moment ceases to maintain it by fresh efforts in literature and science. Two great works demand our special notice at the present moment; one of which the first instalment has been given, another which is about to appear. We gather the information from the letter of the able and well-informed German correspondent of *Norton's New York Literary Gazette*.

The first part of a new work upon the history of architecture (*Geschichte der Baukunst*), by the well-known Dr. Kügler, of Berlin, has just been published in that city. The previous criticisms of that writer upon all matters pertaining to the fine arts are already well known among English readers, especially the "Handbooks of Painting," which were translated under the direction of Sir Charles Eastlake and Sir Edmund Head. Kügler's "General History of Art" is no less worthy of general circulation. The work

which we now notice has a different scope from any which have preceded it, being intended to do thoroughly and completely for architecture what had been previously done by the author in a general way for all branches of the fine arts. The first part just issued goes back accordingly to the commencement of historical knowledge, examining with all the light which the recent investigations of Lepsius, Brugsch, Layard, Botta, and others have furnished, the earliest monuments of antiquity, and presenting, in a clear, connected manner, a view of the architectural attainments of all ancient nations of whom we have any knowledge. Succeeding volumes will bring the work down to modern times, and the whole is to be amply illustrated with new engravings. As the publication of this work may be regarded of high importance both in its theoretical and practical bearings, the following extracts from the prospectus will not be devoid of interest —

"Written historical records will form one principal source of the work, but another more important source is that which is drawn from the monuments themselves. The former in most cases can only give a general knowledge upon which the monumental forms depended,—can only furnish the connecting points for fixing, chronologically, particular monuments; the latter give an exhibition of the meaning of each monument, and of its artistic results. The work will be divided according to national and historical groups, into principal and subordinate parts. Each historical group of nations will be treated as a connected whole, from the commencement to the termination of its career: the succession of the groups will be in accordance with the origin of their earliest development.

Each part commences with a general view of the characteristics of the group to which it relates. After this comes a verification by reference to particular monuments according to their importance, and according to the peculiar historical circumstances which are thereby set forth. A full citation will be given of the authorities upon which the work is based. The work is intended to be supplementary to the 'Monuments of Art' (*Denkmäler der Kunst*), and to the 'Handbook of the History of Art' (*Handbuch der Kuntsgeschichte*), by the same author; and accordingly illustrations which were given in the former of these works will not be repeated in the new volumes that are now announced under the above-mentioned title of the 'History of Architecture' (*Geschichte der Baukunst*)."

The next publication deserving of attention belongs to that class which are the result of those scientific expeditions that do so much credit to foreign governments and so little to our own, from their utter neglect of such means as originating from within, and the scanty and grudging aid they receive when proposed from without. The work announced for publication in Berlin is one of great value upon the subject of Egyptian antiquities. It will contain the studies and investigations of Dr. Henri Brugsch, a private-docent in the University of Berlin. This learned scholar, although still a young man, was sent by the King of Prussia, upon the special recommendation of Baron Von Humboldt, two years ago, to visit Egypt and explore its ancient monuments. Although the funds which were placed at the disposal of Dr. Brugsch were far less than those appropriated to the first Prussian expedition to the Nile, which achieved, under the direction of Dr. Lepsius, so high a reputation, yet the facts which it has brought to light are of the greatest importance in the study of those interesting antiquities.

The work now about to be published will bear the following title: "*Monumens de l'Egypte, décrit, commentés, et reproduits, par le Dr. Henri Brugsch, pendant le séjour qu'il a fait dans ce Pays en* 1853 *et* 1854, *par ordre de sa Majesté le Roi de Prusse.*" We cannot give a better idea of its scope than by the following translation from the announcement of the publisher:—"The monuments of Egypt, that history written upon granite, and which extends back to the farthest antiquity, have been successively described and even explored in Egypt by learned *savans*, amongst the foremost of whom, Champollion, Rosellini, and Lepsius, should be mentioned; but the works of these celebrated men are far from having satisfied the different interests of study which so vast a subject demands, or from having exhausted that soil, so fertile in the monuments of archæology, invaluable treasures for the artist, the scholar, and the historian."

Thousands of the most interesting inscriptions are undoubtedly still buried in the rubbish formed by the dust of ages: and as each year the inundations of the Nile, the blind and venal cupidity of the Arabs, who prostitute these venerable remains to serve their most common wants, and also the deplorable mania of innumerable tourists for mutilating previous inscriptions, for the puerile gratification of taking back to Europe some miserable relic from these ruins, all unite in threatening the speedy destruction of this monumental history,—science seems to impose upon scholars who are especially devoted to the study of antiquities, the difficult task of arresting from eternal oblivion and irreparable loss the inscriptions which still remain in the land of Egypt.

Although not in strict conformity to the title we have affixed to these observations, we add a paragraph from the same source upon a correlative subject which may be useful to some of our readers:—

"An excellent opportunity of procuring casts of many of the finest statues of both ancient and modern times, is now offered at the Royal Museum of Berlin. What is known as the Old Museum in Berlin, contains among its collections many valuable original antiques in marble. For the collections of the new museum, on the other hand, casts have been taken from such works of the sculptor's art as are found in other galleries. The duplicates of several hundred different casts, of which the originals are sometimes in Berlin, and sometimes in other cities, are now offered for sale. Among the most important of these are the 'Horse Subducrs' (each more than 17 feet high), attributed to Phidias and Praxitcles, of which the originals are in Rome: and the group which is so celebrated in Naples,—the 'Farnesian Bull.' Catalogues have been prepared, containing a full description of each statue, with the place where the original may be found, and the size and price of the cast.

METROPOLITAN BUILDINGS ACT.

Messrs. Pownall, Donaldson, and Hesketh, as a deputation from the district surveyors, had an interview with Sir William Molesworth, in Whitehall-place, on Saturday, the 10th inst. They explained the incorrectness of the statements contained in the letter of the Secretary of the Board of Health to Lord Palmerston, and that no neglect on the part of the district surveyors had occurred in regard to noxious trades and businesses. In respect of cellar dwellings, they are, in fact, more a matter of police inspection and regulation, like the lodging-houses, which have been remedied so beneficially, and to so great an extent, by the vigilance and prompt proceedings of the force, and for which purpose the powers of that body are so efficient.

FALL OF A HOUSE AT ISLINGTON.

On the night of Sunday last, the 11th, part of a house, No. 2, in the Lower-road, Islington (a few doors from the Green), fell to the ground, and caused the death of no fewer than seven persons, including a policeman, Francis Stoker, who courageously attempted to aid the inmates. Although recently pointed and repaired externally so as to have a decent appearance, it was a very old house, and had been much cut about and altered internally, without the knowledge of probable results. The northern flank wall adjoined an old wall belonging to the next house, and on it a considerable weight had been thrown by the formation of a cartway through the house a few years ago. It is thought that this wall, originally too slight, had been weakened by alterations, and ultimately yielded.

An inquest was held on Wednesday, the 14th, and was adjourned to the 21st to obtain the evidence of a surveyor. It appeared in evidence that the house, consisting of eleven rooms, was occupied by thirty-six persons.

There are several other houses in the neighbourhood in a very bad state, and this disastrous occurrence will probably lessen the objection, which a conscientious district-surveyor must always feel, against interfering with the property of individuals on any but the most unequivocal evidence of danger.

BALL FOR BUILDERS' BENEVOLENT INSTITUTION.

In accordance with the notices we had previously given, the ball in aid of the funds of this important and excellent charity, took place at Willis's Rooms, St. James's, on Thursday, the 8th of February, and was attended by a large number of visitors, who made good use of the exciting strains of Adams's band. We must nevertheless say, that the leading builders and others connected with the trade, did not show in the numbers the committee had a right to expect, when we consider the object they have at heart. Still it was very well attended. The arrangements were all excellent and did great credit to the Honorary Secretary and those members of the Committee who assisted him. On another occasion we hope the above hint will not be lost on those who, from their position and circumstances, are able to give a higher character to the meeting.

Electro-telegraphic Progress.—Rome, it appears, will this month be placed in telegraphic communication with the principal cities of Europe, by the completion of the line from Rome to Bologna.

THE PROVINCIAL TOWNS.

THE PUBLIC HEALTH BILL.

I observe by your Parliamentary intelligence that Sir B. Hall, Bart. M.P. has introduced a new Public Health Bill, and also an amended Nuisance Removal Act. I had hoped that before the introduction of an amended Public Health Bill, a Parliamentary inquiry would have been instituted into the operations of the Act of 1848 in those towns where it has been adopted, also into the reasons for which those towns have not adopted it where a preliminary inquiry had been made by the inspectors of the Board of Health; in fact, into the general working of that measure and the Nuisance Removal Act. * * I think a Public Health Act should be of a more comprehensive character than that of 1848. It should not only include power for sanitary works, such as sewerage, paving, water and gas supply, abattoirs, &c. but should have general powers for the improvement of towns, the regulation of buildings, and the more effectual removal of nuisances of every kind.

It is of little use to apply the remedies casually alluded to above for the sanitary improvement of towns, unless stringent measures are adopted to improve the "Homes of the Poor." Many of these in our towns are in unhealthy situations, badly constructed, in a very dilapidated state; in fact, unfit for human habitations. These are the origin of our heavy bills of mortality, the seats of sickness, squalor, and death, and the roots at which legislation and philanthropy should strike to lessen their destructive and demoralising effect.

The state of the "Homes of the Poor" in London must be as familiar to the masses as household words, since the publication of those able papers, forming the "London Shadows." The startling facts and stern realities of human misery, drawn by so vigorous a hand, true to the life, and brought home to the heart, where a spark of feeling exists, must, I am sure, have had their due weight and import with our legislators and the high and noble of the land, and the residents of the largest and most opulent city in the world, by some called modern Babylon; but I must inform you, if you extend your researches, your useful sanitary mission, and your graphic pen, to the provinces, you will find in many localities shadows as murky and dark as those you have so faithfully and eloquently portrayed; habitations as wretched, human beings as squalid and miserable, sickness as proverbial, and deaths as premature and horrible as in your overgrown city; and the rising generation of Britons are gradually degenerating from the fine, manly frame, and stalwart proportions of our forefathers, from causes within the reach of human aid, human forethought, and high-born philanthropy. The working classes, although the bone and sinew of the country, are, unhappily, not sufficiently considered; and woe to Great Britain if she neglects her sons of toil: as the poet most feelingly and beautifully expresses it,—

> "Ill fares the land, to hastening ills a prey,
> When wealth accumulates, and men decay.
> Princes and lords may flourish or may fade,
> A breath can make them, as a breath has made;
> But a bold peasantry their country's pride,
> When once destroyed, can never be supplied."

One of the first measures in the sanitary improvement of towns is to see that your streets are laid out as spacious as possible, which has heretofore been so grievously neglected; that there are no *cul de sacs*, or where they exist I would throw them open, and compensate the owners out of the rates. This I should call municipal or parochial economy. I would also see that the homes of the poor are made healthy, that they are properly and substantially built, properly drained and supplied with water, and in open, airy situations. Cellar dwellings should be totally and irrevocably abolished. As to the improvement and widening of streets, &c. I think general powers are necessary, so that when houses are taken down for re-erection, they should be set back to improve the line of street, or removed entirely to improve any line of thoroughfare, by compensating the owners, as private interests ought in every instance to give way for the public benefit.

The arrangement, amount of compensation, &c. might be settled by a commission,—the Board of Health, for instance,—as in the case

of the Highland roads, Holyhead road commissions, &c. As to nuisances, I would take powers to remove with a vigorous hand all manufactories, of whatever character, that affected the public health. I think it will be admitted that no man has a right to plant his works in a town, for his private benefit, and poison the inhabitants, even if he be prepared to compensate them pecuniarily for the losses and misery he occasions. I would also remove slaughter-houses, piggeries, manure heaps, &c.; in fact, any matters or thing that would have an injurious tendency or effect on public health. B. B.

Notices of Books.

Views of the Crystal Palace and Park, from Drawings by eminent Artists: with literary Notices by M. D. WYATT. London: Day and Son.

WE have here twenty-four views, including a title-page, lithographed in tints, from drawings and photographs, and accompanied by brief descriptions from the graceful pen of Mr. Digby Wyatt. Two of the views, namely those of the Pompeian Court and the Italian Court, attempt to convey some idea of the polychromatic decorations employed: the remainder are in simple tints, and, without pretence to great excellence, serve as pleasant *souvenirs* for those who have visited Sydenham, and incitements for those who have not.

"The great end and aim of the Crystal Palace," says Mr. Wyatt, "are to cultivate the imaginative faculty in the workman himself,—to cause its value to be appreciated by the class of employers,—and to make a recognition of it indispensable on the part of purchasers, and of all who by their position and influence may be able to direct the current of popular feeling." By its means we may thus hope that a clearer recognition of beauty will gradually extend throughout the country, and elevate our manufactures to at least an equality, in point of design, with those of any other nation. We have laboured strenuously to make the real purpose of the Sydenham Palace apparent. Its value is not at present recognised by the general public, but it will gradually be felt, and will lead to important results.

VARIORUM.

Messrs. A. and C. Black, of Edinburgh, have published, as a separate treatise, the article by Mr. F. Dent, chronometer-maker to the Queen, in the "Encyclopædia Britannica," on clock and watch work. There is an appendix on the Dipleidoscope. The great clock for the Houses of Parliament, as Mr. Dent states in this treatise, had been going in his factory for some time when he was writing. It was, by the contract, to have been fixed by February last, but the tower was not ready for it. The dials are to be 22 feet in diameter, and will be the largest in the world with the minute hand. Every half minute the point of the minute-hand will move nearly seven inches. The clock will go eight and a half days, and strike only for seven and a half, so as to indicate by its silence any neglect in winding it up. The mere winding of each of the striking parts will probably take two hours. The pendulum is 15 feet long. The wheels are of cast-iron. The hour bell is 8 feet high, and above 9 feet in diameter, weighing 14 to 15 tons. The weight of the hammer is 4 cwt. The largest of the mere quarter bells is about the size of the great bell of St. Paul's, which weighs 5½ tons. The clock as a whole is said to be at least eight times as large as a full-sized cathedral clock. The main works will be on the top of the great frame, which is a trussed girder frame 19 inches deep (like the girders of the Crystal Palace), resting on two walls 11 feet apart, which come right up from the bottom of the tower.——An interesting sketch of "Cornwall; its Mines, Miners, and Scenery," in two parts, of Longmans' "Travellers' Library," by the author of "Our Coal-fields and our Coal-pits," has been recently issued; as also a part on "Voyages and Discoveries in the Arctic Regions," edited by Mr. F. Mayne.——"The Post Magazine Almanac and Insurance Directory," for 1855, published by Pateman, of Wine-office-court, Fleet-street, is useful to all interested in life and fire insurance,—and who are not? Assurance associations are vastly on the increase, and yet there is doubtless room for all, and for more, perhaps, than those even yet projected. During the last year no less than seventy-one of such associations have been set agoing. The almanac under notice contains a list of these, beginning with "The Alma," and ending with "The World." It also, of course, contains a list of those already established.——Part VI. of the "Micrographic Dictionary" has recently been published by Van Voorst, of Paternoster-row. As we have said before, this is a valuable publication, well illustrated with plates and woodcuts of curious microscopic objects.——Messrs. Longman have published a small volume on arithmetic, by Mr. A. J. Ellis, B.A. the purpose of which we must allow the title itself to describe. It is titled "Self-proving Examples in the four first Rules of Arithmetic, simple and compound, especially adapted for self-practice as well as school or family use, allowing the teacher to set innumerable examples simultaneously, and to verify the results at sight, without permitting the pupils to foresee, and, therefore, 'force the answer;' to which are added examples in contracted division, square and cube root as self-practice for advanced computors, with an explanation of Guy's and Horner's rules."——As results of the endeavour to obtain cheap reading for the multitude, no unimportant matter, Messrs. Routledge have sent us "The Curse of Gold," and "The Family Feud," both very readable tales, the commencement of a series of original novels; while from Houlston and Stoneman, we have Fanny Fern's "Ruth Hall," which, although wanting in refinement, and said to be unjust, is interesting as picturing the experiences of one struggling to maintain herself by her genius and her pen. It may not be known to all our readers, that the lady who has obtained herself a reputation under the name of Fanny Fern, is the sister of Mr. N. P. Willis.——"Mother and Son," the first of a series of tales, with a purpose, intended for children (J. H. Parker), is very well intended, but is so unpleasant that we should scarcely like to give it to a child.——Routledge's cheap issues of Sir E. Bulwer Lytton's novels and tales, is a boon to the reading multitude.——And we may note here, by the way, that the current "Blackwood" contains a very eloquent eulogy of Bulwer,—the first novelist of our time.——The handsome little volume titled "The Pocket Peerage of Great Britain and Ireland," by Mr. H. R. Forster, of the *Morning Post*, has just been issued by Bogue, of Fleet-street. This is its fifth anniversary. The whole work is virtually revised by the nobility themselves, and one painfully interesting portion of the present year's volume, and peculiar to this year's volume alone it is to be hoped, is the list of the many deaths of those gallant scions of our aristocracy who have fallen in a glorious cause in the Crimea and elsewhere in the East: this list is brought down to the latest possible date. The book contains, of course, a list of titles of courtesy, as well as of the ecclesiastical dignitaries, the Privy Council, the Baronetage of the United Kingdom, &c.——Mr. Tate, of Kneller Training College, is still engaged in his public labours as a teacher of the young: he has just had issued, by Messrs. Longman and Co. "An Elementary Course of Natural and Experimental Philosophy," in two volumes, with numerous illustrations. The selection of these, and of experimental detail's connected with them, appears to be, in many instances at least, particularly well calculated to attract the interest of those "beginners," for whose use the work is intended.——"Timbs's Year-Book of Facts" (Bogue, publisher), is now itself a well-established fact. It always forms one of the most interesting of the many volumes which pass through our hands in the course of the year, and hence we ever look forward with interest to its perennial recurrence, as a sort of focal or bird's-eye view of the progress made throughout the twelvemonth in all the various arts and sciences.

Miscellanea.

METROPOLITAN SEWERS COMMISSION.—On 6th inst. a special court was held to consider various motions, of which notice had been given. Deputy Harrison and Mr. Taylor were present as representatives of the City. Sir John Shelly moved, "That the whole question of the main drainage north of the Thames be not taken into consideration until the various plans recently proposed, or which may be, before the first Tuesday in April next, laid before the commission, for such drainage, be brought before the court, and due time for consideration on such plans be given." While speaking on the resolution, Sir John remarked that as a portion of the works of northern drainage—the Hackney-brook sewer—had been contracted for and executed, so far as that part was concerned it appeared that the court would be bound to follow out the plan of the preceding commission, or to sacrifice a portion of the works that had been executed; but certainly the impression left on his mind was not one of confidence in the late commission; and when he was appointed he was not prepared to pledge himself to anything that had been done by the former commission, and therefore it was that he had introduced this motion. Mr. Thwaites seconded the resolution, which was also supported by Mr. Offer, Mr. Ward, &c.; and opposed by Mr. Johnson, Deputy Harrison, and Mr. Taylor. Upon a division it was carried by eight to four. Propositions of Sir John Shelley were then agreed on, to the effect, that without the power of taking land beyond the limits of the commission, works essential to the main drainage of London cannot be completed by the commission eastwards.

TOWN SEWAGE.—At a recent meeting of the Central Farmers' Club, Mr. Mechi read a paper on the extent to which town sewage can be profitably applied to the purposes of agriculture. Considerable discussion was elicited, in which Mr. Edwin Chadwick and other gentlemen bore a part. In the end a resolution was agreed to,—"That the application of sewage manure might be rendered of great advantage to agriculture if it could be supplied at a cost sufficiently moderate to warrant its use." The adoption of this resolution, reports the *Morning Herald*, was followed by much laughter.

RAILWAY RETURNS.—The number of persons employed on railways open in England and Wales at the end of June, 1853, was 66,267; and in 1854, 74,562. The length of line open in 1853 was 5,747 miles; and in 1854, 5,965 miles. The number of persons employed upon the Scottish railways at the end of June, 1853, was 8,979, and the length of line open 977 miles; and in June, 1854, the number employed was 10,002, and the length of line open 994 miles. Upon the Irish railways the number of persons employed at the end of June, 1853, was 5,163, and the length of line open 786 miles; and in 1854 the number of persons employed was 5,845, and the mileage 843 miles. On railways not open, the persons employed for those of England and Wales at the end of June, 1853, numbered 24,883; and in June, 1854, 28,170: the total length of line authorised, but not open, was 2,969 miles in June, 1853; and in 1854, 3,235 miles. In Scotland there were 3,114 persons employed in June, 1853, and 5,685 in June, 1854: the total length of line authorised, but not open at end of June, 1853, was 662 miles, and 731 in 1854. In Ireland there were 9,767 persons employed in June, 1853, and 11,546 in June, 1854: the length of line authorised, but not open, at end of June, 1853, was 741 miles, and in June, 1854, 912 miles.

MOTIVE POWER BY ELECTRICITY.—Mr. G. E. Dering, of Lockley, Herts, has taken out a patent for obtaining motive power from electricity. The arrangement consists of a flat surface, composed of a series of electro magnets, on which is made to rock or roll, by their galvanic action, a cylinder which either itself constitutes a keeper or armature for all the magnets, or carries, or has suspended to it, a number of armatures corresponding with the electro-magnets. The object of this arrangement is, that by a succession of small pulls one long stroke may be obtained, and thus the full power of every magnet secured without the loss hitherto sustained in most arrangements for producing electro-motive power.

MACHINE FOR QUARRYING SLATE.—Mr. H. J. Brenner, of Nazareth, Pennsylvania (U.S.), has introduced a machine to supersede the process of cutting grooves in slate rock to a certain depth by the common pick, and then taking off the several layers of stratification to form roofing rectangular slates. The machine is worked by hand, and is so constructed that the cutters having worked a channel forward, it turns at right angles, and cuts a transverse groove: this operation being continued, cuts out the four perforations with great rapidity, and perfectly true. It is stated that one man can cut as much slate in a day by this means, as twelve men by the old pick system.

STATUES AT FLORENCE.—A number of gentlemen some years since formed the project of placing statues of the most celebrated men of Florence and Tuscany in the niches of the double portico of the Palace Uffizi, in accordance with the original plan of Giorgio Visari, approved of by the Grand Duke Cosmo de Medici. That project has now been carried into execution. After being vacant for about two centuries, all the niches, with the exception of two, have been provided with statues, and these two will soon be filled. Amongst the statues are those of Dante, Petrarch, Boccacio, Machiavelli, Guicciardini, Galileo, Leonardo da Vinci, Michaelangelo Buonarotti, Benvenuto Cellini, Amerigo Vespucci the navigator, Cosmo and Laurent de Medici, and Ferruccio the last general of the republic. The statues have been executed by the most eminent sculptors of Tuscany.

LIMITED LIABILITY IN PARTNERSHIP.—A meeting of the Amendment of the Law Society was held on Monday evening before last at their rooms, 21, Regent-street; Lord Brougham in the chair. Mr. D. Power opened the proceedings by discussing at some length the question of limited liability in partnership. He concluded by moving a series of resolutions for carrying out that object, as recommended by the committee. Mr. Hill seconded the resolutions. He considered that such an alteration as would admit of the formation of partnerships upon the *commandite* principle would be a great improvement. Mr. Elliot objected to any alteration in the existing law on the subject of liability, as endangering the security of mercantile operations, and increasing to a very great extent the amount of fraud in commercial affairs. The Chairman, Mr. Commissioner Fane, Mr. Field, Mr. Serjeant Manning, Mr Webster, and other gentlemen took part in the discussion, which was adjourned until next meeting. In reference to this important subject we may add that, in reply to a question put in the House of Commons last week by Mr. Collier, Mr. Cardwell stated, on the part of the Board of Trade, that it was his intention to bring in a Bill on the law of partnership, on the principle of limited liability, but that he could not say to a certainty when.

MODEL LODGING-HOUSES AT CAMBRIDGE:—"VICAR'S BUILDINGS."—A ricketty and filthy mass of building, called Sharpe's Rookery, at the Falcon-yard, leading from Petty-cury, under three archways, into the Black-ditch, in the parish of St. Andrew the Great, has been razed by the Rev. John Cooper, the vicar of the parish, who has made a public carriage-way in lieu of a narrow, low, covered passage, and erected a model lodging-house for sixteen families, under the title of "Vicar's-buildings," from designs by Mr. R. R. Rowe, architect. Messrs. Gray and Sons were the builders. The exterior is brick, but moulded in various forms of divers colours: no particular style of architecture has been adopted: it is a brick construction, the chief feature being a combination of semicircular arches and vertical lines, which the *Cambridge Chronicle* compares to the old houses in Bruges. Two open arches lead into the entrance-halls, whence two stone staircases rise to the upper floors: one staircase leads to four suites of apartments, the other to twelve. Each door upon the landings is the front door of a distinct dwelling, consisting of a sitting-room, two bed-rooms, scullery, water-closet, sink, coal-place, cupboard, and a dust-shoot.

MASONS' PROVIDENT INSTITUTION.—The ninth annual meeting was held at Hawkstone Hall, on Thursday, February 1, for the purpose of receiving the report of the managing committee and auditors; and for the election of a widow pensioner upon the funds; and other business connected with the institution. Mr. C. H. Smith took the chair, and a satisfactory statement was made.

RED BRICKS OF QUEEN ANNE'S REIGN.—In reply to the inquiry of "Unburnt Stock," in your journal of the 20th ult. as to where the red-brick rubbers of the buildings in London in the time of Queen Anne and George I. came from, I beg to say that I expect some of them came from Nonesuch, near Ewell, Surrey, and from Hedgerly, near Windsor. At these places (previously, at least, to the introduction of the Welsh and Stourbridge fire-bricks) there used to be made kiln-burnt red bricks called Windsor fire-bricks and Nonesuch fire-bricks, of a uniform quality, easily ground or rubbed to any required shape; and although the same brick, which might well stand the fire as these did, might not so well bear exposure to the weather as good red rubbers evidently did, yet the similarity of appearance between the two was so great, that I incline to think the same clay produced and was used in both. A reply to the second question, "of what kind of clay they were made, I am not able to answer, except that I expect it was a marly loam with sand, and *not* containing any chalk or carbonate of lime.—RED RUBBER.

THE LIVERPOOL, HULL, AND STOCKTON TIMBER TRADES.—Mr. Chaloner, of Liverpool, in his usual annual circular, issued at the end of January of each year, says that though a more general and more vigorous prosecution of the war would likely tend temporarily to advance prices in the natural course of business, timber can hardly be expected to recover the high value at which it lately ruled. Within a few days past, he adds, the subject of a new duty on wood has been spoken of; which measure would, if carried out, certainly affect the prices of wood goods. The following table, given in this circular, contrasts the tonnage employed in the trade this year with the previous one:—

	From 1854 to 1855.		From 1853 to 1854.	
	Vessels.	Tons.	Vessels.	Tons.
Quebec	163	131,300	156	125,874
St. John, &c.	258	181,676	342	211,760
Baltic	71	20,103	129	40,545
	492	333,079	629	378,179

A report is prevalent in Hull also that an increase of timber duties is contemplated. Acting upon this idea, whether well-founded or not, a pretty considerable liberation of timber from bond it appears is just now taking place in Hull. This town is largely interested in the matter, and the activity just now prevalent is taken to be indicative that, somehow or other, an inkling of the intentions of the Government has been obtained. In 1854, 142 timber ships, of nearly 24,000 tons register, brought upwards of 30,000 loads of timber into the port of Stockton-upon-Tees.

THE MANCHESTER AND SALFORD SANITARY ASSOCIATION.—The wise and profound advice emblazoned on the gates of ancient heathen temples, "Know yourself,"—make yourself acquainted with the true temple, of which those built with hands are but the types or similitudes,—is being practically followed out by this very useful and active association, at least in all that regards the sanitary welfare of the human body. The nature of the proceedings of the association may be gathered from the following few particulars as to what has been done within the last week or two. The lectures given are adapted to the audiences attracted by them. On Thursday evening week Mr. J. S. Fletcher, M.R.C.S. gave a lecture in St. Jude's school-room, Canal-street, Ancoats, on "Long life and how to attain it." The room was quite filled, the attendance at this, as well as at two preceding lectures of the present course, having very considerably exceeded the general attendance of last season. The lecture was frequently interrupted by applause from the audience. In the Deansgate district a lecture was delivered in St. Ann's school, Queen-street, on the Friday evening, by Mr. W. Smith, M.R.C.S. on "What is health? and how to keep it." The Rev. lecturer pointed out, in unmistakeable language, how health may be preserved,—viz. by a proper attention to the character and use of food, clothing, exercise, and cleanliness. The lecturer was listened to with the most marked attention, and at the close the audience evinced their gratification in the warmest manner. In the Ardwick and London-road district, on the following Tuesday night, a lecture was delivered in St. Thomas's church school, to a numerous and respectable audience of both sexes, by Mr. T. Turner, F.R.C.S., "On the instinct of the love of life." The lecturer was very frequently applauded, and was listened to with marked attention. On the Thursday night following a lecture, under the auspices of the same association, was delivered by Mr. H. Browne, M.D. in the room of the Young Men's Christian Association, John Dalton-street, "On preventible diseases." The attendance on the occasion was large, the room being very nearly filled by a most attentive audience.

YOU ARE A BRICK.—A certain college Professor in America had assembled his class at the commencement of the term, and was reading over the list of names to see that all were present. It chanced that one of the number was unknown to the Professor, having just entered the class. "What is your name, sir?" asked the Professor, looking through his spectacles. "You are a Brick," was the startling reply. "Sir," said the Professor, half starting out of his chair at the supposed impertinence, but not quite sure that he had understood him correctly, "Sir, I did not exactly understand your answer." "You are a Brick," was again the composed reply. "This is intolerable!" said the Professor, his face reddening. "Beware, young man, how you attempt to insult me." "Insult you!" said the student, in turn astonished: "how have I done it?" "Did you not say I was a brick?" returned the Professor, with stifled indignation. "No, sir: you asked my name, and I answered your question. My name is U. R. A. Brick—Uriah Reynolds Anderson Brick." "Ah, indeed!" murmured the Professor, sinking back into his seat in confusion. "It was a misconception on my part. Will you commence the lesson, Mr.—ahem!—Mr. Brick?" Mr U. R. A. Brick is surely brother to the celebrated I. M. A. Brick.

SOFTLY! WALK SOFTLY!—Among the new inventions of the day are air soles for shoes and boots, which are said to render walking on rough roads as easy as if on moss. They are doubtless made on the air-cushion principle, by help of india-rubber, and as the substance of the sole itself may consist of vulcanized rubber, they may even be made at least as lasting, or as capable of withstanding the tear and wear of rough roads, as the india-rubber golloshes are. The utility of such a happy little invention in the sick chamber is still more obvious. As no good is unmixed with evil, however, just as no evil is unmixed with good, it is to be feared it will add the stealthy noiselessness of the cat to the cunning dodges of the burglar and the thief. The use of "air soles," one would expect, will give a fine elastic spring to the gait, which, in walking, will remind the old, rather pleasantly one would think, of the jaunty *airs* of their youth. To walk upon air is indeed a new thing under the sun.

INVALID'S BED, &c.—A philanthropic gentleman, Mr. H. Lawson, of Bath, has invented and presented to the hospitals there and elsewhere a very ingenious and useful iron framework, with lifting apparatus and other conveniences, suitable to the easy attendance on patients with paralysis or fractured limbs. Another of his inventions connected with this is a surgical "transferrer," whereby the most severely wounded person, or other pained or endangered patient can be transferred from one bed to another, or one place to another, with the least possible risk of injury or increase of pain. The girths are separately drawn through beneath the patient by hooking with a flat needle, and the whole are threaded on poles and fixed without moving the patient in the least, till he is actually laid, as it were, comfortably, on the "transferrer," which is removable from below him in a similar way. Mr. Lawson is desirous of giving publicity to these inventions for the sake of suffering humanity alone, as he has presented them to the public, and supplied them to various hospitals.

MIASMA.—A writer in the *Scientific American* of the 13th of last month states that when the hair used in mixing mortar is not properly cleansed of the animal matter that adheres to it, a fetid miasma is generated, and a house built with such mortar is consequently unhealthy. I have experienced that a room freshly papered, and for some time after, had a most disagreeable and sickly smell, from the size or animal matter used in paperhanging. I have also observed that old worsted carpets emit a mouldy effluvium, as also the decaying boards under them,—thus producing a mixed miasma of decaying animal and vegetable matter. The rooms *below* the level of the earth, where servants sleep, are damp and mouldy; consequently, the servants first catch colds and fevers, and, from them, their masters and all the household. It is very desirable to construct houses so that the servants' apartments are not *under* the level of the earth.—J. N.

TENDERS

Tenders for finishing the Wesleyan Schools, New North-road, Hoxton. Messrs. Bridger and Collins, architects:—

Hocken	1,165
Reider	1,140
Crossby	1,090
Scarborough	1,050
Case	1,045

Tenders for St. Stephen's Parsonage-House, Westbourne-park, Paddington. Messrs. E. and H. Francis, architects:—

	Estimate with Malm Facing.			With Kentish rag and Bath-stone quoins.		
	£.	s.	d.	£.	s.	d.
Messrs. J. & C. Thanson	1,600	0	0	1,640	0	0

TO CORRESPONDENTS.

"*Pro Rata.*"—"Eccleston-square" (in the case of smoky chimneys, each instance requires to be judged of separately—general advice would be useless. A supply of air at the bottom often remedies a down-draught)—"H. W." (when a builder is individually *invited* to tender, without reservation, it is always understood, that if lowest his tender will be accepted. As to power of recovery we are not in position to advise)—"T. L."—"R. A."—"G. and T."—"P. N."—"T. R."—"R. S. M."—"T. M." (we cannot interfere in private disputes)—"J. A. P."—"F. W."—"Constant Subscriber" (we do not supply prices)—"A Subscriber from the first."—"A. R."—"J. L."—"J. L. P."—"J. G."—"J. G. K." (we shall be glad to hear)—"N. O." (take up a pocket compass)—"W. G."—"J. H."—"J. C."—"A. S."—"W. J. F."—"E. J. L."—"Constant Reader" (apply to a proper person, who will arrange the ventilation to suit the particular circumstances)—"J. H."—"Mr. C." (take up the floor, and introduce sound-boarding and pugging.—"Marlborough-house student" (shall appear).—"A. P. H."

NOTICE.—All communications respecting *advertisements* should be addressed to the "Publisher," and not to the "Editor:" all other communications should be addressed to the EDITOR, and not to the Publisher.

ADVERTISEMENTS.

BRINDLEY'S STEAM SLATE-WORKS, Bermondsey-wall, Deckhead.—WANTED, at the above works, a PERSON proficient in MARBLING on SLATE; one who can also ornament and inlay would be preferred. Apply on WEDNESDAY, 21st inst. between ELEVEN and ONE o'clock. The advertiser would be glad to see specimens, which the candidates will please bring with them, together with any testimonials they may have.

CLERK of WORKS.—WANTED, by the Burial Board for the Borough of Wigan, a thoroughly experienced and practical Man, to superintend the erection of the several buildings, boundary walls, drainings, excavations, roadmaking, &c., for the Way in Cemetery. Full particulars, with testimonials, stating salary and where last engaged, to be sent to the undersigned, on or before WEDNESDAY, the 21st day of FEBRUARY instant.
JOHN S. MARSHALL, Clerk to the said Burial Board.
Wigan, February 13th, 1855.

ORDNANCE WORKS.—To DRAUGHTSMEN REQUIRED, an experienced ARCHITECTURAL DRAUGHTSMAN, for three months; salary, 5s. per week.—Apply to Captain COLLINS, R.E., Royal Arsenal, Woolwich. Royal Engineer Office, Woolwich, Feb. 2, 1855.

TO PARENTS AND GUARDIANS.

WANTED, by a celebrated Historical Engraver, an industrious, per-evening youth, as OUT-DOOR PUPIL, who has a decided taste for drawing, and is desirous of accomplishing the art of engraving, will find this an excellent opportunity. Apply to F. B. 52, St. John's-wood-road. The usual premium required.

TO ARCHITECTURAL ASSISTANTS.

WANTED, for a short time, and immediately, ASSISTANCE. None need apply who is not thoroughly able to make and tint perspective drawings.—Apply, stating terms, &c. to Mr S. HEMMING, Architect, Birmingham.

WANTED, in a Builder's Office, a Person thoroughly competent to the general routine. He must have considerable experience in measuring, estimating, and superintending works, with some knowledge of drawing. Address, by letter only, to A. Z. stating age, last employment, and salary required, at Messrs. Farmiloe's, 12, Rochester-row, Westminster.

TO PARENTS AND GUARDIANS.

WANTED, by an Architect and Surveyor, of good practice in the City, a well-educated Youth as PUPIL, who has a taste for drawing, and is desirous of entering the profession.—Address by letter, post paid, to M. A. W. at Mr. Greenaway's, Hatter, 38, Bishopsgate-street, City.

TO SURVEYORS AND DRAUGHTSMEN.

WANTED, one who has a good knowledge of surveying and levelling, and is a neat hand at planning. None need apply but those who can furnish good references, which are required to be inclosed with communications addressed to A. M. Post-office, Leeds, stating age, salary, qualifications, &c. Parties who are thought eligible, will be communicated with.

TO MARBLE MASONS.

WANTED, an active FOREMAN, to take the MANAGEMENT of extensive MARBLE WORKS at Carlisle.—Apply to THOS and JAS. NELSON, Carlisle.

TO GAS AND WATER COMPANIES.

WANTED, an ENGAGEMENT as SUPERINTENDENT or MANAGER by a gentleman, who is thoroughly conversant with the management of gas or water works, is a practical engineer, and has had considerable experience in the construction of both gas and water works. Aged 34. No objection to go abroad. Address, J. C. J. Water Works' Office, Norwich.

WANTED, an ENGAGEMENT, as CLERK in a BUILDER'S OFFICE, by a Young Man, who is thoroughly acquainted with the trade; is a good draughtsman and quick at accounts.—Direct, A. B 10, Manchester Cottages, Isle of Dogs.

TO BUILDERS.

WANTED, by an experienced BUILDERS' CLERK, a RE-ENGAGEMENT. Is competent to fill the situation in all its branches, having a thorough knowledge of the trade, and being a good accountant and book-keeper. Salary moderate. Address, ZETA, Office of "The Builder."

TO BUILDERS AND MASTER PAINTERS.

WANTED, a SITUATION as FOREMAN, by an experienced Man, having filled similar situations for the last fifteen years. Can have good references as to ability, &c. Direct, prepaid, to X. Y. Z. No. 4, Shaddy-place, Bell-alley, London-wall, City.

TO ENGINEERS, CONTRACTORS, &c.

WANTED, by the Advertiser, a SITUATION as FOREMAN or SUPERINTENDENT, having had the management of extensive railroad and waterworks. Can take out quantities, measure up works, estimate, make working drawings, and has a thorough practical knowledge of the use of the level. Good reference given.—Address, OMICRON, Post-office, Bury, Lancashire.

WANTED, as FOREMAN, a STONEWARE POTTER, who has been accustomed to the manufacture of tiles and drain pipes and to kiln-work. Apply personally, between Five and Seven in the Evening, or by letter, to Mr. JOHN HUNTSMAN, 378, Oxford street, London.

WANTED, as Foreman of Carpenters and Joiners, a thorough Practical Man as GENERAL FOREMAN, about 35 years of age, who has been accustomed to superintend both in and out-door work. Constant employment will be given.—Apply by letter, stating age, salary required, and where last employed, to W. D. Office of "The Builder."

WANTED, a SITUATION, by a Young Man, as HOUSE PAINTER. Writing and Graining if required. Good references given.—Address, H. E. No. 22, Chapel-place, Dover, Kent.

TO BUILDERS AND TIMBER MERCHANTS.

WANTED, by the Advertiser, age 25, acquainted with the routine of a Builder's Office (and who will be at liberty on 17th instant), an ENGAGEMENT as TIME or BOOK-KEEPER (confidential), in town or country. Salary 35s. per week.—Address, A. D. M. at Mr. Poole's, Carpenter, 27, Sidmouth-street, Gray's-inn road.

WANTED to place out an active, well-educated YOUTH, as IN-DOOR APPRENTICE to a Carpenter and Joiner, or Cabinetmaker. A moderate premium will be given. Apply by letter (post-paid), to P. J. 16, Cumberland-market, Regent's-park.

TO BUILDERS AND PLUMBERS.

WANTED, by a steady Young Man, a SITUATION as Plumber, Painter, and Glazier, &c. Good reference.—Address, A. B. No. 7, Westminster-bridge-road.

TO ARCHITECTS.

AN experienced DRAUGHTSMAN is open to an ENGAGEMENT, as an Assistant in an Architect's Office.—Address, A. B. 39, Michael's-place, Brompton.

WATERLOW and SONS, MANUFACTURING and EXPORT STATIONERS,
65 to 68, LONDON-WALL, AND 49, PARLIAMENT-STREET, LONDON.
MILL AGENTS FOR WHATMAN'S DRAWING PAPERS.

TO ENGINEERS, ARCHITECTS, SURVEYORS, &c.

AN Architectural and Mechanical Draughtsman, who also understands surveying and levelling, is OPEN to an ENGAGEMENT. Speaks French, and can produce satisfactory testimonials. Only a moderate salary required. Address, C. D. 7, Pool Valley, Brighton.

TO ARCHITECTS.

A YOUNG GENTLEMAN, now with an Architect, wishes to obtain a SITUATION in an Office where he may meet with increased practice, and opportunities for improvement. Salary at first 15s. per week.—Address, ALPHA, 7, Great College-street, Westminster.

TO LANDOWNERS, SURVEYORS, AND OTHERS.

A YOUNG MAN, who is a good draughtsman and accountant, thoroughly acquainted with land-measuring, levelling, setting out plans for and superintending the erection of farm and other buildings, and who has been accustomed to collect and disburse moneys, is open to a RE-ENGAGEMENT. Salary moderate. Six years' reference to his present employer.—Address, H. S. Bodmin, Cornwall.

TO ARCHITECTS.

A PROFESSIONAL Gentleman offers his services in PREPARING and COLOURING PERSPECTIVES, in a superior style, on reasonable terms. Country architects attended to by forwarding tracings.—Address, X. X. North Lodge, Clement's-inn, Strand.

A LAND SURVEYOR, of more than twenty years' experience, is desirous of meeting with EMPLOYMENT. He has been accustomed to valuations, timber measuring, &c. and could take that department in an office, or at his own residence.—Address, A. B. Post-office, Charles-street, Brompton.

TO ARCHITECTS AND SURVEYORS.

A RESPECTABLE Young Man, in his 22nd year, having just completed his articles with an architect and surveyor in the country, wishes a similar ENGAGEMENT in London. Respectable references can be given. Salary not so much an object as improvement.—Address, No. 20, Messrs. COOPER and CO. Union-street, Birmingham.

TO BUILDERS AND HOUSE DECORATORS

A RESPECTABLE Young Man, a Painter and Glazier, who perfectly understands distemper ing, and has a good knowledge of writing and marbling, and will produce specimens, wishes to obtain a constant SITUATION. Wages not so much an object as a permanency. No objection to the country.—Address, A. B. 14, Mr. Bannister's, Dyer, &c. 9, Union-street, Borough-road, London.

A LAND SURVEYOR and LEVELLER, accustomed to staking out, calculating earthwork, &c. and who is also a neat draughtsman, desires an ENGAGEMENT. Good references and testimonials. Address SURVEYOR, care of Mr. Woodley, 20, Pure-street, City.

TO PLUMBERS, &c.

A SITUATION is WANTED, by a Young Man, a good Plumber, who can fill up his time at Painting and Glazing, if required. Town or country. Good reference given.—Address O. S. Plumber, &c. Office of "The Builder."

TO ARCHITECTS, CIVIL ENGINEERS AND OTHERS.

A YOUNG MAN (well educated) desires a RE-ENGAGEMENT. He is a good architectural draughtsman, a ready accountant, can map, plan, and take out quantities, and is thoroughly acquainted with book-keeping and the principles of levelling and surveying. Salary, 25s. per week.—Address A. G. Messrs. Houlston's Library, Old Bond-street.

TO BUILDERS.

A PERSON in the locality of Islington wishes to arrange with a Builder for occasionally taking out Quantities, preparing Estimates, measuring up Work, &c. on commission or otherwise. Strict privacy as to prime costs, &c. may be relied upon.—Address, A. B. Mr. Chapell's, 19, Trinidad-place, Liverpool-road, Islington.

TO ARCHITECTS AND SURVEYORS.

OCCASIONAL ASSISTANCE.—A qualified ASSISTANT, of eleven years' experience, is desirous of affording temporary assistance to the Profession, at their offices or his own residence. Address, A. B. Kettle's Newspaper Office, Little Queen-street, Holborn.

TO BUILDERS AND OTHERS.

EMPLOYMENT WANTED, by a steady, active person (aged 50), either as Foreman, Clerk of Works, or in any position where confidence and experience are required.—Apply, 59, Stanhope-street, Hampstead-road.

TO ARCHITECTS.

THE Advertiser is desirous of meeting with a RE-ENGAGEMENT about the early part of March, as he completes his present engagement the end of February; he is a good draughtsman, and thoroughly understands construction, and superintending building operations. Unexceptionable references can be given. Salary moderate.—Address, free, to H. M. Post-office, Witham.

TIMEKEEPER, CLERK of WORKS, &c.—WANTED, by a Young Man who has been articled to an architect, and since been engaged as Timekeeper, Clerk of Works, and Draughtsman to a builder, a SITUATION in either of the above capacities, or in an Architect's office. Satisfactory references can be given.—Address, F. G. H. care of Mr. Hall, Auctioneer, 36, Chester-street, Kennington.

TO ARCHITECTS.

THE Advertiser, a neat Draughtsman, acquainted with building generally, and competent to make working, finished, and perspective drawings, having also a knowledge of colouring, is OPEN to an ENGAGEMENT. Salary moderate.—Address, G. H. Office of "The Builder."

TO ARCHITECTS, SURVEYORS &c.

THE Advertiser, aged 19, the son of a Builder, who has had four years' practical experience, partly in an architect's office, is in want of a SITUATION. Salary, 25s. per week.—Address, W. G. 4, Edward-street, Woolwich.

THE Advertiser, who is a good Plain and Ornamental DRAUGHTSMAN and COLOURIST, understands perspective, &c. is desirous of an ENGAGEMENT, either in an Office, or as Clerk of Works. He has been accustomed to draw up specifications, &c. and to superintend buildings. Address A. J. C. 7, Upper Park-street, Greenwich.

WANTED, a PARTNER, with 2,000*l.* or 3,000*l.* to assist in enlarging an established and profitable business in a large and respectable country town.—References exchanged upon application, by letter only, addressed D. E. 19, Acacia-road, St. John's wood, London.

TO BUILDERS, CARPENTERS, JOINERS, AND ROLLING BOARD MANUFACTURERS.

TO BE DISPOSED OF by PRIVATE CONTRACT, a very compact BUILDING ESTABLISHMENT, with Stock, Tools, and Implements of Business, all in good working condition, situate in Trinity-street, Huddersfield, Yorkshire; an excellent situation for the business, and replete with every convenience necessary. The premises comprise a convenient residence, office, saw-mill, three stories high, and is fully occupied in the rolling-board and packing-case manufactory. Nos. 1 and 2, joiner's shop on the ground floor, well fitted up with steam pipes and lighted with gas; also a saw-pit, shed, and stabling. The machinery includes a 4-horse high-pressure steam-engine, and 8-horse boiler; two saw-tables, with shafting and gearing. The premises have been built and occupied for the last twenty-five years by the present occupier, who is wishful to dispose of it in order to carry on another business. Application to be made to Mr JOHN KIRK, Architect, John William-street, Huddersfield.

TO GAS COMPANIES, GASHOLDER MAKERS, CONTRACTORS, and OTHERS. TO BE DISPOSED OF, by the Commercial Gas Company, London, SURPLUS GAS MACHINERY, consisting of Iron Gasholder Tanks, Gasholders (single and Telescopic), Condensers of various powers, Station Meter, Governor, Hydraulic Mains, Ascension and Dip Pipes, with various connections. Particulars of the above may be obtained on application to Mr. ROBERT JONES, the Company's Engineer, at the Company's Offices, Stepney, between the hours of TEN and FOUR. Tenders for the above, or any portion thereof, will be received not later than THURSDAY, the 1st MARCH next. The Company is not bound to accept any Tender. Tenders to be addressed to the Secretary, and endorsed "Tender for Gas Machinery."—By order of the Board,
GEORGE JAQUES, Secretary.
Stepney, 6th February, 1855.

A PLUMBING, PAINTING, and GLAZING BUSINESS to BE DISPOSED OF, in a densely-populated seaport town, well adapted for a young man wishing to commence business, and possessing limited capital. Full particulars can be had by applying to W. PATTEN, Lead Merchant, Old Fish-street, London.

TO BE DISPOSED OF, in consequence of the illness of the proprietor, a good BUSINESS, with connection through out the manufacturing and coal district of South Wales. Having the sale of exclusive supplies of patent articles in good and increasing demand. A slight knowledge of engineering, although not indispensable, would be advantageous. For particulars, apply by letter, addressed to P. Q. Post-office, Swansea.

TO ARCHITECTS AND SURVEYORS.

TO be DISPOSED OF, upon moderate terms, a small but increasing PRACTICE, in a rising and beautiful watering place.—For further particulars, address, S. S. Office of "The Builder."

NOTICE of REMOVAL.—WILLIAM HILL, Builder and Engineer (Manufacturer of Hot-water Apparatus), late of Greenwich, to STRATHAM-HILL, where communications are respectfully requested to be addressed. Stratham-hill, London, January 8, 1855.

ARCHITECTURAL and CIVIL ENGINEERING CLASSES, OPENED, for the instruction of pupils, at one guinea per quarter, which includes drawing materials, instruments, colours, paper, drawing-boards, T squares, &c. Instruction in architectural and civil engineering, drawing and colouring, making finished and working drawings, preparing specifications, taking out quantities, estimating, &c. &c.—For prospectuses, apply to Messrs. HYDE, SMYTH, and LEWIS, Civil Engineers, Architects, Surveyors, &c. 24, Guildford-street, Russell square.

SWISS DRAWING INSTRUMENTS, equal in quality to the very best London-made instruments, and considerably cheaper.—Apply to Mr. S. BARLOW, 2, Thavies-inn, Holborn (between 1 and 2 p.m.), or to Mr. H. B. BARLOW, Office for Patents, Ducie-place, Exchange, Manchester.

MATHEMATICAL DRAWING INSTRUMENTS.—JOHN ARCHBUTT, 20, Westminster-Bridge-road, Lambeth (near Astley's Theatre), begs to call attention to his Stock of Instruments manufactured by superior workmen. The prices will be found considerably lower than ever charged for articles of similar quality and workmanship. Rules, scales, tapes, &c. at equally low prices. A detailed price-list will be immediately forwarded, free, on application.

WHITE OXIDE OF ZINC AND ZINC PAINT.
(LANGSTON SCOTT'S PATENT.)

CROWLEY, WHITE, AND CROWLEY, *Sole Manufacturers.*

This healthful substitute for White Lead, of unrivalled colour and texture, may be obtained from most of the principal Paint Grinders, Oil and Colourmen, and Ship Chandlers in the United Kingdom, or direct from the Works, Grand Surrey Docks (Wheatsale under Brand), either in the dry state or ground in Oil.

Zinc Paint, being unchangeable in colour, stands pre-eminent for the highest purposes of Art; and from its perfectly pure and innocuous qualities, is peculiarly applicable to fine-class Decorations and House Painting. For Iron it possesses great affinity, and hence its preservative properties for that Metal, whether employed for Marine or other purposes. It is now ground in Colours, and may be successfully employed on Stucco, or any other outside work for which White Lead is used; it sets harder, is consequently more durable, economical in first cost, and covers equal to any known pigment.

PRICE LIST AND TESTIMONIALS FORWARDED IN ANSWER TO LETTERS ADDRESSED TO

MESSRS. CROWLEY, WHITE, AND CROWLEY, 39, KING WILLIAM-STREET, CITY, LONDON.

HUBBUCK'S PATENT WHITE ZINC PAINT,
The Permanent White of the Ancient Artist.

HUBBUCK and SON, the Original Manufacturers of White Zinc Paint on a large scale in this country, are enabled, by a process, which is patented, to supply their Pure White Zinc Paint at the price of White Lead. Those direful maladies, paralysis and painters' colic, will be entirely avoided. It is entirely free from any poisonous or pernicious property. Neither exposure to heat, nor tropical climates act upon it. The Powdered White Zinc may be had for grinding in oil; also for Plaster Decorations, and where it is used with Size, Varnish, &c. To be had of the Wholesale Paint-dealers in Original Packages, each cask stamped HUBBUCK LONDON—PATENT. And if not so marked, the quality is not guaranteed. Full particulars may be had of THOMAS HUBBUCK and SON, the Original Wholesale Manufacturers in this country. Paint and Varnish Works, Upper East Smithfield, opposite the London Docks.

THE VIEILLE MONTAGNE ZINC MINING COMPANY'S PURE PATENT WHITE ZINC PAINT is unequalled for permanency of colour, hardness, and brilliancy of surface; it is unaffected by sulphureous or any other vapours in towns. Being completely innocuous and free from the pernicious effects of white lead, it may be employed in all apartments whilst in use without any inconvenience to the inmates.

The greatest caution is recommended to avoid any spurious compounds that might be sold at cheap prices as Pure Oxide of Zinc. If any adulteration has taken place in the oxide, either in consequence of impurity in the material primarily in use, or to produce it, an imperfect production, or by mixing with the oxide certain substances calculated to give it increased weight, it then produces a very inferior instead of a very superior paint, and the result entailed by the purchaser of such articles becomes a very expensive result to the owner of the premises painted with them.

The VIEILLE MONTAGNE'S ZINC OXIDES, dry or ground in oil, are sold with the VM mark—in Hull by Messrs. BLUNDELL, SPENCE, and Co.; when ground and dry, by Messrs. T. B. MORLEY and Co. sole Consignees and Grinding Agents, in London, Messrs. CHARLES DEVAUX and CO. Wholesale Agents, 63, King William-street City. FREDERICK BRABY, Wholesale and Retail Agent, 8, Tottenham court, New road. In Manchester and Liverpool by Messrs. LAWFORD and Co. of 49, Norfolk-street, Liverpool, who are also acknowledged Painters to the Company for Zinc Paints, and undertake painting shire, warehouses, dwelling-houses, &c. In Leith, by Messrs. R. ANDERSON and CO. Timber-bush. Dry OXIDES and PAINTS, in kegs of 14, 21, and 28 lbs. and upwards, to be had of the Company's Agents in Birmingham, Newcastle, Glasgow, Bristol, Plymouth, Portsmouth, Norwich, Ipswich, Poole, and the Isle of Jersey, Guernsey, Man, and Wight; also in Dublin, Cork, and Belfast.

The Company also employ an acknowledged Painter in London, who will undertake any description of painting with Zinc Paint by contract.

For further particulars, apply to the Company's General Agent in London, Mr. SCHMOLL, 13, Manchester-buildings, Westminster.

PORTLAND CEMENT.—ASPDIN'S PATENT.

Messrs. ASPDIN, ORD, and CO. have much pleasure in informing consumers of this valuable Cement, that they have, by means of a recent discovery (patented by Mr. ASPDIN), much improved the quality of this Cement without any increase in price.

Engineers and architects are recommended to specify "Aspdin's Patent," as there are numerous imitations sold as Portland Cements resembling it only in colour.

ASPDIN, ORD, and CO. beg to call attention to their SECOND QUALITY, which is equal, if not superior, to most of the Cements sold as Portland, and is considerably cheaper.

A report of experiments made to prove the extraordinary strength of their Patent Portland Cement, may be had at their Office, New Wharf, Abingdon-street, Westminster; at their Works, Gateshead-on-Tyne; at their Wharfs, Rotherhithe-street, Blackfriars, Kingsland Basin, and Limehouse; or from their Agent, Mr. HENRY ROBINSON, 31, King-street, Liverpool.

PORTLAND CEMENT.—JAMES WESTON having enlarged that portion of his CEMENT WORKS on Mill wall, Poplar, for Manufacturing the above CEMENT, begs to inform the Trade in general that they can be supplied with any quantity they may require, either at his Works, St. Andrew's Wharf, Earl street, Blackfriars, or Middle Wharf, Scotland yard, Westminster. Manufacturer of Roman, Lias, and Mastic Cements, English and French Plaster, &c.

6, South Wharf, Paddington.

PORTLAND CEMENT.—CHARLES RICHARDSON has the greatest confidence in introducing to the Trade the above superior CEMENT, being of uniform colour and quality, a desideratum never before attained in Portland Cements. It possesses extraordinary cementitious qualities, resists the action of fresh and salt water, and is more durable than any other Cement; does not vegetate, burn green, or crack combined with white, possessing hydraulic properties stamp it at once as the first Cement of the day for work where all the above qualities are requisite. It is manufactured on the only principle Portland Cement can be, and contrary to the statements put forth by those who have hitherto had the purchasers in—Manufactured by R. GRAVES, Esq. at his Works, near the River Avon, and sent to all parts of the kingdom per boat or rail, at a reduced price to the trade.

PORTLAND CEMENT.—FULLWOOD THOMPSON and CO. beg to request the attention of Contractors, Merchants, and others, to the Quality of their Roman, Portland, and Bath Cement, which they are manufacturing at their works situate on the Bristol and Exeter Railway, five miles north of Bridgewater, and adjoining the Dunball Wharf, on the river Parrett.

These Cements are, they believe, the best for any purpose now in the market; they will set under water in a few minutes, and are insensible to extremes of heat or cold. The material used is such as will produce a certain and unvarying cementitious power, and a consequent regularity, the want of which is so obvious in Cements manufactured in the ordinary method.

FULLWOOD, THOMPSON, and CO. will be happy to forward prices by post on application, and can offer favourable terms to large purchasers and exporters.

Dated St. Mary-street, Bridgewater, July 26th, 1854.

PORTLAND CEMENT WORKS, NORTHFLEET, KENT. Messrs. ROBINS and CO. with much pleasure announce to their Friends and the Public, that they have completed the enlargement of their works, in order to meet the great increasing demand for *their* Cement; and are now prepared to supply any quantity of the very best PORTLAND CEMENT, manufactured by them for all the purposes Cement is applicable.—Orders received at Great Scotland-yard, and at the Works.

PARIAN CEMENT, for Internal Use, to be painted in a few hours and papered within a couple of days. CHARLES FRANCIS and SONS, Manufacturers of Roman, Parian (under patent), and all other Cements in use for building purposes, Nine Elms, London

KEENE'S and PARIAN CEMENTS and FRENCH PLASTER for internal uses These well-known hard Stuccoes dry quickly, and can be painted upon within a few days.—Made and sold by JOHN BAZLEY WHITE and BROTHERS, Millbank-street, Westminster.

SOUTHAM BLUE LIAS LIME WORKS. OLDHAM and TATHAM have the pleasure of announcing to Engineers, Architects, Builders, and Contractors, that they have erected extensive works near Southam, for the manufacture and grinding of BLUE LIAS LIME, the value of which is now so universally admitted, especially for hydraulic purposes, concrete, &c. &c.; and they most respectfully solicit orders.

O. and T. can deliver by their own boats, or by rail to any part of the kingdom

Office, Warwick

SOUTHAM CEMENT WORKS.—OLDHAM and TATHAM respectfully request a trial of their PORTLAND, ROMAN, and LIAS CEMENTS, which they do not hesitate to pronounce as good as any now in the market. Their unvarying cementitious properties will ensure regularity in colour and quality.

Office, Warwick

GEO. & THOS. EARLE, CEMENT MANUFACTURERS, HULL, Light and Dark, equal to any made Manufacturers also, and Dealers in Plaster, Parian White Mastic, Hair Lias Lime, Laths, Slates and Slate Slabs Fire-bricks, Grindstones, Cement Chimney-tops, ditto Vases, Ridging, &c. Paints, Stucco, &c. Marble Merchants and Importers of Pozzolano

ARTIFICIAL HYDRAULIC or PORTLAND CEMENT combines the valuable qualities of the natural Cements with the additional advantage that it greatly excels them in its cementitious properties; that it is not affected by frost, and does not materially vary in its constituents. An account of COMPARATIVE EXPERIMENTS on the strength of this and other Cements (read at the Institute of Civil Engineers), to be obtained from the Makers, JOHN BAZLEY WHITE and BROTHERS, Millbank street Westminster, who prepare one quality only of Portland Cement

ATKINSON'S CEMENT, so long known and esteemed in London for plastering purposes, is a quick-setting Cement that requires no colouring.—Sold exclusively by JOHN BAZLEY WHITE and BROTHERS, Millbank-street, Westminster; and Seel-street, Liverpool.

CEMENT.—ROMAN and PORTLAND CEMENTS, and PLASTER of PARIS, manufactured by C. J. HILTON, can be had in any quantity, wholesale or retail, at his wharf, 6, Upper Thames-street, London; and also at the manufactory, Faversham, Kent. N.B. These Cements supplied for shipment, on advantageous terms.

GREAVES'S BLUE LIAS LIME.—The superior manner in which the above is ground renders it cheaper for concrete or stucco than any other lime or cement. The shell lime for mortar is burnt on an improved principle leaving it nearly pure core. The satisfaction constantly expressed by Engineers, Architects, and Contractors, of the above, is its best recommendation.

Gibbs, Canning, and Co.'s Blue Vitrified Bricks, Pipes, Junctions, Bends, and Fire Goods.

ROMAN, PORTLAND, PARIAN, ANSTON, and LIAS CEMENTS, of the best quality.

SECONDS, PAVIORS', STOCKS, and other BRICKS.

CHARLES RICHARDSON, 6, South Wharf Paddington.

MAW'S ENCAUSTIC TILE PAVEMENTS—A highly durable and decorative substitute for ordinary flooring and their perishable oil cloth, coverings; for entrance halls, passages, verandahs, conservatories, &c.

MAW and CO send, free of expense, their pattern and price book, with designs, to any given spaces (and estimates), free of expense.

BENTHALL WORKS, BROSELEY, SALOP.

PEAKE'S TERRO-METALLIC TILES, PIPES, &c.—Notice is hereby most respectfully given, that the LONDON DEPOT for this WARE is REMOVED to No. 31, WHARF, Macclesfield-street North, City road Basin. Secondly, that the trade term, "TERRO-METALLIC," is the exclusive right of the Proprietor; and, thirdly, that the "REMARKS ON THE TILES," page 381, of the Great Exhibition, rank the Manufactories known so long as "The Tileries," Tunstall, Staffordshire, as the first of the kind in the world.

GREAT NORTHERN WHARF, York-road, King's-cross.—WHITE BRICK and TILE DEPOT.—L. B. PEARSE and CO. Brick, Tile, Lime, and Cement Merchants Builders, contractors, and others supplied with every description of building material at the lowest market prices.

BRICKS.—Malm Cutters, Yellow and Pale Seconds, Paviors, and Pickings, of good and sound quality, constantly on sale at H. DODD'S Brick fields, which are only a quarter of an hour's walk from the Rly. H. D. earnestly requests purchasers to favour him with a visit, in order to inspect his stock, and to judge for themselves.

Malm Place, half-washed Stocks, and Place Bricks, also on sale These bricks are sound, well burnt, and unusually free from defects; a very large proportion of the stock being suitable for external facing.

Apply to HENRY DODD and CO. at the Counting-house, Hoxton Brickfields, Grange-walk, near the Rosemary Branch, Hoxton.

N.B. Light-coloured Pit Sand of approved quality constantly on sale upon reasonable terms This Sand, from its not containing any saline matter, is acknowledged to be preferable to river sand

BRICKS for OVEN-BUILDING, acknowledged the best for that purpose, delivered, 22s. to Londonbridge or Newington; beyond that distance, moderate charge carriage. Bricks of all description; yellow and light pickings, equal to seconds. Red facings, at 30s. in Bell; red and glazed pipes, about half the price of stoneware; white sand, nearly silver, in field or by barge; founders' sand and loam; good coloured gravel.—Address, S. PARKS, Lewisham Brickfields.

MILLS and PRICE, Brick and Stone Merchants and Agents, very respectfully announce, that their business, hitherto conducted at 37, Newington crescent, Newington-butts, will from MONDAY, the 11th inst. be carried on at 5, ADELAIDE-PLACE, LONDON-BRIDGE.—Dec. 8, 1854.

BRICK-MAKING EXTRAORDINARY!! BY OATES AND INGRAM'S PATENT MACHINE.

TO CAPITALISTS AND BRICKMAKERS.

Messrs. OATES and INGRAM beg to announce, that the above powerful and effective machine may be seen by order only, in daily operation at the works of the Vaughton's Hole Brick Company, near Birmingham.

The great advantages possessed by this machine over all others are, no tempering is required.

The bricks are produced at the rate of twenty-five per minute, smooth on the surface, being pressed in moulds, and sufficiently dense to be hacked up in ranks before leaving the machine, which is entirely self acting, consequently requires only the labour of feeding and carrying off.

Applications either to view the machine, or for the purchase of the patent right for counties or for royalties, to be addressed, T. WELLS INGRAM, Engineer, Birmingham; or to J. F. OATES, Inventor and Patentee, Lichfield.

WHITE SUFFOLK and RED FACING BRICKS

COWLEY, KENT, and ESSEX BRICKS.

Also Yellow and Pale Malm Seconds, Cutters, Paviors, Shippers, &c.

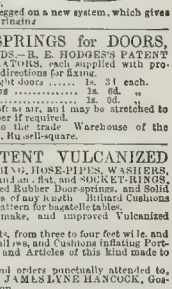
KENTISH RAG-STONE of the FINEST QUALITY.

MILLS and PRICE (successors to Mr. Benjamin Gough), 5, ADELAIDE-PLACE, LONDON-BRIDGE.

WANTED, from 250,000 to 300,000 good STOCK BRICKS. Letters, stating price for cash on delivery, on the Surrey side, between Blackfriars and London bridges, address to A. B. Post-office New Park-street Southwark.

BRICKS and DRAIN-PIPES for SALE.—1,000,000 Stocks and Red Bricks, and between 300,000 and 500,000 Drain-pipes, from 3½ inch to 6 inches diameter to be sold together or separately.—Apply to the Foreman, OLD HALL, at the Brick-yard, near the Colney-hatch Station; or at the Office of R. T. CARLISLE and CO. Contractors, Dermondsey New-road, London.

BRICKFIELD.—TO BE LET, for a term of years, at a royalty rent, a BRICKFIELD, near Milton, near Sittingbourne, Kent, containing a large quantity of the finest brick earth, with suitable dwelling house, sheds, and stable. Also, with the same, a Baker's Shop and Dwelling house, and Five excellent Cottages, bounded nicely adjoining the field. There is an abundant supply of water.—For particulars apply to Mr. T. CLARK, Solicitor, 3, Dean's-court, St. Paul's Churchyard, London.



TO BRICKMAKERS, CONTRACTORS, BUILDERS, AND OTHERS

TO BE LET, a BRICKFIELD in full working order, with the entire Plant and Machinery necessary for working five Stools, in the centre of a neighbourhood where immense building operations are in progress, and adjoining one of the contemplated metropolitan railways which have passed the standing orders of Parliament, a short distance from the Regent's-park, the station of the North Western Railway, and the principal public wharfs of the Regent's-canal. Dirt for two millions of bricks is already turned, and sales for three births. This presents an admirable opportunity for any one desirous of entering into this lucrative business, as he would not be required to purchase the plant. A good practical FOREMAN is open to Engagement, fully competent to conduct the same.—Particulars with Mr. NUTTER, Auctioneer, 1, York-place, Kentish-town.—Five horses, and 2 one thousand brick-carts for sale

TO CAPITALISTS, BUILDERS, and BRICKMAKERS.—TO BE LET, a valuable BRICKFIELD, containing fine brick earth. The steam-engine and machinery for making bricks to be taken at a valuation, and the ground at a rent and royalty. It is situate about five miles from London-bridge, and near to extensive estates, on which buildings are being rapidly erected. For further particulars apply to Messrs. WIRE and CHILD, Solicitors, 9, St. Swithin's-lane, City.

O. M'CARTHY, CARMAN, and SAND and CEMENT MERCHANT, Whitefriars Wharf, Whitefriars Fleet-street, City. Sand, from above or below bridge, delivered by the yard or per barge. Ballast screened or unscreened, by the yard or per barge. Lime and paving bricks. Dry rubbish delivered per barge, in any quantity, alongside the Thames.

JOHN WARNER and SONS, Patentees of IMPROVEMENTS in the MANUFACTURE of LARGE BELLS.

J. W. & SONS having of late years devoted much time and study to the long neglected art of Bell Casting, have recently invented and patented a new process connected therewith, by which they are enabled to manufacture Bells of any size, note, or weight, of superior tone, truer in form, and at less cost than has hereto fore been accomplished.

Bells for Churches, Chapels, Colleges, Schools, Turret Clocks, &c. cast for any size, note, or weight, singly or in peals

TUNED BY MACHINERY

Stocked and wheeled ready for hanging. Old Bells recast or taken in exchange.

MUSICAL HAND-BELLS tuned to the Chromatic Scale, with improved Clappers, arranged on a new system, which gives a superior tone and facility for ringing

INDIA-RUBBER SPRINGS for DOORS, and for WINDOW BLINDS.—R. E. HODGE'S PATENT INDIA-RUBBER ACCUMULATORS, each supplied with proper metal fittings, and printed directions for fixing.

Size A for hall doors and large doors ..... 31 each.
" B for strong house doors ..... 1s. 6d. "
For window blinds ..... 1s. 0d. "

They are ready fixed, out of sight, and may be stretched to six times the length of the rubber if required.

N.B. A liberal allowance to the trade Warehouse of the Patentee, 44, Southampton-row, Russell-square.

HANCOCK'S PATENT VULCANIZED INDIA-RUBBER TUBING, HOSE-PIPES, WASHERS, ENGINE-PACKING both round and flat, and SOCKET-RINGS, for Hot-water-pipes. Vulcanized Rubber Door-springs, and Solid Round Rubber Cord of all sizes of any length Billiard Cushions and Rubber Strips cut to any pattern for bagatelle tables.

Diving dresses of superior make, and improved Vulcanized Rubber Supply-pipes for ditto.

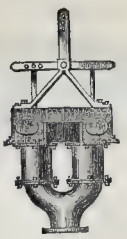
Vulcanized Rubber, in sheets, from three to four feet wide, and of any thickness Air-beds, Pillows, and Cushions inflating Portable Baths, Invalid Cushions, and Articles of this kind made to any pattern to order.

N.B. All communications and orders punctually attended to, addressed to the Manufactory, JAMES LYNE HANCOCK, Goswell-street, Gosswell-road, London

TO BUILDERS AND HOUSE DECORATORS.

THE LARGEST STOCK of Upholsterers' Cloths, Baizes, and Druggets, in every width, colour, and quality, is kept at HILL and SONS, 82 and 83, St. Martin's lane, Charing cross Patterns forwarded upon application

FORSTER and SLATE'S PATENT CONSTANT SUPPLY FILTERS, tested and approved by the first water engineers in the country. Used and approved at the Offices of the General Board of Health Exclusively adopted by the Crystal Palace Company. Easily cleaned without trouble or expense. To be seen in operation daily, at J. EVANS and SON'S, Ironmongers, 93, King William-street, London-bridge.



FOWLER'S IMPROVED FARM AND COTTAGE PUMPS.

To be had of any Ironmonger or Plumber, 1l. 15s.

The usual allowance to the trade.

PUMPS of SUPERIOR CONSTRUCTION bored perfectly true by improved machinery, in various plain and ornamental patterns, for squares and market-places, roads, conservatories, liquid manure, ship, barge, brickmakers, contractors, gold diggers, brewers, chemical works, and in wrought and cast-iron, copper and brass, for hot or cold liquors, &c. &c. Long barrel and hydraulic lift-pumps, with handles on planks; and engines of various powers, for wells of any depth.

ON SINGLE PUMPS, BARRELS AT SHORTEST FOR HAND STEAM

HIRE, AND DOUBLE 3 in. to 15 in. to any depth, NOTICE, OR POWER.

FOWLER'S IMPROVED WROUGHT IRON PUMPS,

FOR CONTRACTORS, BUILDERS, EXCAVATORS and OTHERS.

A LARGE STOCK, from 3-inch to 9-inch Barrels, with Plain or Sliding Telescope Suction, always on hand.

This description of Pump Work varying in almost every case, it is impossible to quote a general price, but the fullest particulars will be given on application.

BENJ. FOWLER, WHITEFRIARS-ST. FLEET-ST. **NOT DORSET-ST.** as formerly.

M. A. RICHARDS and SON, PUMP MANUFACTURERS and ENGINEERS

Pumps in Wrought and Cast Iron and Brass, bored by machinery, and fitted in the best possible manner, suitable for excavators, roads, brickmakers, farms, gardens, stables, liquid manure, ships, barges, well-sinking, &c, adapted for any depth. Hydraulic Pumps for deep wells.

PUMPS ON HIRE.

Pumps of any size, single or double barrel, up to double 12-in. diameter, kept ready for use at reduced prices.

N.B. The above can be worked either by hand, horse, or engine power.

Iron Pails 38s. per doz. painted.
Ditto .... 48s. per doz. galvanized.

Upper Ground-street, Blackfriars Bridge, Surrey Side.

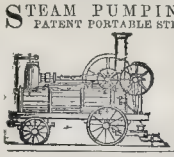
TO BUILDERS AND PLUMBERS.

The attention of the Trade is called to

JOHN WARNER & SONS'

PATENT VIBRATING STANDARD PUMP,

which is recommended for the simplicity of its construction, and the ease with which it works.



By the introduction of the vibrating standard, the cumbrous carriage and expensive slings and guides are unnecessary, rendering the price considerably less than pumps made on the old plan.

Beer and Water Engines for raising fluids from a depth not exceeding 28 feet; also, Garden Engines constructed on the same principle.

JOHN WARNER & SONS,
8, Crescent, Jewin-street, London,
Manufacturers and Patentees.

STEAM PUMPING ENGINES.—PATENT PORTABLE STEAM-ENGINES, from four to ten-horse power, always ready to let on hire, by the week or month, for pumping, sawing, pile driving, raising materials, &c. &c.

Contracts taken for pumping any quantity of water.

JAMES BURTON & SONS,
Engineers and Contractors,
John's-place, Holland-street,
Southwark, London.

STEAM-ENGINE.—WANTED, to purchase a (second-hand) STATIONARY HIGH-PRESSURE STEAM-ENGINE, 8, 9, 24, or 3-horse power.—Full particulars and price to be forwarded to Mr. WILKINSON, Foundry, Ely.

PUMPING ENGINES.—TO BE LET ON HIRE, TWO PORTABLE STEAM-ENGINES, of three and five horse power, with pumps, complete.—Apply to Mr. HENRY JOHNSON, 11, Bleeding Hart-yard, Hatton Garden, London; and 44, Broad-street, Birmingham.

HOUSEHOLDERS and GENERAL LIFE ASSURANCE COMPANY, 15 and 16, Adam-street, Adelphi.

Money received at interest at 5 per cent. per annum, payable in April and October.

Agents (with references) may apply.
R. HODSON, Secretary.

THE ALBERT ASSURANCE COMPANY. (Established in 1838.)

MORTGAGE and other LOANS in connexion with life assurance are granted by this Office, either for long or short periods, on freehold and leasehold property, reversionary interests, and on good personal security.—EASTERN BRANCH, 7, Finsbury-square.
W. S. VARDY, Manager.

ESTABLISHED 1803.

SPECIAL NOTICE.

TO SECURE THE ADVANTAGE OF THIS YEAR'S ENTRY, PROPOSALS MUST BE LODGED AT THE HEAD OFFICE, OR AT ANY OF THE SOCIETY'S AGENCIES, ON OR BEFORE 1st MARCH.

INSTITUTED 1831.

SCOTTISH EQUITABLE MUTUAL LIFE ASSURANCE SOCIETY.

Incorporated by Royal Charters, and Special Act of Parliament.
Head Office—EDINBURGH, 26, St. Andrew-square.
LONDON—126, Bishopsgate-street, Cornhill.

The SCOTTISH EQUITABLE LIFE ASSURANCE SOCIETY is an Institution peculiarly adapted to afford provision for Families. It was established in the year 1831, upon the principle of MUTUAL CONTRIBUTION, the Surplus or Profit being wholly divisible among the Members; and the Additions which have been made to Policies at the Periodical Investigations of the Society afford satisfactory evidence of the prosperity of the Institution, and the great advantages derived by its Members. The following Examples exhibit the Additions already made:—

A Policy for 1,000*l.* opened in 1832, is now increased to 1,523*l.* 8*s.*
A Policy for 1,000*l.* opened in 1836, is now increased to 1,491*l.* 16*s.* 10*d.*
A Policy for 1,000*l.* opened in 1840, is now increased to 1,310*l.* 19*s.* 7*d.*

The Profits are ascertained and divided triennially among Policies of more than five years' duration.
The Annual Revenue is upwards of 150,000*l.*
The Amount of Assurances in force is upwards of Four Millions and a Quarter Sterling
The Amount paid to the Representatives of Deceased Members exceeds 600,000*l.* sterling.
The Total Amount of Vested Additions allocated to Policies exceeds 600,000*l.*
The Accumulated Fund is upwards of 830,000*l.*
Loans granted to Members to the extent of the Office value of their Policies.

Copies of the Annual Report, Forms of Proposal, and all information may be had on application at any of the Society's Offices in town or country.

ROBERT CHRISTIE, Manager.
WILLIAM FINLAY, Secretary.
W. COOK, Agent.
January, 1855. 126, Bishopsgate-street, London.

	William Wilberforce, esq.

A reduction of 25 per cent. has been made on the premiums of all policies of five years' standing.

ALEX ROBERTSON, Manager.

LADDERS, BARROWS, &c. for SALE or HIRE.—GEORGE ELL, 3, Tottenham-court, New-road, opposite the Hampstead-road, and corner of Pratt-street, Paddington, has on hand at all times a large stock of LADDERS, EXCAVATORS', BRICKMAKERS', and other BARROWS, PAINTERS' TRESTLES, MACHINES, STEPS, &c. Price lists can be had on application, at 3, Tottenham-court.

VENTILATION.—PURE AIR.

Sheringham's Ventilator for the admission of pure air through an

EXTERNAL WALL.

With single pulley, from 6*s.* each; with leading pulley, from 6*s.* 6*d.*

These Ventilators are arranged that the requisite quantity of air may be admitted for the due ventilation of an apartment without the slightest draught being felt by the occupants; and as they are placed in the external wall, their action is not impeded when the house is closed for the evening, at which time a constant supply of fresh air is most required.—HATWARD, BROTHERS, sole Manufacturers, 196, Blackfriars road, and 117, Union-street, Borough; and of all respectable ironmongers, builders, &c.

SMOKY CHIMNEYS CURED EFFECTUALLY for TEN SHILLINGS, by SUTTERS' PATENT WIND-GUARD.—This Guard allows free egress to the smoke, prevents the wind blowing down the mouth of the chimney, and is not liable to be injured by the most boisterous weather.

To be had of Ironmongers and Builders; and of the Patentee, at his Office, 65, Fenchurch-street, London.

PAVING, 2*s.* 9*d.* per SQUARE YARD.—Basements, Foot-walks, Malt-houses, Corn Stores, Floors of Warehouses, and every description of Pavement laid down at the above low price, and the work guaranteed.

Apply to JOHN PILKINGTON, POLONCEAU'S BITUMEN PAVEMENT OFFICE, MONUMENT CHAMBERS, 14, FISH-STREET-HILL.

N.B. Country Agents, and Railway Engineers and Contractors supplied with the best Bitumen for covering Bridges and Arches.

ASPHALTE.—GERVASE FOOTTIT, Trinidad Asphalte Works, Rotherhithe; established 1834. Every description of Flooring laid with the above durable material in the best manner. Asphalte for Railway Arches, 30*s.* per ton. Importer of Trinidad Asphalte.

Shipping Depôt, Devon Raptor Wharf, Rotherhithe.
G. H. CLARK, Agent.

PURE WATER, for manufacturing purposes, may be obtained at very moderate cost by RANSOME'S FILTERING STONE. Estimates given for large or small quantities. Builders and Plumbers supplied with the ascension and other Filters at trade prices. These filters, at one, two, three, and four guineas each, yielding 50, 100, 150, and 200 gallons per diem, will be found sufficient for ordinary domestic requirements; are self acting, and not liable to get out of order. References to parties satisfactorily supplied with quantities up to 30,000 gallons per diem, may be obtained on application at the depôt, 71, Baker-street, Portman-square, London.

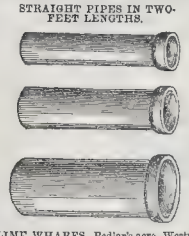
ARTESIAN WELLS, Boring for Water, Sinking Shafts, &c.—The nobility, gentry, water-companies, towns, baths, brewers, and manufacturers of every description, may be supplied with any quantity, by DAVID GREENLEY, Civil Engineer and Patentee of Boring Tools, 10, Charming-street, Pentonville. Pumps and machinery for raising water from deep wells, boring-tools, and well-pipes for exportation. Men and tools supplied to bore for railroads, minerals, &c.

PATENT SANITARY GAS SHADES.—These Shades, manufactured exclusively by RICE HARRIS and SON, Islington Glass Works, Birmingham, on an entirely new principle, effectually destroy the effluvia and smoke which have hitherto made the use of gas so objectionable in dwelling-houses and offices where cleanliness and freedom from smell are of importance. They are simple and inexpensive, and may be had at the Works in a variety of forms adapted to the style of fitting, or the taste of purchasers; also at Mr. JOHN SHORTON'S, Crispin-street, Spitalfields, London.

JAMES STIFF,

MANUFACTURER OF GLAZED STONEWARE DRAIN PIPES, WATER-CLOSET PANS, SINK TRAPS, INVERT BLOCKS, AND ALL OTHER ARTICLES SUITABLE FOR DRAINAGE AND OTHER PURPOSES,
LONDON POTTERY, HIGH-STREET, LAMBETH, LONDON.

HALF-SOCKET PIPES, in 2 feet lengths, at usual prices, by the use of which, Drains may be readily examined, and Junctions inserted, in the event of requiring further connections.



IMPROVED WATER-CLOSET PANS AND TRAPS, WHITE INSIDE.

Pan, 3*s.* 6*d.*

Trap, 2*s.*

STRAIGHT PIPES IN TWO-FEET LENGTHS.

IMPROVED WATER-CLOSET, PANS AND TRAPS. WHITE INSIDE.

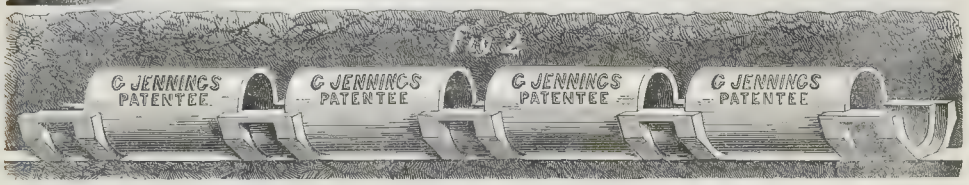
Pan, 3*s.* 6*d.*

Trap, 2*s.*

May be had also at Messrs. GLADDISH'S LIME WHARFS, Pedlar's-acre, Westminster-bridge, City-road Wharf, City Basin; Dock-head, Bermondsey; Danvers Wharf, foot of Battersea-bridge, Chelsea; Pratt Wharf, King's-road, Camden New Town; J. TURNER, 9, South Wharf, Praed-street, Paddington; COLWILL, Brothers, 29, Brydges-street, Covent Garden; and at EDWARD COCK'S, 94, Wardour-street, Oxford-street. Drawings and List of Prices will be forwarded free on application.

JENNINGS'S PATENT DRAIN-PIPES.

The following remarks are made, and illustrations given, to enable persons (by COMPARISON) to decide if Jennings's alteration in Drain-pipes is an IMPROVEMENT or OTHERWISE



ORDINARY PIPES, or HALF-SOCKET PIPES, even if laid with EXTRAORDINARY CARE, may or may not be perfect at the joint.

When pipes are placed in the sockets, they may be a little above or below the pipe adjoining (EXAMINATION is IMPOSSIBLE); and a series of these obstructions must be detrimental to the flow of sewage.

Then, in making the Joints to SOCKET or HALF-SOCKET PIPES, the ground must be removed under every joint, to enable the workmen to work in the stopping material. *Query*, Is this done? And if done, what prevents the stopping matter, be it CEMENT, MORTAR, or CLAY, from passing into the pipe, and adding to the obstructions caused by irregular joints?

It is most important that the joints of sewage pipes should be AS PERFECT AS JOINTS OF WATER-PIPES, as any escape of liquid is a LOSS OF CLEANSING POWER within the pipe, and such escapes must be prejudicial to HEALTH, and DESTRUCTIVE to PIPE DRAINAGE.

The illustration (fig. 1) shows a series of Jennings's Patent Chairs, laid at certain distances, to the required fall, each chair being so bedded, that the pipe will rest on the excavation as well as the chairs; this done, the rebates of the chairs have only to be filled with cement or other material, and the pipes bedded down to the line of chair, as shown in fig. 2.

The space between each pipe (see fig. 2) enables the workman to see that every pipe is level with the chairs previously laid. He can strike up the joints of the invert without trouble, and the superintendent or foreman CAN SEE that the drainage is PERFECT, before allowing the saddles to be fixed. It will also be seen that the bedding of the pipe in the chair makes the joint at once, without any disturbance of the ground.

Fig. 3.

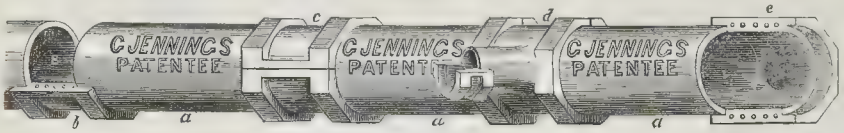


Fig. 3 shows a line of pipes finished, with a junction on one of the saddle pieces. Engineers and Architects describing these pipes to be used, will effect a great saving in the Labour of Laying, will ensure better Work, more perfect Joints, and they will have the GREAT SATISFACTION of knowing that the drainage can at all times be examined, or junctions introduced, without TEARING UP THE INVERT OR GENERAL DRAIN.

Pipes may never need examination, and junctions to finished drains may never require to be made; but it must be advantageous to be able to do either, or both, IN CASE it should be necessary.

The introduction of JENNINGS'S PATENT PIPES will PROBABLY cause a great reduction to be made in the price of ORDINARY and HALF-SOCKET PIPES. THIS THE PATENTEE IS PREPARED FOR.

And in return for the support he is receiving, the public shall have the improved pipes at the lowest remunerating prices.

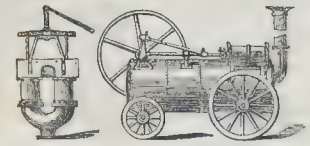
A Book containing Illustrations and Particulars of JENNINGS'S DRAIN-PIPES, WATER-CLOSETS, URINALS, LAVATORIES, SLUICE-VALVES, FIRE-COCKS, GULLY-TRAPS, SHOP-SHUTTER SHOES, &c. &c. can be had free on application, or by post, if two postage stamps are inclosed to

GEORGE JENNINGS, SANITARY ENGINEER, 29, GREAT CHARLOTTE-STREET, BLACKFRIARS-ROAD.

TO WATER COMPANIES AND PLUMBERS.

HIGH-PRESSURE COCKS & CLOSETS.

The Health of Towns Commissioners having recommended the adoption of the high-pressure principle in all towns, WARNER'S HIGH-PRESSURE COCK is recommended as a Cock free from leakage, and applicable for all purposes and situations. Patent Closets and Basins with supply-valve for attaching direct to main pipes without a cistern, cocks, or wire.



LEAD, IRON, and TIN PIPE.

JOHN WARNER and SONS, Manufacturers, 8, Crescent, Jewin-street, London.

TO CONTRACTORS

PORTABLE STEAM-ENGINES TO BE

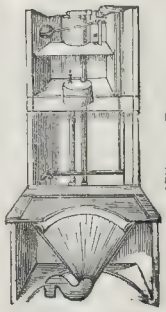
LET, on HIRE, by the WEEK, MONTH, or for any period, of 8-horse, 10 horse, 12 horse, 16-horse 20-horse, and 25-horse power, adapted for Contract work generally. These engines have been successfully employed for years by all the principal contractors. Nearly 100 are ready for delivery at a day's notice Several may be seen at work; Also at Messrs MEDWIN and HALL'S, Engineers, 92, Blackfriars-road, Sole Patentees and only Manufacturers. N.B. Several for Sale.

PORTABLE STEAM-ENGINES and

PUMPS Kept in Stock for Hire at reduced Prices. M. A. RICHARDS and SON, Pump Manufacturers and Engineers, Upper Ground-street, Blackfriars-bridge (Surrey Side).

Superior Glazed Stoneware Pipes, Bends, Junctions, Traps, &c. Hopper and other Pans, with best White Glaze inside.

Pan, 3s. 6d.



Trap, 2s.

Syphon Pan, with or without STEPHEN GREEN'S Patent Air-tight Valve.

Registered Flushing Basin,—the most effective syphon-trap yet offered to the public.

STEPHEN GREEN, IMPERIAL POTTERIES, LAMBETH.

This effective article has not any Crank or Wire to get out of order, and is all complete and ready for use, and may be seen in operation at STEPHEN GREEN'S Manufactory Lambeth

IMPORTANT TESTIMONIALS

TO THE EFFICIENT WORKING OF

M medium.	

Sold by all the principal Stationers in town or country.

BUILDERS' ADVANCES OFFICE, for

supplying LOANS to BUILDERS in large or small amounts, on more equitable terms. Proposals to be made to the Surveyor, Mr. K. KERR, 41, Coleman-street, City.

TARPAULINS for COVERING ROOFS

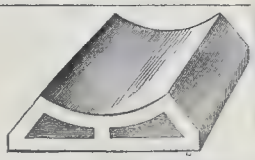
during Repairs. SCAFFOLD CORD and every description of ROPE used by Builders upon the lowest terms. Marquees and temporary Awnings on sale or hire. Orders per post receive the most prompt attention.—WILLIAM PIGGOTT, 11, Fore-street, City. Manufacturer, by appointment, to her Majesty's Honourable Board of Ordnance.

HENRY DOULTON AND CO.

HIGH-STREET, LAMBETH, LONDON.

MANUFACTORIES -HIGH-STREET, LAMBETH; ROWLEY REGIS, STAFFORDSHIRE, AND SMETHWICK, NEAR BIRMINGHAM.

PIPES laid with ordinary care do not need examination. Not ONE in a THOUSAND of all the Pipe-drains laid throughout the Kingdom during the last Six or Seven Years has required to be looked at.



DOULTON'S HALF-SOCKET PIPES may be used with advantage where the Pipes may have to be removed, or in cases where it is necessary to introduce Junctions after the Drain has been completed.

DOULTON'S PATENT INVERT BLOCKS

FORM A GLAZED, EVEN, AND IMPERISHABLE SURFACE FOR THE BOTTOMS OF SEWERS.

They have been used extensively by the Metropolitan and City Commissioners of Sewers, and for the Main Sewers in many Provincial Towns.

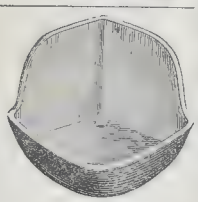
DOULTON'S

PATENT JUNCTION BLOCKS,

BY WHICH THE CONNECTION BETWEEN

PIPE-DRAINS AND SEWERS AND BRICK SEWERS,

Is made perfect and secure.



DOULTON'S

SINKS AND URINALS

Are manufactured in a NEW KIND OF STONEWARE, of High Glaze and Uniform Colour.

They will withstand the action of the most powerful Acids, and are made very strong to bear rough usage.

DOULTON'S

TERRA-COTTA CHIMNEY-TOPS,

Will withstand the action of Frost or Sea Breezes, and are absolutely imperishable.

From 2s. 3d. each.

FULL PARTICULARS, WITH DRAWINGS AND PRICES, MAY BE HAD ON APPLICATION AS ABOVE.

A

B. PEARSE and Co. Great Northern-wharf, York-road, King's-cross.

ISAAC PARRY'S

GLAZED STONE SEWER PIPES,

RED DRAIN PIPES, AND CHIMNEY-POT MANUFACTORY,

CHURCH-STREET, DEPTFORD, KENT.

ESTABLISHED UPWARDS OF 100 YEARS.

SALES BY AUCTION.

SOUTH SEA HOUSE ESTATE, THREADNEEDLE-STREET.

MESSRS. BEADEL and SONS are favoured with instructions to SUBMIT to PUBLIC COMPETITION, on TUESDAY, FEBRUARY 27th at TWELVE, the above valuable PROPERTY, having each a frontage to Threadneedle-street, comprising the new wall, Old Broad-street, and covering a superficial area of nearly three-quarters of an acre. This very eligible property is, with a small exception, freehold, and is all but tax-free. It comprises the present South Sea House, a most substantially erected fabric, three valuable messuages used as offices the open areas surrounding the South Sea House, the whole of which will be offered in one lot; also a small but fine new occupying with the Flower Pot public house, which will be sold separately. The property presents a rare opportunity for the acquisition of a compact freehold estate in the neighbourhood of the Bank of England, and, as its present steward will prove a handsome rental; but if judiciously re-arranged will probably realize an increased income in ground rents as the materials will find a ready sale to the various buyers.—Particulars, with lithographic plans attached, are now ready, and may be had on application, to Messrs. Wontner and Son, Gresham, and Beadel, Solicitors, at the South Sea House, Threadneedle-street; at the Mart; and of Messrs Beadel and Sons, 25, Gresham-street.

ST. LEONARDS-ON-SEA, SUSSEX. For SALE by AUCTION by

MESSRS. COBB, at the SOUTH SAXON HOTEL, at Saint Leonards-on-Sea, on THURSDAY, FEBRUARY 22nd, 1855, at Six o'clock precisely, in Four Lots, FOUR valuable SEMI-DETACHED MARINE VILLAS, of handsome elevation, substantial build, and in the corner one in the arrangement of rooms, and most desirable situation in the central and best part of the favourite watering place of St. Leonards. No. 1, West Vale, facing the sea, near the Marine, the Assembly Rooms, and Royal Victoria Hotel; and Nos. 2, 3, and 4, Orchard View, Maize-hill, a fine open situation, surrounded by ornamentally-planted grounds, and commanding a view by sea and inland to Hastings. Held for terms of 500 years, at low ground rents, and let on lease to freehold.—Printed particulars may be had at the place of sale; the Auction Mart, London; of Messrs. Smith and Ayres, Solicitors, Hastings; of Messrs. Mc ars. Sykes, Towson and Mounsey, Solicitors, Mercgate-street Chambers; and of Messrs Cann, Surveyors and Land Agents, 12, Lincoln's-Inn-fields, London.

8,000 Pieces of Paperhangings, an Marble and Enamelled Slate Chimney-Pieces.

MR. BRAY, Jun. will SELL at his ROOM, 29, High Holborn on WEDNESDAY, FEBRUARY 21, at ONE for TWO, some Hundreds of PAPERHANGINGS suitable for the drawing and dining rooms, parlours and secondary apartments, halls, and staircases.—May be viewed and catalogues had.

FARRINGDON-STREET EXTENSION Building Materials of Twenty-two Houses

PULLEN and SON have the honour to announce, that they will SELL by AUCTION, on the PREMISES, on WEDNESDAY, FEBRUARY 21, and following day, at TWELVE, by order of the Improvements Committee of the Corporation, of the City of London, all the valuable BUILDING MATERIALS of about twenty-five houses, shops, factories, stabling, and premises in Bull-court, Bull's-head-passage, Cock-court, and passage Falcon place and Copperfield, Clerkenwell, comprising about 600,000 good sound bricks, several tons of lead, large quantity of plain and wrought deal, York and other paving stone, fir timber, roofing, floors, sashes, doors, shutters, shop fronts, entrance gates and stable fittings, two large lavatories, grates, mahogany counters, and various useful fixtures, gas pipes, valves, cisterns, and numerous fittings up. May be viewed two days previous. Catalogues had at the Auction Offices, Guildhall; and of Pullen and Son, 7, Pore-street, Cripplegate.

BOROUGH of SOUTHWARK.—Nine Rare Freehold Houses, in single lots, each of which confers entitled a Vote,—particularly worthy the attention of small Capitalists

MR. W. F. HAMMOND has been favoured with instructions from the proprietor to SELL by AUCTION, at GARRAWAY'S, on FRIDAY, MARCH 9, at TWELVE for TWELVE, in single lots, the above valuable FREEHOLD ESTATE, comprising ninety-three houses, all lying compact in four blocks, each let on lease for twenty-one years, with a frontage to King-street, Borough. The description of the property is of the useful and profitable well built character described about thirty years, each house, of six and seven rooms, now producing rentals from 32*l.* to 50*l.* each, making a total sum of 1,334*l.* 4*s.* per annum, and lower rentals as a whole. This forms an important investment to small capitalists, being sold in separate lots, with a special condition granting to every purchaser the option of purchasing one half of the purchase money upon mortgage.—Further particulars, with conditions of sale and plans (the estate to be let at Messrs Jacobs and Hopps, Solicitors, No. 2, Gresham-buildings, Basinghall-street), at the house, Cornhill; of Mr Seagle, the Collector on the Estate, No. 47, Henry street; and at the Auctioneer's office, No. 3, Carey-street, Lincoln's-inn.

THE COLOSSEUM.

MESSRS. WINSTANLEY are directed to SELL BY AUCTION, at the MART, Bartlett's-buildings, on WEDNESDAY, MARCH 14, pursuant to a Decree in the High Court of Chancery, and the orders of the Master, in the Causes of "Phillipson and another v. Turner and others." THE COLOSSEUM IN THE REGENTS-PARK; an Exhibition of recent Art, which has justly received the support of the patrons of Fine Arts, the public, and universal approbation. Every person having a claim for advances, or any other establishment THE MAGNIFICENT EDIFICE, with its models, pictures, and PREMISES and HOME wholly occupied by Mr. Declimus Burton; the interior of the building was rearranged and decorated, at an enormous cost, under the superintendence of the late Mr W. Bradwell; works of extraordinary merit, by talented artists, have from time to time been produced, and the present Exhibition now possesses the following leading features. THE GLYPTOTHECA, or MUSEUM OF SCULPTURE. The far famed Panorama of "LONDON BY DAY," and the two splendid motions "Panorama of LONDON BY NIGHT," and "PARIS BY MOONLIGHT;" the Stalactite Caverns, Swiss Cottage, Cascade, Lake, Rustic Arcades, Italian Rooms and Walks of celebrated Greek and Roman Temples in the exterior promenade; the extensive and beautiful ranges of Conservatories, Gothic Aviary, splendid Saloon, or Refreshment-room, &c. In addition to the foregoing is the GRAND CYCLORAMA IN ALBANY-STREET, a building 300 feet long, constructed especially for exhibiting Dioramic on an unparalled scale of magnificence, which is the ELEGANT AND CHASELY-DECORATED THEATRE with beautiful drop scene and other paintings by Haydon. "THE DIORAMA OF NAPLES," by Morton, now exhibiting, showing the great ERUPTION OF VESUVIUS and DISINTERMENT OF POMPEII, A.D. 79, and which is a most striking one of Nelson, by Danson, is a masterly production. This portion of the property might be let out as an independent undertaking, and would readily produce a very considerable rental. The powerful gas machinery, steam engine, gas, and water fittings, fixtures and sundry effects, will be included in the Sale. The property occupies a FRONTAGE OF ABOUT THREE HUNDRED FEET, both to the Park and Albany-street, and is held by one lease under the Crown, for about sixty-nine years, at the very low ground rent of TWO HUNDRED AND SIXTY TWO POUNDS EIGHTEEN SHILLINGS PER ANNUM. Printed particulars may be had, three weeks prior to the day of Sale, at the Colosseum; of Messrs Gregory and Hodgson, Solicitors, 5, Gresham-square, of Messrs Hall and Rawle, Solicitors, Chancery-square, of Mr. Angell, Surveyor, 5, Lothbury, E.C. and Regent-square; at the place of Sale; and of Messrs. Winstanley, 10, Paternoster-row, of whom may be had orders to view the whole, at 1*s.* each person, at stated times.]

SALES BY AUCTION.

Burghley Park, February 9, 1855.

PADDINGTON.—Stock-in-Trade of a Mason.

MESSRS. EVERSFIELD and HORNE will SELL by AUCTION, on the PREMISES, 46, Bridge-place Harrow-road, Paddington, by order of the proprietor, who is declining business, in consequence of ill-health, on TUESDAY, FEBRUARY 20th, at TWELVE, the STOCK of a MASON, comprising a quantity of Portland and Yorkshire Stone, in steps, landings, coping, cills, sinks, &c. marble and other chimney-pieces, trade implements, cart, truck, and other effects.—May be viewed the day previous to, and catalogues had on the Premises, and of the Auctioneers, 40, Parliament-street, or C at-Exchange.

IMPORTANT SALE OF RAILWAY PLANT, HORSES, ENGINES, MACHINERY, &c. &c.

TO IRONMASTERS, COLLIERY PROPRIETORS, RAILWAY CONTRACTORS, ENGINEERS, AND OTHERS.

MR. THOMAS GLOVER has been authorised by MR. JOSEPH PICKERING, Contractor for the Sunken Railway, to offer for SALE, upon the DOCK WORKS at SWANSEA, on the 22nd, 23rd, and 24th instant, in consequence of the works of his contract being nearly completed, the very powerful HORSES and GEARS as well as all the notice of any parties requiring horses of this class, as they have been selected among the best of years' less expensive.

THREE HUNDRED FOUR YARDS EARTH WAGGONS, in excellent order.

THIRTY-THREE TONS OF CONTRACTORS' RAILS

THREE LOCOMOTIVE ENGINES, 9-horse power each. These engines have been used for pumping and pulling the excavation out of the dock, and are in first-rate order, and well calculated for work of this description, or for colliery works, railway tunnelling, saw-mills, or for driving machinery of any description having either crank or fly wheels. They are fitted with 6-inch cylinders, 2 feet stroke, and are capable of working from 40 to 50 horse power each, and are all now at work.

TWO SETS of DOUBLE DRUMS for working inclines. They are fixed 3 inches in diameter, 3 feet 6 inches long, with 6¼ inches wrought iron shaft, cast in rings, coupled with sliding bolts, spur-wheels, clutches, &c. complete, and are now at work.

SET OF DOUBLE DRUMS, 2 feet diameter, 4 feet long, width, 14 inches, weight 1¼ ton, and all complete, same as last.

THREE PORTABLE VERTICAL BOILERS, for raising mortar, with iron cone, engine beds, to forced pan, wheels, set complete with crank axle. The pans are 6 feet diameter, 15 inches deep, with wood bottoms, which can be replaced at small cost. WROUGHT-IRON, HORIZONTAL, and UPRIGHT SHAFT, 5 inches diameter with three sets of main gear, pinion, and spur-wheel, for driving the same The above gears are well worth the notice of any contractor for tunnels or lock works, as they have all the latest improvements for mills of this description, and are unequalled to the present time.

TWO SETS of 5-inch PUMPS, from 35 feet to 40 feet in length each, two working barrels, two bucket door-pipes, buckets, spear rods and bell crank. Also a long length of horizontal spear rods, joints and rockers, pinion, spur-wheel, shaft carriages, &c. &c. The spears are in first-rate working order, and can be seen at work at Hafod-ucha engine-pit, Swansea.

ONE SET of 12 inch PUMPS, with two working barrels, two feet long, spear rods, under-lever spear rod to bell crank pinion, spur-wheel, horizontal spear rods, with joints, rockers, &c attached to Gooch's engine

TWO SETS of 11 inch PUMPS, about 30 feet long, each complete in all respects same as last

TWO SETS of 10-inch PUMPS, similar in every way to the last. The above pumps are all fixed, and can be seen at work. They are all fixed so as they can be worked double or single. THREE SETS of FRICTION GEAR, for winding out of tunnels, &c all complete and in use.

FOUR FLAT ROPES for the above gear, several wrought-iron skips, rails wheels for flat and round ropes, pit trailies, and several lots of materials for tunnel work.

ONE SCREWING-MACHINE by Shaws, Rogers, and Co. Manchester, very powerful. ONE SMALLER SCREWING MACHINE

ONE LARGE IRON CIRCULAR-SAW TABLE, two excellent lathes complete, with conical pulleys for driving the same

TWO IRON MILLS, very good TWO CHAFF CUTTERS, ditto ONE OAT CRUSHER Several WROUGHT IRON SHAFTS DRUMS, &c. for driving machinery.

FIVE QUARRY CRANES, self-slinging lift heavy weights.

ONE PORTABLE CRANE, very good.

TWELVE Double-Barrel Gas CRABS

SIX SETS of FRAMES for goliahs or travelling cranes, with moving gear, &c. &c.

ONE large INCLINE WHEEL, 9 feet diameter.

FIVE SETS of BLACKSMITHS' BELLOWS, ANVILS, &c. complete

TWO SETS of HARNESS of different kinds

TWENTY CARTS, FOUR STONE DRUGS, TWO TIMBER CARRIAGES.

ONE 6-inch CARRIAGE for REMOVING LOCOMOTIVE ENGINES, will carry twenty tons.

ONE 10 T. WEIGHING-MACHINE.

ONE small MACHINE for weighing coal, by People.

ONE SACK MAKING-MACHINE to weigh cwt. &c.

Together with other Plant, and a very large quantity of Building Materials, Tools, and Timber of all kinds, too numerous to enumerate in the space I can advertisement.

The Manager is at all times to draw the attention of Engineers, Contractors, and others having works abroad, that this large and well-selected Stock of Plant is now all lying within 2 yards of the Docks, and is ready for shipment at a very trifling expense

Catalogues may be had by applying to the Auctioneer, Swansea; the *Birmingham Journal* Office, Birmingham; or at Mr. Pickering's Office, Llandaff, Brandingham, or Swansea.

TOWN SURVEYOR WANTED. — The West Hartlepool Improvement Commissioners are desirous to ENGAGE a qualified person to perform the joint duties of SURVEYOR and INSPECTOR of NUISANCES for the district of West Hartlepool, in the county of Durham. The person appointed will be required to give his entire services. Joint salary for the offices, 120*l.* per annum—Applications, stating age and qualifications, with testimonials, to be sent to or delivered at my office, not later than the 27th FEBRUARY instant, at noon.

By order,
WM. W. BRUNTON, Clerk to the Commissioners.

West Hartlepool, 7th February, 1855.

COMPETITIONS.

WANTED, a SET of PLANS for a WESLEYAN CHAPEL, intended to be built in Pimlico. A Premium of 5*l.* will be given for the set selected.—For particulars apply to Messrs. CUTHBERTSON, 49, Lower Belgrave-place, Pimlico.

THE GILBERT MONUMENT.—DESIGNS and ESTIMATES for the ERECTION of the proposed Monument to the memory of the late Lieutenant-general SIR WALTER RALEIGH GILBERT, Bart. G.C.B. will be received on or before MONDAY, the 26th of MARCH next, accompanied by sealed letters, addressed to "The Secretary of the Gilbert Monument at 78, New Bond-street, London," and endorsed, "Design for the Gilbert Monument."—Full particulars may be had by written application to the Secretary at the above address, where plans, and a description of the site of the Monument, may be seen, on and after TUESDAY, the 27th instant.

78, New Bond-street, London, Feb 22, 1855.

TO ARCHITECTS.

THE IPSWICH BURIAL BOARD are desirous of receiving PLANS for the ERECTION of CHAPELS and other suitable buildings. Further information, with a plan of the ground, may be obtained by applying at the Town Clerk's Office, Ipswich. The Plans, with estimates, must be sent in on or before the 16th of MARCH next, addressed to the Town Clerk. A premium of twenty guineas will be paid for the Plan selected, and such plan will be the property of the Board. In the event of the author of the Plan selected being employed to superintend the work, the premium will not be payable, but he will be paid the usual commission. Each design must be marked with a distinctive motto, and accompanied by a sealed envelope, addressed to the Town Clerk, containing the name of the competitor, with a reference to the design and its motto.

Ipswich, Feb 15, 1855.

TO LANDLORDS AND OTHERS.

HARDY & CO. Estate Agents, &c. undertake the entire MANAGEMENT of HOUSE PROPERTY, in town and country; the Collection of Rents, Superintendence of Repairs, and surety of good Tenants, at a great saving of expense. —Offices, 32, Castle-street, Holborn-bars.—Established 16 years.

CONTRACTS.

TO BUILDERS AND CONTRACTORS.

THE WELLS BURIAL BOARD have resolved to ERECT TWO CHAPELS and a PORTER'S LODGE on the Burial Ground.—Plans and specifications are deposited, and may be seen at the Office of Mr. HIPPISLEY, Surveyor, New street, Wells. Persons desirous of CONTRACTING for the performance of the Works are requested to send Sealed TENDERS, under cover, addressed to the Clerk, on or before SATURDAY, the 3rd day of MARCH next, of whom all further particulars may be known. By order of the Board,

Wells, Feb 6, 1855 W. J. S. FOSTER, Clerk.

TO BUILDERS, CONTRACTORS, &c.

HULL CORN-EXCHANGE.—The Committee for Building the New Corn-Exchange, at Hull, is ready to receive TENDERS for the EXECUTION of the whole Work, according to the plans and specification, which may be seen at the Office of the Corporation's Surveyor, Town hall, Hull, between the hours of TEN and FIVE, on any day after the 14th day of FEBRUARY instant, and where parties can have copies of the specification, at 5*s.* each; or from Messrs. BELLAMY and HARDY, Architects, Lincoln. Tenders (which must be in the form to be had from the said Surveyor) must be sent, addressed "To the Town Clerk, Town-hall, Hull," and marked outside "Tender for Corn-Exchange," on or before NOON of the 12th day of MARCH next, and must be accompanied by a letter from two responsible persons agreeing to become bound in the sum of 1 000*l.* for the due performance of the contract, if accepted. The Committee do not bind themselves to take the lowest Tender.

By order,
THO THOMPSON, Town Clerk.

Town Hall, Hull, 12th February, 1855.

NEWMARKET LOCAL BOARD of HEALTH.—To CONTRACTORS for SEWERS and PIPE DRAINAGE. Persons willing to CONTRACT for the DRAINAGE of the TOWN of NEWMARKET may inspect the plans and specification of the work, forms of Tender, &c. at the Office of Mr. J. F. CLARK, Architect, Newmarket. The district will be divided into three parts, for which separate Tenders are required. The Tenders are to be delivered to the Clerk of the Board, on or before SATURDAY, the 3rd of MARCH next. The lowest or any Tender will not necessarily be accepted.

JAMES BUTTON, Clerk to the Local Board.

February 19, 1855.

CONTRACTS for the SUPPLY of BUILDING MATERIALS for CONVICT PRISONS.—Persons desirous of TENDERING for the Supply of Timber, Deals, Slates, Lime, Sand, Bricks, Lead, Glass, Wrought and Cast Iron, Ironmongery, Gas and Water Pipes, White Lead, Oils, &c. for Twelve Months, from the 1st of April next to the 31st of March, 1856, for Pentonville, Millbank, Brixton, Portland, Portsmouth, Dartmoor, and Parkhurst Prisons, are requested to forward the same, addressed, "Directors of Convict Prisons, 45, Parliament-street, London," on or before SIX o'clock, p.m. on MONDAY, the 5th of MARCH, 1855.—Forms of Tenders may be had on application at the several prisons, or at the Office of the Directors, 45, Parliament-street, London.

45, Parliament-street, 19th of February, 1855.

BURSLEM LOCAL BOARD of HEALTH.

CONTRACT, No. 1.—The Burslem Local Board of Health are prepared to receive TENDERS for the supply of certain SALT GLAZED EARTHENARE PIPES and other articles, to be used in the drainage of Sneyd's Croft, Middleport, for the "Burslem and Tunstall Freehold Land Society."

The drawings and specifications may be seen, and further particulars obtained, on application to Mr. RALPH HALES, Cobridge, Surveyor to the Local Board. Sealed Tenders must be sent to me on or before the 6th day of MARCH next.

By order,
JOSEPH LOWNDES, Clerk.

Public Offices, Burslem, February 16, 1855.

EXTENSION OF TIME FOR DELIVERING TENDERS TO 6TH MARCH NEXT.

ORMSKIRK LOCAL BOARD of HEALTH WATERWORKS.—To STEAM-ENGINE MAKERS, BOILER MAKERS, and OTHERS.—The Local Board hereby give Notice, that they are prepared to receive TENDERS from parties willing to undertake the following Contract:—For the SUPPLY and ERECTION (at Ormskirk) of a NEW STEAM-ENGINE, BOILER, PUMPS, and other APPARATUS; also, for certain Repairs to existing Machinery and Connections therewith. The Specification may be seen, and forms of Tender may be obtained, together with any further information required, on application at the Office of the Local Board, Ormskirk, or at the Offices of ROBERT RAWLINSON, C.E. 34, Parliament-street Westminster. Sealed Tenders to be delivered at the Office of the Local Board of Health, Ormskirk, before SIX o'clock, on TUESDAY, the 6th day of MARCH, endorsed, "Tender for Contract for Engine, Boiler Pumps, &c."

WILLIAM WELSBY, Clerk to the Board.

Ormskirk, January 31, 1855.

DOVOR HARBOUR.—A Committee of the Lord Warden and Assistants of Dovor harbour will be held at the COUNCIL-HOUSE, Dovor, on TUESDAY, the 6th day of MARCH, at TWELVE o'clock at noon, to receive TENDERS, in writing, from such person or persons as may be willing to take, on Lease, for Building and other purposes, the following PARCELS of GROUND, or some part thereof, viz. all that PLOT near the New-bridge, in Dovor, now occupied by Mr. Sterliker Finnis; all those several PLOTS at the rear of Waterloo-crescent, in Dovor, occupied by Messrs. Duke, Messrs. Cullin and Prescott, Mr. James Crundall, and others; and all those several PLOTS, being part of the ground recovered from the pent situate at the back of Snargate street, and near the slipway, in Dovor, and now unoccupied.—Plans of the said ground may be seen, and particulars ascertained, at Mr. G. T. THOMPSON'S Office, Dovor; or at Mr. HARDWICK'S Office, Henrietta-street, Cavendish-square, London. The Tenders, which are to be sealed up and endorsed "Tender for Ground," may be left at Mr. THOMPSON'S office, up to TEN o'clock in the forenoon of the said 6th day of MARCH next. G. T. THOMPSON, Registrar.

Dovor, 16th February, 1855.

Sealed Tenders, to be delivered at the Commissioners' Office, Chorley, before TWELVE o'clock on SATURDAY, the 16th day of MARCH, 1855, endorsed, "Tender for Contract No 1."

RICHARD JACKSON, Clerk to the Commissioners.

Chorley, February 19th, 1855

SOUTHPORT WATERWORKS.—CONTRACT for STEAM-ENGINES, BOILERS, PUMPWORK, &c. The Directors of the Southport Waterworks Company are ready to receive TENDERS for the CONSTRUCTION and ERECTION of TWO WATERWORKS STEAM-ENGINES, Three Boilers, and Pump work and other Apparatus, complete. Plans and specifications may be seen and forms of Tender obtained on application to THOMAS HAWKSLEY, Esq of No 30, Great George-street, Westminster, London (the Engineer to the Company); or at the office of Mr. WILLIAM HARPER, Silver-street, Bury Lancashire on and after THURSDAY, the 22nd day of FEBRUARY inst. The lowest Tender will not necessarily be accepted. Sealed Tenders to be delivered to Mr. WILLIAM HARPER, No. 17, Silver-street, Bury, Lancashire, on or before WEDNESDAY, the 7th day of MARCH next.—By order,

WM HARPER, Clerk to the Company.

Bury, Lancashire, February 15, 1855.

TO BUILDERS AND CONTRACTORS.

MILITARY DEPOT for the County of DENBIGH, at Wrexham.—Any person willing to CONTRACT for BUILDING the new MILITARY DEPOT, for the custody of the stores, arms, and accoutrements of the Militia of Denbighshire Rifles and for ERECTING a HOSPITAL, with QUARTERS for the Sergeant-Major and Six Sergeants of the Permanent Staff, together with all necessary Outbuildings and for forming the PARADE GROUND, may see the plans and specifications after the 7th of MARCH next, upon application to Mr WHITTAKER, at the Turf Tavern, near the Railway Station at Wrexham, or at my office in Oswestry. Sealed Tenders to be sent, addressed to me, at Gwernyclill-hall, on or before the 19th day of MARCH endorsed "Tenders for the Military Depôt at Wrexham." The Contractor will be required to enter into security, with sufficient sureties, for the due completion of the works. The lowest Tender may not be accepted, or should have due regard to the eligibility of the parties.—Any further information may be obtained at my Offices at Oswestry, and Gwernyclill, near Wrexham. THOMAS PENSON, Architect.

Oswestry, February 21, 1855.

SHIPLEY LOCAL BOARD of HEALTH.—WATERWORKS CONTRACT, No 2.—The Local Board hereby give Notice that they are prepared to receive TENDERS for the CONSTRUCTION of a COMPENSATING RESERVOIR at ELDWICK, near Bingley, with the Culverts, Waste Pit, Gauge Basin, Resolvent Lodge, and other Works therewith connected, and for Furnishing all the stores of Cast Iron upon, or within 1 mile near Bailiff on Plan, sections, detail drawings, and specimens as may be inspected, and at after the 23rd FEB. at the Offices of Mr. J. MCLANDSBOROUGH, Civil Engineer, 23, Queen-square, Bradford, from whom Forms of Tender and further information may be obtained. Sealed Tenders to be delivered in time, at my Offices in Bradford, Yorkshire, on or before MONDAY, the 12th day of MARCH next, endorsed "Shipley Waterworks Tender for Contract, No. 2." The Local Board do not bind themselves to accept the lowest or any Tender.

JO THOMPSON, Clerk to the Local Board.

Bradford, Feb. 16th 1855.

HER MAJESTY'S CROWN ESTATE, SUNK ISLAND, COUNTY of YORK.—Persons desirous of CONTRACTING for the ERECTION of sundry HOUSES, COTTAGES, and other BUILDINGS upon this estate, are requested to communicate their intention to the Architect, Mr TEULON, Lansdowne place, Brunswick-square, London. The plans and specifications are lodged with Mr SUTTON, the Clerk of Works, at Mr CUDDAY'S Sunk Island, and the Tenders are to be delivered, free of expense, on or before the 5th MARCH, to the office of Messrs. Dand Preece, 1, Whitehall-place, London, addressed to the Hon. CHARLES FORE, H.M.'s Service, and endorsed "Tender for Works at Sunk Island."

TOWNSHIP of MANCHESTER.—ERECTION of NEW WORK HOUSE.—The Guardians of the Poor of the Township of Manchester are desirous of receiving TENDERS for the whole or any branch of the Works required in the ERECTION of a NEW WORK HOUSE, intended to be built at Crumpsall, near Manchester. The drawings and specifications may be seen at the offices of Messrs MILLS and MURGATROYD, Architects, Exchange-chambers, Bank-street, Manchester, where all parties who may be desirous to tender in respect thereof. The Guardians do not pledge themselves to accept the lowest Tender

By order &c. JOHN HARROP, Clerk to the Guardians.

Poor Law Offices, New Bridge-street, Manchester,

February 21st, 1855

TO BUILDERS

NEW MARKET at GLOUCESTER.—The Corporation of Gloucester are desirous to receive TENDERS for the ERECTION of the above Market, in accordance with the plans, specifications, and conditions, prepared by Messrs. MEDLAND and MABERLY, Architects, Gloucester, which may be seen on application to them on and after 8th MARCH next. The Tenders to be delivered, free of all charge, before TWELVE o'clock, on MONDAY, 19th MARCH next, at the Architects' office, sealed and endorsed, "Tenders for New Market, Gloucester."—The Corporation will not be bound to accept the lowest or any Tender if the amount be unreasonable. The works will be divided into two Contracts, viz. No. 1. The excavators, bricklayers, masons, carpenters, joiners, slaters, plumbers, painters, and glaziers' works.—No. 2. The smiths and ironfounders' works.

A. H. JENKINS, Town Clerk.

Gloucester. February 21st, 1855

TO IRONFOUNDERS AND OTHERS.

THE COMMISSIONERS of SEWERS of the City of London hereby give Notice that they will meet in the Guildhall of the said city, on FRIDAY, the 23rd of MARCH, 1855, at TWELVE o'clock at noon precisely, to receive TENDERS for the supply of CAST-IRON WORK, for a period of three years from Lady-day, 1855, to Lady-day, 1858. A specification of articles commonly used by the Commission may be seen daily at their office, Bridewell-hall, the hours of TEN and FOUR. Security will be required for the due performance of the contract, and no Tender will be received after TWELVE o'clock on the day of treaty. The Contractors do not pledge themselves to accept the lowest Tender. JOSEPH DAW, Principal Clerk.

Sewers' Office, Guildhall, 22nd February, 1855.

TO CONTRACTORS FOR PUBLIC WORKS.

CARMARTHEN SEWERS.—THE CARMARTHEN LOCAL BOARD of HEALTH are desirous of receiving TENDERS for the CONSTRUCTION of BRICK SEWERS for a portion of the town of Carmarthen, with Junctions, Manholes, &c. Parties desirous of Tendering can inspect the plans and specification at my Office, on and after MONDAY, the 19th of February inst. Tenders must be delivered on MONDAY, the 5th MARCH next, to the Committee, who will meet for that purpose at the Council Chamber, in the Town hall, at ELEVEN o'clock precisely.—By order of the Board. GEO. THOMAS, Clerk.

Carmarthen, Feb. 13, 1855.

JACKSON and COOK, Ironfounders and Manufacturers of CORRUGATED and GALVANIZED IRON ROOFS and BUILDINGS, beg to call the attention of Architects, Builders, and others, requiring roofing, to the superiority of iron as manufactured by them for that purpose, in point of lightness, cleanliness, durability, cheapness of construction, and being fire-proof. Drawings and estimates furnished

Island Foundry and Ironworks, Millwall, London.

Offices: 13, Fenchurch-street, City.

SYLVESTER'S HOT WATER STOVES, for Warming Halls, Staircases, Galleries, Warehouses, Stores, Hot-houses, and Offices, require no Flue, create no Dust, and are safe from all risk of Fire.

Any number of these Stoves may be heated from one Boiler, and may be used equally well with Steam or Hot Water.

SYLVESTER'S IMPROVED AIR WARMER

is the most powerful, salubrious, and economical Apparatus yet invented for Heating Churches, Chapels, Schools, and Public Rooms, by means of Hot Air.

Prospectuses and Estimates may be obtained on application to

SYLVESTER and CO. Engineers, and Manufacturers of Heating Apparatus, 98, Great Russell-street, Bloomsbury.

PUBLIC INVITATION.—HEATING by HOT WATER with ONE BOILER.—JOHN WEEKS and CO. King's-road, Chelsea, Horticultural Builder and Hot-water Apparatus Manufacturer, most respectfully invite the Nobility, Gentry, and Horticulturists, to visit their nursery establishment during this severe weather, and witness the efficient working of their hot-water apparatus. The establishment consists of forcing houses, conservatories, &c. &c. many of which are of wide and lofty dimensions, and together measuring upwards of 1,000 feet in length; the whole effectually heated by one boiler, at the small cost of 3s. 8d. per day for fuel and labour. The various houses are divided into above forty different compartments, either of which can be heated separately, and the whole regulated at pleasure with a greater command of heat than is required. Boilers of all sizes, and apparatuses, both plain and ornamental, adapted for warming churches, schools, warehouses, and buildings of every description; also a great variety of horticultural buildings, to be seen in full operation, so that a lady or gentleman can select the description of house best adapted for every required purpose. Also a splendid collection of plants.

JOHN WEEKS and CO. Horticultural Establishment, King's-road, Chelsea.

WARMING and VENTILATING.—COTTAM and HALLEN, 2, Wimsley-street, Oxford-street, having had thirty years' experience, and having warmed by the circulation of hot water upwards of 4,000 buildings, consisting of churches, prisons, lunatic asylums, halls, and staircases, galleries, conservatories, forcing-houses, &c. can with confidence recommend their system, which, by the various improvements they have made, has perfected the construction and economised the expense. Greenhouses, conservatories, verandahs constructed entirely of iron or wood, and of iron and wood combined. Estimates upon application.—COTTAM and HALLEN, Engineers and Ironfounders, 2, Wimsley-street, Oxford-street.

ROYAL POLYTECHNIC GAS FIRE. BACHHOFFNER and DEFRIES'S PATENT.—The public is respectfully informed that arrangements have now been made for the supply of this unique and beautiful mode of warming private houses or store, public buildings, &c. Smoke, dust, ashes, and accidents from fire are effectually prevented by its use, while it presents all the comfort and appearance of an open coal fire, securing, at the same time, perfect ventilation.—To be seen in action at DEFRIES'S Office, 45, Regent-street London.

HEATING by HOT WATER.—JOHN WEEKS and CO. King's-road, Chelsea, solicit the attention of architects, &c. &c. to their supreme APPARATUS. As Messrs Weeks' establishment, an apparatus with one boiler can be seen daily in full operation, heating buildings measuring 1,000 feet in length, at the small average cost per day in fuel and labour of 3s. 8d. This achievement in heating by hot water is unprecedented.

THE SMOKE-CONSUMING STOVE, invented by Dr ARNOTT, and explained by him at the Society of Arts, on WEDNESDAY, MAY 16, insures perfect combustion, economises fuel, requires much less attention than the register stove for general use, and produces by the use of Dr. Arnott's improved Circular Valve, a perfect system of Ventilation.—Manufactured by D. and E. BAILEY, 372, Holborn.

FIRST PRIZE KITCHEN RANGE.—The only prize ever competed for the prize of public approbation—has long been obtained by BROWN and GREEN'S celebrated KITCHEN RANGE, which is pre-eminently the best, most perfect, economical, and convenient stove for all domestic cooking operations. It is warranted a certain cure for a smoky chimney.—Wholesale agents, R. W. KENNARD and CO. 67, Upper Thames-street, London. Manufactory, Luton, Beds

THE LOCK CONTROVERSY SETTLED. Messrs. HOBBS, ASHLEY, and CO. are now Manufacturers of their celebrated AMERICAN and ENGLISH PATENT LOCKS by their Patent Steam Machinery on the Premises, 97, CHEAPSIDE, and 31, LAWRENCE LANE.

Messrs. H. and Co. by the introduction of their Steam Machinery, are enabled to guarantee GREATER SECURITY, and SUPERIOR WORKMANSHIP, at prices more moderate than any Locks produced, either in Town or Country; in addition to which, they are applicable to all purposes for which Locks are used.

Every Lock being made and finished at the Manufactory bears their own stamp, and is warranted, without which none are genuine. These Locks can be procured by order through any respectable Ironmonger in the United Kingdom.

WHOLESALE and RETAIL WAREHOUSE, 97, CHEAPSIDE Manufactory, 31, Lawrence-lane, London

P.S. Depôt for Milner's Patent FIRE and BURGLAR PROOF SAFES fitted with Hobbs's Patent Locks.

PARNELL and PUCKRIDGE'S DEFIANCE and NATIONAL LOCKS, "which cannot be picked," are made of a large and fine variety for every purpose

FIRE-PROOF SAFES, DOORS, and FRAMES;

DEED and CASH BOXES, COPYING and LEVER PRESSES;

STREET DOOR LATCHES, of every kind for sale from pocklocks, with two small neat keys, 15s. each.

Descriptions and lists of prices may be had, or sent, upon application to

PARNELL and PUCKRIDGE, 52, STRAND, London.

A PRIZE MEDAL for SUPERIOR LOCKS was awarded to J. H. BOOBYER at the Great Exhibition of 1851, who invites the attention of Builders, &c. to his Stock of Ironmongery, Brass Foundry, Nails (wrought and cut), Copper and Zinc Goods, Cabinet Ironmongery, Chains, Glass, and Wood Furnitures of all kinds, with Patent Shifting Spindles; Dr. Arnott's Ventilator, 4s.; and the new registered Venetian Ventilator, somewhat improved, &c. &c. 61, Aldersgate-street.

J. H. BOOBYER (late STURCH and BOOBYER), established nearly 200 years, for the supply of Goods from the best Manufactories, at the lowest prices.

14, Stanhope-street, Clare market, London.

CHUBB'S LOCKS & FIREPROOF SAFES.

INEFFECTUAL ATTEMPT UPON THE STRONG ROOM OF THE LONDON AND NORTH WESTERN RAILWAY, LIVERPOOL.

"London and North Western Railway Company,

"Liverpool, May 7, 1853

"Gentlemen,—I have much pleasure in bearing testimony to the efficiency of the iron doors and locks of your make, which secure the strong room at this office, and which completely baffled the efforts of one or more burglars to get at the money chest on the night of Tuesday last, although it is evident that considerable force was used to break open the door.—I am, gentlemen, your obedient servant, "GEORGE PALMER.

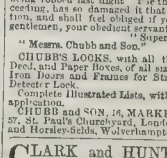
"Messrs Chubb and Son."

FROM MR. OTWAY, SUPERINTENDENT OF POLICE, C DIVISION

"S, Great Vine-street, May 3, 1853.

"Gentlemen,—I have the pleasure to inform you that having one of your locks on the street door of my house prevented my being robbed last night. The thief tried to open it, but not succeeding, has so damaged it that I have sent it to you for inspection, and shall feel obliged if you will have it repaired. I am, gentlemen, your obedient servant, "J. OTWAY.

"Superintendent C Division of Police.



"Messrs. Chubb and Son."

CHUBB'S LOCKS, with all the recent improvements; Cash, Deed, and Paper Boxes; Iron Doors; Fireproof Safes and Chests; Iron Doors and Frames for Strong Rooms, all fitted with the Detector Lock.

Complete Illustrated Lists, with prices and sizes, will be sent on application.

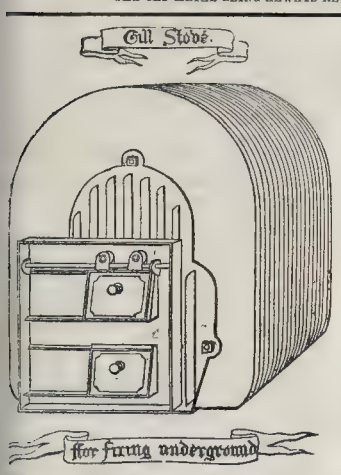
TO ENGINEERS, ARCHITECTS, AND CONTRACTORS.

ZINC ROOFING, INCLUDING TIMBER OR IRON FRAMEWORK,

IS AS



CHEAP AS SLATES OR GALVANIZED IRON, LIGHTER, AND MORE DURABLE.

Certificates, and Models of various descriptions, may be seen, and estimates obtained on application to

THE SURVEYOR OF THE VIEILLE MONTAGNE ZINC MINING COMPANY, 12, MANCHESTER BUILDINGS, WESTMINSTER

Roofs constructed under his superintendence guaranteed to require no repairs for at least ten years.

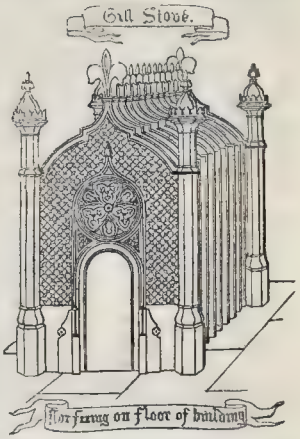
THE OLD METAL BEING ALWAYS RETAKEN AT HALF-PRICE, RENDERS IT ADVANTAGEOUS FOR ALL TEMPORARY BUILDINGS.

STUART AND SMITH'S
PATENT GILL STOVE,

FOR

HEATING CHURCHES AND OTHER PUBLIC AND PRIVATE BUILDINGS.

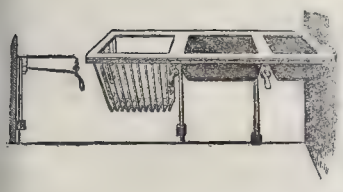
The constant failures, and enormous expense, consequent upon the endless variety of experiments to warm buildings has left the public in doubt as to whether there exists any certain, economical, and safe mode of effecting that object or not.



STUART AND SMITH,

ROSCOE-PLACE, SHEFFIELD,

confidently assert, that the Air-Warmer they recommend, possesses the desired qualifications, and respectfully request Gentlemen interested in the question, to ascertain the fact from the actual working of the invention.



It has been fixed in the following, besides a great many other private and public buildings:—St. Stephen's, Longsight, Manchester; Grassendale Church, Aigburth, Liverpool; St. Ann's, Aigburth, Liverpool; North Wootton, near Lynn, Norfolk; St. Paul's, Alnwick, Northumberland; Bettesanger Church, Sandwich, Kent; St. Mary's, Pitsmoor, and Grimesthorpe, Sheffield; County Lunatic Asylum, Derby, &c. &c. &c.

Prospectuses, and every information, sent on application.

COTTAM'S NEW PATENT FOR STABLE REQUISITES.

COTTAM AND HALLEN,

the original projectors of the above arrangement of MANGER RACK and WATER-TROUGH, AS ONE FIXTURE, which obtained the Great Exhibition Prize Medal, and universally approved of, have added all the latest improvements to their invention (secured by patent), which includes an entirely new method of attaching the hatter bail and ring, giving to the horse greater freedom, and being noiseless in operation, add much to its comfort whilst feeding and convenience when at rest.

COTTAM'S ENAMELLED MANGERS

are constructed in the best possible manner, both as to form and utility, are cleanly in appearance, durable, and impervious to infection; manufactured PLAIN, GALVANIZED, or ENAMELLED.

Improved Stable Guttering, with Moveable Safety Covers.

Loose Box Fittings, Harness-room Appendages, and every Article in Stable Furniture kept on Show.

Descriptive Catalogues and Estimates on application to

COTTAM AND HALLEN, 2, WINSLEY-STREET, OXFORD-STREET, LONDON.

IMPROVED PUMPS,

Of the best Workmanship and warranted.

The VALVES and SUCKERS of these Pumps are constructed upon an entire new and SIMPLE principle; they are not likely to get out of order; should they do so, can easily be repaired, as the Pump is so contrived that the valves can readily be got at.

An Improved CAST IRON TRAP strongly recommended by the Sanitary Commissioners, and suitable for Sugar Bakers, Slaughter Houses, &c. &c. It is so formed that the trap plate will pass any matter the top grating will let through and therefore is not liable to stoppages and well adapted to Stables and Stable-yards, for saving the best part of Liquid Manure.

STEVENS AND SON,

ENGINEERS,

IRON AND BRASS FOUNDERS AND MANUFACTURERS;

CONTRACTORS

FOR THE

ERECTION OR ALTERATION OF GAS-WORKS FROM TWENTY LIGHTS UPWARDS,

With Buildings, Mains, Meters, Service-Pipes, Lamp-Posts, Lamps, and Gasfittings

WATERWORKS FOR THE SUPPLY OF TOWNS,

DEVICES FOR GAS ILLUMINATION.

IMPROVED REGISTERING TURNSTILES FOR TOLL-BRIDGES, EXHIBITIONS, PUBLIC GARDENS, BATHS AND WASHHOUSES, &c.

These Turnstiles have been selected for the Entrances of the Great Exhibition, New York.

PATENTEES OF THE SEMAPHORE RAILWAY SIGNAL.

Signals for communication between Guard and Engine Driver. Railway Stores and Lamps of every description

DARLINGTON WORKS, 16 to 19, SOUTHWARK-BRIDGE ROAD, LONDON.

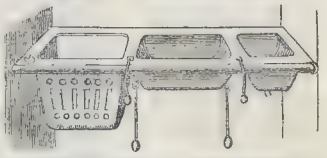
BUILDERS, Contractors, Carpenters, and others are invited to inspect the stock of NAILS, TOOLS, BRASS, AND GENERAL IRONMONGERY at PEELL and STEDALL'S,

Nos. 5 and 6, BROAD-STREET, BLOOMSBURY.

The prices will be found the lowest, and the stock one of the largest in the trade. A price list sent on application.

COLLINGE'S PATENT HINGES.—Sole Manufacturers, CHARLES COLLINGE and CO. 61 and 65, Bridge-road, Lambeth, where a great variety are always on view for church, park, railroad, coachhouse, and other gates and doors of large and small dimensions, a ton weight moving with these hinges as easily as a wicket. Ornamental hinges, adapted for drawing-rooms, &c.; doors fitted with them may be removed and replaced in an instant. Rising and double-acting spring hinges, and superior gate fastenings, at moderate prices.

None genuine unless marked "Charles Collinge, Patent, Lambeth." Plain and ornamental cast and wrought iron-work, for building and other purposes. Engines, machinery, patent axle-trees, sugar-mills, &c.



NEW PATENT MACHINE for MORTISING and TENONING HARD or SOFT WOOD, and BORING WOOD or IRON.—House and Coach Builders, Joiners, Cabinetmakers, and others, doing similar work, are invited to call at the Patentees, FOWIS, JAMES, and Co. Wholesale Builders and Cabinet Makers, Ironmongery Establishment, 86, Watling-street, City, and see in action this very simple, powerful, and expeditious machine, which is the only one yet brought out, for performing these three separate kinds of work by one machine; and as it is self-feeding, it does not require any skill or care in using like the older inventions introduced. It can either be worked by a boy, or made to go by steam power.

P.S. Steam Engines and Machinery contracted for.

TO IRONMONGERS AND THE TRADE GENERALLY.

D. HULETT and CO. Manufacturers of GAS CHANDELIERS, HALL LANTERNS, GLASS LUSTRES, &c. &c. A large assortment of the newest designs always on show—every article marked in plain figures. Patentees and manufacturers of the Mercurial Gas Regulator. Complete pattern-book and price list, 10s.—55 and 56, High Holborn.

BARTON'S PATENT SAFETY STABLE FITTINGS, and ENAMELLED MANGERS.

The only Patented Invention of this description constructed so as to prevent considerable waste of Hay and Corn, together with all the newest improvements.

STABLE FITTINGS, FORTY SHILLINGS PER SET, to fill up the whole width of Stalls, and can be had enamelled or galvanized. Every description of Mangers, Racks, and Stable Furniture in stock; Iron Hurdles, Gates, Fencing, &c.

Manufacturer of Kirk's Patent Noiseless Cast-Iron Smoke-curing Chimney Cans (200 on Buckingham Palace), price 35s. each. Price-lists and Illustrated Catalogues forwarded on receipt of two postage-stamps.

JAMES BARTON, Ironfounder, &c. 370, Oxford-street, a few doors east of the Pantheon.

A SAVING of TIME and MATERIALS, with Solidity of Building.
HENRY GOUGH'S PATENT PORTABLE STEAM ENGINES of two, three, four, and six horse power, for grinding mortar, raising building materials, driving piles, circular saws, pumps, &c. 46, Albert-street, Manchester.
TESTIMONIAL.
"Thorn Island Battery Works, Milford Haven,
"Mr Gough, "Jan. 19, 1855.
"Sir.—The three-horse power steam-engine purchased from you in 1852, for the purpose of hoisting stone and other material for the building of the above battery, has answered the purpose for which it was required remarkably well, and from its portable ness was found very convenient to remove from one part of the building to another. The consumption of coals was about 4 cwt. in 10 hours.
"I am, Sir, yours truly, for THOMAS JACKSON,
"THOMAS SWAIN."

TO IRONMONGERS, BUILDERS, AND OTHERS.
TO BE SOLD by TENDER, a large quantity of NAILS for building purposes. Samples to be seen on application to Mr. RUDHALL, at Mr. Fowler's, 4, Garden-court, Temple Tenders to be delivered there on the 1st of MARCH.

MACHINERY. — SAWING, PLANING, MOULDING, and WOOD CUTTING MACHINES
To Timber Merchants, Contractors, and others. SAMUEL WORSAM and CO. of Hortulan-place, King's-road, Chelsea, invite the attention of Timber Merchants and others to their new inventions and improvements in all kinds of machinery used in Sawing, Planing, Moulding, and Wood Cutting S. WORSAM and CO. are able to execute orders with cheapness and despatch; they solicit an inspection of their machines constantly on hand and in progress; and they can refer to parties of the highest position and respectability, as to the goodness and efficiency of their machines.—Estimates made for Exportation, or otherwise. Drawings and prices on application.
February 16th, 1855.

GASLIGHT and FROST.—THOMAS GLOVER, Gas-meter Manufacturer, Suffolk-street, Clerkenwell-green, London.—The present very severe frost suggests to him the propriety of reminding gas companies and gas consumers of the advantages of his PATENT DRY GAS METER, and the disadvantages of wet gas-meters, as stated below.
ADVANTAGES OF HIS PATENT DRY GAS-METER.
1st. Cannot become fixed by frost, however severe, thus saving gas companies and gas consumers much trouble, expense, and annoyance in business.
2nd. Steady lights are secured, there being no evaporation from the meter, and, consequently, no condensation in the fittings, all expense of inspectors attendance and gasfitters' charges are saved, which is a matter worthy of consideration.
3rd. The Advertiser's Patent Dry Gas-meter is a fixed measurer, cannot vary in its measurement, and does not vary in measurement. Thomas Glover has manufactured upwards of 74,000 of these Patent Dry Gas-meters, and would have great pleasure in exhibiting to any one the numerous testimonials he has received in their favour, too numerous for an advertisement, therefore will content himself by giving an extract from a letter he received last mail:—
"Dated Charlotte-town, January 19, 1855,
Prince Edward's Island.
"I have had great pleasure with your meters, so much so, that * Up to this date I have had no trouble with them whatever; not so with the few wet meters, all of which I have had to replace with your Patent Dry Meters; and, although your Dry Gas-meters are placed in exposed stores and shops, not one has got out of order, notwithstanding the rigour of our climate.
(Signed) "ALEX. M'AUSLAND, Manager."

FOR SALE.—To MANUFACTURER and OTHERS.—A CORRUGATED GALVANISED TINNED IRON ROOF, with skylight and gutters, about 72 ft square, with the wood frame, and supports of stout timber painted inside and out, quite new within the last six months Also a large TANK, of yellow deal plank, never used, 3 feet 5 feet 7 inches and 5 feet.—To be seen at LETT'S Wharf, Commercial-road, Lambeth, near Waterloo-bridge.

Their Show Rooms contain the largest Stock of Chimney-pieces in England. Address, WESTMINSTER MARBLE COMPANY, EARL-STREET, MILBANK.

MARBLE WORKS by PATENT MACHINERY, Commercial-road, Pimlico, London.
THOMAS JACKSON begs to draw the attention of the public to the most extensive stock of Marble Chimney-Pieces in the Metropolis; consisting of a selection of upwards of two hundred and manufactured by persons from the finest Italian and other marble, and with that careful attention to the details and finish so necessary in good marble work. The Stock consists of elegant Drawing-Room Chimney-Pieces in Statuary Marble; bold massive Chimney-Pieces, in Black, Black and Gold, Sardinian, Sienna, Verd Antique, Brocatella, Dove, St. Ann's, and Serpentine Marble, suitable for Dining-Rooms, Libraries, Vestibules, and Entrance-Halls; and a great variety of others in Veined, St. Juan, Emperor's Red and Amber Marble, for Boudoirs, Breakfast-Rooms, and secondary Bed-Rooms, &c. also, Monuments, Tombs, Tablets, and Pedestals for Busts and Statues, and Slabs for Cabinet Work, &c.; the whole executed from the most classic designs, and in all the varieties of the finest Italian and British Marble, at the lowest remunerative prices.

GRANITE, MONUMENTS, TOMBS, TABLETS, LEDGERS, LANDING STEPS, &c. polished or otherwise, as required. Granite blocks, ashlar, tramway, &c. Bramley Fall and other stone. Cargoes of the above stone supplied direct from the quarries, landed and shipped.—Apply to Mr. G. H. CLARK, Stone Merchant and Granite Agent, Devonport Haytor Wharf, Rotherhithe, London.

GRANITE.—The Cheesewring Granite Company, Liskeard, Cornwall.
London Agents—TRESEDLLES and TAYLOR, 3, Pinner's-court, Old Broad-street. MESSRS. J. MATHEW, Liskeard.
This Granite is selected for the New Westminster-bridge.

MARKET-WHARF, REGENT'S-PARK BASIN.—WEST-END DEPOT, for Yorkshire Paving Portland and Derby Stone, Bangor Slates, Slabs, &c. Also Bricks, Lime, Cement, Plaster, Tiles, Laths, and Fire Goods. WOOD and ROBARTS invite the attention of Builders, Masons, and others, to their Stock as above, where everything will be charged at the lowest prices. Headstones, Ledgers, Steps, Lamps, &c. cut on the shortest notice. Country orders promptly attended to.

BATH STONE OF BEST QUALITY.
RANDELL and SAUNDERS, QUARRYMEN AND STONE-MERCHANTS, BATH.
List of prices at the quarries and depots, also cost for transit to any part of the kingdom, furnished on application to Bath Stone Office, Corsham, Wilts.

THE LONDON AND MANCHESTER PLATE GLASS COMPANY

Beg to inform the TRADE, that the EXTENSION OF THEIR WORKS being now completed, they are enabled to execute orders to any extent at immediate notice. The Company also beg to intimate that owing to improvements effected in the reconstruction of their Works, the COLOUR and QUALITY of their GLASS will be found to be considerably improved, and that they can guarantee the maintenance of these essential requirements They further beg to invite attention to their reduced List of Prices, which may be obtained on application at their London Warehouse, or at the Works

For the convenience of the LONDON TRADE, a large stock of POLISHED PLATE is now kept at the COMPANY'S WAREHOUSE, BARRAUD'S WHARF, WHITEFRIARS.

The Works, Sutton, St. Helen's, January, 1855.

TO ARCHITECTS, BUILDERS, CONTRACTORS, AND OTHER CONSUMERS OF GLASS.

HARTLEY'S PATENT ROUGH PLATE GLASS,

1-8th of an inch thick, or 2 lbs. to the foot; 3-16ths, or 3 lbs.; and 1-4th or 4 lbs. is now universally used for

RIDGE AND FURROW ROOFS, GREENHOUSES, RAILWAY STATIONS, MILLS, MARKET HALLS, BATHS AND WASH-HOUSES, FACTORIES, WORKSHOPS, SHIP-BUILDING SHEDS, AND OTHER EXTENSIVE BUILDINGS.

By a carefully prepared Estimate, it has been ascertained that FOUR-FIFTHS of the ROUGH PLATE, or non-transparent Glass, consumed in the United Kingdom in 1854, was manufactured by HARTLEY'S PATENT—thus affording the most incontestable evidence of its superiority over every other article of the kind, and as being the only description of Glass suitable for the purposes above named. It combines size and strength with economy of cost, and is manufactured in sizes expressly for RIDGE and FURROW ROOFS, giving a SPAN of TWELVE FEET, at a price not exceeding, weight for weight, that of Common Crown Glass. Its non-transparency renders BLINDS UNNECESSARY, and no scorching occurs in Greenhouses glazed with it; hence the preference given to this Glass for all Horticultural purposes.

For further particulars, apply to

JAMES HARTLEY AND CO. SUNDERLAND; AND PURFLEET WHARF, EARL-STREET, BLACKFRIARS, LONDON.

Sole Manufacturers of Lockhead's Patent Perforated Glass for Ventilation.

*** *Hartley and Co.'s Glass Tariff Newspaper will be forwarded gratis, on application.*

January 1, 1855.

CAEN and AUBIGNY STONE.—P. FOUCARD, Stone Merchant and Quarryman. Cargoes shipped to order from Caen to any port. Contracts taken for any quantities. Depôts: Granite Wharf, East Greenwich; Leth's Waterloo-bridge. Offices: 346, High-street, Southwark, near the Newhall.

CAEN and AUBIGNY STONE.—GATES and GEORGE (late Luard, Beedham, & Co.), General Stone Merchants. Caen Wharf, Rotherhithe, are supplying the Cove and Bath, Portland, Yorkshire, Granite, and other stones from their depôt, at current prices by land and water carriage; sales by vessel direct from the quarries, at moderate ship freight to any part of the United Kingdom.

N.B. Heavy goods landed, transhipped, or carted with despatch, and at moderate charges.

ANCASTER STONE, from the celebrated quarries of Mr. John Wilson, Ancaster, who has appointed GATES and GEORGE, Stone Merchants, his sole consignees for the London district. Ancaster Stone, so generally esteemed by the building profession, for its great durability, economy, and general utility, as to require but a trial to secure the approval of Architects and others for its more extended use in building. Samples and other information can be obtained at the Great Northern Depôt, Kings-cross; Caen-wharf, Rotherhithe; and Hibernia-chambers, London Bridge, Borough; or forwarded to address, free of charge.

GODSTONE STONE.—GATES and GEORGE beg to solicit the attention of architects, engineers, and builders to the above Stone, as being suitable for all purposes of construction, either as a substitute for brickwork, or in connection therewith, the price in most respects being about the same as ordinary brickwork. It can be obtained in large quantit es, and to specified sizes, in rubble or rough square blocks, direct from the quarries.—Information and samples given at Caen-wharf, Rotherhithe, and Hibernia-chambers, London-bridge, Borough.

By Her Majesty's — Royal Letters Patent.

SILICEOUS STONE.—ORNAMENTAL WORK of every description executed at LOW PRICES in this most durable material. A large Stock kept of Mantel-pieces, Balustrades, Quoins, Tombs, Fonts, &c. at the new premises, Whitehall Wharf, Cannon-row, Westminster.

VALENTIA SLATE SLABS.—The Valentia Slab Company invite attention to their Slabs now supplied, of very large dimensions and of superior quality. They have been used at the British Museum, National Gallery, Bethlem Hospital, various Lunatic Asylums, the Ordnance Works, Model Prison, Pentonville, and other Penitentiaries; Malting Floors in Bedfordshire and Hertfordshire, Breweries, the Race Stand at Brighton, Portsmouth Barracks, and are kept in stock in large quantities by Messrs. FREEMAN, Millbank-street; also by Messrs. Sharpe, Tooley-street; and at Messrs. Braby's, Belvidere-road, where terms may be obtained.

ENAMELLED SLATE.—REDUCTION in PRICE.—Mr. MAGNUS having completed some extra machinery, is enabled to announce a further reduction in price in the shape of a large and increased discount to the TRADE. His best goods are now supplied at prices below those charged by other parties for very inferior imitations of his work.—PIMLICO SLATE WORKS, 39 and 40, Upper Belgrave place, Pimlico.

WILKINSON'S IMPROVED ARTIFICIAL STONE CHIMNEY-PIECES.—Nearly 3,000 of the above have been Sold, although only recently brought to their present state of perfection, and offered to the public. The prices range from 6s. for a neat bedroom set; with jambs, moulded with large ogee on inner edge, set on plinths, Mantel, moulded with ovolo and fillet under shelf, and shelf with hollow on edge, to 50s. for sitting-room patterns of more elaborate character. A liberal discount for quantity.—Address W. B. WILKINSON, Newcastle-on-Tyne.

BOW-BRIDGE SLATE WORKS, Stratford, near London.—A. A. ROBINSON begs to inform Architects, Contractors, Builders, and others, that his PRICE LISTS for SLATES and SLAB WORK for 1855 are NOW READY, and can be had on application, inclosing a postage-stamp

N.B. A liberal discount to the trade.

TO BUILDERS' CLERKS AND OTHERS

THE INDURATED STONE COMPANY require the SERVICES of a good WRITING CLERK. He must understand bookkeeping by double entry, and be familiar with the measuring and valuing of stone-work. Good references are indispensable.—Apply on MONDAY, between TEN and TWO, to Mr. ROBERTS, the Company's Surveyor, 16, Hollis-street, Cavendish square

IMPERISHABLE STONE.—TRICKETT and PERKINS having erected new and powerful machinery, at their extensive quarries, are now able to execute orders to any extent with their much esteemed RAWDON-HILL STONE, which, from its strength and durability, together with its beautiful colour and readiness of conversion, renders it one of the most desirable stones out, being at once useful and ornamental. Architects and others are requested to test its qualities for strength and durability, either for external, internal, or ornamental purposes. Samples and prices furnished by SAMUEL TRICKETT, Stone Wharf, Isle of Dogs.

NOTE.—Can be got any size, or delivered to any part by rail or water carriage.

FOR SALE, price 47. 10s. a GLAZED SHOP FRONT and ENTABLATURE, for a 16-feet frontage. Shutters, doors, stall-board, &c. in good condition, at No. 7, George-street, Lisle-square.

THOMAS MILLINGTON

Begs to inform ARCHITECTS, BUILDERS, and the Trade, that he supplies the following articles of the best quality and at the same time upon the lowest terms:—

ENGLISH AND FOREIGN SHEET GLASS, PLATE, PATENT PLATE, PATENT ROUGH AND FLUTED PLATE, MILLED SHEET LEAD,

PATENT PIPE, LEAD, IRON, AND BRASS PUMPS, AND WATER-CLOSETS,

Genuine White Lead, Colours, Varnish Brushes, and every article in the Trade.

FOR PRICE SEE ADVERTISEMENT FIRST SATURDAY IN EVERY MONTH, OR UPON APPLICATION AT THE WAREHOUSE,

87, BISHOPSGATE-STREET WITHOUT, LONDON.

CHEAP AND DURABLE ROOFING.

By Her Majesty's — Royal Letters Patent.

F. McNEILL and CO. of LAMB'S-BUILDINGS, BUNHILL-ROW, LONDON, Manufacturers and ONLY Patentees of

THE PATENT ASPHALTED FELT, FOR ROOFING HOUSES, VERANDAHS, SHEDS, &c.

Patronized by

HER MAJESTY'S WOODS AND FORESTS,
HER MAJESTY'S COMMISSION OF CUSTOMS,
HONOURABLE EAST-INDIA COMPANY,
HONOURABLE BOARD OF ORDNANCE,
HER MAJESTY'S ESTATE, ISLE OF WIGHT,
ROYAL BOTANICAL GARDENS, REGENT'S PARK,

And by the most eminent members of the Royal Agricultural Societies of England, Scotland, and Ireland; at whose great national shows it has been exhibited, and OBTAINED THE PRIZE, for being the best and cheapest article for roofing; also used for under sia'es at the Royal Agricultural Society's House, in Hanover-square. Its advantages are lightness, warmth, durability, and economy. It is impervious to rain, snow, and frost, and a non-conductor of heat and sound. The Felt can be cut to any length, by 33 inches wide. The price is only ONE PENNY PER SQUARE FOOT. Samples, with full directions as to its use and the manner of applying it, with TESTIMONIALS, some of them of seven years' experience, from Architects, Builders, Noblemen, and Gentlemen who have extensively used it, sent free to any part of the town or country. A Dry-hair Felt, for covering Boilers, &c. is also manufactured, by which a saving of about 25 per cent. in fuel is effected. The TRADE are respectfully enjoined to send their orders DIRECT to the FACTORY, as the surest means of being supplied with the genuine article, and in lengths best suited to their roofs. They are likewise CAUTIONED AGAINST MISREPRESENTATION, as THE ONLY WORKS in Great Britain where the above roofing is made are F. McNEILL and CO.'s Manufactories, LAMB'S-BUILDINGS, BUNHILL-ROW. Roofs covered with the Felt to be seen at the Factory, also the new Vice-Chancellor's Courts, the passages and offices leading to Westminster Hall, and other buildings at the New Houses of Parliament.—A Liberal Discount allowed to the Trade.

SUPERIOR BRITISH PLATE-GLASS AT VERY LOW RATES

THE UNION PLATE-GLASS COMPANY having recently completed very considerable improvements and additions to their works, take the opportunity of informing their friends that they will now be able to supply orders without delay; and respectfully invite the attention of the trade generally to the low rates at which their now much-esteemed manufacture is sold.

Lists of prices may be obtained on application at

The Works, Pocket Nook, St. Helen's, Lancashire.
The Warehouse, 99, Hatton-garden, London.
" 48, Piccadilly, Manchester.
Messrs. C. and J. Malloch, 30, Turner's-court, Glasgow.
" John Dix and Co. Bath-street, Bristol.
" H. Sibthorpe and Son, Cork-hill, Dublin.

AN ENCYCLOPÆDIA of CIVIL ENGINEERING,

HISTORICAL, THEORETICAL, AND PRACTICAL.

Complete in One Volume.

By EDWARD CRESY, F.S.A. C.E.

"A desideratum in the history of engineering science is supplied by the publication of this volume. There is not a member of the community, from the highest engineer to the humblest surveyor, who will not find here materials to enrich his mind and extend his knowledge."—*Irish Railway Gazette.*

London: LONGMAN, BROWN, GREEN, and LONGMANS.

Just published, price 4s. 6d cloth gilt,

A SYSTEM of NATURAL HISTORY. Being a Structural and Classified Arrangement of Plants and Invertebrated Animals, forming a basis for the Study of Botany and Zoology. With upwards of Seven Hundred Microscopical and other Illustrations.

The Botany by EDWARD SMITH, M.D. LL.B. and B.A. (Lond.). The Zoology by W. S. DALLAS, Esq. F.L.S. And forming the Third Volume of ORR'S CIRCLE of the SCIENCES.

London: HOULSTON and STONEMAN, 65, Paternoster Row; and WM. S. ORR and CO. Amen Corner.

Of whom may be had, price 4s. 6d each,

Vol. I. PHYSIOLOGY of ANIMAL and VEGETABLE LIFE; the STRUCTURE of the SKELETON and the TEETH: and the VARIETIES of the HUMAN SPECIES. By Professor OWEN, Dr LATHAM, and Dr BUSHNAN

Vol. II. THE MATHEMATICAL SCIENCES, embracing Arithmetic, Algebra, and Euclid, Plane and Spherical Trigonometry, Series, Logarithms, Land Surveying, Mensuration, and Practical Geometry. By Professor YOUNG, Rev. J. F. TWISDEN, and ALEXANDER JARDINE, Esq.

PHILLIPS'S MINERALOGY GREATLY IMPROVED.

In post 8vo. with numerous Woodcuts, price 18s.

AN ELEMENTARY INTRODUCTION to MINERALOGY.

By the late WILLIAM PHILLIPS, F.L.S.

A new edition, with extensive Alterations and Additions, by H. J. BROOKE, F.R.S. F.G.S. and W. H. MILLER, M.A. F.R.S. F.G.S. Professor of Mineralogy in the University of Cambridge.

London: LONGMAN and CO.; SIMPKIN and CO.; E. and J. RIVINGTON; WHITTAKER and CO.; TEGG and CO.; and D. BOGUE.

THE BUILDER'S PRACTICAL DIRECTOR, now publishing, in Parts, at 1s. each, containing Designs for C tages, Villas, &c. will shortly contain Designs for Shop-fronts, also a Model Cottage, adapted for mechanics, with full Specification, Descriptive Essay, and Estimate.

By EDWARD I. TARBUCK, Architect and Surveyor.

The CAUSES and REMEDIES of SMOKY CHIMNEYS (illustrated), by the same Author, will shortly appear.

Parts I. to IX. are now ready

London: J. HAGGER, 67, Paternoster-row.

On the 28th instant, will be published, price Two Shillings, Part XXIII. of the

ENGLISH CYCLOPÆDIA, extending the Natural History Division from Membranipora to Morrhua; and the Geographical Division from Mesopotamia to Nairnshire; including articles on Mexico, Michigan, Milan, Military Frontier, Minnesota, Minsk, Mississipi, Missouri, Modena, Moldavia, Moluccas, Mongolia, Montenegro, Montevideo, Moravia, Morea, Moscow, Mosquito Kingdom, Munich, Musant, &c. &c.

BRADBURY & EVANS, 11, Bouverie-street.

In 18mo. with Woodcuts, price 3s. 6d

SOUND and its PHENOMENA.—By the Rev. E. C. BREWER, D.D. Trinity Hall, Cambridge, Author of "Guide to English Composition" (6s. 6d.); "Poetical Chronology" (6s. 6d.), &c.

"The phenomena of sound are here explained in a manner at once clear and simple, and calculated to arrest the attention of the student. The subjects treated of are as wide as the science of acoustics, which, according to the author's definition, is a part of physics which embraces whatever pertains to the cause, the nature, the sensation, and the laws of sound. It shows how it is produced and what physical changes take place in order to produce it. It explains how it is communicated to the air; how it is propagated through different media; and how the sensation is registered on the organ of hearing. It treats of music so far forth as that science is connected with physics; embraces in its range the mystery of echo; anatomises the curious workmanship of the ear; pries into the mechanism of the voice; and explains how buildings should be constructed so as to prevent the transmission of sounds into contiguous rooms, and so as best to favour the orator and the musician."—*Athenæum.*

London: LONGMAN, BROWN, GREEN, and LONGMANS.

A new edition, in 8vo. price 10s. 6d.

HISTORY of the IRON TRADE, from the Earliest Records to the Present Period.

By HARRY SCRIVENOR, Liverpool,

Author of "The Railways of the United Kingdom Statistically Considered."

London: LONGMAN, BROWN, GREEN, and LONGMANS.

In 8vo with Plate and Woodcuts, price 10s. 6d.

RESEARCHES on LIGHT in its CHEMICAL RELATIONS, embracing a Consideration of all the Photographic Processes.

By ROBERT HUNT, F.R.S.

Professor of Physics in the Metropolitan School of Science.

Second Edition, thoroughly revised, with extensive Additions.

London: LONGMAN, BROWN, GREEN, and LONGMANS.

In fcp. 8vo. with Woodcuts, price 7s.

LECTURES on POLARISED LIGHT, together with a Lecture on the Microscope, delivered before the Pharmaceutical Society of Great Britain, and at the Medical School of the London Hospital.

By the late JONATHAN PEREIRA, M.D. F.R.S. &c.

Second Edition, greatly enlarged from Materials left by the Author.

Edited by the Rev. BADEN POWELL, M.A. V.P.R.S.

London: LONGMAN, BROWN, GREEN, and LONGMANS.

PEOPLE'S EDITION OF MR. MACAULAY'S ESSAYS.

In 2 vols. crown 8vo. price 8s. cloth; to be had also in 7 parts, at 1s. each.

MR. MACAULAY'S CRITICAL and HISTORICAL ESSAYS contributed to the *Edinburgh Review.*

London: LONGMAN, BROWN, GREEN, and LONGMANS.

GIOTTO, and his WORKS in PADUA; being an explanatory notice of the series of wood engravings executed for the Arundel Society, after the frescoes in the Arena Chapel).

By JOHN RUSKIN. Part I.

N.B. In consequence of the numerous applications for this Essay, contributed by Mr. Ruskin to the fifth year's publication of the Society, the Council have resolved to sell it to the public generally, without the wood engravings comprised in the issue to the subscribers.

Published at the Office of the Arundel Society, 24, Old Bond-street; and to be obtained (through any Bookseller) of Messrs. BELL and DALDY, Fleet-street.

JOHN NORTON, Secretary.

FREE TRADE in BOOKS.—S. and T. GILBERT beg respectfully to inform the Public, that they supply all Books, Magazines, Reviews, and Periodicals published at 1s. and upwards, at a reduction of 2d. in the Shilling for cash. Country orders executed on the same terms, and delivered on the following morning, at a charge for postage of 2d. for each lb. or fraction of a lb. weight. School and export orders promptly attended to. Please note the address—S. and T. GILBERT, Booksellers, 4, Copthall buildings, Moorgate street.

ARCHITECTURAL and CIVIL ENGINEERING CLASSES, OPENED, for the instruction of pupils, at one guinea per quarter, which includes drawing materials, instruments, colours, paper, drawing-boards, T squares, &c. and instruction in architecture and civil engineering, drawing and colouring, making finished and working drawings, preparing specifications, taking out quantities, estimating, &c. &c.—For prospectuses, apply to Messrs. HYDE, SMITH, and LEWIS, Civil Engineers, Architects, Surveyors, &c. 24, Guildford-street, Russell square.

PATENT SANITARY GAS SHADES.—These Shades, manufactured exclusively by RICE HARRIS and SON, Islington Glass Works, Birmingham, on an entirely new principle, effectually destroy the offensive and smoke which have hitherto made the use of gas so objectionable in dwelling-houses and offices where cleanliness and freedom from smell are of importance. They are simple and inexpensive, and may be had at the Works in a variety of forms adapted to the style of fittings or the taste of purchasers; also at Mr. JOHN SHORTORS, Crispin-street, Spitalfields, London.

WINDOW BLINDS.—TYLOR & PACE, Window Blind Manufacturers, 104, New Bond-street, and 3, Queen street, Cheapside, London, submit the following PRICES of WINDOW BLINDS, which they can recommend as being made in the best manner:—Venetian blinds, per square foot, 9d. best holland blinds, on rollers, 6d.; best ditto, on spring rollers, 9d.; gauze wire blinds, in mahogany frames, 9s.; perforated zinc blinds, in ditto, 14s. 10s.; outside blinds of striped cloth, 2 Transparent blinds in great variety. Engravings, with prices and discounts to builders and the trade, forwarded on application by post free.

The Builder.

SATURDAY, FEBRUARY 24, 1855.

IN the last article of our series on the history of architecture, in connection with the courts at Sydenham, we inquired into characteristics of the development of Italian influence in England and France. Whilst isolated examples of the Cinque-cento style had been coëval with the Renaissance, we found that the settled adoption of the pure Italian architecture was first consummated in England. It was left to be inferred that the diversity of manner in the architecture of Louis XIV. continued during his reign; and allusion was made to the fact that the peculiar style of French domestic architecture obtained a footing in England. After the time of Jones in one country, and Le Mercier in the other, the parallel acquires independent features of interest. Both in England and France, though in different ways, there was a grand opportunity for architectural skill, and a man of science competent to adapt himself to the emergency.

With the mere reflection of good Italian art, and the works of Jones to guide him, it is not surprising that many of the prevalent vices of art in Europe, should have entered into the works of Wren. If we are of those who think that everything from this master's hand has matter of interest attached to it, we are not of those who see everywhere beauties to be admired. We should rather hold, that parts of even his best works are valuable for lessons of faults to be avoided. Great ability in the management of outline, and power of giving constant variety of parts, are no more to be denied, than are the architect's constructive science and practical skill. Some of the greatest men that have ever lived, have suffered in fame, only because they have done so much. Called into practice at the time when no general profession of architects had been formed in England or in France, Wren had suddenly thrust upon him an amount of responsibility that would have turned the heads of the best of his detractors. There would seem to have been no one else available. The name of Webb, the son-in-law of Jones, who completed some of that artist's works, is not even given in the best list of architects which is before us. The only other competitor was, like Wren, a mathematician. He, Robert Hooke, designed Montague House, referred to in our last article, and the Old Bethlem Hospital, Moorfields. He was associated with Wren in some works, and himself gave a plan for rebuilding London after the great fire. Fortunately, it is at great emergencies, that unlooked-for sources of ability are discovered. May the truth of this be proved by events, to which just now, architectural history would rank subordinate in public interest. Still, even Wren's career testifies to us, that there is no real substitute for professional training, and for such advantages as our modern architects have, whether used by them or not. Without a visit to Italy, an architect's opportunities for acquiring a knowledge of the best works must have been very limited, although Palladio was at hand, and Vitruvius had been translated.

It is scarcely possible that everything bearing the name of Wren, could then have come from one unaided hand; yet there was no school of architects to supply the means of aid; and the necessary delay in forming such a school as that which produced Hawksmoor, must be taken into account. It may be doubted whether Wren himself had much ability as a draughtsman. The very tools for drawing, in which the modern architect has some advantages, we might say, did not exist.

Architecture owes much to men like Wren in England, and Perrault in France, who were not originally destined for the profession. Still we are inclined to argue, that professional training would be one item to be attended to in any scheme for the production of a great architect, —not, as of late it seems to have been assumed by some, that all that the professional architect learns is of the nature of an encumbrance.

It is due to the fame of Wren, to call to mind, that the present plan of St. Paul's was not that suggested by the architect. It may be argued, that such a circumstance forms no excuse for many improprieties, apparently unconnected with the plan,—as, for example, the use of the upper screen order. The architect might have followed the arrangement of the Church of the Sorbonne, and converted buttresses similar to those which appear in the one case, and are concealed in the other, into objects of beauty. The truth, however, is, that the common interference with an architect, so unsettles the logical order of the process of design, as to unfit the individual who would otherwise work out a problem thoroughly, for the solution of even subordinate details. We are not merely alluding to the trials of temper, to which Wren was subjected.

When we also look back to the condition of the people and the character of the court, at that time, we cannot but wonder at the important position which our art maintained, if we do not also see, that under circumstances which should be more favourable now, there is still much to be effected in the way of its public recognition.

Wren has been fittingly praised for the steeples of his churches, which have great variety in plan. But it has, perhaps, not been sufficiently noticed, that some of them mark an important epoch in the history of art. In the effective treatment of the bell-tower, and its combination with the building, the Gothic style stood pre-eminent. Wren not only adopted the belfry-tower in his Gothic works, but he perceived the beauty of the spiral form of termination. Therefore, we have one of the main features of Gothic architecture revived in a different style, and it must be admitted often with the best effect. In certain cases, however, such a result was not obtained. In St. Bride's Church, where there is great beauty of *outline*, the horizontal lines of features unconnected with each other, are discordant. In other cases, the tasteless method of terminating the spire, reminds us only of the more appropriate finial and cross. Discordance of lines might be got over by a course the very opposite of that taken with a view to prevent discordance of style,—in other words, by a more complete abandonment, in the spire at least, of the horizontal line. The problem, *How to design a steeple in the Italian style, crowned with a spire accordant with it, and of the Gothic form*, might be tried for what it is worth,—as not unlike the question discussed some time since in our pages, as to a *Gothic dome*.

The influence of Wren was much felt in the direction given by his buildings, to the practice of the natural style of ornament. The carving about St. Paul's Cathedral had his sanction, yet the Gibbons' school of carving is affected with the same vices of manner which prevailed throughout Europe. These presented the very antithesis to the characteristics of either Greek or Roman ornament. The recent revival of the style has been hastily made, and is not consistent with sound views of art.

The history of the Louvre in Paris, would be an epitome of the progress of French architecture, and interesting would be the examples here illustrating it, had addition and not demolition solely, been at work. What was done by Louis XIV. presents, however, great contrast to the rest of the work of his reign, and is of the utmost importance to the right comprehension of the history of this century. The period whereof we are treating, is marked by an effort scarcely second to any in the history of art, to effect great results in architecture by Government patronage. What might have been done by one of the most art-loving of *our* kings, was stopped by the troubles of his reign; and the fragment of a great work, which would have covered more ground than the palace of Diocletian, served only for the scaffold of him who was to have inhabited it. Justified as the republic now is, as a bright page in the history of England, it effected nothing in architecture. Of the succeeding reign we have already spoken. In France, the royal demand for architecture went out: there also, the professional aid was not readily forthcoming. That the mere name of *architect* is said not to have been assumed before the time of Mansart, is, perhaps, not of much importance. In 1660, Louis XIV. had decided to complete the Louvre. Le Vau and d'Orbay were called to undertake the work. As usual in the case of this building, the architects pursued their plan without much reference to the work of their predecessors.

A façade towards St. Germain l'Auxerrois had been commenced, when Colbert was named minister and superintendent of the royal buildings in 1664. The work of Le Vau appeared to him unworthy of the palace of a king of France; and the mandate went forth for destruction. A competition of designs for another façade took place, and the drawings were sent to Rome, for the opinion of the French painter, Poussin, and the Roman architects. The great Bernini then occupied the sphere of art in Italy. Much the same thing was done, as in recent competitions, and Bernini himself was entreated to undertake the work. This trial at the old source of European developement, Italy, however, failed in the present case. The work of Le Vau was, indeed, demolished, and the new design was commenced; but Bernini left the work incomplete,—disgusted, as it was said, with the workmen of Paris. The right man had still to be chosen.

In France as in England, the conduct of the greatest work of the time, fell to the lot of one who was no professional architect. The result was, in each case, an important contribution to art,—though a result from concurrence of high individual talent with the absence of adequate professional competition, which is only to be regarded as a fortunate accident. To those who would say,—here is a proof how necessary it is, from time to time, to "ventilate" ideas by new contributions—such as they assume it is in the nature of associations to require from without—we answer that we admit part of the grounds of the opinion, though not the conclusion which we have said is often come to. Provided that substantial claim be put in—like to that preferred by Wren, Perrault, Burlington, Aldrich, and others—we shall not be found amongst those who will refuse to discuss precept, and it may be receive example, at non-professional hands. But, it is not by men such as those named, that opinions are now uttered. On the other hand, the profession in France and England, though hardly yet holding a definite position, has its thousands in place of units: education, though still greatly in arrear of professional wants, is in advance of what it was out of Italy in the seventeenth century. If there are men out of the ranks of the profession, qualified to shed a lustre upon our *art*, let them come forth. They have not yet done so. Vitruvius is often quoted for the opinion, that it is the combination of theory and practice that makes the qualified architect; and there be some things whereabout *we* still think as did the much-abused Roman.

It was not the fashion to carp at his doctrine in the time of Louis the Great. On the con-

trary, one of the first steps taken to invigorate the practice of architecture, was the translation of Vitruvius, at the instance of the enlightened minister of the king.

There seems to be an universality in the range of members of the medical profession in the higher ranks, not unworthy to be referred to in treating of an art which requires the most extended, and yet apparently the most opposite qualifications. The translator of Vitruvius was a physician. In the competition we have spoken of, he had proved himself something more. But, it is not merit that carries the day in competitions—as some of our readers know to their cost—and the design of the physician and accomplished man of science had been praised by the king and Colbert, only to be put aside for a far inferior design of a better known artist. On the departure of Bernini, necessity as well as good taste, fortunately pointed in the right direction. The result was a work far exceeding in importance any other of the time of Louis XIV. It had great influence in fixing the general adoption of the Cinque-cento architecture, as regarded exteriors, in the time of the next king, and it is of importance to us in our view of the architecture of our own country.

Claude Perrault—the man above referred to—commenced his portion of the Louvre in the year before the Great Fire of London; and it was in that same year—1665—that Sir Christopher Wren visited Paris. St. Paul's Cathedral was not commenced till 1675. In both buildings the chief feature is that of the coupled columns, which, though used by the modern Italians—if not during the time of the Roman empire—have always been questioned by some authorities as appropriate architectural appliances. A better example than that mentioned—of their use by Wren is in the colonnades of Greenwich Hospital, commenced in 1698; and with this work before us, it would grate against our conscience were we to join issue with the architect. Mr. Gwilt, in his "Elements of Architectural Criticism," says: "The beauties of the façade of the Louvre so completely overpower its defects, that I can hardly bring myself to the mention of its coupled columns, and the arch of the central door rising into the story of the colonnade."

The scheme of Perrault was that of a magnificent colonnade, and he was so far carried away by his design, that had it all been executed, nothing would have remained of the older parts, and the beautiful architecture of Lescot. All that had been built by Bernini, at great cost, was of course cleared away. In the subsequent history of the Louvre, the same "fatality," as the Comte de Clarac* calls it, continued to attach itself to the building,—so far as regards the non-completion of many designs which were undertaken. The chief French architects continued to be engaged, but though much was undertaken at the beginning of the present century by Percier and Fontaine, it remained for the present Emperor to make what appears likely to prove the completion of the building, as well as the required junction with the Tuileries. This part of the history our readers will recollect, has been treated of by Professor Donaldson.

It must, we think, be admitted that as regards the steady pursuance of great works, and their speedy completion, this country has every reason to prefer a claim for praise. Our cathedrals are perfect, compared with those of the continent,—great in their designs but abortive in their execution. Whilst the Louvre was left unfinished, the contemporary work in England was brought to a termination by one architect. There is a good result in art by the economy of the one course: there is an element of failure in the other system, no matter what the profusion of the expenditure.

Although the Louvre, as we have remarked, had some influence on the architecture of England, its effect on the architecture of France, though considered great, does not appear to have been immediate. The munificent encouragement of Louis XIV. confessedly produced no commensurate result; and the reason given is that which we have assumed—the lack of able architects. The one chief architect of a period received an amount of patronage which allowed him to mark the character of an epoch, without having the opportunity for developing the inventive powers which he might have unfolded. The works of Jules Hardouin Mansart begin in the year 1675, the date of the commencement of St. Paul's Cathedral. He was principally employed on the works at Versailles. With the exception of the chapel, it cannot be said that they are worthy of one who was an artist of undoubted ability. The dome of the church of the Invalides would alone justify the last opinion. It has great beauty, and in originality of conception is perhaps superior to any other example.

It is due rather to accident, and to misdirection given to the architect's genius by his great patron, that more did not result—that Mansart's concern with the colossal undertakings of the king—did not allow him to complete the development of the grand monumental style, and of a better and purer taste. This work was left to his relative and pupil, Jacques Ange Gabriel, and to others in the reign of Louis XV. It must be noticed that we continue to speak only of exteriors. No general inference should be made as to interiors, which it will be necessary for us to treat of hereafter. Let us, however, remark, that whilst art, as applied to interior decoration, was tending towards final degradation—except perhaps as to novel application of materials, and executive skill—the advance referred to otherwise, took place. Gabriel's chief work is the colonnade to the Garde-Meuble in the Place Louis XV.

Mansart died in the year 1708, and Wren in 1723. During the eighteenth century, the architecture of Italy shows improvement,—if only by the removal of the chief upholders of the caprices into which the art had degenerated. There were indeed two fine works, namely,—the front of the church of St. John in the Lateran, by Alessandro Galilei, and the church at Turin, by Filippo Ivara. Painting, however, rapidly declined—at the time in which it rose to importance in England.

During the reign of George I., from 1714 to 1727, the names of some of our chief architects are met with. Wanstead House—considered by the foreign artists, as one of the best of the English works—was built by Colin Campbell, in 1715. It was destroyed in 1815. The eccentric but able artist, Nicholas Hawksmoor, completed the church of St. Mary Woolnoth, in 1719; about which time also flourished John James, the architect, of St. George's Church, Hanover-square; of St. Luke's, Middlesex; and the church at Greenwich. In the same reign the works of James Gibbs commence—the church of St. Martin's-in-the-Fields having been completed in 1726; and Sir Christopher Wren was living, as we said, till 1723, and Sir John Vanbrugh till 1726. The school of the period is in great part, marked by a tendency towards the more Roman elements of the Cinque-cento, the portico being often a very important feature.

In France, the tendency was of even more defined character, and of this, the church of Ste. Geneviève, or the Pantheon, by Soufflot, is the principal example. Goudouin, however, followed the pure Palladian school; whilst Antoine, who died as late as 1801, used the Grecian Doric order, with which the French had been made acquainted through the work of Le Roy. Le Mercier long before, had conceived an order, having a column without base. The rage for Grecian architecture at length prevailed in France, as in England, the Doric order being employed indiscriminately in such a manner as eventually to create a dislike for it. In consequence, the use of the order soon ceased with the French, as, indeed, it has now done with us.

The doctrines of antiquity which began to be put into circulation towards the middle of the eighteenth century in France,—in great measure through the labours of Winckelmann,—did not prevail to so great an extent in England. During the reign of George II., 1727 to 1760, the Palladian manner of architecture received new contributions from Italy. Kent returned in 1729; and he, Lord Burlington, Gibbs, and Wood of Bath, are the most important men of this reign. Kent is said to have been the introducer of the modern picturesque system of gardening.—In the Mansion-House, London, by the elder Dance, and in some of the City halls, the defective arrangement of plans already noticed, is to be remarked. Passages of communication seem to have been considered unnecessary; and the open court, suited to the Italian climate, was the substitute. The reader may picture to himself the elegant company of the other evening, passing through the snow from one reception-room to another,—as in plain seriousness, would have been necessary, according to the original plan of the Mansion-House.

In France, the classical columnar character of design, which in the Pantheon is united with that of the dome of St. Paul's Cathedral, was varied by the practice of Servandoni, originally a scene-painter. His façade of the church of St. Sulpice, commenced about 1732, is generally ranked high in the works of the eighteenth century; but the towers, designed with story upon story, piled somewhat disconnectedly, seem to us in that manner of scene-painter's architecture, which is more valuable in its suggestiveness, than in regard to applicability to permanent works.

Sir William Chambers's "Treatise on Civil Architecture," published in 1759, was remarkable for its writer's opposition to the view then being advanced, as to the merit of the Greek orders. Two or three years afterwards, the first publication of Stuart and Revett's "Athens" took place. It was not, however, for some years, that the Greek style prevailed extensively in England. Meanwhile (in 1776) Somerset House was commenced, and Sir Robert Taylor, one of the best of the Anglo-Italian architects, practised. The chief work of Stuart—the interior of the chapel at Greenwich—has little attempt at the character of Grecian architecture. During the early part of the reign of George III. also practised the younger Dance, whose Newgate Prison (as first built) and St. Luke's Hospital, are marked by that painter-like composition which was once justly recognised in the different style of Vanbrugh. Servandoni died in 1766, Soufflot in 1781, "Athenian Stuart" and Sir Robert Taylor both in 1788, and Sir William Chambers in 1796. During this same latter period of the eighteenth century, the singular exotic style of the Adams was in full bloom. Robert Adam died in 1792.

We are, however, getting beyond the limits we had prescribed to ourselves. Great events were in progress in France—events of the utmost importance to all the nations of Europe—and which did not less, leave their impress upon the domain of art. But, the aberrations of taste peculiar to the close of the last century, and the beginning of the present, may form a proper subject for further remarks. It is not easy—we have heretofore said—rightly to apprehend the circumstances of our own time, and we have thought some examination of the seventeenth and eighteenth centuries, a fitting preparation for the effort we propose to make. Before doing so, however, we must supply the dropped passages in the history, by some notice of those styles of architecture of the periods of Louis XIV. and Louis XV. which, though of most familiar acquaintance in the interiors of houses, are not in their origin and relation to other styles, always rightly understood. This supplementary matter, then, we shall offer in an intermediate paper.

* "Description du Musée royal des Antiques du Louvre"

ERRORS IN FURNISHING AND DECORATION.

The establishment, at Marlborough House, of a museum containing the most tasteful and beautiful, as well as the most trashy and vulgar examples of articles required in the decoration of houses, has called forth from many quarters condemnation of the principles which the Government are by this means endeavouring to bring before the public. The existence of such an institution must of necessity act, to a certain extent, as a guide, in matters connected with those important branches of manufactures which it strives to direct in a channel conformable to convenience, common sense, and comfort. For however desirous manufacturers may be to keep in the background principles which will result in the discarding of the monstrous medley of trash now forced upon the public by them, they

will find—nay, they have already found—that there is an undercurrent of popular feeling which condemns their productions as unsuited to the wants and requirements of the present day;—I say an undercurrent, because the public generally, however contrary to their conviction, find it necessary or convenient to side with the manufacturers in their rejection of the proposed reform. And for this two reasons may be assigned;—first, because Englishmen, as a rule, think everything new must be false; and, secondly, because they find that to conform to the true principles of decoration would necessitate a total revolution, in both general character and detail, of the ornamentation of houses they have either lived in from their childhood or fitted up at great personal expense and inconvenience. If the first of these reasons were not a potent argument with John Bull, the second most assuredly would be; and thus a chain of circumstances perpetuates a system, the evil of which, upon calm unprejudiced consideration, no ordinarily well-educated person is at a loss to see.

What, then, *is* the evil complained of in modern English house decoration? and what is the proposed reform? will be asked by many who have not had an opportunity to examine for themselves the effect of the two principles, as exemplified in the museum at Marlborough House. The evil, in a few words, is this:—Our decorative designers are no longer artists, but being chosen from ordinary workmen by a chance display of talent, are more easily controlled by the manufacturers, whose incessant cry is,—"Make something that will sell—something attractive; never mind what." The designer who receives these instructions is in many cases an ignorant man, who has neither read "Redgrave's Report on the Exhibition of 1851," nor has studied any system or examples to lead him on in his task, except brilliant "hits" of the same character as that he is expected to design. What is the result? He has a feeling for nature, and an appreciation of her beautiful colour, and so he concocts an elaborate interweaving of stem and leaves, bud and blossoms, correctly copied from nature; colours it with the tints of the rainbow, scrupulously shades it into roundness from his model, and by some brilliant distinguishing characteristic makes it, perforce, "attractive," and his object is attained.

This principle is applied to all objects alike, and the effect in a room furnished with such articles is, that one object has no more importance than another—they are all alike, grossly impertinent. But even out of these productions of modern designers, their colours being sometimes crippled by the cheapness of the required paper or carpet, a moderately humble design is produced, which, if judiciously contrasted with others of a like character, might be tolerated; and a house really might be furnished in which a member of a refined community could live, without being in danger of falling through the landscape of his drawing-room carpet, or of being torn to pieces by the lion crouching on his hearth-rug. But that is pre-supposing that he has taste enough to make such a selection. Most likely he never sees the effect of his furniture until it has been arranged by other hands than his.

It is unnecessary to describe the chance way in which a house is actually tortured into a residence now-a-days. After each individual object running the gauntlet of the "selling" manufacturer, the whole has to come under another test. Every one knows that when young people marry, they leave the furnishing of their houses in the hands of an upholsterer, whose interest is bound up with their wish to make everything as gaudy and expensive as possible. If they are too independent to do this, they do what is perhaps worse; they select the papers of the house one day, and the carpets another; choose the curtains because they are of the newest pattern, and the hearth-rug, because it is the most fashionable; winding up all by selecting the heavier furniture totally irrespective of the character, colour, and design of that already chosen, and bearing no sort of relation to any other portion of the decoration of the room. The consequence is, that the carpet and paperhanging and hearth-rug and curtain are all in a tremendous competition lest one should be seen before the others; and they each, by some brilliant characteristic, attract the eye of the spectator, and threaten him, if he scorns the perusal of their charms, to scorch his eyes by their glare, or overturn him by their inequalities. We see the effect also in the cold and comfortless dwellings of those who have spared no expense in their material, and in the glaring puppet-shows of others, who suppose they have everything as perfect as possible. Now, as the primary reason for papering walls, or carpeting floors, is to make the room more attractive, and to give it a greater air of comfort and repose, it follows that these things, by coming into competition with each other, not only fall short of the use for which they were intended, but create a sensation of uneasiness—"jarring" against the feelings, as well as fatiguing the eye. Moreover, as a paperhanging or a carpet is to be a background to other objects, they ought, of course, to be subordinate to those objects having a tendency to improve them by comparison. But a highly-shaded bunch of flowers, coloured from nature, will not tend to improve a severe line engraving, even though half of it be hidden by the frame of the picture; and the brilliant spots of colour in the modern exhibition carpets surely depreciate rather than heighten the value of the soberer colouring of the more important furniture. A room, to be furnished agreeably, must have some parts of its furniture subordinate to others; for, if each of the objects in it be equally attractive, the result is an uproar. The admirers of this gaudy style of decoration contend that as it is as easy to print copies from nature as conventional representations of flowers, why should not this natural imitation be preferred to (what they please to call) the innocent deformity of them. Our reply to this is, that a line must be drawn *somewhere*. Either you must be quite content with block printing, and call it "high art," or you must sacrifice your wall paper to that which you place upon it. If you particularly wish the reproduction of the beautiful objects of nature, then we can inform you that the most elaborate block printing that can possibly be conceived, will not correctly reproduce the infinite variety of tints in nature. At the best, they are but clumsy caricatures, and the enormous expense of getting them up, even as well as they are produced, is one more testimony against them; for you might obtain works of high artists for the surplus that you squander in covering your walls with caricatures, and when you had a truthful copy of nature, your love for it would surely prevent you from immovably blending it with the construction of your house; but in most cases, the patterns, setting aside the impropriety of the design, are so outrageously badly drawn, that to any one who has examined the subject, the wonder is, how they have been tolerated so long. Nothing but the most profound ignorance of form and fitness can have blinded the British people to their want of merit. However, as long as we continue to give children a square bit of wood with four pegs in it, and call it a horse, and an isosceles triangle, with a stick in its base, and teach them to call it a tree,—as long as we paper our nursery walls with gross and ill-drawn representations of fruit and flowers, we must expect that the British people *will* be profoundly ignorant of form and fitness. An influence which is commenced in the nursery, and continues through the whole of after life, may be supposed to exercise some control over the foundation and formation of every man's taste.

It would be ridiculous to expect an ear for music in a child who had been brought up without any musical education except the jingle of the triangle, and as impossible is it to find an appreciation of beautiful form in those who have been accustomed all their lives to, and whose eyes are familiar with, the monstrosities of modern English decorative art. It may at first sight appear a trivial way of explaining a great national defect, but I fully believe, that in this may be found the explanation of this fact, that the English nation, which claims to be one of the greatest, ancient or modern, in the arts of civilization, should be so painfully behind hand in the highest walks of art, that she must allow precedence to every little European kingdom or petty German state.

Another essential defect in common and even in the most expensive (for the evil increases the more ambitious the attempt of the) paper-hangings and carpets of the present time, is the laboured efforts to destroy all appearance of flatness. Thus an elaborate framework of geometrical forms is often festooned with outlandish wreaths of flowers, part of which is thrown into shade behind the *iron* framework.

Again, carpets are sometimes bordered by highly-shaded copies of Gothic groining, which acts as a picture-frame to a landscape in the centre, attempting to express many miles' distance. This radical error can be productive of nothing but uneasiness, as we certainly cannot appreciate living in a bird-cage, even though it be wreathed with beauties, or of having the floor we walk upon perforated, because it may occasion some danger to our equilibrium.

All these inconsistencies plainly bespeak an erroneous style of decoration, which, however it may pander to the tastes of the vulgar, should not be encouraged or recognized by those who have any pretensions to taste. For the argument that shaded groining in a carpet does *not* give one the idea of walking upon mullions, infers that the *attempt has been* made, and failed; and if it is a failure, this alone should warrant our rejection of it. The failure is another proof of the weakness of the system, and these failures must take place to make them even bearable. Why should we bow so humbly to the French school of design?—painting flies and insects of all kinds in our teacups, and carving dogs' heads, and any other head that will make it inconvenient, on even such a disagreeable necessity as an umbrella? when the only feeling such things can produce is disgust at having drunk fly-broth, or curses on the fine-art handle, which has been doing its best to lacerate our hands during the time we used it. Is it not evident that the chief object of the producers of these things is appearance of the ornament only? that construction is lost sight of in ornamentation—workmanship takes the precedence of truth? And let those who doubt the principles we are studying to inculcate ask themselves which is most necessary, construction or ornamentation,—whether the ornamentation of construction, or the construction of ornament, be the truer principle? All that we ask the public to do is to examine this subject with unprejudiced minds, and then we feel confident the point will be gained.

A Marlborough House Student.

YOUNG MORTALITY AMONGST THE LONDON GRAVES.

After years of persevering agitation by the intelligent and well disposed, the *occupation* of the London grave-digger is almost past, and Old St. Pancras' and other great receptacles of the dead have become, both on Sundays and week-days, quiet and little-frequented spots. We still, however, pay them an occasional visit, and look with a certain amount of satisfaction at the share we have had in forcing forward this most desirable consummation. In walking amongst these masses of the dead, several other feelings intrude themselves upon the mind. How can it be otherwise, when wandering amid the dust of nearly all that has, for some centuries, constituted the strength, energy, ability, and also the vices of this great metropolis? In these grave-yards, the memorial of many a name still cherished and revered, has, from neglect, passed away; and many a grave which, at the time it received its tenant, was but little noted, has often since been sought for by numbers in vain. The grave in which the great and glorious Milton rests, in Cripplegate Church, was left without a mark, and it is now uncertain where he lies. Massinger, the poet, rests in the church-yard of St. Saviour's, in the Borough, with no notice save in the parish-register to say so.

There are three books which have become more than any other familiar to the multitudes, not only in England, but also in those immense districts and populations which speak our language, and are inspired to a considerable extent with our feelings. These books are, the

"Vicar of Wakefield," by Goldsmith; "Robinson Crusoe," by Daniel de Foe; and "The Pilgrim's Progress," by John Bunyan. These household words are treasured by rich and poor; are read without weariness in youth; and equally, if not more admired, in maturer years. The ashes of two of these great and popular authors, De Foe and Bunyan, rest in the Dissenters' cemetery in Bunhill-fields. The former has no monument—not even a line over his grave; that of Bunyan is covered by an altar-tomb, which is so much beaten by the weather that the original inscription is in many parts entirely illegible, and few could read whose grave it was, save that the sexton of the place, greatly to his credit, had one of the panels re-cut at his own expense. The wealthy and influential body of Nonconformists should not let the remains of these eminent champions of their cause be left in comparative dishonour and neglect. Surely the countless thousands of all creeds who are readers of "The Pilgrim's Progress" and "Robinson Crusoe," while still the graves of the two authors are in the memory of man, will make an effort to raise the means of showing future generations that we have a proper appreciation and a due feeling of gratitude to those who have mixed so much pleasure with instruction. We believe that some time since a subscription was opened, and a considerable amount raised, for the purpose of placing a monument to De Foe and Bunyan in Bunhill-fields. The London graveyards are full of interest, and deserve a chronicler, in order that in after years, when they shall have become pleasant little parks, well decked with plants and flowers, the visitors, both old and young, may experience the additional pleasure of literary and historical association. What has become of the gravestone of "Honest Joe Miller," formerly in Portugal-street, Lincoln's-inn-fields?

As to the ancient grave-yard of St. Pancras,—a spot already familiar to our readers,—it is fearful to contemplate the numbers which have been brought here, in some instances not to rest. For the last twenty years there has been an average number of interments of nearly fifty a week: this gives us a number of about 52,000: how many more have been placed here it is difficult to form an idea of. In other respects Old St. Pancras's burial-place and the church have considerable interest, for although the old church has been almost entirely rebuilt, the monuments have been carefully preserved, and in some instances restored. In the church is a small marble tablet, surmounted by a painter's palette and brushes, to the memory of Samuel Cooper, the portrait-painter, who painted the famous miniature of Oliver Cromwell. He died in 1672. There is also a canopied tomb, in which have formerly been brasses, to the memory of one of the Grays of Gray's-inn-lane; and memorials of some other families of rank, all in good preservation. At the time of the alteration of the church, several Norman fragments of architecture, brickwork of the fourteenth century, a stone with five crosses upon it, and some other matters were discovered. We were told by a very old and intelligent inhabitant, that the body of Earl Ferrers was brought here after his execution, privately, in the night, and buried at a great depth below the old tower of the church. In consequence of peculiar sanctity being considered, by Roman Catholics, to attach to Old St. Pancras, numbers of Italian and other foreign refugees have been buried here, amongst them the celebrated Marco Polo. The crowd of monuments is extraordinary. Not far from the east door of the church a plain, upright stone, marks the grave of William Woollett, the engraver. It is curious, when standing at the resting-place of this, the greatest of landscape engravers, to think of the changes which have been made since he was brought here, a period of not much more than half a century. Then, as far as the eye could reach, the ivy-mantled tower of the old church was surrounded by green and pleasant fields; and the question suggests itself, are the London parish authorities doing right to make the new cemeteries so close to London?

A few years since the tombstone of Woollett was almost as illegible as that of John Bunyan: this being mentioned to a society of young artists at that time formed in Camden-town, they at once subscribed a few shillings each to prevent this relic of one eminent in art being taken to mend the ways. We hope that this good example may be in other instances followed. In another part, a stone is placed to the memory of John Walker, the author of the "Pronouncing Dictionary," and not far off were buried William Godwin, the author of "Caleb Williams," and Mary Woolstoncroft, his wife: her body has, however, been removed, by leave of the Bishop of London, to some other place. Dr. Johnson, in passing, a few days before his death, remarked the number of graves; and three days before poor Chatterton so painfully terminated his brief and troubled career, while walking in Old St. Pancras with a friend, he fell into a newly-made grave, and was sadly impressed by the circumstance.

In the yard of St. Giles's-in-the-Fields, adjoining Old St. Pancras, lie the remains of Flaxman. Here, too, under a drooping willow, is the tomb of Sir John Soane, and in that of St. Martin's-in-the-Fields, in Pratt-street, also under a willow, is the tomb of Dibdin, so well known for his national songs.

In the burial-ground at Pentonville-hill, a stone marks the grave of Joey Grimaldi, who now rests quietly enough here,—his sports and gambols all past. We made some inquiries in the street adjoining, where he lived for several years, but could gain little tidings about him, except that for some time before his death he was in the habit of being carried on a friend's back to a tavern close by, where he had the opportunity of enjoying the conversation of a few friends. At Sadler's Wells Theatre is a box-full of models and tricks used in pantomimes by Joey himself, very neatly constructed and painted.

Not far from Grimaldi, Bonnington, the painter, who died at too early an age for English art, is buried. His resting-place is unmarked.

THE FLOW OF WATER THROUGH PIPES AND ORIFICES.

INSTITUTION OF CIVIL ENGINEERS.

The evening of the 13th was entirely devoted to the consideration of Mr. Leslie's paper "On the Flow of Water through Pipes and Orifices."

In the discussion, when moving a vote of thanks to the author for his paper, it was stated to be only due to his position in the profession, to direct his attention to certain points which appear to require revision, before the paper was printed. The paper might be divided into two heads,—1st, as to the accuracy of the experiments themselves; and 2nd, as to the extent to which they might be considered as a test of the accuracy of the formula of Du Buat. With regard to the experiments,—in the cases of low velocities and flat gradients, due precautions did not appear to have been taken for guarding against obstructions, especially from the effect of the accumulation of air. For instance, in the second series of experiments, with a pipe 500 feet long, it was obvious that the results could not be relied upon:—In experiment 1, with a gradient of 1 in 2,000, the flow of water was stated as ·3243, whereas in the preceding series of experiments the flow was stated to be ·7407, with a flatter gradient of 1 in 2,391.

In Experiment 5, of the second series, the flow was stated to be 2·18, with a gradient of 1 in 220; whereas in the preceding series, in Experiment 8, the flow was stated to be 3·, with a gradient of 1 in 230. These were examples of the discrepancies, more or less, pervading the whole of the experiments of the class.

While on that subject, as there appeared to be, at present, a strong tendency on the part of public boards, to invalidate established formulæ, and to introduce others affording larger results, the attention of all who desired to investigate the subject was directed to the article "Theory of Rivers," in Dr. Robison's "Mechanical Philosophy," vol. 2, page 388. By an attentive perusal of the article, they would not only be confirmed in their faith in the experiments and formulæ of Du Buat, but they would be satisfied how little practical result depended upon whether, in point of fact, the flow of water was understated, even to the extent of 20 per cent.: for instance, in a culvert of 100 inches diameter, such a discrepancy would not influence its dimensions to the extent of 7½ per cent. nor the cost of construction probably to the half of that per centage.

It was urged that if several miles of huge sewers, in the metropolis, were constructed of too large dimensions, there might be an extra expenditure of 5 or 10 per cent.; but if by the adoption of empirical and incorrect formulæ their dimensions were unduly restricted, the whole system might be a failure, and the expenses induced would be enormous.

On this point it was remarked, that the formulæ published by authority, and insisted on by the Board of Health, gave results differing very considerably from those of accepted practised experimenters, and men of admitted scientific attainments and mathematical knowledge; and it was asserted, according to the authorised report of the proceedings, "that the experiments referred to, although generally stated to have been made for the Metropolitan Commissioners of Sewers, and actually undertaken by a committee composed of gentlemen, at that time forming part of the commission, and the expense, amounting to upwards of 7,000*l.* being paid from that office, yet that no complete records of the proceedings could be found in the archives of the commission, nor had any official report been presented relative to the experiments, which had been chiefly made by a person who was not an engineer by profession, nor a man of scientific attainments, but who was a foreman, or clerk of works, on some small contracts for sewers. A careful examination of the details of the experiments showed, conclusively, that they had been instituted and prosecuted by persons entirely ignorant of the science of hydraulics, and as a natural consequence, that the results were utterly worthless for all practical purposes; and moreover, that, such as they were, they had evidently been tampered with and perverted, apparently with the object of fitting them to preconceived theories; thus the extensive circulation of deductions from these fallacious experiments had diffused error, and would, if persevered in, obstruct the progress of sound engineering in all matters connected with the drainage and supply of water to towns in this country."

In the course of the discussion it was further elicited, that the formula which the author had employed was not the formula of Du Buat, nor was it applicable to the case of very low velocities, in which the adhesion of the water to the sides of the pipe would produce a very sensible retardative effect. The formula used was, in point of fact, a special modification of Eytelwein's formula, and did not comprehend in its terms this cause of resistance. Du Buat's formula, on the contrary, did include the resistance by adhesion, and also that of viscidity, and was of the following form, when reduced to English inches:—

$$v = \frac{307\ (\sqrt{d} - 0{\cdot}1)}{\sqrt{s} - L\sqrt{s + 1{\cdot}6}} - 0{\cdot}3\ (\sqrt{d} - 0{\cdot}1)$$

d being the hydraulic mean depth, s the denominator of the fraction expressing the slope, or gradient, and L the hyperbolic logarithm of the quantity to which it was prefixed.

This formula gave values much more nearly approaching the results of the author's experiments, with minute heads and low velocities, than the formula employed by him; but it was less exact than the still more elaborate formula of Dr. Thomas Young, published in the Philosophical Transactions for 1808, which afforded correct results on pipes, even so small as the $\frac{1}{10\text{th}}$ part of an inch in diameter, and with velocities of only one-fourth of an inch per second. This formula was of the form—

$$v = a\,\frac{l}{d}\,i^2 + 2\,c\,\frac{l}{d}\,v$$

in which a and c were exceedingly complicated functions of the diameter, each involving four or five terms. For all practical purposes, however, the formula of Eytelwein, Prony, Poncelet or Hawksley, might be used almost with indifference. The last-mentioned was the result of an independent investigation, had been frequently verified on a large scale, and in addition was better adapted for mental calculation in

the practical operations of engineers. This formula was:—

$$V = \tfrac{3}{4}\sqrt{\frac{h\,d}{L + 1\tfrac{1}{2}\,d}}$$

or more exactly $= \cdot 77\sqrt{\frac{h\,d}{L + 1\tfrac{1}{2}\,d}}$

V being the velocity in yards per second, L the length in yards, h the active head in inches, d the diameter in inches, and the co-efficient $1\frac{1}{2}$ the divisor when L vanished into a tubulated orifice.

Particular attention was drawn to the evil consequences which had resulted, and still continued to result, from the suspension of the drainage of the metropolis, while successive boards of commissioners, appointed by Government, were debating among themselves trivial questions, as to whether this or that formula should be used in the calculations of their engineer, or whether water would run faster through a cylinder made of one kind of material, or of another kind of material.

PROVINCIAL NEWS.

Lynn.—The cost of the new corn exchange, exclusive of the land, appears, from a statement by Messrs. Medland and Maberley (of Gloucester), the architects, to the corporation, to have been as follows:—Amount of contract, 2,450*l.*; extras, of various descriptions, 94*l.* 13s.; value of old materials taken by the contractor, 300*l.*; architect's commission, 142*l.*; total, 2,986*l.* 13s. To this has to be added cost of stands, attendance, &c.

Chelmsford.—There is now, says the local *Chronicle*, an abundant supply of water rising in the town artesian well. For a few days last week the accumulation of sand in and around the pipe was so great as to stop the flow of water altogether. The contractor, however, succeeded in obtaining a free passage for the water, and the pumps have since been at work day and night in emptying the well. There was at first, as is usual in wells of the artesian character, a large admixture of sand with the water, but it now flows in a pure state, and it is hoped, if nothing unforeseen occur, that in a short time it will be available for laying on to those houses which are supplied with pipes.

Bridgewater.—There is some probability, it appears, of the erection of a suite of buildings here for the general purposes of the County Courts, comprising a court for the monthly sittings, a judge's room, a clerk's offices, &c. Some difficulty, according to a local paper, has arisen in negotiating with the corporation for the appropriation of the assize hall, although Mr. Reeves, of London, has surveyed the building, and designed plans for their reconstruction. It is suggested that a reconstruction of the market-house entirely would give ample space not only for suitable offices and a county court, but likewise for an institution, library, and news-room, there being over the present building an amount of valuable space in the very centre of the town entirely thrown away.

Wells.—The directors of the Somerset Central Railway are promoting a Bill in the present session of Parliament for powers to raise new capital to extend their line to this city and to Burnham. It is proposed to construct a pier at Burnham in connection with the railway, to afford a more direct and speedy communication, by means of steamers, with Cardiff, and other ports in Wales, than at present. The additional capital required for these purposes is 70,000*l.* which they propose to raise in 3,500 shares of 20*l.* each. It appears the directors of the Bristol and Exeter have agreed to work the proposed extension during the existing lease of the line in operation at a rent equal to 4 per cent. per annum on the proposed new capital.

Derby.—At Codnor-park, Ironville, Butterley, &c. a committee has been formed by ladies to raise a bazaar, the proceeds of which are to be employed in laying out the grounds at Codnor-park, given by the Butterley Company for the purposes of recreation, &c. The bazaar is to be held at Whitsuntide.

Chesterfield.—The second premium offered for the design for market-hall, &c. was awarded to Mr. Christopher Eales. We mentioned as to the first last week.

Headley.—The architect of the new church here, referred to last week, is Mr. Salvin. The funds were provided by the Hon. Mary (not Mr.) Howard.

Bury.—The suite of rooms at the Bury Townhall have recently been decorated at the expense of their owner, the Earl of Derby. The walls of the principal room, in which public balls, concerts, &c. take place, are painted a giraffe colour, and at intervals there are large imitation pilasters in inlaid marble, painted so as to have the appearance of supporting the arches of the roof, and at the point of junction between the pilasters and the arches are trusses, consisting of solid figures, scroll work, and fruit. The flats of the arches are formed into imitation panels and styles, the panels being decorated with patterns, picked in with blue and red, the styles being grey. The ceiling, which is arched, is formed into panels, with enriched mouldings. The panels are painted a light grey, and the styles a giraffe, to blend with the walls. There are numerous other decorations throughout the room walls. The ante-room is painted to correspond with the large room, with the exception that four large pillars are in imitation of Bissificaria marble. The card-room walls are painted an apple green. The staircase leading to these rooms has been painted in imitation of granite. The whole of the decorations have been executed by Messrs. John Crowther and Son, of Manchester.

Liverpool.—The building trades here, as well as at Manchester, are very dull at present, and there are many of the working-classes connected with these and other trades out of employment. A rather serious bread riot, we observe from the *Times*, has just occurred at Liverpool. It is said to have been a strange circumstance that while no Russian port in the Black Sea was blockaded throughout the last autumn and the present winter, the Danube and its corn countries were actually prevented by our own ships from providing us with a plentiful supply of corn, whereby such sufferings as those of the poor people of Liverpool might have been obviated.

Manchester.—The once celebrated free-trade hall here is now being razed, to make way for the new free-trade hall, on plans by Mr. Walters, architect, and at a cost of about 30,000*l.* Mr. G. Harrup is the contractor.

Doncaster.—The contractors for the new cemetery, Messrs. Anelay, are about to commence operations. The mayor is to lay the foundation stones of the cemetery chapels. The building of the wall is being proceeded with by Mr. John Elsworth.

Dundee.—The new infirmary here has been inaugurated. At the opening it was stated, that while in course of erection some of the stones selected were found, in the severe winter of 1852, to have crumbled to pieces, and that Professor Donaldson had been consulted on the subject, and had gratuitously given the building committee valuable information, on which they had proceeded, as to the proper method of using the stones. They had also consulted Dr. Guy on the subject of heating and of ventilation, and had adopted his advice in favour of what might be called the natural system of ventilation by doors, windows, and open fire-places, thus dispensing with a costly apparatus of pipes, flues, stoves, &c. which had in many cases been found to be worse than useless. The plans on which this new building has been erected, it may be remembered, were selected from twenty-nine lodged in competition, Messrs. Coe and Goodwin being the architects employed.

THE PUBLIC HEALTH BILL OF 1855.

INSTEAD of the country, by its legislature, applying itself by vigorous means to remedy the sanitary evils which exist around us, it is being led on by exaggerations to act the part of a hypochondriac. Look at the Public Health Bill! What is the legislature doing? It appears actually about to hand over the country to one of the most unconstitutional systems which a Briton can well imagine. It is going to put extraordinary powers into the hands of a dictator, at his own request. The present Act (1848) makes many advances towards such a position. Now, however, the system is to be extended.

In the present Act the surveyor of the local board (a person for whose qualification for his office no provision is made), or the board itself, has the power to determine *arbitrarily* what drains are sufficient for a house within the district, and other matters of that class; also as to streets being laid out in a satisfactory manner. There are no rules whatever to guide them; but they may make the law *ad libitum*.

But in the present Bill a further march is attempted to be stolen on the public. Sec. 91 gives the board and its officer new and arbitrary powers as to the *whole construction of houses* in their districts, not one rule being laid down as to the thicknesses of walls or as to any other particular. I say *arbitrary*, though an appeal is given to Quarter Sessions, for what individual will incur the cost and delay of appealing to a court not acquainted (more than the local board) with building matters, and having no enacted rules to guide it. This pretended limitation to *arbitrary* power is a mockery.

I say "arbitrary power," but it must be further observed, not in the local board, though at first it appears so. They will generally hesitate to use the legislative functions put upon them, and will consult the general board, and then we come to the real dictator, who, from his central seat, is preparing to inform all his subordinates throughout the country; and this, forsooth, under pretence of the principle of *local administration*.

Is our legislature come to this, that it cannot frame the details of its laws, but must delegate the functions entrusted to it by the nation?

The Institute of Architects, and the Institution of Civil Engineers, are about to take up this subject, if time be given them, and it is to be hoped that the energy of these professions will be directed to the staying or moderating so great an evil, both to them and the public.

ARCHITECT.

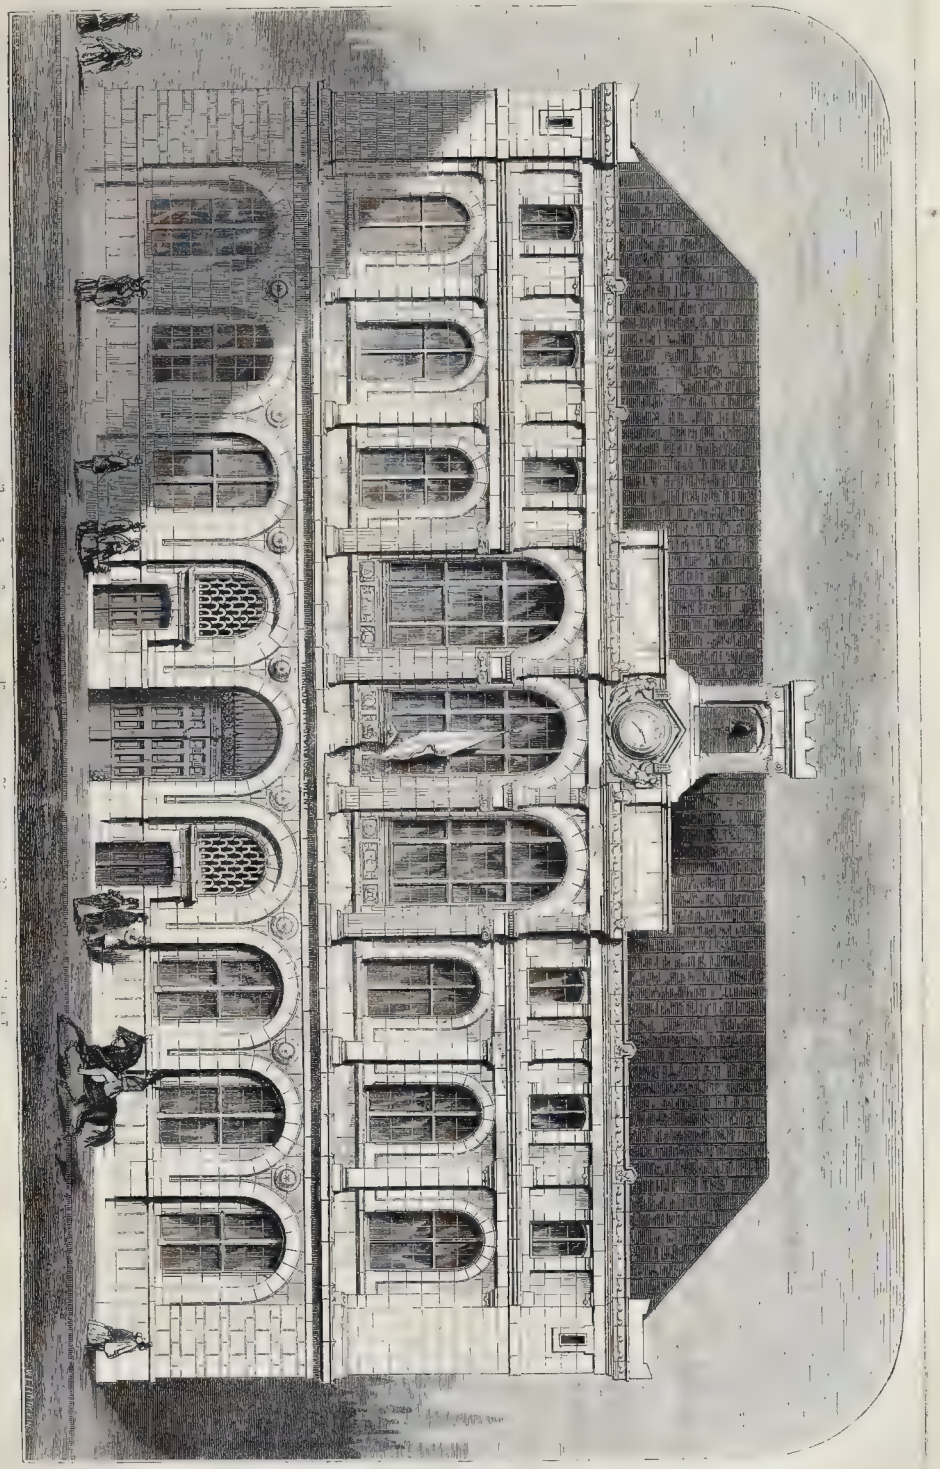
THE MAIRIE OF THE THIRD ARRONDISSEMENT, IN PARIS.

ON THE DEVELOPMENT OF A NEW STYLE.

IN continuation of those illustrations of the buildings in the French capital which have appeared from time to time in our pages, we have engraved, from the *Revue Générale de l'Architecture*, a view of the "Mairie," or municipal offices, of the third arrondissement of Paris, which was commenced at the end of the year 1848, from the designs of M. A. Gerard. A "Mairie," in Paris, has four principal purposes to fulfil,—those of the mayor, the justice of the peace, the national guard, and the office for charitable purposes,—and demands, therefore, careful arrangement and plenty of space. The three great facts of life, namely,—birth, marriage, and death, are dealt with here, and it includes in itself provision not simply for the objects of the mediæval Hôtel de Ville, but for many of the offices which formerly were discharged wholly by the church.

The building in question is situated in the Rue de la Banque, and forms three sides of a square, backing on the ancient Church des Petits Pères. The façade has a frontage of 39m. 20.

It is wholly of stone, as are the returns, and the roof is covered with plates of zinc. The total cost, including 740*l.*, architect's commission, was 15,574*l.*



The style, it will be seen, is a free adaptation of Classic forms, and is made to convey with distinctness the purpose of the building. M. Cæsar Daly, the able editor of the *Revue de l'Architecture*, in his account of this edifice, makes some observations on the present position of architecture so fully in accordance with views which have been again and again expressed in this journal, that we are induced to quote the substance of them. There is not, says the writer, at least to our knowledge, a single building erected in Europe within the last fifty years, which is not to some extent a work of archæology. And the reason is simple: it is because the complete creation of a new style of architecture cannot be brought about either by a single man or in a single day. The result is, that the

DOORWAY: THE MAIRIE OF THE THIRD ARRONDISSEMENT, IN PARIS.

purist and the architect, forced to produce, become exclusively archæologists, and accept as perfect the elements of a past art; whilst the true artist,—that is to say, he who desires to create, who feels the necessity of being always himself, and manifesting it in his works, can simply realize productions more or less heterogeneous, because he is without a settled principle, and is a member of a society which has not itself a principle yet, acknowledged by all; and because society and he, on account of the complexity and contradiction of ideas, of the recollections, tendencies, and passions of the day, can only progress towards the future burdened with a medley of elements gathered from all anterior states of society. It is either imitation or the confusion of different degrees:—we have had nothing else for the last fifty years. Nevertheless, we do not hesitate to say, this disagreeable confusion, which results from the amalgamation of styles, and which is the fundamental character of the most considerable monuments of our time, the efforts which the most able architects have made to give cohesion to this medley, this confusion,—in itself vicious,—is nevertheless one of the preliminary conditions of the progress of our art at this moment; the more so, too, as divers elements essentially modern get mixed up, willingly or unwillingly, in the heart of this imitation of old things, and there, exercise and influence which becomes every day less and less hidden. This sort of confusion is bad, it is true, for each particular edifice; but it is good, so far as relates to the experience required, and the progressive developments which will terminate in a new art. A new style is the same as a new language:—we stutter and often make mistakes before we speak glibly. But if an imperfect word is the first condition, or first step, to speak well hereafter, would it be wise, on account of aversion for inevitable errors, to give up altogether the attempt to speak any other language but our own? By this argument we should be led to condemn all language to avoid hearing the incomplete sounds of infancy.

We would add to the foregoing observations, that the simple juxta-position of varying elements will never constitute a style homogeneous and living. If we confine ourselves to bringing together the most beautiful portions of previous styles, and even improving them, this mere mixture will never become a new art. Eclecticism in matters of art has been vigorously attacked by able minds, and they are probably right in denying its value as an end; but those who would do so, considering it simply as an instrument of transition, would be wrong. Eclecticism, or the amalgamation of styles, will not suffice to form a new style of art, but it will be of the utmost use as affording a road to it, and providing materials.

THE MAIRIE OF THE THIRD ARRONDISSEMENT, IN PARIS.—M. A. Gerard, Architect.

METROPOLITAN TURNPIKES.

Restrictive of commerce, obstructive of structural improvement and the natural progression of dwelling-houses, these barriers remain with us as relics of the Middle Ages. A movement is, however, begun, having for its object the abatement of the grievance, and the removal of all such restrictions beyond the bills of mortality, and, at least, beyond the limits of the metropolis, wherein a levy of paving and lighting is made upon the inhabitants, at present subjected to the double mulct of a turnpike-toll, professedly imposed for the same purpose of keeping the roads in repair.

If the objection were solely confined to the fact, that this particular imposition is collected through the obsolete practice of *farming out the revenue*,—that one-half of the sums so raised necessarily goes into the pockets of the contractors and farmers,—that ought to be a sufficient reason wherefore the Government should either abate the impost altogether (in the cases where highway-rates are levied), or substitute for the imposition some other more just and equable mode of fixing the charge of keeping the highways in repair.

The operation of toll-charges is, in all metropolitan instances, most unjust and unequal. It falls heaviest on the trader of the vicinage, who, having to fetch his commodities from market, first pays toll in the morning for his stock in the mass, and, at innumerable times throughout the day, repeats the same (to him) costly ceremonial in infinitesimal distribution to his customers; but the pressure is most seriously felt by proprietors of vacant lands and houses near the gates, since, as example on all sides proves, *the value of lands and houses* is most seriously depreciated in such localities. Witness the green (though smoke and soot covered) pastures in proximity to Camden-town;—witness the unoccupied and low-rented houses near to all the most vicinal of the London tolls: and for the reverse of the picture, witness the rapidly enhanced value of all the property adjacent to the lately removed barriers of Marsh-gate, Tyburn-gate, King's-cross, &c.

It may be argued that tradesmen in the oppressed localities may lay on a profit to repay the undue charges levied upon them; but such is not the fact, for these are notoriously the poorest districts; and even though it were otherwise, competition in trade would forbid reimbursement in such a manner by an increase on the market price.

In barbarous or semi-civilized states, the revenues are still farmed, but with what effect is patent to the world,—dwindled exchequers, and corrupt and rascally douaniers and contractors! It has been abolished in England save in this particular; and perhaps, of all imposts, not one is so un-English, not one so distasteful to John Bull, as to be stopped on the highway for the levy of black-mail, by a (not always over civil) man who, in our days of enlightenment and liberty, can legally arrest his progress, with the antiquated and startling summons of *stand and deliver*.

One penny in the pound levied in the parochial assessment, if it were necessary, which it is not, wherever highway rates are levied, would be sufficient to keep up all the metropolitan roads and causeways, in a thorough state of repair: but the paving and lighting assessment is, or if it is not, it ought to be, made sufficient for the purpose, without the retention of an odious and most unpopular, and iniquitous tax.

Two meetings recently held at the Adelaide, Camden-town, and at the Assembly-rooms, Kentish-town, would, if the proceedings were published, clearly announce to the Government the iniquity of the tolls, and the detestation in which they were held. Mr. William Morley was the promovent in the question, and the discussion held on these occasions clearly announced the impolicy and oppression of the system. It was shown that omnibus proprietors, who paid as much as 100*l.* a-year, were forced to lay the charge on their passengers in increased fares, and that these being chiefly of the middle and lower classes, the onus must of course rest on their shoulders.

One by one the nearest toll-bars have been removed; and, to enforce the argument of expediency for such enfranchisement, it is only requisite to say that the city has abolished the levy of dues upon carts and wains not belonging to freemen. Like men of business, they clearly saw that the profit was small—that the loss was great—for the restrictions placed upon commerce and upon free traffic must have far outweighed in amount any very doubtful gain derived from a toll collected only from stray commercialists and their waggons.

The tolls on the bridges, though only one halfpenny, are grievances of the same class. They are unsuited to our times; and every bar which imposes the smallest dole upon the wayfarer is a restraint upon commerce, a check upon free intercourse, and a tourniquet upon the main artery of civic intercommunication. In point of fact, a great city should have its roads, bridges, causeways, and traverses, *wholly and completely unobstructed*; and the expense, however large, attendant upon all the intercourse and all the aisances of a great community, ought to be distributed equally over the nation; for the service of the State, as well as the Church, should in every sense be "perfect freedom." Q.

WAR APPLIANCES.

It is satisfactory to know from Lord John Russell, that the New War Minister, Lord Panmure, "will not hesitate to take advantage of additions and improvements made by the progress of arts and science to the armies of other countries, which have enabled them to gain their present reputation." This is a pretty clear admission of our own deficiency in modern war appliances; but why we should merely be followers of others in such appliances, it is hard to say; nor is the assurance very promising that "he will not be disposed to introduce innovations that may be destructive to the army." None but a friend of the Czar would do that; but we cannot overlook the fact that from want of "innovations," our noble army has already been all but "destroyed."——The invention of innovations destructive to the enemy's army, meanwhile, is by no means exhausted. The last new deadly missile we have heard of, is a bullet of brass, which opens or "expands," in firing, from 24 to 30 inches, and "acts as a sword, cutting horizontally throughout the whole of its course:" it is adapted to ordinary fire-arms, and was invented by Mr. N. G. Staunton, C.E. The Board of Ordnance have had their attention drawn to a newly-invented revolving rifle, with barrels as large as the Minié rifle now in use, and chambers similar to the repeating pistol. This weapon, it is said, will discharge five shots in four seconds, and can be loaded with extraordinary facility. An improved cannon to be loaded at the breech has been invented by Messrs. W. Church and S. A. Goddard. It is mainly by means of a compound wedge worked by a lever in a depressed chamber at the breech, and covered by an annular and shiftable collar, that this purpose is effected. India-rubber blocks to act as recoil springs attached to mortars or guns in mortar-boats or ships have been successfully experimented with, it is said, at Woolwich. Each recoil spring is calculated to resist a concussion of from 20 to 25 tons at an average compression of from 1 to 1½ inch.——An extensive arm factory is now in course of erection for Government at Enfield Lock, Middlesex. Mr. J. Haywood, of Derby, the contractor, is bound to complete the whole in six months.——Mr. John Downie, of Glasgow, has patented a new description of cannon, constructed of wrought and cast iron combined. The firm to which he belongs has contracted with Government to supply 2,000 tons of war stores, including cannon and mortars, shot, shells, &c. They began with a huge mortar to throw 13-inch shells, and requiring 9 tons of fluid metal in the casting, though not to exceed three tons in actual weight.——The Admiralty have taken up two ships to convey 1,000 tons of wooden huts to Heligoland for a British encampment to be there formed.——The railway companies of France have subscribed 100,000*l.* to the fund now raising for the sick and wounded in the army in the Crimea.——The navvies, it appears, were landed at Balaklava in good health and spirits, and the railway works were commenced at once, and considerable progress had already been made, by last accounts. No difficulties were presented by the nature of the ground. The first mile and a half from Balaklava is nearly level, the incline being only 1 foot in 60: there are then two miles of steep incline, rising 1 foot in 15 for the first half-mile, and then 1 foot in 25; but from about the end of this distance to Lord Raglan's quarters the ground is nearly level. The Field-Marshal and Sir John Burgoyne are said to think favourably of the project.——The *Spitfire* was about to leave Kamiesh on 15th ult. for Constantinople, to fetch the submarine electric telegraph-wire, and the persons to be employed in its laying down between Cape Chersonese and Varna. A wire is also to run from head-quarters to Balaklava.——A mercantile firm, according to the *Times*, has offered to do the whole duty of the Commissariat, and feed the army, not with raw pork and green coffee, but with three wholesome cooked warm and regular meals, at 3*s.* 3*d.* a day for each soldier.——Two picked firemen from the Metropolitan fire brigade have been sent to the hospital at Scutari, at the request of Government.——A levy of thirty-four ship carpenters, according to *Galignani*, has been ordered in the maritime arrondissement of Havre, to work on the gun-boats now building by M. Normand for the French Government. A levy of seamen has also just been made in the arrondissement of Calais.

ROCHESTER.

Some time since I read a letter in the *Builder*, calling attention to some of the dirty localities of this town, and signed "C. E." Allow me to point out a few places worth the trouble of an inspection as contra thereto. First I would mention the Town-hall, the façade of which is one of the best specimens of brickwork I know of, and was erected in 1687. The work is rubbed brick, set in putty, five courses to the foot, and highly ornamented. The Corn-exchange is also of the same kind of work and period. The castle and parts of the cathedral, as all know, are well worthy of a visit, as well as the quaint old timber houses in Eastgate, with their overhanging floors and curious gables, which, although they are inconvenient as dwellings, are notwithstanding very handsome relics of that style of architecture. I shall pass several objects worthy of observation, till we come to the entrance gates lately put up to the Hare and Hounds Tea-gardens, on St. Margaret's-bank, which formerly stood at the entrance to the Chatham brewery, and also to another pair still standing at the brewery, opposite the Sun Inn, Chatham, and the baluster in front of the offices of that establishment: these are very good specimens of old iron work. Unfortunately the last two specimens are now in rather a bad state of repair for want of proper attention and a little paint. The front of these offices is in the Italian style, and well worthy of inspection. The next and last that I will now call your attention to, is the entrance doorway to the Parsonage-house, a little lower down the High-street, on the same side of the street. It is composed of two pilasters, one on each side of the doorway, panelled, and ornamented with fruit and flowers, carved in high relief: from these spring brackets or trusses, also beautifully carved, and the whole of the inside wood being cut away so that they are quite open. The pediment over the door is quite in keeping, and the whole gives evidence of great skill in the execution. In conclusion, if any of my brother professionals should think it worth while, should they be near here, to take only a passing glance at the different places I have named, and have afterwards any spare time, I would recommend a visit to the Model-room of the Royal Engineer establishment, in Brompton barracks, only a short distance from the last building I have called attention to, and they will find it repay them for their walk; and they will also have the opportunity of seeing another piece of good brickwork erected about the same period as the Town-hall, Rochester, *i.e.* the principal entrance to her Majesty's Dock-yard. T. J. R.

THE FALL OF HOUSE IN ISLINGTON.

The adjourned inquiry respecting the deaths unhappily caused by the fall of an old house in the Lower-road, Islington, was resumed on the 21st, before Mr. Wakley, the coroner. In the course of the evidence given,—

Joseph Wright, of 10, Old Paradise-row, said that he was a journeyman bricklayer by trade. He did some work at the premises during six weeks at the beginning of the last summer. Mr. Fownes paid him 4*s.* a day. He examined the premises, and reported to Mr. Fownes what was necessary to be done. He did not offer to do the work for any particular sum. He did not tell him that the house was in a dangerous state. Witness had put some stonework and bricks in the cracks under the gateway. He repaired the fracture with cement, according to Mr. Fownes' instructions. He was inclined to think that he removed about 3 or 4 feet of the wall which he repaired. The wall was in some places 9 inches thick. He put about forty new bricks into the wall. To the best of his knowledge, no surveyor was employed there. The bricks that he removed were not under the girder. The bricks were all loose, but there was mortar attached to them. The wall was in what may be termed "a middling condition." He reported to

Mr. Fownes that the other part of the wall was in a dangerous condition. Mr. Fownes said, "Then you had better get it down and repair it at once, in case of danger." He saw that the house was in a bad state, but he did not tell Mr. Fownes of it. The roof of the house was also in a dangerous state. It is still standing.

Geo. Ebsworth, next door, said: There was a zig-zag crack in the wall, which suddenly appeared at the side of the wall of his own house. It extended from the ceiling to the floor. He spoke to Wright about the state of the wall, and he said that it would be all right when it was repaired. Several yards of the wall were taken down. On the Saturday preceding the accident a man removed some of the brickwork, when the crack widened. He went and fetched a man who was removing some of the brickwork, and he said, "I do not know whether you are doing right or wrong." At the same time he informed him that the aperture in the wall was getting larger, but a man named Elgar, in reply, said, "Oh, it is all right." This took place about the time the man had removed six bricks. A thick wall had been removed: a thinner one was substituted. He had lived in the house three years. The wall had been taken away right along the passage, and also under the gateway. The wall was certainly not so thick as it was formerly.

Richard Elgar, of No. 49, White Lion-street, a bricklayer, said that he was employed on Saturday week, by Mr. Fownes, to look to the state of the house in Lower-street. Mr Fownes was with him at the time. He removed three "bats," which he prized out with a chisel. He did not knock them in again, or by any means replace them. He took the "bats" from the further end of the wall, nearest the back yard. Mr. Fownes asked him if there was any danger, and he replied that there was no immediate fear that he saw at that time. Fownes then told him to take the brick-work out on the Monday morning, and to raise a pier with cement and mortar, in order to support the beam that went across. He saw no crack in the main wall, but there was a crack in the angle of the wall over the shop. Before he took the bats out he thought the wall was 14 inches thick. His object in taking the bats out was to ascertain the thickness of the wall. The wall was bulging where he took the bricks out.

Mr. George Godwin, District Surveyor, deposed that he had not received any notice of the state of the premises; nor of the works recently done. The Act directed that on receiving information of a ruinous building, the district surveyor was to take certain steps, and these he detailed. If the dangerous condition of a house came within his knowledge, he should, without notice, take the steps pointed out to protect the public. In reply to the coroner, he did not consider the Act afforded full protection to the public; and yet he would not have the responsibility of discovering ruinous buildings thrown wholly on the surveyor, as that would relieve owners from the responsibility which they ought to feel. The Act of Parliament was not working well, and the difficulties were increased by an unfortunate difference of opinion between the referees and the registrar. He took occasion to urge on builders the necessity of giving notice to the district surveyor before commencing any works. If notice had been given in this case, the condition of the building would doubtless have been apparent. He concurred in the opinion that many new houses were in a very improper condition. At the request of the coroner, the witness then pointed out some alterations desirable in the Act, urging especially the formation of an open court, with one or more official referees (architects), with a legal assessor, to give summary decisions, as at a police court. He attributed the accident to the failure of the wall on the right hand side of the gateway, either through being weakened or from gradual decay.

Mr. T. M. Nelson, architect, appointed to examine into the cause of the accident, said that he had made an examination of the house and premises in the Lower-road, part of which had fallen down. He considered that the house was built 150 years ago: it was in a very dilapidated state, and unfit for habitation, and was not in a condition to bear any superincumbent weight, and the only wonder was, that the accident did not happen before. The house was in such a state of decay, that a slight concussion or vibration, arising from any cause within or without the building, would have produced the catastrophe that occurred. In reply to the coroner, Mr. Nelson said that he considered the law upon this subject to be in a most unsatisfactory state; and he then set forth at very considerable length what he considered some of its deferts. He believed there were as many as 300 awards unsealed. He might mention as one incongruity in the Act, that while a district surveyor might get a fee for the placing of a chimney-pot, he received no fee at all for surveying a building assumed to be ruinous. The Act was equally faulty in other respects; it particularly favoured the erection of small incommodious dwellings for the poor. He, and several of his profession, conjointly with the metropolitan parishes, had urged upon the Government the great necessity for its interference with respect to the Metropolitan Buildings Act. There was a simple Act in operation in Paris which might be modified to suit this country.

The coroner, in summing up, dwelt very forcibly on the evils of the Buildings Act, and said he thought no Act at all would be better than a deceptive one, and pronounced its present administration a disgrace to the country. For the one judge to sit in open court and act summarily, he decidedly agreed with Mr. Godwin in recommending that it should be an architect. He then pointed out very clearly and ably the law as regards the criminality attaching to owners, and read over the more important parts of the evidence.

After some deliberation, the following verdict was returned,—"That the jury are of opinion that the deceased persons lost their lives by the falling of a house, situate at No. 2, Lower-street, in the parish of Islington, on the night of Sunday, the 11th of February, 1855, from misadventure; and there was great and culpable neglect on the part of Mr. Henry Fownes, the owner of the house, in employing incompetent persons to repair the premises, without previously giving notice to the district surveyor; and the court cannot separate without expressing their approbation of the conduct of the late Francis Stoker, police-constable No. 262 of the N division, who lost his life in endeavouring to save the lives of several others at the said period. They (the jury) also wished to express their admiration of the conduct of Mr. William Calvert in saving the lives of eight persons; and they regretted the injuries sustained by the witnesses Jauncey and the police-constable Best."

DINNER-TABLE DECORATIONS.

Having ventured to suggest the decoration of our City Guildhall with frescoes, under the patronage of our present worthy Lord Mayor, I would now, in reference to a letter which recently appeared in your columns on "Dinner Decorations," merely observe, that the most cheerful, refreshing, and effective decorations that I have seen, were at a great public dinner at Leipzig, during one of the great fairs, which railways have now made almost a matter of history. A large number of standard orange and oleander trees were ranged along the tables, through which the stems of the trees were brought; thus nothing intervened to obstruct the view of any of the guests, and the branches which spread *overhead* tended only to add beauty and fragrance to the whole scene. "Non Nobis."

ROYAL INSTITUTE OF ARCHITECTS IN IRELAND.

The usual monthly meeting of this body took place at Dublin, on Saturday evening, the 17th inst. Mr. Jacob Owen, V.P. in the chair. Donations having been acknowledged, some carved caps belonging to an altar screen, in the Early English style of architecture, were exhibited by Mr. Kirk; and Mr. J. H. Owen afterwards read the first portion of a paper on "The Curiosities of Architecture."

THE GREAT BELL OF ST. PAUL'S.

Under the head of "Variorum," in your number for February 17th, p. 83, reference is made to a treatise in the "Encyclopædia Britannica," by Mr. Dent, the eminent chronometer maker; and various interesting particulars are given therefrom, respecting the great clock and bells for the new palace at Westminster. Among these it is stated that "the hour-bell is 8 feet high, and about 9 feet in diameter, weighing fourteen to fifteen tons. * * * The largest of the mere quarter-bells is about the size of the great bell of St. Paul's, which weighs 5½ tons."

I think there is probably a mistake respecting the weight of the great bell of St. Paul's. Its diameter is stated in Charles Knight's "Pictorial Half-hours of London Topography" as being 9 feet; and its weight 11,474 lbs. being 5 tons, 2 cwt. 1 qr. 22 lbs. or a little over 5½ tons. I do not remember any other work in which its dimensions are referred to; but I have repeatedly met with this statement of the weight; and I am led to doubt its correctness, judging by the weight of the hour-bell above-mentioned, and that of "Big Peter of York," which, with a height of 7 feet 7 inches, and diameter 8 feet 4 inches, exceeds twelve tons. My belief is, that the above figures originally stood as 11·474 tons; and that some succeeding book compiler, not understanding decimal notation, thought *tons* a mistake, and put *lbs.* instead; and the misstatement, once going forth, got repeatedly copied.

Any one familiar with the deep, sonorous *boom!* of the great bell of St. Paul's (which has been heard twenty miles off), will question the suitableness of such a bell for striking the quarters upon, or the expediency of having two bells of 9 feet in diameter in one campanile.

Of course, my hypothesis may be, after all, erroneous: and I do not question the practicability of casting two bells similar in form, size, and external appearance, the one so much thinner than the other as to turn out little more than a third of its weight; but St. Paul's does not sound as if it were at all deficient in metal.

The following, I believe, are modern English proportions of bells: the thickness of the brim, the height, and the top and bottom diameters, relatively, as 1, 12, 7½, and 15; and the brim, the foundation of all the dimensions.

The Messrs. Mears, of the old Bell-foundry at Whitechapel, whence have issued most of our great "Toms," could probably state, from their records, the weight of the great bell of St. Paul's, which I should not be surprised to hear was cast by their ancestors.

James Wylson.

THE ROD IN THE IPSWICH GRAMMAR SCHOOL.

In addition to the brief notice which appeared last week, of that delectable specimen of fair architectural competition, the Ipswich Grammar School, perhaps you can find a corner for the following, scribbled one day, in a fit of inspiration, on the cover of my copy-book.

Timotheus Ticklebackius,
Alumnus Scholæ Elizabethæ Gippovicensis.

ON VIEWING THE IPSWICH GRAMMAR SCHOOL TIED UP WITH IRON RODS.

Tityrø tu patulæ recubans sub tegmine *virgæ*.
Dr. Burch's Variorum Virgil.

In Busby's time, under his birchen sway,
The rod was used to make bad boys obey;
But now that birch the mawkish mind appals,
When rods are used, it is to mend bad walls.
If the rod's ancient office were restored,
There are some backs* deserve to be well scored.

Notices of Books.

The Electric Telegraph Popularized. By D. Lardner, D.C.L. Walton and Maberly, Upper Gower-street, London: 1855.

The purpose of Dr. Lardner in preparing this little volume for his "Museum of Science and Art," from which it is here, however, separated, is to render intelligible, to all persons who can read, the various forms of telegraph in actual operation, and the way of their working. In this purpose we think the author will have fair success; but the word "intelligent" should be placed before the word "persons."

The electro-magnetic and magneto-electric telegraphs are the inventions of many minds, no single individual, as in many other instances, being entitled to be named as the inventor. In England, however, Professor Wheatstone; in the United States, Professor Morse; in Bavaria, M. Steinheil; in Prussia, Dr. Siemens; and in France, MM. Breguet and Froment, may be named as having severally stood in the leading ranks of its invention; and besides these eminent persons may be named Mr. Bain, the inventor of the electro-chemical telegraph; Mr. Henley and the Messrs. Bright, who have improved the magnetic or magneto-electric telegraph; Messrs. Brett, to whom the world is indebted for submarine telegraphs; Messrs. Newall and Co. who have constructed so many submarine cables; Mr. Walker, of the South-Eastern Telegraph Company; and Mr. House, of the United States, the inventor of a printing telegraph in extensive operation.

The *beau ideal* of the telegraph appears to us to be the autographic telegraph, by means of

* No allusion to our school committee.—T. T.

which the wires, though they were a thousand miles long, become as it were the pen by which a writer at one extremity can produce a letter or other document "in his own handwriting," at the other; and although this *beau ideal* is not yet in practical use, it has actually been worked with, in a hopeful, though still an imperfect manner. It is by a modification of the electro-chemical telegraph, that this wonder of the day has been rendered possible. Mr. Bain is the inventor of the electro-chemical telegraph itself, which, in Dr. Lardner's opinion, is likely to be of more use than it yet is, when the demands of the public on the telegraphic system shall be greatly multiplied and extended by lowering the tariff. In this view, as the Doctor remarks, "the system of Bain is to the common telegraph what the steam-engine is to the horse, the power to the hand-loom, the lace-frame to the cushion, the self-acting mule to the distaff, or the stocking-frame to the knitting-needle." Is there no far-seeing Boulton who will take this poor Watt by the hand, and enable him, perhaps, to so improve his processes as to accelerate the lowering of the tariff itself, and so to hasten the time when the present hand-loom telegraph shall be cast aside, and the power-loom multiplier and the electro-chemical pen of Bain shall be brought into universal action?

Miscellanea.

HORSES FOR WAGGON TRAINS: NATIONAL FAIRS.—Mr. B. Almack suggests the institution of national or patriotic fairs, to be held in various localities, where the spare horses of the district might be sold to Government at fair prices by the farmers, who, he is sure, if confident their horses, which are the best in the world, would not be "used up" without credit to their country, would willingly part with some of them on reasonable terms, even though at some present inconvenience to themselves. Thus a better class of waggon horses could be obtained than are usually on sale, and they would be already trained and in good condition for work. The best waggons now in use, too, he observes, might be had at once, or improved ones made by our agricultural implement makers, according to Government order, and suitable for army purposes. All depends, Mr. Almack observes, on confidence in the Ministry, and on system in carrying out the suggestion. The finest waggon train in the world, he believes, might thus be had in one month's time, with light, under-sized, active men for drivers, who, with a pair of revolvers each, would give a good account of their charge, as well as of the enemy who might attack them.

PROGRESS AT MELBOURNE.—In a leading article on the social condition of the colony of Victoria, and the town of Melbourne, the *Age*, a Melbourne paper, says that in spite of recent reverses, population has continued to pour in, and building has been carried forward in the city with great spirit. A Public Free Library is in course of erection. The University building is going forward. The Exhibition has been "most splendidly successful." The existing literary institutions are flourishing, and new ones rising. Booksellers' shops are multiplying. Melbourne is no longer a mere collection of scattered stores, rudely built of battens and bricks without any pretension to style or arrangement. In Collins-street there is scarcely a wooden building remaining, and a great portion of the shops might, without suffering by comparison, be placed side by side with those of Cheapside or the Strand. Many of the streets are susceptible of great improvement, but they are in general in a very creditable Macadamized state: the footpaths are being flagged with Yorkshire stone. There are numbers of capacious stores, long piles of massive buildings, in certain localities, looking more like prisons than places of business. There is rather more than a sufficiency of comfortable residences. A well-built brick house, which at the highest times was worth 8*l.* per week, now lets for 4*l.* or 5*l.*; and houses which then let at 5*l.* per week are now offered at from 2*l.* to 3*l.* per week. In the neighbourhood of North Melbourne and Collingwood, there are many comfortable-looking houses without occupants, and which have been so for some time.

THE BERNAL COLLECTION.—The Council of the Society of Arts have presented a petition to the House of Commons, calling attention to the fine collection of works of art, extending from the Byzantine period to that of Louis Seize, made by the late Mr. Ralph Bernal, which are advertised to be sold by auction on the 5th of March; and they pray the House to vote the necessary funds for its purchase, about 50,000*l.*

FIRES IN THE FROST.—In order to avoid the delay in getting water to extinguish fires when the frost is severe, it would, I think, be well if, in the gas main nearest to any "fire-plug," there were inserted a gas-plug (as it would be called), and if every engine were provided with a short length of gutta percha pipe, with union and nozzle, so that a powerful jet of flame, as from a blow-pipe, might be directed on the frozen water plug. If the turncock were also provided with a piece of tubing, water would be ready before the engines arrived. There could be no objection on the part of the gas companies; a few pence would be the value of the gas; and the cost to the assurance offices would be soon repaid in the time, and therefore property saved. One winter such as this, one fire such as that recently would do it.——Pray, continue to complain of the gas. I have a 15-light meter, but till after eight o'clock cannot get gas enough for three hours. There is nothing amiss with my pipes, for the company (Equitable) have seen to them. It is not so much supply that is wanted as *density*. The companies are retracting so many valuable "products" from the gas manufacture (as I happen to know), that the illuminating power and, consequently, density, are seriously lessened. Does not every one notice the darkness of the streets, compared with what they were?—J. J. C.

CAMBRIDGE ARCHITECTURAL SOCIETY.—The first meeting of this society for the Lent Term was held on the 7th inst. at the society's rooms. After some other business was done, including the resignation of one of the secretaries and the appointment of another, Mr. R. R. Rowe read some remarks upon the original contract for the building of Trinity-hall, between Bishop Bateman and John de Mildenhall His remarks had reference to several technical words connected with carpenters' work, introduced into the Latin contract. The meeting adjourned to the 22nd inst. the 21st being Ash Wednesday.

LEEDS SCHOOL OF PRACTICAL ART.—A *conversazione* was held in the rooms of the Leeds School of Practical Art on Tuesday evening before last, the object being to direct more general attention to the institution, with a view of obtaining increased subscriptions. The withdrawal of the government grants to the school, under the late regulations of the Board of Trade Department of Science and Art, placed the managers in a somewhat critical position, and the institution has been struggling for some time. The amount required to support the school, in addition to the pupils' fees and a few petty subscriptions, is about 100*l.* per annum. At the *conversazione* on Tuesday there was a highly-respectable assembly of visitors, though not very numerous. It appeared, from statements made at the meeting, that the number of pupils in the school, and those in commercial and other schools in the town who receive instruction in drawing by the master of the school of practical art, Mr. J. C. Swallow, amounted to 865. A series of resolutions were adopted recognizing the advantages which accrued from such schools, and urging that a canvas should be entered upon to obtain the necessary subscriptions in order to carry on the school.

LECTURE ON WOOD ENGRAVING.—At the Literary and Scientific Institution, East Grinstead, according to the *Sussex Express*, on January 31st, a lecture on engraving was delivered by Mr. J. J. Jenkins. After some general remarks on engraving, the lecturer stated that he should not attempt to treat of the history of the art, and then proceeded to give practical information as to the various processes employed in the production of an engraving. In conclusion, Mr. Jenkins made some observations on the importance of the engraver's art, not only to the world by diffusing a knowledge of art amongst those who could not hope to become the possessors of original paintings, but also to the artist, by giving to his creations a comparative immortality, as by the lines of the graver alone we are enabled to form any available idea of many celebrated works which have long since perished by fire or other destructive accidents, or by the natural process of decay. For though the unique original may be thus early destroyed, or partially injured, it is surely possible that the *whole* of the impressions from any one plate should entirely perish. The lecture was illustrated by a number of engravings, and of copper and steel plates in various styles of progress, the different tools and instruments used by the engraver, &c. &c.

BATH SOCIETY FOR THE PROMOTION OF THE FINE ARTS.—The second *réunion* of this society, took place on Tuesday night, in the week last past, and the apartments, crowded to overflowing, notwithstanding the unusual severity of the weather, bore gratifying testimony, says the *Bath Chronicle*, that the inhabitants of Bath justly appreciated the exertions of the committee at its opening meeting. There were not less than 600 persons present, and the works of art exhibited, it adds, were of the same high quality as on the former occasion.

VIEWS OF THE PARIS PALACE OF INDUSTRY.—The announcement by the company of the Palace of Industry, that law gives them the exclusive right of publishing representations of the new building, and that they will proceed against any who may attempt to do so, either wholly or in part, has excited great displeasure, as might be expected. Their power to prevent such publication seems doubtful, but even apart from this the desire is most unwise and short-sighted.

PROCEEDINGS UNDER THE METROPOLITAN SMOKE NUISANCE ACT.—The Government are still actively at work in suppressing the smoke nuisance in Lambeth, Westminster, and elsewhere throughout the metropolis. On 12th inst. Mr. T. Maudslay, of the firm of Maudslay and Field, in the Westminster-road, Lambeth, appeared before Mr. Elliot to answer an information under the Act for neglecting to adopt the necessary apparatus for the prevention of smoke from their furnaces. The full penalty of 5*l.* was imposed. The railway companies are about to be called to account.

DOWN DRAUGHTS.—We have recently received some letters seeking to learn how to overcome the evils of a down draught. One says the inhabitant of nearly every house in Belgravia, Eaton-square, and the neighbourhood are thus troubled, particularly in those houses which are most lofty:—"When my neighbour lights his breakfast-room fire, my dining-room is filled with the smoke that he is better entitled to: my dining-room discharges its black superfluities in his nursery; whilst in both our houses there is a capital draught up every chimney, when we want it, and when we do not, a down current of stifling quality from some other chimney. Very recently a child was all but suffocated in bed: congestion of the lungs was coming on when the infant was fortunately discovered in its predicament, in time to be saved from serious consequences. The builders are conscious of this defect, but are unable to remedy it; and we hereabouts are of opinion that if these remarks be published *in extenso*, through your kindness, some experienced practical builder may perchance hit upon a remedy against the great evil of down draughts."

ELECTRO-TELEGRAPHIC PROGRESS.—The electric telegraph between Varna and Bucharest is progressing rapidly. The wire goes by way of Giurgevo, and is completed as far as Kalugreni, which is but two post stations from Bucharest.——The communication by electric telegraph is now completed between the three presidencies, the north-west provinces of India, and Lahore. The lines between Bombay and Madras were joined by moonlight near Belgaum, on the night of the 31st of December, and the communication between the presidencies completed on the first day of the year.——The submarine Atlantic telegraph is said to be now fully under way, and the last doubt removed about its final completion. Six hundred men have been employed for a year in its construction from New York City to St. John's, Newfoundland, to which point (1,200 miles) it is nearly completed. Before two years have gone by, it is said intelligence will be flashed regularly every hour from London to New York.

THE LONDON 'CHANGE.—Can you do anything to help the attenders at 'Change in their sufferings from the unprotected condition of their place of meeting? It is really very hard that the merchants of the first city in the world cannot have,—I will not say a comfortable place to meet in,—but one that affords the merest shelter from wind and rain: the area, as you are aware, is open to the sky, and if you take shelter in the "cloisters," there is an attack of bronchitis behind every pillar. It is a fact, that some of our leading men absent themselves from 'Change on this account; but for some of us, who must either look out for business, or perish in the attempt, it is a serious business. Surely, a glass roof is not beyond the wealth and enterprise of the merchants of London.—A STARVED BROKER.

ISLINGTON.—Alterations are to be made at Islington Workhouse, and tenders have been received, ranging from Bradley, 788*l.* to Nash, 590*l.*

THE WEATHER.—In order that the public may be made acquainted with the severity of the present season, I send you an account of my thermometrical register of the past week. Mine is a self-registering thermometer, and hangs on the north side of a wall bounding my premises and an open field. I have kept an account, similar to that which I now send, for more than twenty years. I merely observe that my figures denote the coldest point to which the thermometer was reduced, viz.:—

Feb.	13. Tuesday	12 deg.
	14. Wednesday	29
	15. Thursday	14
	16. Friday	14
	17. Saturday	16
	18. Sunday	27
	19. Monday	29

E. N.

ARCHITECTURAL SOCIETY OF THE ARCHDEACONRY OF NORTHAMPTON.—At a committee meeting, held February 12th, the Rev. P. H. Lee, B.D. in the chair; on the recommendation of Lord A. Compton, it was agreed that the secretary should propose to the committee of the Northamptonshire Educational Society that a joint committee be formed, for the purpose of procuring the best plans for schools and school fittings, suited to the wants of the archdeaconry. It was also determined to repeat the proposition to the Agricultural Society, relative to the obtaining of good and cheap plans for labourers' cottages. It was definitely fixed to hold the spring meeting at Peterborough, on Wednesday and Thursday, the 23rd and 24th of May, the Dean of Peterborough having kindly offered every facility and accommodation in his power to the society.

THE CRYSTAL PALACE OF WIELICZKA.—When Russia, Austria, and Prussia were dividing Poland among them, there was one "gem" that fell to Austria's share. This was the Crystal Palace, the gem-salt mines of Wieliczka, at the foot of the Carpathian Mountains. Poland had thus her Crystal Palace hundreds of years before London dreamt of hers, and these dwindle into utter insignificance when compared with the extent of the Crystal Palace of Wieliczka, with its suites of vast and lofty halls, its vaulted chapels, its long range of spacious galleries, and the quiet lakes spread like mirrors within its walls. To make the descent easy, broad flights of steps have been cut, through the superincumbent strata of marl, clay, and sand, into this wonderful labyrinth of crystal halls, 100 of which measure from 100 to 150 feet each in height, and from 80 to 100 feet in length and breadth, each having its peculiar name. The largest of the salt chapels is dedicated to St. Anthony. In this Gothic chapel, as well as in the smaller ones, not only the walls, the doors, the niches, are hewn out in salt, but so likewise are the altar and the crucifix in front of it, the statues of the saints, as large as life, that grace the niches and kneel around the altar, and even the little lamps, of antique form, that burn before their shrines. The grandest of these crystal halls is, however, the ball-room, adorned with slender columns, with ornamental capitals, with friezes of sculptured foliage, and with a chandelier formed of salt-crystals, 60 feet in circumference. In this hall are given *fêtes* on occasion of the presence of emperor or king. The effect produced when the hundreds of lights in the chandeliers are reflected from the myriads of saline gems which form the walls, ceiling, and floor of these halls, is said to be wondrously beautiful. Among the sculptured works that adorn the various chambers, a trophy formed of all the tools and instruments used in the mine, is particularly interesting; and a statue of King John Sigismund, of Poland, cut out of a single block of crystal. The works at present extend over an area of 35,000 square fathoms, the length of the galleries and passages making together 7¼ German miles (about 37 English miles). They consist of three divisions or "fields." These "fields" consist of five stories, or "contignations," as they are called in Galicia, the one below the other, and each comprising vast ranges of chambers, communicating with each other by numerous horizontal galleries or "levels;" while the various contignations communicate by means of perpendicular and oblique shafts, besides the staircases already mentioned. The lowest level of the mine is 300 feet below that of the sea, and 580 feet below the bed of the Vistula.

A SNOW MELTER.—The model of a cart for the removal of snow has been submitted to us by the inventor, a practical man, Mr. West, which he thinks might be employed with good effect at this moment. The cart is intended to be of cast iron, containing a furnace; the heated air from which would pass through chambers in the side of the cart, and on to these the snow would be shovelled and so melted. The clear water is then allowed to run off through a trap in the side of the cart down the nearest gully-hole. Through another trap in the bottom the muddy sediment may be removed. Snow is longer melting than some think.

NUMBERS AT NIGHT.—A friend of mine was complaining to me of the difficulty the cabmen found at night in discovering the number on a street door. It occurred to me that if the number of the house opposite the lamp-post was painted on the *upper* part of the lamp glass that looks across the road, it would remedy the difficulty, and would but slightly interfere with the rays of light in the unimportant upward direction.—F. W.

THE COMPETITION FOR THE WATFORD CORN-EXCHANGE has been decided in favour of Mr. Jas. Murray. The second premium was awarded to Mr. E. W. Tarn, M.A. The building is to be immediately proceeded with.

PERCY CHAPEL, BATH.—In our notice of this building, illustrated last week, we omitted to mention that Messrs. Goodridge, of Bath, were the architects.

CLARKE'S PATENT FOR SOFTENING HARD WATER.—Professor Clarke, of Aberdeen, has had an extension granted him for seven years of his ingenious patent for softening water obtained from chalk or lime formations, by means of quicklime itself, which precipitates the soluble carbonate by converting it into an insoluble,—into whiting, in fact,—and so deprives the water of its hardness, saves much soap in washing, and yields a marketable precipitate besides.

LECTURE ON NINEVEH AT CALCUTTA.—In the Town-hall of Calcutta a lecture, or rather exhibition, which had been preparing for some months, and which was arranged to come off the moment Lord Dalhousie's daughter arrived, took place on 19th December last. This was a lecture on Nineveh and its Antiquities, given by the Rev. J. M. Bellew, the chaplain at St. John's Cathedral. The Calcutta correspondent of the *Morning Herald* says it was a superb work of art. A complete stage had been built, the proscenium being one of the water-gates of the Palace of Sennacherib, drawn from one of Mr. Fergusson's sketches. All the appliances of scenery and machinery were brought to bear on the subject, and every one here, he adds, declares that even in London, anything more perfect was never witnessed.

CORROSION OF IRON PIPES.—Some iron water-pipes, laid through ground at Bath, formerly used by contractors as a receptacle for ashes, and thence conducted to the Public Baths and Wash-houses of that city, in Milk-street, were lately found to be much corroded, while the same line of pipes was quite entire beyond the limits of the site of the ash heap. It ought to be known that caustic potashes will corrode iron: there may also have been other corrosive agencies such as ammonia saturating the soil of a contractors' dung-heap.

SAW-MILLS AND TIMBER DESTROYED BY FIRE NEAR BLACKFRIARS-BRIDGE.—On the night of Friday last, a fire, by which, unfortunately, Mr. Thomas Jackson, a son-in-law of Mr. Braidwood, the superintendent of the London Fire-engine Establishment, lost his life,—occurred in the extensive premises belonging to Messrs. Routledge, the steam saw-mill proprietors, Holland-street, Blackfriars-road. Adjoining these premises were others, considerably larger, belonging to Sir John Reunie and others. When first discovered, the flames had obtained complete possession not only of the saw-mill, but also of many lofty piles of timber, which covered a large area of ground, and property valued at several thousand pounds was thus destroyed.

STATUE OF THE LATE KING OF HANOVER.—A subscription has been commenced at Hanover for the erection of a statue in commemoration of the late King Ernest.

A NEW MATERIAL FOR SHIP-BUILDING has been exhibited at Liverpool. It consists of a combination of cork and wood, which is said to possess many advantages over wood and iron, being lighter, stronger, and more elastic.

THE GAS COMPANIES OF PARIS.—The municipal corporation of Paris not having consented to accept, on account of their insufficiency, the offers made by the united gas companies of that city to lower their prices on having their contract prolonged till 1863, the emperor has ordered experiments to be made at Sevres, at works established for that purpose on ground belonging to the civil list, in order to ascertain the exact cost at which gas can be supplied. The experiments are carried on under the direction of an eminent member of the Institute.

IMPROVED MACHINE FOR DRILLING STONE.—Mr. F. Davidson, of Petersburg, United States, has patented a new combination of parts for catching hold of the drill-bar and letting it go, either to form the hole, by its own gravity, or by the aid of springs to increase the momentum. There is a trigger connected with a dog and chain, and a stop at top and bottom of the guide-frame, by the action of which the drill is made to turn horizontally at every blow, and to be raised and lowered rapidly, solely by the action of the working shaft.

BRADFORD UNION WORKHOUSE COMPETITION.—We are informed that the competition for the enlargement of the Bradford Union Workhouse, for the accommodation of 370 additional inmates, has been decided in favour of Messrs. Lockwood and Mawson. The style of the present building will be adhered to.

EVENING EXHIBITIONS.—You would be doing an excellent service to the art-loving public by urging on the British Institution, the Royal Academy, and other similar exhibitions to follow the example of the Royal Scottish Academy, in opening their rooms of an evening at a reduced charge, which, whenever it has occurred, has been attended with the best results. The two crowded dress evenings at the Institution, and the one at the Academy, might still be retained for those who like white cravats, dress pumps, and hot rooms. Besides conferring a great boon upon the middle and lower classes, I believe in almost every case it would be found remunerative. SPERO.

THE ROYAL FORESTS.—The commissioners appointed to report on the condition of the royal forests, observe that the rapid conversion of woodlands into arable land throughout the country leads to the belief that at the end of another century the navy will be mainly, if not altogether, dependent upon these forests for its supply of timber.

INSTITUTION OF CIVIL ENGINEERS OF IRELAND.—A general meeting of this institution was held on Tuesday evening, 13th inst. Mr. M. B. Mullins in the chair, when Mr. Bower read a description of a wooden bridge designed by him, a model of which he presented to the institution. A lengthened conversation followed, in the course of which several members expressed their opinion that the construction was suitable to temporary bridges, and to roofs of large span. The ballot having been closed, the scrutineers announced that Mr. Charles Hazlitt Swiney, and Mr. John Fitzgerald were duly elected as associates of the institute.

THE LATE MR. WILLIAM HENRY BARTLETT.—In order to provide for the education of the three younger children of the late Mr. Bartlett, whose numerous works, we regret to say, seemed to have failed to enable him to leave sufficient funds for this object, it is proposed to publish a memoir, with a portrait, by subscription (price 1*l.* 1s.), the entire proceeds to be devoted to the object in view. The author of the memoir is Dr. William Beattie. Mr. John Davies, the architect, will receive names of subscribers.

MODEL HOUSES FOR SCOTLAND.—Mr. Dunlop has obtained leave from the Commons to introduce a Bill to facilitate the erection of improved dwellings for the working classes in Scotland, and the conversion of old and bad houses into better ones.

THE THAMES TUNNEL.—30,886 persons passed through in the week ending 17th February, and paid in tolls 128*l.* 13s. 10d.

THE WELLS CEMETERY.—The designs and specifications for two chapels and a lodge to be erected in the Cemetery row in formation near Wells, and prepared by Mr. Hippisley, surveyor to the Wells Burial Board, have been adopted, and advertisements have been issued for contracts for the construction of the works.

SINCLAIR'S WATER-ENGINE.—The *Dundee Advertiser* speaks in high terms of a water-engine put up for them by Mr. Sinclair, of Stirling, and which, at an outlay of only one-half of what would be required for a steam-engine of equal power, gives twenty impressions in the minute, or 1,200 in the hour. Notwithstanding the high speed which this water-engine gives—as high as the press can be safely worked—the engine itself is in size little more than a toy, weighing less than a hundredth part of the machine it works, and standing on no more space than would be required for a small box, and on one-fourth of that required for the working of the ordinary fly-wheel. The size of the sole-plate on which the engine stands is only 18 inches by 22 inches: the cylinders are only 2½ inches in diameter, with 5 inches length of stroke, and the top of the driving-pulley is under 36 inches from the floor. The economy of space and power which it accomplishes, depends upon the valves of the cylinder working on the pivots of oscillation, and on the fact that each cylinder is double, and gives twice the power of cylinders of the same size in the ordinary water-engines. They think that while this engine answers so well for the purposes wherever pressure of water can be had at moderate rates, it will be equally available for numerous purposes in which a moderate or even a high speed without great power may be necessary. With a reservoir at an elevation of 400 feet, a pipe discharging only eight gallons per minute will give one-horse power.

ROAD-MAKING.—The following are the Tenders sent in for roads, sewers, &c. on the Shepherd's Bush estate of the London Assurance Freehold Land Society. Mr. James Ebenezer Saunders, jun. architect:—

WATERLOW and SONS, MANUFACTURING AND EXPORT STATIONERS,
65 to 68, LONDON-WALL, AND 49, PARLIAMENT-STREET, LONDON.
MILL AGENTS FOR WHATMAN'S DRAWING PAPERS.

TO BUILDERS AND OTHERS.

WANTED, by a Man of Business, acquainted with Office duty generally, an ENGAGEMENT as Accountant and Bookkeeper, experienced in prime cost and pricing the trade's charges. Town or country. No objection to a temporary engagement.—Address Y. Z. Messrs. Gardiner and Son's, Ironmongers, Wandsworth-road, Surrey.

WANTED, by a thoroughly competent Builders' Foreman, a SITUATION, either shop or general, or as Clerk of Works.—Address, H. J. care of Mr. Tindall, 20, Ranelagh-street, Pimlico.

ENGINEERING DRAUGHTSMAN.

WANTED, by a Gentleman in business during the day, an ENGAGEMENT for two or three evenings in the week. Practice being the principal object, a small remuneration will be taken; highly respectable references will be given.—Address, Z. Y. E. 17, Fenchurch-street, City.

TO BUILDERS AND CONTRACTORS.

WANTED, a RE-ENGAGEMENT, by a middle-aged Person, of considerable experience in measuring, estimating, taking off and pricing quantities, &c. and who is fully acquainted with the general routine of a builder's office, at moderate salary.—Address, A. H. Post-office (Wastie's), Kennington-cross, Lambeth.

TO PROPRIETORS OF SAW-MILLS AND BUILDERS.

WANTED, a SITUATION as SAW-SHARPENER or FRAME WORKER, or BENCH-WORK, with four years' good character. In town or country.—Direct, to C. L. 28, Union-row, New Kent-road, London.

TO BUILDERS AND IRONMONGERS

WANTED, a RE-ENGAGEMENT, by a good smith, fitter, &c.; is a competent gasfitter, locksmith, and bellhanger; has heated buildings on every known principle.—Address, E. A. Gilston House, New Brompton.

TO BUILDERS AND SURVEYORS.

A YOUNG MAN, of respectable connections, wishes to meet with a permanent SITUATION; is a fair draughtsman and calculator. Salary, to begin with, 25s. per week.—Address, Q. T. Moore's Library, 34, Princes-terrace, Caledonian-road, Islington.

TO ARCHITECTS AND SURVEYORS.

A RESPECTABLE Young Man, in his 22nd year, having just completed his articles with an architect and surveyor in the country, wishes a similar ENGAGEMENT in London. Respectable references can be given. Salary not so much an object as improvement.—Address, No. 20, Messrs. COOPER and CO. Union-street, Birmingham.

AS ARCHITECT'S ASSISTANT.—A gentleman is desirous of a RE-ENGAGEMENT in the above capacity. He is practically experienced in Gothic and Italian, and perfectly conversant with other styles. Testimonials of the highest character can be produced.—Address, L. J. Post-office, Charles-street, Fulham-road, Brompton.

TO BUILDERS AND ARCHITECTS.

A GENTLEMAN, who is well versed in CONSTRUCTION, a good Draughtsman, and accustomed to take out Quantities, offers his SERVICES for a period, gratuitously, to any Architect or Builder of considerable practice, who is in want of assistance. Address, O. O. Mr. HAILES, Stationer, 27, Leadenhall-street, City.

TO LIME, TILE, BRICK, AND CEMENT MERCHANTS.

A YOUNG MAN, aged 25, who has been accustomed to the above trades for the last nine years, desires EMPLOYMENT. He is capable of keeping books by double entry, and is used to collecting. Satisfactory references as to ability, integrity, &c. can be given.—Address, pre-paid, W. H. at Palmer's Library, 27, Lamb's Conduit-street.

TO PRACTICAL SURVEYORS.

A GENTLEMAN desirous of perfecting himself in Surveying, Levelling, and Mapping, wishes to place himself with a Surveyor, with whom he would have the opportunity of practically acquiring the above, in consideration of giving his services gratuitously for a time; or would not object to pay a small premium.—Address, X. Y. Z. News Rooms, 66, Cheapside.

A YOUNG MAN, who has been in a builder's office as Copying Clerk, requires EMPLOYMENT, in town or country.—Address F. C. 32, New-street, Portland-town.

TO ENGINEERS AND CONTRACTORS.

AN Engineering Surveyor, of very considerable experience, is desirous of an ENGAGEMENT, either to make surveys and plans, or to superintend works. Has surveyed several towns for sanitary improvements, is possessed of all necessary instruments, and can give unexceptionable references.—Address, R. S. Office of "The Builder."

TO CIVIL ENGINEERS, Architects, Surveyors, Land Agents, &c.—A Surveyor, who has recently accepted a high appointment, has no longer any use for his convenient and appropriate OFFICES, in a most eligible situation at Westminster. The rent is 30l. per annum, for a term of 3½ years.—Apply by letter, to R. and L. 14, Upper Belgrave-place, Pimlico.

A THOROUGHLY-QUALIFIED BUILDER'S CLERK is desirous of a RE-ENGAGEMENT, in town or country. Being a good draughtsman, bookkeeper, measurer, &c. he would be found a valuable assistant to any gentleman who had suffered his books to become disordered. Unquestionable references as to character and ability.—Address, E. R. care of Mr. Kennett, 14, York street, Covent-garden.

TO ARCHITECTS, CIVIL ENGINEERS, AND OTHERS.

A YOUNG MAN desires a RE-ENGAGEMENT. He is a good architectural draughtsman, a ready accountant, can map, plan, and take out quantities, and is thoroughly acquainted with book-keeping and the principles of levelling and surveying. Salary moderate.—Address, A. G. Messrs. Hookham's Library, Old Bond-street.

TO ARCHITECTS, &c.

AN Artistic Colourist, Draughtsman, and Designer, OFFERS his SERVICES in the preparation of Perspective Views, with plan, elevation and figures, also in general drawing, on moderate terms. Address, A. Z. 61, Denbigh-street, Belgravia.

TO ARCHITECTS, BUILDERS, &c.

THE Advertiser, a good draughtsman, competent to make working, finished, and perspective drawings, is open to an ENGAGEMENT. Salary moderate.—Address X. X. Office of "The Builder."

TO ARCHITECTS OR BUILDERS.

THE Advertiser, who has been six years in the profession, seeks an ENGAGEMENT in the Office of an influential Architect or Builder, where he may meet with opportunities for improvement, with increased practice. Salary, 1l. 1s. per week.—Address PHIDIAS, Mr. S. Hands, Library, Clapham, Surrey.

TO ENGINEERS AND IRONFOUNDERS.

THE Advertiser, aged 30, is open to an ENGAGEMENT, either at home or abroad. He is qualified to conduct an engineering and ironfounding establishment in all its branches, and can give satisfactory references.—Address, E. B. care of Mr. Andrew Scott, 33, Upper Thames-street, City.

TO PARENTS AND GUARDIANS.

THERE is an opportunity of placing a well-educated youth as an ARTICLED PUPIL (outdoor) in the establishment of a firm of extensive practice, carrying on the professions of auctioneers, architects, surveyors, valuers, land and estate agents. Premium required. Apply to Messrs. MANSELL and ELLIOTT, Auctioneers, 13a, Belgrave-square, or 12, Birchin-lane, Cornhill.

TO ARCHITECTS AND SURVEYORS.

THE Advertiser will shortly be open to an ENGAGEMENT; is a neat and correct draughtsman, thoroughly practical, soon-tomed to fair working, and detail drawings, taking out quantities, measuring up works, and land surveying. Reference to present employer. Salary moderate.—Address R. H. W. Office of "The Builder."

TO ARCHITECTS.

THE Friends of a Young Man (21 years of age) of good education, and who has been five years in a first-class Builder's Office, are desirous of placing him in an ARCHITECT'S OFFICE, where his abilities and industry will be considered a sufficient remuneration for the experience to be obtained in practical architecture and drawing, of which he already possesses considerable knowledge, taste, and talent. Most satisfactory references will be given.—Address, R. V. Jordan's Newspaper Office, 36, Shaftesbury-terrace, Pimlico.

TO ARCHITECTS, BUILDERS, &c.

THE Advertiser, aged 27, who is a good Draughtsman and Accountant, well versed in taking out Quantities and practical Construction, and who has had the sole superintendence of several works, wishes for immediate EMPLOYMENT at a moderate salary.—Address, E. J. F. Office of "The Builder."

TO ARCHITECTS AND SURVEYORS.

OCCASIONAL ASSISTANCE.—A qualified ASSISTANT, of eleven years' experience, is desirous of affording temporary assistance to the Profession, at their offices or his own residence. Address, A. B. 36, Duke-street, Grosvenor-square.

OCCASIONAL ASSISTANCE.—Builders' Accounts promptly made out, and Estimates prepared by an experienced person, either by the hour or otherwise, on moderate terms.—Address, G. H. 41, Lamb's Conduit-street.

PARTNERSHIP.—An Architect, in extensive and increasing practice in Scotland, wishes to assume a PARTNER.—Communications, with regard to which the strictest secrecy will be observed, to be addressed to S. A. Office of "The Builder."

WILL SHORTLY CLOSE.

COLOSSEUM, Regent's-Park.—Admission, 1s.—The original PANORAMA of LONDON by DAY, is exhibited daily, from Half-past Ten till Five. The extraordinary PANORAMA of LONDON by NIGHT, from Seven till Ten. Music from Two till Half-past Four, and during the evening.

James Fuller Madox, esq. | John Campbell Renton, esq.
William Wilberforce, esq.

A reduction of 25 per cent. has been made on the premiums of all policies of five years' standing
ALEX. ROBERTSON, Manager

IMPERIAL LIFE INSURANCE COMPANY, 1, OLD BROAD-STREET, LONDON. Instituted in 1820.
WILLIAM R. ROBINSON, Esq. Chairman.
HENRY DAVIDSON, Esq. Deputy-Chairman.
The SCALE of PREMIUMS adopted by this Office will be found of a very moderate character, but at the same time quite adequate to the risk incurred.
FOUR-FIFTHS, or 80 per cent. of the profits, are assigned to policies every fifth year, and may be applied to increase the sum insured, to an immediate payment in cash, or to the reduction and ultimate extinction of future premiums.
ONE-THIRD of the premium on insurances of 50l. and upwards, for the whole term of life, may remain as a debt upon the policy, to be paid off at convenience; or the Directors will lend sums of 50l. and upwards, on the security of policies effected with this Company for the whole term of life, when they have acquired an adequate value.
SECURITY. Those who effect insurances with this Company are protected by its subscribed capital of 750,000l. of which 140,000l. is invested from the risk incurred by members of Mutual Societies.
The satisfactory financial condition of the Company, exclusive of the subscribed and invested capital, will be seen by the following statement:

At the close of the last financial year, the sums assured, including bonus additions, amounted to	£2,500,000
The premium fund to more than	800,000
And the annual income from the same source, to	109,000
Assurances, without participation in profits, may be effected at reduced rates.	

SAMUEL INGALL, Actuary.

PELICAN LIFE INSURANCE COMPANY, established in 1797.
70, Lombard-street, City, and 57, Charing cross, Westminster.
DIRECTORS.

Robert Gurney Barclay, esq.	Thomas Hodgson, esq.
William Cotton, esq. F.R.S.	Henry Lancelot Holland, esq.
John Davis, esq.	J. Petty Muspratt, esq.
Jos. A. Gordon, M.D. F.R.S.	C. Hampden Turner, esq. F.R.S.
Henry Grace, esq.	Matthew Whiting, esq.
[illegible] Hodgson, esq.	M. Wyvill, jun. esq. M.P.

The Company offers—
Complete Security—
Moderate Rates of Premium with Participation in Profits—
Low Rates without Profits.
BONUS.—Four-fifths or Eighty per Cent. of the Profits are divided amongst the Policy-holders.
LOANS in connection with Life Assurance on approved security.
ANNUAL PREMIUM required for the Assurance of 100l. for the whole term of life:

Age	Without Profits	With Profits.	Age	Without Profits.	With Profits.
15	£1 11 0	£1 15 0	40	£2 18 10	£3 0 5
20	1 13 10	1 19 3	55	4 0 9	4 10 7
30	2 4 0	2 9 4	60	5 7 7	6 7 4

For Prospectuses and Forms of Proposal, apply at the Offices as above, or to any of the Company's Agents.

SPECIAL NOTICE.
TO SECURE THE ADVANTAGE OF THIS YEAR'S ENTRY PROPOSALS MUST BE LODGED AT THE HEAD OFFICE, OR AT ANY OF THE SOCIETY'S AGENCIES, ON OR BEFORE 1st MARCH.
MUTUAL LIFE ASSURANCE
SCOTTISH EQUITABLE LIFE ASSURANCE SOCIETY.
HEAD OFFICE, 26, St. Andrew square, Edinburgh.
LONDON OFFICE, 26, Poultry-street.
Instituted, 1831.
Incorporated by Special Act of Parliament.
The Profits are divided every Three Years, and wholly belong to the Members of the Society. The next division takes place at 1st March, 1856.
EXAMPLE OF ADDITIONS
On a Policy for 1,000l. dated 1st March, 1832.
1,522l. 8s. will be payable at or become a claim during the current year, after Payment of this year's Premium. This is an addition of more than Fifty per Cent. on the Sum Assured, and averages 2l. 3s. 7d. per cent. per Annum.
Supposing such a Policy to have been effected at the age of Thirty, the additions might now be surrendered for a present payment of 321.7s. 10d. or if applied in reduction of the future Premium, would reduce the Premium from 23l. 10s. 10d. to 6l. 3s.; and even the small payment must be reduced every Three Years during the subsistence of the Policy.

Amount of existing Assurances	£4,234,598
Annual Revenue	152,615
Amount of Accumulated Fund	839,354

Copies of the Annual Statement, Forms of Proposals, and all information, may be had on application at any of the Society's Offices in town or country. W. COOK, Agent.
126, Bishopsgate-street, London.

ONE THOUSAND BEDSTEADS to CHOOSE FROM.—HEAL & SON have just erected extensive Premises, which enable them to keep upwards of One Thousand Bedsteads in stock. One Hundred and Fifty of which are fixed for inspection, comprising every variety of Brass, Wood, and Iron with Chintz and Damask Furnitures, complete. Their new warerooms also contain an assortment of BED-ROOM FURNITURE, which comprises every requisite, from the plainest Japanned Deal for Servants' Rooms to the most rich and most tasteful designs in Mahogany and other Woods. The whole warranted of the soundest and best manufacture. HEAL & SON'S ILLUSTRATED CATALOGUE of BEDSTEADS and PRICED LIST of BEDDING sent free by post.—HEAL & SON, 196, Tottenham Court-road

GUTTA PERCHA TUBING.—Many inquiries having been made as to the durability of this tubing, the Gutta Percha Company have pleasure in drawing attention to the following letter received from Mr. C. Hacker, surveyor to the Duke of Bedford:—"Office of Works, Woburn-park, Jan. 10, 1852.
"In answer to your inquiries respecting the gutta percha tubing for pump suctions, I find that the water has not affected it in the least although it will eat lead through in two years; we have adopted it largely, both on account of being cheaper than lead, much easier fixed and a more perfect job. Yours, &c. C. Hacker."
N.B. The Company's Illustrated Circulars containing instructions to plumbers for using tube, lining tanks, &c. will be forwarded on the receipt of three postage stamps. The Gutta Percha Company, Patentees, 18, Wharf-road, City-road, London.

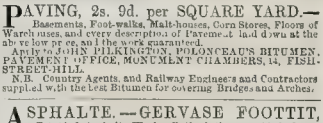
WILLIAM HARRIMAN and CO. FIRE-BRICK and SANITARY TUBE WORKS, BLAYDON, NEWCASTLE-UPON-TYNE.

TERRA-COTTA.—Statues, Statuettes, Vases, Terzze, Busts, Consoles, Bas-reliefs, &c. by J. M. BLASHFIELD, of Millwall, near the West-India Docks Station, and sold at No. 1, Pread-street, Paddington-basin, where prices and designs can be obtained. Examples of Terra-cotta, by J. M. Blashfield, are to be seen at the Crystal Palace, Sydenham, in the Mineral Court. The statues of Australia, Venus di Medici, and the colossal Tritons in the gardens at Sydenham, are in Terra-cotta, so are the fountains at the Renaissance Court, and the roof of the Alhambra Court. The Pompeian roof is of Terra-cotta and red cement combined. Since the execution of these works, J. M. Blashfield has taken a patent for an improvement in the manufacture of Terra-cotta and pottery, whereby larger and more even surfaces can be produced, and a higher degree of vitrification attained.

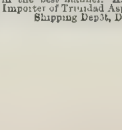
TARPAULINS for COVERING ROOFS during Repairs. SCAFFOLD CORD and every description of ROPE used by Builders upon the lowest terms. Marquees and temporary Awnings on sale or hire. Orders per post receive the most prompt attention.—WILLIAM PIGGOTT, 115, Fore-street, City, Manufacturer, by appointment, to her Majesty's Honourable Board of Ordnance.

LADDERS, BARROWS, &c. for SALE or HIRE.—GEORGE ELL, 3, Tottenham-court, New-road, opposite the Hampstead road, and corner of Pread street, Paddington, has on hand at all times a large stock of LADDERS, EXCAVATORS', BRICKMAKERS', and other BARROWS, PAINTERS' TRESTLES, MACHINES, STEPS, &c. Price lists can be had on application, at 3, Tottenham-court.

BARROWS, BARROWS, LADDERS, &c. J. BARNES, Wheelwright, Manufacturer of every description of Brickmakers' and other Barrows, Railway-trucks, &c. A good country Wheelwright wanted—2, York-place, Pentonville-hill.



JOHN WARNER and SONS, Patentees of IMPROVEMENTS in the MANUFACTURE of LARGE BELLS.
J. W. & SONS having of late years devoted much time and study to the long neglected art of Bell Casting, have recently invented and patented a new process connected therewith, by which they are enabled to manufacture Bells of any size, note, or weight, of superior tone, truer in form, and at less cost than has heretofore been accomplished.
Bells for Churches, Chapels, Colleges, Schools, Turret Clocks, &c. cast for any size, note, or weight, singly or in peals.
TUNED BY MACHINERY.
Stocked and wheels ready for fixing. Old Bells recast or taken in exchange.
MUSICAL HAND-BELLS tuned to the Chromatic Scale, with improved Clappers, and pegged on a new system, which gives a superior tone and facility for ringing.



FORSTER and SLATE'S PATENT CONSTANT SUPPLY FILTERS, tested and approved by the first water engineers in the country. Used and approved at the Offices of the General Board of Health. Exclusive adopted by the Crystal Palace Company. Easily cleaned without trouble or expense.—To be seen in operation daily, at EVANS and SON'S, Ironmongers, 31, King William-street, London-bridge

TO GAS COMPANIES, GASHOLDER MAKERS, CONTRACTORS, and OTHERS.—TO BE DISPOSED OF, by the Commercial Gas Company, London, SURPLUS GAS MACHINERY, consisting of Iron Gasholder Tanks, Gasholders (Single and Telescopic), Condensers of various sizes, Station Meters, Governor, Hydraulic Main, Ascension and H Pipes, with various connections. Particulars of the above may be obtained on application to Mr. ROBERT JONES, the Company's Engineer, at the Company's Offices, Stepney, between the hours of TEN and FOUR. Tenders for the above, or any portion thereof, will be received not later than THURSDAY, the 1st MARCH next. The Company is not bound to accept any Tender. Tenders to be addressed to the Secretary, and endorsed "Tender for Gas Machinery."—By order of the Board,
GEORGE JAQUES, Secretary.
Stepney, 6th February, 1855.

VENTILATION.—PURE AIR.

With single pulley, from 6s. each; with leading pulley, from 6s. 6d.
These Ventilators are arranged that the requisite quantity of air may be admitted for the due ventilation of an apartment without the slightest draught being felt by the occupants; and as they are placed in the external wall, their action is not impeded when the house is closed for the evening, by which time a constant supply of fresh air is most required. HAYWARD, BROTHERS, sole Manufacturers, 196, Blackfriars-road, and 117, Union-street, Borough; and of all respectable ironmongers, builders, &c.

SMOKY CHIMNEYS CURED EFFECTUALLY for TEN SHILLINGS, by SUTERS' PATENT WIND-GUARD. This Guard allows free egress to the smoke, prevents the wind blowing down the mouth of the chimney, and is not liable to be injured by the most boisterous weather.
To be had of Ironmongers and Builders; and of the Patentee, at his Office, 69, Fenchurch-street, London.

PAVING, 2s. 9d. per SQUARE YARD.—Basements, Foot-walks, Malt-houses, Corn Stores, Floors of Warehouses, and every description of Pavement laid down at the above low price, and the work guaranteed.
Apply to JOHN ELLINGTON, 19, SUTERS' PATENT ASPHALTE OFFICE, MONUMENT CHAMBERS, 14, FISH-STREET-HILL.
N.B. Country Agents, and Railway Engineers and Contractors supplied with the best Bitumen for covering Bridges and Arches.

ASPHALTE.—GERVASE FOOTTIT, A Trinidad Asphalte Works, Rotherhithe; established 1824. Every description of Flooring laid with the above durable material in the best manner. Asphalte for Railway Arches, 30s. per ton. Importer of Trinidad Asphalte.
Shipping Depôt, Devon Harbor Wharf, Rotherhithe.
G. H. CLARK, Agent.

HUBBUCK'S PATENT WHITE ZINC PAINT,

The Permanent White of the Ancient Artist.

HUBBUCK and SON, the Original Manufacturers of White Zinc Paint on a large scale in this country, are enabled, by a process, which is patented, to supply their Pure White Zinc Paint at the price of White Lead. Those direful maladies, paralysis and painters' colic, will be entirely avoided. It is entirely free from any poisonous or pernicious property. Neither exposure to heat, nor tropical climates act upon it. The Powdered White Zinc may be had for grinding in oil; also for Plaster Decorations, and where it is used with Size, Varnish, &c. To be had of the Wholesale Paint-dealers in Original Packages, each cask stamped "HUBBUCK—LONDON—PATENT." And if not to be had in the quality he may be requested. Full particulars may be had of THOMAS HUBBUCK and SON, the Original Wholesale Manufacturers in this country. Paint and Varnish Works, Upper East Smithfield, opposite the London Docks.

WHITE OXIDE OF ZINC AND ZINC PAINT.

(LANGSTON SCOTT'S PATENT.)

CROWLEY, WHITE, AND CROWLEY, *Sole Manufacturers.*

This healthful substitute for White Lead, of unrivalled colour and texture, may be obtained from most of the principal Paint Grinders, Oil and Colourmen, and Ship Chandlers in the United Kingdom, or direct from the Works, Grand Surrey Docks (Wholesale under Brandi, either in the dry state or ground in Oil.

Zinc Paint, being unchangeable in colour, stands pre-eminent for the highest purposes of Art; and from its perfectly pure and innoxious qualities, is peculiarly applicable to first-class Decorations and House Painting. For Iron it possesses great affinity, and hence its preservative properties for that Metal, when employed for Marine or other purposes. It is now ground in Colours, and may be successfully employed on Stucco, or any other outside work for which White Lead is used; it sets harder, is consequently more durable, economical in first cost, and covers equal to any known pigment.

PRICE LIST AND TESTIMONIALS FORWARDED IN ANSWER TO LETTERS ADDRESSED TO

MESSRS. CROWLEY, WHITE, AND CROWLEY, 39, KING WILLIAM-STREET, CITY, LONDON.

DAMP WALLS.

STENT'S COMPOSITION FOR PREPARING NEWLY-PLASTERED OR DAMP WALLS FOR PAPERING,

Is the result of practical experiments and long experience; it is unfailing in its application. Entire houses have been papered a few days after plastering. In repairs of old plastering it is invaluable. A moderate room can be papered for 3s. 6d.

Prepared only by W. J. STENT, Warminster.

London Agents: Messrs. GEO. and THOS. WALLIS, 64, Long-acre. Agent for Ireland: Mr. S. BOYD, 46, Mary-street, Dublin.

THE VIEILLE MONTAGNE ZINC MINING COMPANY'S PURE PATENT WHITE ZINC PAINT is unequalled for permanency of colour, hardness, and brilliancy of surface; it is unaffected by sulphureous or any other vapours or emanations. Being completely innoxious and free from the pernicious effects of white lead, it may be employed in all apartments whilst in use without any inconvenience to the inmates.

The greatest caution is recommended to avoid any spurious compounds that might be sold at cheap rates as Pure Oxide of Zinc. If any adulteration has taken place in the oxide, either in consequence of impurity in the material primarily made use of to produce it, an imperfect mode of production, or by mixing with the oxide certain substances calculated to give it increase of weight, it then produces a very inferior instead of a very superior paint, and the economy realised by the purchasers of such oxides becomes a very expensive result to the owner of the premises painted with them.

The VIEILLE MONTAGNE'S ZINC OXIDES, dry or ground in oil, are sold with the VM mark in Hull by Messrs. BUNNELL, SPENCE, and Co.; when ground and dry, by Messrs. T. B MORLEY and CO and by the Company's Grinding Agents, in London, Messrs. CHARLES DEVAUX and CO. Wholesale Agents, 62, King William-street, City; FREDERICK BRABY, Wholesale and Retail Agent, 8, Tottenham-court, New-road. In Manchester and Liverpool by Messrs. LAWFORD and Co. of 49, Norfolk-street, Liverpool, who are also acknowledged Painters to the Company for Zinc Paints, and undertake painting ships, warehouses, dwelling-houses, &c. In Leith, by Messrs R. ANDERSON and CO. Timber-bush. Dry OXIDES and PAINTS, in kegs of 14, 21, and 28 lbs. and upwards, to be had of the Company's Agents in Birmingham, Newcastle, Glasgow, Bristol, Plymouth, Portsmouth, Norwich, Ipswich, Poole, and the Isles of Jersey, Guernsey, Man, and Wight; also in Dublin, Cork, and Belfast.

The Company also employ an acknowledged Painter in London, who will undertake any description of painting in Zinc Paint by contract.

For further particulars, apply to the Company's General Agent in London, Mr. SCHMOLL, 12, Manchester-buildings, Westminster.

PORTLAND CEMENT.—ASPDIN'S PATENT.

Messrs. ASPDIN, ORD, and CO. have much pleasure in informing consumers of this valuable Cement, that they have, by means of a recent discovery (patented by Mr. ASPDIN) greatly improved the quality of this Cement without any increase in price.

Engineers and architects are recommended to specify "Aspdin's Patent," as there are numerous imitations sold as Portland Cements resembling it only in colour.

ASPDIN, ORD, and CO. beg to call attention to their SECOND QUALITY, which is equal, if not superior, to most of the Cements sold as Portland, and is considerably cheaper.

A report of experiments made to prove the extraordinary strength of their Patent Portland Cement, may be had at their Office, New Wharf, Abingdon-street, Westminster, at their Works, Gateshead-on-Tyne; at Messrs. Rosher's Wharfs, Holland-street, Blackfriars, Kingsland Basin, and Limehouse; or from their Agent, Mr. HENRY ROBINSON, 31, King-street, Liverpool.

PORTLAND CEMENT.—JAMES WESTON having enlarged that portion of his CEMENT WORKS on Millwall, Poplar, for Manufacturing the above CEMENT, begs to inform the Trade in general that they can be supplied with any quantity they may require, either at his Works, St. Andrew's Wharf, Earl-street, Blackfriars, or Middle Wharf, Scotland-yard, Westminster. Manufacturer of Roman, Lias, and Mastic Cements, English and French Plaster, &c.

6, South Wharf, Paddington.

PORTLAND CEMENT.—CHARLES RICHARDSON has the greatest confidence in introducing to the Trade the above superior CEMENT, being of uniform colour and quality,—a desideratum not obtained in Portland Cements. It possesses extraordinary cementitious qualities, resists the action of frost and heat, and is more durable than any other Cement; does not vegetate, turn green, or crack; combined with which, its eminent hydraulic properties stamp it at once as the first Cement of the day for work where all the above qualities are requisite. It is manufactured on the only principle Portland Cement can be, and contrary to the statements put forth by those who have hitherto had the monopoly. Manufactured by H. GREAVES, Esq. at his Works, near the River Avon, and sent to all parts of the kingdom per boat or rail, at a reduced price to the trade.

PORTLAND CEMENT.—FULLWOOD THOMPSON and CO. beg to request the attention of Contractors, Merchants, and others, to the quality of their Roman, Portland, and Bath Cement, which they are manufacturing at their works, situate on the Bristol and Exeter Railway, two miles north of Bridgewater, and adjoining the Dunball Wharf, on the river Parrett.

These Cements are, they believe, the best for any purpose now in the market; they will set under water in a few minutes, and are insoluble to extremes of heat or cold. The material used is such as will produce a certain and unvarying cementitious power, and a consequent regularity, the want of which is so obvious in Cements manufactured in the ordinary method.

FULLWOOD THOMPSON and CO. will be happy to forward prices by post on application, and can offer favourable terms to large purchasers and exporters.

Dated St. Mary-street, Bridgewater, July 26th, 1854.

PORTLAND CEMENT WORKS, NORTHFLEET, KENT.—Messrs. ROBINS and CO. with much pleasure announce to their Friends and the Public, that they have completed the enlargement of their works, in order to meet the great increasing demand for their Cement; and are now prepared to supply any quantity of the very best PORTLAND CEMENT, manufactured by them for all the purposes Cement is applicable.—Orders received at Great Scotland yard, and at the Works.

PARIAN CEMENT, for Internal Use, to be painted in a few hours, and papered within a couple of days. CHARLES FRANCIS and SONS, Manufacturers of Roman, Parian (under patent), and all other Cements in use for building purposes, Nine Elms, London.

KEENE'S and PARIAN CEMENTS and FRENCH PLASTER, for internal uses. These well-known hard Stuccoes dry quickly, and can be painted upon within a few days. Made and sold by JOHN BAZLEY WHITE and BROTHERS, Millbank-street, Westminster.

SOUTHAM BLUE LIAS LIME WORKS. OLDHAM and TATHAM have the pleasure of announcing to Engineers, Architects, Builders, and Contractors, that they have erected extensive works near Southam, for the manufacture and grinding of BLUE LIAS LIME, the value of which is now so universally admitted, especially for hydraulic purposes, concrete, &c. &c.; and they most respectfully solicit orders.

O and T can deliver by their own boats, or by rail to any part of the kingdom.

Office, Warwick.

SOUTHAM CEMENT WORKS.—OLDHAM and TATHAM respectfully request a trial of their PORTLAND, ROMAN, and LIAS CEMENTS, which they do not hesitate to pronounce as good as any now in the market. Their unvarying cementitious properties will ensure regularity in colour and quality.

Office, Warwick.

GEO. & THOS. EARLE, CEMENT MANUFACTURERS, HULL.—Light and Dark, equal to any made. Manufacturers also, and Dealers in Plaster, Paris White, Mastic, Hair, Lias Lime, Laths, Slates, and Slate Slabs. Fire-bricks, Grindstones, Cement Chimney-tops, ditto Vases, Ridging, &c. Paints, Stucco, &c. Marble Merchants and Importers of Pozzolano.

ARTIFICIAL HYDRAULIC or PORTLAND CEMENT combines the valuable qualities of the natural Cements with the additional advantage that it greatly excels them in its cementitious properties; that it is not affected by frost, and does not vegetate in damp situations. Account of COMPARATIVE EXPERIMENTS on the strength of this and other Cements, read at the Institute of Civil Engineers; to be obtained from the Makers, JOHN BAZLEY WHITE and BROTHERS, Millbank-street, Westminster, who prepare one quality only of Portland Cement.

ATKINSON'S CEMENT, so long known and esteemed in London for plastering purposes, is a quick-setting Cement, that requires no colouring.—Sold exclusively by JOHN BAZLEY WHITE and BROTHERS, Millbank-street, Westminster; and Seel-street, Liverpool.

CEMENT.—ROMAN and PORTLAND CEMENTS, and PLASTER of PARIS, manufactured by C. J. HILTON, can be had in any quantity, wholesale and retail, at his wharf, 6, Upper Thames-street, London; and also at the manufactory, Faversham, Kent.—N.B. These Cements supplied for shipment, on advantageous terms.

GREAVES'S BLUE LIAS LIME.—The superior manner in which the above is ground renders it cheaper for concrete or stucco than any other lime or cement. The shell lime for mortar is burnt on an improved principle, leaving scarcely any core. The satisfaction constantly expressed by Engineers, Architects, and Contractors, of the above, is its best recommendation.

Gibbs, Canning, and Co.'s Blue Vitrified Bricks, Pipes, Junctions, Bends, and Fire Goods.

ROMAN, PORTLAND, PARIAN, ANSTON, and LIAS CEMENTS of the best quality.

SECONDS, PAVIORS, STOCKS, and other BRICKS.

CHARLES RICHARDSON, 6, South Wharf, Paddington.

MAW'S ENCAUSTIC TILE PAVEMENTS—A highly durable and decorative substitute for ordinary flooring and their peri-hable oil cloth coverings; for entrance-halls, passages, verandahs, conservatories, &c.

MAW and CO. send, free of expense, their pattern and price book, with designs, to any given spaces (and estimates), free of expense.

BENTHALL WORKS, BROSELEY, SALOP

MINTON and CO.'S ENCAUSTIC and other PATENT TILES, for Churches, Entrance Halls, Conservatories, Balconies, &c.; Antique, Geometrical, and Alhambric Mosaics, manufactures of a highly decorative character, and extreme durability. Slabs and Tiles for Fireplaces and Hearths, Cornice for Grates, Door Furniture, White Glazed and Ornamental Tiles for Baths, Dairies, and Kitchen Ranges, may be had in great variety at their Warehouse, 9, Albion-place, Blackfriars-bridge, London; and at their Manufactory, Stoke-upon-Trent, Staffordshire.

PEAKE'S TERRO-METALLIC TILES, PIPES, &c.—Notice is hereby most respectfully given, that the LONDON DEPOT for this WARE is REMOVED to No. 31, WHARF, Macclesfield-street North, City-road Basin. Secondly, that the trade term, "TERRO-METALLIC," is the exclusive right of the Proprietor; and, thirdly, that the "REPORTS OF THE JURIES," page 351, of the Great Exhibition, rank the Manufactories known so long as "The Tileries," Tunstall, Staffordshire, as the first of the kind in the world.

GREAT NORTHERN WHARF, York-road, King's-cross.—WHITE BRICK and TILE DEPOT.—L. B. PEARSE and CO. Brick, Tile, Lime, and Cement Merchants. Builders, contractors, and others supplied with every description of building material at the lowest market prices.

BRICKS.—Malm Cutters, Yellow and Pale Seconds, Paviors, and Pickings, of good and sound quality, constantly on sale at H. DODD'S Brickfields, which are only a quarter of an hour's walk from the City. H. D. earnestly requests purchasers to favour him with a visit, in order to inspect his stock, and to judge for themselves.

Malm Place, half-washed Stocks, and Place Bricks, also on sale. These bricks are sound, well burnt, and unusually free from defects; a very large proportion of the stock being suitable for external facing.

Apply to HENRY DODD and CO. at the Counting-house, Hoxton Brickfields, Grange-walk, near the Rosemary Branch, Hoxton.

N.B. Light-coloured Pit Sand of approved quality constantly on sale upon reasonable terms. This Sand, from its not containing any saline matter, is acknowledged to be preferable to river sand.

BRICKS for OVEN-BUILDING, acknowledged the best for that purpose, delivered, 32s. to London-bridge or Newington; beyond that distance, moderate charge carfare. Bricks of all description; yellow and light pickings, equal to seconds. Red facings, at 30s. in field; red and glazed pipes, about half the price of stoneware; white sand, nearly silver, in field or by barge; founders' sand and loam; good coloured gravel.—Address, B. PARKS, Lewisham Brickfields.

MILLS and PRICE, Brick and Stone Merchants and Agents, very respectfully announce, that their business, hitherto conducted at 37, Newington-crescent, Newington-butts, will, from MONDAY, the 11th inst. be carried on at 6, ADELAIDE-PLACE, LONDON-BRIDGE.—Dec. 8, 1854.

BRICK-MAKING EXTRAORDINARY!! BY OATES AND INGRAM'S PATENT MACHINE.

TO CAPITALISTS AND BRICKMAKERS.

Messrs. OATES and INGRAM beg to announce, that the above powerful and effective machine may be seen (by order only) in daily operation at the works of the Vaughton's Hole Brick Company, near Birmingham.

The great advantages possessed by this machine over all others are, no tempering is required.

The bricks are produced at the rate of twenty-five per minute, smooth on the surface, being pressed in moulds, and sufficiently dense to be backed up in ranks before leaving the machine, which is entirely self-acting, consequently requires only the labour of feeding and carrying off.

Applications, either to view the machine, or for the purchase of the patent right for counties or for royalties, to be addressed, T. WELLS INGRAM, Engineer, Birmingham; or to J. P. OATES, Inventor and Patentee, Lichfield.

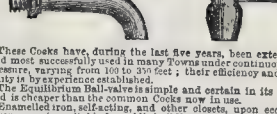
WHITE SUFFOLK and RED FACING BRICKS.

COWLEY, KENT, and ESSEX BRICKS.

Also Yellow and Pale Malm Seconds, Cutters, Paviors, Shippers, &c.

KENTISH RAG-STONE of the FINEST QUALITY.

MILLS and PRICE (successors to Mr. Benjamin Gough), 5, ADELAIDE-PLACE, LONDON-BRIDGE.



TO BRICKMAKERS, CONTRACTORS, BUILDERS, AND OTHERS.

TO BE LET, a BRICKFIELD in full working order, with the entire Plant and Machinery necessary for working the Stocks, in the centre of a neighbourhood where immense building operations are in progress, and adjoining one of the contemplated metropolitan railways which have passed the standing orders of Parliament, a short distance from the Regent's-park, the station of the Great Northern Railway, and the principal public wharfs of the Regent's-canal. Dirt for two millions of bricks is already turned, and ashes for three berths. This presents an admirable opportunity for any one desirous of entering into this lucrative business, as he would not be required to purchase the plant.—A good practical FOREMAN is open to Engagement, fully competent to conduct the same.—Particulars with Mr. NUTTER, Auctioneer, 3, York-place, Kentish-town—Five horses, and 3-one thousand brick-carts for sale.

O. M'CARTHY, CARMAN, and SAND and CEMENT MERCHANT, Whitefriars Wharf, Whitefriars, Fleet-street, City. Sand, from above or below bridge, delivered by the yard or per barge. Ballast screened or unscreened, by the yard or per barge. Stocks, lime, and old bricks. Dry rubbish delivered per barge, in any quantity, alongside the Thames.

PRIZE MEDAL, CLASS 22.

HIGH-PRESSURE VALVE COCKS.—LAMBERT'S PATENT.

These Cocks have, during the last five years, been extensively and most successfully used in many Towns under continuous high pressure, ranging from 40 to 300 feet; their efficiency and durability is by experience established.

The Equilibrium Ball-valve is simple and certain in its action, and is of far less than the common Cocks now in use.

Enamelled iron, self-acting, and other closets, upon economic arrangements, suitable for public buildings, cottages, asylums, &c

THOMAS LAMBERT and SON

Brass and Iron Founders, Short-street, New-cut, Lambeth.

TO WATER COMPANIES AND PLUMBERS.

HIGH-PRESSURE COCKS & CLOSETS.

The Health of Towns Commissioners having recommended the adoption of the high-pressure principle in all towns, WARNER'S HIGH-PRESSURE COCK is recommended as a Cock free from leakage, and applicable for all purposes and situations. Patent Closets and Basins with supply-valve for attaching direct to main pipes without a cistern, cocks, or wire.

LEAD, IRON, and TIN PIPE.

JOHN WARNER and SONS, Manufacturers, 8, Crescent, Jewin-street, London.

BRICKS, &c.—500,000 good well-burnt CLAMP BRICKS for SALE.—For particulars, inquire of Mr. HENRY MULETT, West-street Brewery, Horsham, Sussex. Also some PLOTS of GROUND, well adapted for building purposes, either TO BE SOLD or LET, situated within 300 yards of the Three bridges Station on the Brighton Railway.—Apply as above.

VALUABLE BRICKFIELD, near Harrow, FOR SALE; extensive building operations are being carried on in the immediate vicinity. A large quantity can be made, and bricks fetch a good price. Price required, 350l.—For further particulars apply to Mr. CLARKSON, Surveyor, 48, Penton-street, Pentonville.

FARM AND COTTAGE PUMPS.

WARNER'S PATENT

CAST-IRON PUMPS, for the use of FARMS, COTTAGES, MANURE TANKS, AND SHALLOW WELLS.

Patent Pump..... £1 12 0
Patent Pump, with 15 feet of lead pipe attached, and bolts and nuts ready for fixing..... 2 12 0
Larger sizes if required.

The smaller sizes are also much used for supplying Hot, Forcing, and Plant Houses, from underground Water Tanks, and can be readily fixed in any situation.

May be obtained of any Ironmonger or Plumber in town or country, or of the Patentees and Manufacturers,

JOHN WARNER AND SONS,
6, CRESCENT, JEWIN-STREET, LONDON.

Every description of Machinery for raising Water, Fire Engines, &c.

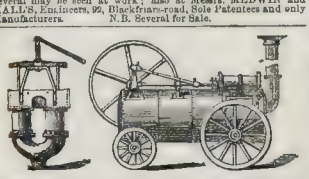
The usual allowance to the Trade.

FOWLER'S IMPROVED

WROUGHT PUMPS for CONTRACTORS, BRICKMAKERS, EXCAVATORS, and OTHERS

The attention of this house for more than fifty years past having been almost exclusively paid to the manufacture of every description of pump-work for every variety of purpose, attention is respectfully requested to their very superior Wrought Pumps, with plain or sliding telescope suction, galvanized and ungalvanized. A large stock of all sizes kept ready to finish off to order, according to length required, at the shortest notice.

This description of Pump work varying in almost every case, it is impossible to quote a general price, but the fullest particulars will be given on application.



A large stock of Wrought Pumps, from 3 inch single to double 15 inch barrel, is also kept on hire prepared for hand or steam power, on reasonable terms, at

TO THE EFFICIENT WORKING OF

STEPHEN GREEN'S

PATENT SYPHON FLUSHING BASIN,

AND

SELF-ACTING CLOSET CONNECTIONS.

Oxford, November, 1849.

GENTLEMEN,—Sixteen of your Closets having been put into operation at Christ Church College, I have great pleasure in giving you my testimony as to their efficiency and superiority.

HENRY J. UNDERWOOD, Architect.
R. S. HOGGAR, Engineer.

Royal Arsenal, Woolwich, June 24, 1850.

GENTLEMEN,—I have much pleasure in giving my testimony in favour of your Patent Syphon Flushing Basin, with Self-acting Closet Connections. There are several fixed here, which have been in use for upwards of twelve months, giving perfect satisfaction.

I am, Gentlemen,
Your obedient Servant,
WILLIAM CARTWRIGHT.

This effective Article has not any Crank or Wire to get out of order, and is all complete and ready for use, and may be seen in operation at STEPHEN GREEN'S Manufactory, Lambeth.

YORK STONE supplied direct from the

Quarries.—NOWELL and ROBSON respectfully invite the attention of Architects, Surveyors, Contractors, Builders, &c. to their excellent STOCK of STONE, containing good colour with durability. SALT-GLAZED STONEWARE PIPES, BENDS, JUNCTIONS, CLOSET-PANS, TRAPS, &c. at the

NEAR POOLE, DORSET

These Pipes being made under immense pressure by patented machinery, and burnt by intense heat to an unusual degree of hardness, are very far superior to the best ware hitherto manufactured in Hants and Dorset; they are made of clay of the first quality, the produce of the estate, and will bear comparison with any Pipes in the kingdom, and can be had upon application to

THE AGENTS:—
Mr. G. S. WHITTON, 17 and 18, Princes-street, Lambeth, London;
Mr. J. S. HUDSON, the Pottery, Bournemouth, Poole;
Where a large stock is always kept on hand.

SUPERIOR GLAZED STONEWARE DRAIN PIPES, invented and manufactured by WILLIAM NORTHEN, UNION POTTERY, No. 14, VAUXHALL-WALK, LAMBETH.

W. NORTHEN begs to inform surveyors, contractors, builders, water companies, &c. that he has completed "Spencer's" new patent machinery for making GLAZED STONEWARE DRAIN PIPES, JUNCTIONS, BENDS, ELBOWS, SYPHON-TRAPS, &c. &c. Amongst the many advantages of pipes made by this machinery over all others may be mentioned, that it insures perfect uniformity in form and size, both of pipes and sockets, the dies being of a different and better construction than any others now in use; and the pipes and sockets being made by one process are secure from separation.

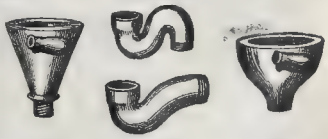
W. N invites particular attention to the superior quality of he glaze used in his manufacture, which is equal to glass, and rendering stoppage in the drains impossible.

W. NORTHEN'S PIPES MAY BE INSPECTED AT THE FOLLOWING PLACES, WHERE ORDERS ARE RECEIVED:—

Rosher and Co.'s Wharfs: Kingsland, Blackfriars, and Millbank. Martin and Wood's Market Wharf, Regent's-park Basin.—J. C. Hilton's, Crown and Horse-shoe Wharf, No. 6, Upper Thames-street. C. Richardsen's, South Wharf, Paddington. G. Erith's, Cambridge Heath Wharf, Hackney. Millwood and Co.'s Wharfs, Kensington Basin, and Creek Wharf, Hammersmith.—J. Corbet's Depôt, Britten-street, Chelsea; and at the Pottery.

E. and W. STURGE invite special attention to their reduced LIST of PRICES of Drain Pipes, Junctions, Pans, Traps, &c.; also, to their Paving, Sinks, &c.; Slates of the best quality, wholesale and retail. Country builders and others supplied with all information, on application to E. and W. STURGE, Bridge-wharf, City-road.

N.B.—The wharf is well situated for carriage by canal boats, or to the railways, to which but a small charge for cartage is made. January, 1855.



VICTORIA POTTERY, LEIGH, NEAR SOUTHEND, ESSEX.

DAVID MOUNTAGUE,

MANUFACTURER of superior GLAZED STONEWARE PIPES (in accordance with the rules established by the Commissioners of Sewers), Bends, Traps, Closet-pans, Jars, Bottles, and every article in Stone Ware on advantageous terms. THE BUILDER.

SALES BY AUCTION.

9 and 10, QUIET-STREET, BATH.
MOST EXTENSIVE and IMPORTANT SALE of MARBLE CHIMNEY-PIECES, REGISTER-STOVES, FENDERS and SETS of FIRE-IRONS, BRASS and IRON BEDSTEADS, GAS CHANDELIERS, KITCHEN-RANGES, and FANCY IRON-WORK

MESSRS. HULBERT and HANCOCK most respectfully announce that they have been honoured with instructions from Mr. H. Clement, the proprietor of the above Establishment,

TO SELL BY PUBLIC AUCTION,
the whole of the very valuable STOCK-IN-TRADE contained in the above Show-rooms, being Nos. 9 and 10, QUIET-STREET (without any reservation whatsoever), on
WEDNESDAY, FEBRUARY 28, 1855 and following Days,
commencing each day at TWELVE o'clock precisely,
it being his determination to confine his attention in future to the parent establishment in Burton-street, where the entire business will be again concentrated and carried on in its several branches as originally, as he finds the above Show-rooms, in Quiet-street, are of too extensive a character for a provincial city.

This magnificent STOCK consists of about ONE HUNDRED CHIMNEY PIECES, in Statuary, Berdilla, Italian Vein, Sienna, and Black Marbles: many of them richly sculptured

Several HUNDREDS of REGISTER and other GRATES, in every possible variety, if the newest designs and best manufacture, adapted for drawing-rooms, libraries, and bed chambers, many of them in bright steel, enriched with highly-finished ormolu mountings.

Several ELIZABETHAN and GOTHIC PILLAR STOVES, a great variety of gas-stoves, for heating warehouses and public buildings; also some very efficient cooking ditto, open and close fire kitchen ranges, fitted up on the most scientific principles; also M. Soyer's cooking and ventilating stoves; many 4-bar ditto, of various descriptions, &c &c.

An immense assemblage of IRON and STEEL FENDERS, and SETS of FIRE-IRONS, embracing every description, the designs of many being of a most *recherché* character

The STOCK of CHANDELIERS is varied, and very superior, and is principally of bronze and ormolu, enriched with B-hemian glass, and adapted for gas and candles; gas fittings, in brackets and Gothic pillars, &c. &c., some very choice foreign bronzes, in figures, vases, on pedestals, &c.

The IRON BEDSTEAD DEPARTMENT contains an endless variety of four-post, half-tester, French, stump, folding, and other bedsteads, many of them ornamented with brass mountings: also children's cribs, swing cots, American rocking chairs, with leather cushions, 4 long ditto, &c.

Among the MISCELLANEOUS ARTICLES will be found a large stock of shower-baths; plunging ditto, capable of being heated by gas or spirit-lamp stoves, japanned tea-trays, iron tables, flower-stands, garden seats, wire-trainers, wheelbarrows, hat and umbrella stands, a great quantity of wire netting, cheese presses, manules, door scrapers, chimney funnels, garden engines, powerful fire ditto, circular and other pig-troughs, cast-iron pumps, &c &c.

The whole of the above will be on view three days previous to the sale, between the hours of TEN and FIVE, when catalogues may be had on the Premises; of the Auctioneers, Quiet-street, and 1 Old Bond-street, Bath; and at Mr JAMES HULBERT'S, 101, Strand, London.

The Auctioneers, in calling the attention of the public to the present Sale, cannot speak in too high terms of commendation of this most beautiful and useful collection of goods, such, perhaps, as few private traders in the kingdom can produce; and if a proprietor has come to the determination of thus disposing it at with very great reluctance, and would not have done so, had he not found for some time past that these extensive Show-rooms do not produce an adequate return.

MR. GEORGE BERRY will SELL by AUCTION, pursuant to a decree of the High Court of Chancery, made in a cause of Archbutt v. Clarkson, at the AUCTION MART, near the Bank of England, on TUESDAY, the 27th day of MARCH, 1855, at ONE o'clock precisely, in one lot, a valuable LEASEHOLD ESTATE, comprising a timber-yard, engine-house, workshop, counting-house, sheds, and other buildings, situate on the north side of the King's road, Chelsea, in the county of Middlesex and also a Cottage, situate on the east side of Robert-street, Chelsea. The premises are held direct from the freeholder for about 43½ years unexpired, and is in mortgage for 1,000l. for a period of five years from 5th of May, 1854, and is sold subject to such incumbrance. The whole of the premises are free of ground-rent, and are let to Mr Thomas Wither for an unexpired term from Midsummer, 1853, of a clear annual rental of 130l. The property may be viewed by leave of the tenant, and particulars and conditions of sale had of Mr J. H. Kaye, 2, New-inn, Strand; Messrs. Jackson and Co. 29, Lombard-street; and Mr. J. Wintermore, 44, Lime-in-son fields; and of the Auctioneer, at his Office, Motcomb-street, Belgrave-square.

SOUTH SEA HOUSE ESTATE, THREADNEEDLE-STREET.

MESSRS. READE and SONS are favoured with instructions to SUBMIT to PUBLIC COMPETITION, on TUESDAY, FEBRUARY 27th, at TWELVE, the above valuable PROPERTY, having extensive frontage to Threadneedle-street, fronting thereto with Old Broad-street, and covering a superficial area of nearly three quarters of an acre, being a piece well stabled and in a central position, freehold, and all held under a lease. It comprises the present South Sea House, a most substantially erected fabric, three valuable messuages, used as offices, the open areas surrounding the South Sea House, the whole of which will be offered in one lot; also a small building now occupied with the Flower Pot public-house, which will be sold separately. The property presents a rare opportunity for the acquisition of a compact freehold estate in the neighbourhood of the Bank of England, and, in its present state, will realise a handsome rental; but if judiciously arranged will probably realize an increased income in gross rents, and the materials will find a ready sale to the various lessees.—Particulars, with lithographic plans may be had on the Premises; and may be had on application to Messrs Wontsworth, Greatbead, and Blake, Solicitors, at the South Sea House Threadneedle-street, at the Mart; and of Messrs Reade and Sons, 26, Gresham-street.

Superior Chimney-pieces of Statuary Marble, some richly sculptured; and of Dove and Vein Marble in great variety.

MESSRS. ROBINS will SELL by AUCTION, at their ROOMS, Great Piazza, Covent-garden, on TUESDAY MARCH 6th, at TWELVE, superior STATUARY MARBLE CHIMNEY-PIECES, some richly sculptured suitable for first-class drawing-rooms, others of a less expensive character, with enrichments; black and Italian marble for dining rooms and libraries, several of dove and Sienna marble, and a great variety of vein marble of smaller size. Now on view in Covent-garden.

HIGHGATE.—400,000 capital Stock and other Bricks

MR. LEREW will SELL by AUCTION, on the PREMISES, the BRICKFIELD, on the west side of the Archway-road, Upper Holloway, on THURSDAY, MARCH 1, at TWO o'clock precisely, about 400,000 BRICKS, comprising stock, place, and grovels under & stand for reduc- May be viewed the day prior and morning of sale, and catalogues had on the Premises; and the Auctioneer, 2, Carlington-street, Hampstead-road.

TO IRONMONGERS, WHEELWRIGHTS, SMITHS, ENGINEERS, BUILDERS, CARPENTERS, and OTHERS.—No. 25, Bethnal-green road.—The valuable and well-assorted Stock of Black and Furnishing Ironmongery

MR. ARBER has received instructions to SELL by AUCTION, by order of the Trustees, on the PREMISES, 25, Bethnal-green-road, on WEDNESDAY, FEB. 28, and following days, commencing punctually at TWELVE each day, the whole of the valuable STOCK, comprising about thirty tons of Staffordshire iron, in bars, hoops, plates, and sheets; three tons of slit rods, five tons of nails, viz. rose, clout, and sprigs; seven tons of cut and wrought nails, one ton of rivets, chain; thirty-nine dozen spades, ten dozen files, carpenters' edge tools, twenty dozen scythes, chaff knives, mortise and other locks, screws, bolts, ranges, stoves, copper furnace pans, wire, rain water and gutter pipes, copper stew-pans and saucepans, fenders, fire-irons, and the general effects of a furnishing ironmonger; two spring carts, harness, household furniture, shop fixtures and fittings, and numerous effects.—May be viewed the day previous and mornings of sale, when catalogues may be had on the Premises; of Messrs. Hill and Matthews, Solicitors, Bury-court, St. Mary-axe; and at the Auctioneer's Offices, 1, Mount-street, Berkeley-square.

SALES BY AUCTION.

By order of the Trustees, removed: a Sale not allowed on the Premises. To PAPERHANGERS and OTHERS.—2200 pieces of superfine Paperhangings

MR. IZOD will SELL by AUCTION, at his OFFICES, No. 3, Bell yard, Doctors' Commons, on WEDNESDAY, FEBRUARY 28, at ONE o'clock, in lots, to suit the trade as well as private purchasers, a choice assortment of bedroom, parlour, hall, and staircase papers, rich flocks and satins, drawing and dining room papers, a few French ditto and linens.—May be viewed on TUESDAY previous and morning of sale, and catalogues had at Mr. IZOD'S Offices, 3, Bell yard, Doctors' Commons.

TO BUILDERS, PLASTERERS, CONTRACTORS, and OTHERS

BENNETT and CO. will include in their SALE, at the NEW CORN-EXCHANGE COFFEE-HOUSE, Mark-lane, on WEDNESDAY, FEBRUARY 28th, at TWELVE for ONE o'clock, 400 CASKS of PORTLAND CEMENT, warehoused at Millwall and at Moline and Chandler's Warehouses, Bilston street, City. Samples and catalogues may be had at the Auctioneers' Offices, 65, Fenchurch-street, City.

ST. MICHAEL, CORNHILL.—TO LET, upon BUILDING LEASES for a term of sixty-one years, the SITES of the FREEHOLD HOUSES, Nos. 44, 45, 46, and 47, Cornhill. The Churchwardens and Committee of Overseers will meet in the Vestry-room of St. Michael's Church, Cornhill, on WEDNESDAY, the 28th day of FEBRUARY, at ELEVEN o'clock precisely, to receive TENDERS from parties desirous of taking any of the above sites, which are divided into three lots. The terms and conditions may be seen, or printed copies of the same obtained, on payment of 2s. upon application to Mr. ALFRED B. MASON, Architect and surveyor, No. 9, Great St. Helen's, or to Mr. HENRY HOPPE, Vestry Clerk, 3, Sun-court, Cornhill. Parties Tendering must send in Tenders to the Vestry Clerk on or before the 27th FEBRUARY, under cover, addressed to the Churchwardens, and endorsed "Tender for Ground in Cornhill," and must be personally or by endorsee at HALF PAST ELEVEN o'clock on the said 28th FEBRUARY. The Churchwardens and Overseers do not bind themselves to accept the highest or any other Tender. Should any Tender be accepted, the party Tendering will be required thereupon to sign the memorandum annexed to the conditions.

TO BUILDERS AND OTHERS.

BUILDING FRONTAGES TO BE LET, for detached and semi-detached VILLAS, in BLESSINGTON-ROAD, Belmont, Lee, Kent, close by the church. This is the most attractive, picturesque, and respectable locality on any side of Lee-on, from which it is only distant one quarter of an hour by railway, and five minutes' walk from the Blackheath Station of the North Kent Railway. Accommodation will be afforded to respectable men For particulars apply to Messrs. J. and C. W. TODD, Miller-street, Brompton; or at their Office in Churchlane, Lee.

ST. MARGARET'S, near RICHMOND.—A few most eligible SITES for VILLAS, with a frontage to the Thames, and other plots, suitable for villas of all classes, TO BE LET, on Building Leases, which are allowed to respective builders.—Apply to GEORGE MORGAN, Esq. Architect, 5, Chancery-lane; or to Mr. LONG, Red Lion-street, Richmond.

BUILDING LAND TO BE LET, close to a station, twenty minutes' walk from London bridge; 40 feet frontage, 120 feet deep. Moderate ground-rent—Apply to G. PERCEY, House and Estate Agent, 10, New-street, Bishopsgate-street.

TO RAILWAY CARRIERS, INN KEEPERS, and OTHERS.—Important and extensive PREMISES, known as the "George Inn, High-street, Borough," TO BE LET. The Governors of Guy's Hospital will meet at the Hospital, on WEDNESDAY, the 7th MARCH next, to receive TENDERS for TAKING on a REPAIRING LEASE, the PREMISES called the "George Inn, High-street, Borough." A plan of the premises may be seen forthwith at the Counting-house of Guy's Hospital, St. Thomas's-street, Southwark; or at the Office of Mr HENRY LUNY, Architect, No. 4, Bedford-row. Tenders to be delivered at the Hospital, on WEDNESDAY, the 7th MARCH, at or before TWO o'clock, and the parties are requested to attend at the Counting-house at that hour. The Governors do not bind themselves to accept the highest or any Tender.

TO TIMBER MERCHANTS, WHARFINGERS, MANUFACTURERS, &c.

TO BE LET, on Lease, extensive WATERSIDE SITES for erecting steam sawing and planing mills, situate in the Commercial road, between Waterloo and Blackfriars Bridges. The land will be let in one or more lots. An excellent and large wharf stabled and let to hold. Apply to Mr ROGERS, Architect, 13a, Cannon-row, Westminster; Mr. J. B. CLARK, 9, Guildford-place, Kennington-lane; or to Messrs. HODGSON and BURTON, 10, Salisbury-street, Strand.

BUSINESS PREMISES.—TO BE LET, extensive PREMISES, adapted for manufacturing or business purposes requiring space, with a residence and stabling, and also a wharf attached. If required, situate in Princes-street, Lambeth. Apply to Mr ROGERS, Architect, Palace-chambers, Lambeth, or 13a, Cannon-row, Westminster; Mr. J. B. CLARK, 9, Guildford-place, Kennington-lane; or to Messrs. HODGSON and BURTON, 10, Salisbury-street, Strand.

TREASURER.

William Tite, esq. F.R.S.

NOTICE. The ANNUAL GENERAL MEETING of the SOCIETY will be held at the ROOMS of the ROYAL INSTITUTE of BRITISH ARCHITECTS, 16, Lower Grosvenor-street, on WEDNESDAY, MARCH 7th. The Chair will be taken at HALF-PAST THREE o'clock precisely.

Information relative to the Society may be obtained of the Honorary Secretary; or of Mr. GOULDS, the Collector, 8, Craik's-court, Charing-cross. JOHN TURNER, Hon. Sec.

23rd Feb. 1855. 15, Wilton-street, Grosvenor-place.

BUILDERS' BENEVOLENT INSTITUTION.—An ELECTION of PENSIONERS will take place in MAY next. Candidates may obtain forms of application, to be returned on or before the 19th instant, at the Offices of the Institution, 19, Southampton-street, Bloomsbury.

Pensions, 24*l.* per annum for Males, and 2*l.* for Females.

March 3, 1855. A. G. HARRIS, Secretary.

INSTRUCTION in ART, General and Special, as afforded at the Central School of the Department of Science and Art, Marlborough House, Pall-mall; the School for Female Students, No. 37, Gower-street; and the District Schools in connection with the Department. The Spring Session will commence on the 1st March.—For information and prospectuses apply at Marlborough House, Pall-mall.

THE LOCAL BOARD of HEALTH for the CASTLEFORD DISTRICT, in the West Riding of the County of York, are in want of a competent Person to undertake the united duties of SURVEYOR, INSPECTOR of NUISANCES, and COLLECTOR of RATES within their district. The candidate must be capable to conduct surveys, take levels, and prepare plans, sections, &c. and must possess a thorough knowledge of the repairs of highways. The person elected will be required to devote the whole of his time to, and to give security in the sum of 250*l.* for the due performance of all the duties assigned by the Public Health Acts to such offices respectively.—A copy of the particulars of which, in detail, may be inspected, on application to the Clerk of the Board, or will be forwarded to any candidate, on receipt of eight postage-stamps. Applications, with testimonials, stating the age of the candidate, previous occupation, and the salary he would expect to receive, marked "Application for Appointment of Surveyor, &c." are to be forwarded to me on or before the 16th of MARCH, 1855.—By order,

THOS. SYKES, Solicitor, Clerk of the Board.

Castleford, February 28, 1855.

BOROUGH of MIDDLESBROUGH.—SURVEYOR WANTED.—The Town Council of Middlesborough are desirous to ENGAGE an active and competent person as BOROUGH SURVEYOR. He must be sufficiently acquainted with engineering to be able to survey, plan, and level, and carry out sewerage and drainage works. Population about 11,000. Salary, 150*l.* per annum. The person appointed will be required to devote his whole time to the office. Further particulars, with respect to the duties to be performed, may be had on application to the undersigned, and applications in the handwriting of the party, and with testimonials of his character and ability, and a statement of his age, and previous and present occupation, must be sent to my Office not later than TWELVE o'clock at noon, on TUESDAY, the 20th MARCH next.—By order,

JOHN S. PEACOCK, Town Clerk.

Middlesbrough, February 23rd, 1855.

COMPETITIONS.

THE GILBERT MONUMENT.—DESIGNS and ESTIMATES for the ERECTION of the proposed Monument to the memory of the late Lieutenant-general SIR WALTER RALEIGH GILBERT, Bart. G.C.B. will be received on or before MONDAY, the 26th of MARCH next, accompanied by sealed letters, addressed to "The Secretary of the Gilbert Monument, at 7, New Bond street, Lond n," and endorsed, "Design for the Gilbert Monument."—Full particulars may be had by written application to the Secretary at the above address, where plans, and a description of the site of the Monument, may be seen, on and after TUESDAY, the 27th instant.

78, New Bond-street, London, Feb. 22, 1855.

STROUD BURIAL BOARD.—TO ARCHITECTS.—PLANS and GENERAL SPECIFICATION are required for CHAPELS, and other requisite Buildings, to be erected on land near Stroud. In making their selection, the Board do not pledge themselves to be guided in their choice by the amount of the estimated cost, nor do they bind themselves to accept any one of the plans offered The architect producing the best plan in the estimation of the Board will be allowed the sum of fifteen guineas, and the architect producing the second best plan in the estimation of the Board, will be paid the sum of seven guineas (which shall include all costs and charges whatsoever relating to and in preparing the same), as soon as the works have been contracted for, at a sum not exceeding the maximum sum to be expended. The plans, &c. so approved, shall become the property of the Board, who shall not be bound to employ the person producing the same as their architect. All the plans are to be drawn to a uniform scale of eight feet to an inch, and all the drawings, with the exception of the ground plans and sections, must be drawn in plain lines, without colouring, shading, or embellishments.—A plan of the ground, with particulars of the required buildings, &c and the limit of the cost of the same, may be had upon application to Mr. PRESTON, Rowcroft-house, Stroud, to whom the plans and specifications are to be sent (free of expense) on or before the 24th day of MARCH next

TO ARCHITECTS.

LEAMINGTON PARISH CHURCH.—The sum of TWENTY GUINEAS will be paid for the best PLANS for COMPLETING and FINISHING the Parish Church at Leamington. The plans will be required to entirely complete the Church on the area of the present edifice now used for Public Worship, and also to include a proportionate Tower capable of holding Six Bells; the plan to include in the designs all the present interior arrangements and buildings now in existence, as far as the same can be with propriety practically included and continued in a design for consistently and advantageously finishing and completing the edifice as a PARISH CHURCH. A guaranteed ESTIMATE, stating the nature of the different materials proposed to be used, to accompany the plan, such Estimate specifying the separate sum for the completion of the Church; also the separate sum for the tower. The plans to be sent in, sealed and directed to the "Committee of a Fund in Aid of the Completion of Leamington Church," on or before TUESDAY in the Easter week, under cover, to Mr. GLOVER, at his Library, Victoria-terrace, Leamington, who will be responsible to pay the above premium on the decision of the said Committee, within one month from the delivery of the said plans and estimate, and to return any plans not obtaining the above said premium.

TO ARCHITECTS AND OTHERS.

THE BURIAL-BOARD for the PARISH of BRIDPORT, in the county of Dorset, is desirous of receiving PLANS, DESIGNS, and ESTIMATES, comprising Ground Plans, Sections, and Elevations, for LAYING OUT a NEW BURIAL GROUND of FOUR ACRES the plan of which may be seen at my house, in East-street), INCLOSING the GROUND, BUILDING a LODGE with ENTRANCE-GATES, and BUILDING TWO DETACHED CHAPELS The party whose plans, &c. may be approved, will, at the discretion of the Board, either have the superintendence of the works, or be paid 31 15*s.* for the plans, designs, estimates, &c The person who prepares, in the judgment of the Board, the second best plan, will be paid 21 *s.* which must be delivered at my house, free of all expense, without the author's name, but with a motto, on or before the 17th of MARCH. A sealed letter, containing real names and address, should accompany each design, which will be opened after selection made, and those not approved will be returned.

W. K. BROWN, Clerk of the Board.

Bridport, February 20, 1855.

CONTRACTS.

TO BUILDERS

NEW MARKET at GLOUCESTER.—The Corporation of Gloucester is desirous to receive TENDERS for the ERECTION of the above Market, in accordance with the plans, specifications, and conditions, prepared by Messrs. MEDLAND and MABERLY, Architects, Gloucester, which may be seen on application to them on and after 5th MARCH next. The Tenders to be delivered, free of all charge, before TWELVE o'clock, on MONDAY, 19th MARCH next, at the Architects' Office, sealed and endorsed, "Tenders for New Market, Gloucester." The Corporation will not be bound to accept the lowest or any Tender if the amount be unreasonable. The works will be divided into two Contracts, viz No 1. The excavators, bricklayers, masons, carpenters, joiners, slaters, plumbers, painters, and glaziers' works.—No. 2. The smiths and ironfounders' works.

A. H. JENKINS, Town Clerk.

Gloucester, February 21st, 1855

TO CONTRACTORS.

THE DIRECTORS of the SUNDERLAND CORPORATION GAS COMPANY are prepared to receive TENDERS for the immediate EXCAVATION and BUILDING of a TANK 41 feet diameter, near the Ayre's Quay Works of the Company, Wellington-lane. Plans and specifications may be seen at the Offices of the Company, 61, Fawcett-street, Sunderland, on and after THURSDAY, the 1st day of MARCH inst. Sealed Tenders, endorsed "Tender for Tank," to be sent in on or before TUESDAY, the 13th MARCH, by TWELVE o'clock at noon. The Directors do not bind themselves to accept the lowest or any Tender. JOHN HENRY COX, Secretary.

Sunderland, Feb. 22, 1855.

CONTRACTS.

Royal Engineer Office, Eastbourne, Feb. 16th, 1855.

TO BUILDERS.

SUCH Persons as are desirous of undertaking the several branches of ARTIFICERS' WORK, IRONMONGERY, CAST-IRON, and METAL WORK, required in the Ordnance Department at the places undermentioned, including REPAIRS to the several BARRACKS, upon a CONTRACT for THREE YEARS from the 1st of APRIL next, determinable at any period after the expiration of one year, on either party giving three months' notice in writing, may be furnished with printed schedules of prices, and the conditions of the contract, with every necessary information respecting the same, by application at this Office.

Stations for which separate Tenders will be received:

From SHOREHAM to the WEST SIDE of CUCKMERE HAVEN;

From the WEST SIDE of CUCKMERE HAVEN to FAIRLIGHT.

The Tenders will be required to be delivered bef re TWELVE o'clock at noon, on TUESDAY, the 13th day of MARCH next, at the Ordnance Office, Pall-mall, addressed to "The Secretary to the Board of Ordnance." The persons whose Tenders shall be approved, will be required to provide eligible securities, and execute a bond for the due performance thereof, and to pay half the amount of the stamp on the bond.

TO BUILDERS AND OTHERS.

SEALED TENDERS, in one specific sum, will be received at the Ordnance Office, Pall mall, London, on or before the 20th MARCH, 1855, for the following SERVICES at Bull Point, in the parish of Saint Budeaux, near Devonport, viz.:—

1.—Building Cottages for a Foreman and sixteen Labourers.
2.—Building a Cook-house and Wash-house for the Crews of the Two Powder Vessels, with Privy and Urinal
3.—Building an Office for the Ordnance Storekeeper.
4.—Building a Civil Watch-house and a Shed for Waggons.
5.—Building a Warder's Lodge and a Shoe-house.
6.—Building an Engine-house.
7.—Building a Boat-house.
8.—Removing the present wooden Filling and Examining-house at Keyham to Bull Point.

Detailed specifications of the above eight services, with addenda thereto, and every requisite information, may be obtained at the Royal Engineer Office, Bull Point, daily (Sundays excepted), between the hours of TEN and FOUR o'clock, from THURSDAY, the 1st, to FRIDAY, 16th of MARCH, 1855, both days inclusive.

Royal Engineer Office, Devonport, 23rd February, 1855.

CHORLEY IMPROVEMENT.—SEWERAGE—TO EARTHENWARE SEWER AND DRAIN PIPE MAKERS AND OTHERS.

The CHORLEY IMPROVEMENT COMMISSIONERS hereby give notice that they are prepared to receive Tenders from parties willing to undertake the following Contract:—

Contract No. 1.—For the Supply of EARTHENWARE SEWER and DRAIN PIPES, &c.

Specifications, schedules, bills of quantities, and form of Tender (6*d.* the set), may be obtained, together with any further information required, on application at the Commissioners' Office, High-street, Chorley; or at the Offices of ROBERT RAWLINSON, C.E. 34, Parliament-street, Westminster.—Sealed Tenders to be delivered at the Commissioners' Office, Chorley, before TWELVE o'clock, on SATURDAY, the 10th day of MARCH, 1855, endorsed, "Tender for Contract, No 1."

RICHARD JACKSON, Clerk to the Commissioners.

Chorley, February 16th, 1855

TO BUILDERS AND CONTRACTORS.

MILITARY DEPOT for the County of DENBIGH, at Wrexham.—Any person willing to CONTRACT for BUILDING the new MILITARY DEPOT, for the custody of the stores, arms, and accoutrements of the Royal Denbighshire Rifles and for RETAINING a HOSPITAL with QUARTERS for the Sergeant-Major and Six Sergeants of the Permanent Staff, together with all necessary Outbuildings, and for forming the PARADE GROUND, may see the plans and specifications, after the 9th of MARCH next, upon application to Mr. WHITTAKER, at the Turf Tavern, near the Railway Station at Wrexham, or at my Office in Oswestry Sealed Tenders to be sent, addressed to me, at Gwersyllt-hill, on or before the 19th day of MARCH, endorsed "Tenders for the Military Depôt at Wrexham." The Contractor will be required to enter into security, with sufficient sureties, for the due completion of the works. The lowest Tender not necessarily accepted, without having due regard to the eligibility of the parties. Any further information may be obtained at my Offices at Oswestry, and Gwersyllt-hill, near Wrexham. THOMAS PENSON, Architect.

Oswestry, February 21, 1855.

STREET WATERING.—Notice is hereby given, that the Commissioners of Pavements of the Manor of Southwark, or Clink Liberty, in the Parish of Saint Saviour, Southwark, in the County of Surrey, are desirous of receiving TENDERS for WATERING the several ROADS, STREETS, LANES, PUBLIC PASSAGES, and places within the said manor or liberty, twice in every day of the week (except on Sunday, and then once only), for one, two, or three seasons, from Lady-day to Michaelmas-day, inclusive. The contractor will be required to enter into a contract, and he and two sureties will have to execute a bond conditioned for the performance of such contract. Tenders, containing the names and addresses of the proposed sureties, sealed up and addressed to the Commissioners, and endorsed, "Tender for Watering," must be delivered at the Clerk's Office, to the Clerk, as under, by FIVE o'clock in the afternoon of WEDNESDAY, the 14th inst. The Commissioners do not pledge themselves to accept the lowest or any Tender. Each party tendering must be in attendance at the Committee-room, Emerson-street, Southwark, at HALF-PAST SIX on WEDNESDAY, the 14th inst aforesaid, when and where the said Commissioners will meet to open and consider such Tenders. The contractor will have to pay for the stamps of the contract and bond. The draft contract and bond can be inspected, and forms of Tender obtained, at the Clerk's Office.—Dated this 1st day of March, 1855.—By order of the Commissioners,

GEORGE HOLMES, Clerk.

36, Bridge-street, Southwark.

[*For remainder of Contracts see next page.*

CONTRACTS.

HENRY JAMES DAMANT, Clerk to the Board.

Cowes, Feb 26, 1855

To IRONFOUNDERS AND OTHERS.

THE COMMISSIONERS of SEWERS of the City of London hereby give Notice that they will meet in the Guildhall of the said City, on TUESDAY, the 20th of MARCH, 1855, at TWELVE o'clock at noon precisely, to receive TENDERS for the supply of CAST-IRON WORK, for a period of three years from 25th March, 1855, to Lady-day, 1858. A specification of articles as commonly used by the Commission may be seen daily at this Office, between the hours of TEN and FOUR. Security will be required for the performance of the contract, and no Tender will be received after TWELVE o'clock on the day of treaty. The Commissioners do not pledge themselves to accept the lowest Tender JOSEPH DAW, Principal Clerk

Sewers' Office, Guildhall, 22nd February, 1855.

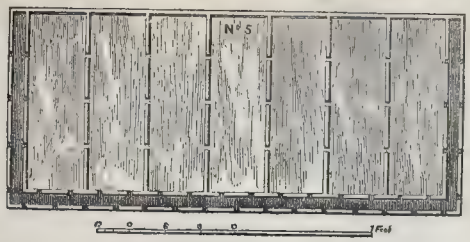
February 28th, 1855

ST. MARYLEBONE.—CONTRACTS for GUERNSEY, GRAVEL or WHITE CHIPPINGS, or other hard materials required for the repairs of the roads in use, for Granite Carriageway Paving Stones, for Yorkshire Footway Paving, and for Granite Footway Kirb. Notice is hereby given, that the Vestry of the Parish of St. Marylebone, in the county of Middlesex, will meet at the Board-room of the said parish on Saturday, the 24th day of MARCH, 1855, at ELEVEN o'clock in the forenoon, to receive TENDERS from persons willing to CONTRACT with the said Vestry for the supply, during the term of one year, commencing on the 25th day of MARCH, 1855 for the supply of any of the above materials. The quantity of flagging required is about 20,000 feet. The materials to be delivered on the premises, stone-yard, or on the streets, as may be required. Further particulars may be known, and forms of Tender procured, from the Surveyor, Mr. ROBERT SCOTT, at his daily attendance at the Office of the Board, from TWELVE o'clock to FOUR, on and after the 10th of the printed forms, and to be delivered sealed up, before ELEVEN o'clock in the forenoon, to receive TENDERS from persons willing to CONTRACT with the said Vestry for the supply of gravel, for the 25th day of MARCH, 1855 for the supply of any of the above materials. The quantity of flagging required is about 20,000 feet. The materials to be delivered on the premises, stone-yard, or on the streets, as may be required. Further particulars may be known, and forms of Tender procured, from the Surveyor, Mr. ROBERT SCOTT, at his daily attendance at the Office of the Board, from TWELVE o'clock to FOUR, on and after the 10th of March, 1855, when and where all Tenders will be received after the specified time. Sealed Tenders must be addressed to the Vestry, and endorsed "Tender for Granite," "Tender for Kirb," "Tender for Gravel," or "Tender for Chippings," as the case may be. The Vestry do not bind themselves to accept the lowest Tender, but will consider the circumstances of each case, and the price, and the ability of the Contractor to perform the work required. Each Tender must be accompanied by the name and address of two householders, who will become bound with the Contractor in the sum of £100 for the due performance of the contract. The Vestry consider it desirable that the persons Tendering, or some person on their behalf, should be in attendance at the time of opening the Tenders.

By order, W. E. GREENWELL, Vestry Clerk.

CONTRACTS.

BUILDERS wishing to give TENDERS for a GROUP of NATIONAL SCHOOLS for the District of St. John, Deptford, may see the Plans, &c., with all necessary details and conditions, at Mr. PAGE'S Office, 15 Bloomsbury-square, on MONDAY and TUESDAY, the 19th and 20th MARCH Tenders to be delivered on FRIDAY, the 23rd. The Committee do not pledge themselves to accept the lowest Tender



WOOLWICH LOCAL BOARD of HEALTH.—To DUST CONTRACTORS and OTHERS. The Local Board of Health for the District of Woolwich, in the County of Kent, hereby give Notice, that they will meet at the TOWN HALL, on TUESDAY Evening, the 13th of MARCH instant, at SEVEN o'clock, to receive TENDERS in writing (in accordance with the regulations prescribed by the by-laws), to CONTRACT for the collection and removal from each of the DUST, ASHES, RUBBISH, FILTH, BONE SOIL, MANURE (except stable manure), and all Animal and Vegetable Matters that may accrue in the premises of the inhabitants of the parish, for a period of Twelve Months from the 4th day of April next. The Dust, Ashes &c. to be collected at the expense of the Contractor, and conveyed beyond the parish boundaries. Persons tendering, or some one on their behalf, are required to be in attendance, and the party whose offer is accepted, to enter into a bond for the due performance of the contract. The Contractor to pay one moiety there from quarterly in the year, and the other in equal moieties within six months from that date. The Local Board do not bind themselves to accept either the highest or lowest Tender. Further particulars may be known on application at the Office of the Surveyor to the Local Board, Mr. Samuel Laing

HAYWARD'S IMPROVED

COAL-HOLE PLATES.

ILLUMINATING GRATINGS.

PAVEMENT LIGHTS.

COAL-HOLE PLATES, with Wrought Eyes fitted; ILLUMINATING with Glass Lenses, 6s. each; Ditto, plain Iron, solid, 2s. 9d. each; Ventilating, 3s. each

N.B. The Flange A prevents them from shifting when trodden on or being forced up.

ILLUMINATING AREA GRATINGS, thick Glass fitted, 5 or 10-inch openings of any length or number, at per foot super. 12s.

ILLUMINATING PAVEMENT LIGHTS, with Flange, as A, and Glass Lenses, 30s. each, 21 inches diameter.

HAYWARD (BROTHERS), MANUFACTURING IRONMONGERS, 196, BLACKFRIARS-ROAD.

ZINC ROOFING, INCLUDING TIMBER OR IRON FRAMEWORK,

IS AS

CHEAP AS SLATES OR GALVANIZED IRON, LIGHTER, AND MORE DURABLE.

Certificates, and Models of various descriptions, may be seen, and estimates obtained on application to

THE SURVEYOR OF THE VIEILLE MONTAGNE ZINC MINING COMPANY, 12, MANCHESTER BUILDINGS, WESTMINSTER.

ROOFS CONSTRUCTED UNDER HIS SUPERINTENDENCE GUARANTEED TO REQUIRE NO REPAIRS FOR AT LEAST TEN YEARS.

THE OLD METAL BEING ALWAYS RETAKEN AS HALF-PRICE, RENDERS IT ADVANTAGEOUS FOR ALL TEMPORARY BUILDINGS.

THE PATENT GALVANIZED IRON.

TUPPER AND CARR'S PATENT GALVANIZED IRON IS THE ONLY ARTICLE THAT HAS STOOD THE TEST OF TIME.

Several Roofs in Woolwich and Deptford Dockyards, erected in 1843, *are as perfect as on the day they were put up.*

TUPPER and CARR'S process of Galvanizing is used very extensively in the Dockyards and by the Board of Ordnance: it can be applied to EVERY ARTICLE MADE OF IRON, and, when properly done, is a SECURE and LASTING PREVENTIVE of RUST.

The PATENT GALVANIZED IRON is to be had ONLY of TUPPER and CARR, the Manufacturers and Patentees, at their Warehouses and Works,

3, Mansion House-place, and Limehouse ..... LONDON.
Nos. 6 and 10, Berkley-street ..... BIRMINGHAM.

Where also are kept in Stock COMMON, BEST, and CHARCOAL (Black) SHEETS, GAS-TUBING, and TIN-PLATES.

☞ IRON ROOFING FIXED IN TOWN OR COUNTRY.

Iron-plate working in all its branches; also Smith's Work and Castings.

Full particulars, Lists of Prices, Drawings, Estimates, &c. can be obtained at TUPPER and CARR'S OFFICE, LONDON.

3, MANSION HOUSE-PLACE, CITY,

Where it is requested all Letters may be addressed.

N.B.—AN ALLOWANCE TO THE TRADE.

FLAVEL'S PRIZE KITCHENER.

These Ranges are strongly recommended for their simplicity of construction and their economy and cleanliness in use.

The top forms a Hot-plate, and the open fire removes many of the objections which are felt to close Ranges.

They are made in all sizes, from 3 feet to 18 feet in width, suitable for large or small establishments.

They are admirably adapted for the Cure of Smoky Chimneys.

SOLE AGENTS:

BENHAM AND SONS,

19, WIGMORE-STREET, LONDON;

and at the Crystal Palace, Sydenham.

SKAIFE'S GALVANIZING WORKS, Commercial-road, Limehouse, London.

Skaife's process is the most effectual preventive against rust, and is extensively used for all purposes where Iron not liable to rust is required.

Patent Galvanized Iron supplied in every form.

Sheets plain and corrugated.—Roofs fixed complete.

J. Skaife is also agent for Norwood and Rogers's Patent Galvanized Tinned Iron, Plumbic Zink, and Tiles.

An Allowance to the Trade.

UNDER PATRONAGE of the ENGLISH and FRENCH GOVERNMENTS

Portable Galvanized or Painted Corrugated Iron Dwellings, Barracks, Hospitals, Stables, Warehouses, Theatres, Billiard and Concert Rooms, &c.

IRON ROOFS,

SYLVESTER'S
HOT WATER STOVES,
for Warming Halls, Staircases Galleries, Warehouses, Stores, Hotels, and Offices, require no Flue, create no Dust, and are safe from all risk of fire.

Any number of these Stoves may be heated from one Boiler, and may be used equally well with Steam or Hot Water.

SYLVESTER'S
IMPROVED AIR WARMER
is the most powerful, salubrious, and economical Apparatus yet invented for Heating Churches, Chapels, Schools, and Public Rooms, by means of Hot Air.

Prospectuses and Estimates may be obtained on application to

SYLVESTER and CO.
Engineers, and Manufacturers of Heating Apparatus, 96, Great Russell-street, Bloomsbury.

PUBLIC INVITATION.—HEATING by HOT WATER with ONE BOILER JOHN WEEKS and CO. King's-road, Chelsea, Horticultural Builder and Hot-water Apparatus Manufacturer, most respectfully invite the Nobility, Gentry, and Horticulturists, to visit their nursery establishment during this severe weather, and witness the efficient working of their hot-water apparatus. The establishment consists of forcing houses, conservatories, &c. &c. many of which are of wide and lofty dimensions, and together measuring upwards of 1,000 feet in length; the whole effectually heated by one boiler, at the small cost of 1s 8d. per day for fuel and labour. The various houses are divided into above forty different compartments, either of which can be heated separately, and the whole regulated at pleasure with a greater command of heat than is required Boilers of all sizes, and apparatuses, both plain and ornamental, adapted for warming churches, schools, warehouses, and buildings of every description; also a great variety of horticultural buildings, to be seen in full operation, so that a lady or gentleman can select the description of house best adapted for every required purpose. Also a splendid collection of plants.

JOHN WEEKS and CO. Horticultural Establishment, King's-road, Chelsea.

WARMING and VENTILATING.—COTTAM and HALLEN, 2, Winsley-street, Oxford-street, having had thirty years' experience, and having warmed by the circulation of hot water upwards of 4,000 buildings, consisting of churches, presons, lunatic asylums, halls, and staircases, galleries, conservatories, forcing-houses, &c. can with confidence recommend their system, which, by the various improvements they have made, has perfected the construction and economised the expense. Greenhouses, conservatories, verandahs constructed entirely of iron or wood, part of iron and wood combined. Estimates upon application. COTTAM and HALLEN, Engineers and Ironfounders, 2, Winsley-street, Oxford-street.

ROYAL POLYTECHNIC GAS FIRE. BACHHOFFNER and DEFRIESS PATENT—The public is respectfully informed that arrangements have now been made for the supply of this unique and beautiful mode of warming private houses, shops, public buildings, &c. Smoke, dust, ashes, and accidents from fire are effectually prevented by its use, while it presents all the comfort and appearance of an open coal fire, securing, at the same time, perfect ventilation.—To be seen in action at DEFRIESS office 145, Regent-street, London.

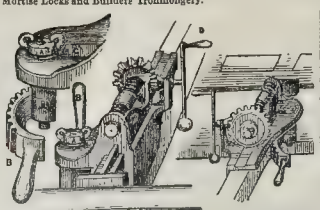
HEATING by HOT WATER.—JOHN WEEKS and CO. King's-road, Chelsea, solicit the attention of architects, &c. to their superior APPARATUS. At Messrs. Weeks' establishment, an apparatus with one boiler can be seen daily in full operation, heating buildings measuring 1,000 feet in length, at the small expense per day in fuel and labour of 2s 8d. This achievement in heating by hot water is unprecedented

THE SMOKE-CONSUMING STOVE, invented by Dr. ARNOTT, and explained by him at the Society of Arts, on WEDNESDAY, MAY 16, insures perfect combustion, economises fuel, requires much less attention than the register stoves in general use, and produces by the use of Dr. Arnott's improved Circular Valve, a perfect system of Ventilation.—Manufactured by D. and E. BAILEY, 272, Holborn.

FIRST PRIZE KITCHEN RANGE.—The only prize ever competed for, the prize of public approbation,—has long been obtained by BROWN and GREEN'S celebrated KITCHEN RANGE, as proved annually by the best, most perfect, economical, and complete apparatus for all cooking operations. It is warranted a certain cure for a smoky chimney.—Wholesale agents, B. W. KENNARD and CO. 67, Upper Thames-street, London. Manufactory, Luton, Beds.

UNIVERSAL SMOKE-CONSUMING COMPANY; Offices, 4, Furnival's-inn, London.—No Smoke, more Steam, and less Fuel. References—Messrs Thurston and Co. Billiard-table Makers, 14, Catherine-street, Strand; Mr. J. T. Hunt, Bone-mills, Lambeth-wharf; Messrs. Fields, Wax-candle Manufacturers, Lambeth; and Messrs Ross and Co. Great Guildford-street, Southwark, where Witty's patent apparatus is at work.

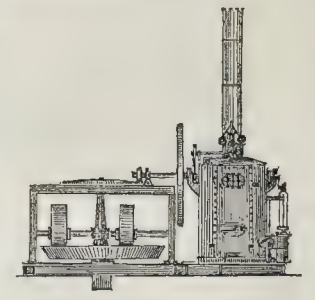
DR. ARNOTT'S SMOKE-CONSUMING FIRE-GRATE is manufactured by F. EDWARDS, SON, and CO. 42 Poland street, Oxford-street, where one may be seen in daily use. The advantages of this grate consist in the smoke being perfectly consumed, no chimney sweeping being required, and a saving of from 40 to 50 per cent. being effected in the cost of fuel.—Prospectuses, with testimonials, sent on application.



THE PATENT PRIZE KITCHENER, with Boiler to supply Bath, Scullery, Hot and Steam Closet, is Manufactured, with all its recent improvements, by THOMAS RADCLYFFE, Leamington, Warwickshire, of whom plans, prices, and testimonials may be had on application. It is made from three feet to twenty, all worked by one small fire. A great saving in fuel is effected by having the kitchener, and it effectually cures smoky chimneys, and is the best cooking range extant

STEPHENSON and PEILL, 61, Gracechurch-street, London, and 17, New Park-street, Southwark, Manufacturers of COPPER'S CYLINDRICAL and improved CONICAL IRON BOILERS, and Conservators and Hot-house Builders, either in wood or iron, respectfully call the attention of the nobility, gentry, and nurserymen to their simple but efficacious method of warming horticultural and other buildings by Hot Water. From the extensive works they have executed, references of the highest respectability can be given, and full particulars furnished on application.

HEATING by HOT WATER.—J. JONES, Iron Merchant, has always a great variety of CONICAL and SADDLE BOILERS in STOCK; also fire and furnace bars, ornamental and plain supply cisterns, double doors and frames, furnace-grates, soot doors for the same, hot-water pipes, elbows, tees, syphons, throttle-valves, stop-cocks, flange and socket elbows, &c.; also, trough-gratings, drawings and prices of the above, on application to J. JONES, Iron-bridge-wharf No. 6, Bankside, London, near the Southwark-iron bridge.



TO ARCHITECTS, BUILDERS, AND OTHERS.
FOR SALE, a 36-inch (No. 3) CUNDY'S PATENT HOT-AIR STOVE, with descending flue, blower, fender, soot and trap doors and frames; a 8-feet length of large cast iron socket-pipe, and one cast bend, with soot door for the above. The stove is in good condition, and it will all be sold for £5. For further particulars inquire of FREDERICK BLAKER, Ironmonger, Worthing.

PATENT CRAMP FOR FLOORS, DOORS, AND SASHES.
W. BISSELL, PATENTEE, WOLVERHAMPTON, Manufacturer of Rein and Mortise Locks and Builders' Ironmongery.

AA. A set screw and pin moving in slab C, to regulate for any thickness of joist, from 9 to 4 inches.
B. An eccentric notched lever, to be turned and pressed against the joist.

Lay the cramp upon the joust close up to the board, move the set screw in the slab up to the side of the joist, then fix the set screw FIRM. Turn the notched lever B against the joist, then, by turning the handle D, the lever will gradually fix itself and hold the cramp firm: the greater the strain, the more tightly, by its eccentric action, will the lever bind. The Patentee, in asking the attention of Builders and others, assures them that his cramp possesses great advantages. It is a BENCH cramp of the best kind, and as well suited for doors and sashes as for floors. From its superior mechanical principles, it has greater power, and will be found to be more quickly and safely used than any yet brought out, and at the same time it is light and portable.

A SAVING of TIME and MATERIALS, with Solidity of Building.
HENRY GOUGH'S PATENT PORTABLE STEAM ENGINES of two, three, four, and six horse power, for grinding mortar, raising building materials, driving piles, circular-saws, pumps, &c. 46, Albert-street, Manchester.

"New Borough Gaol, Walton, near Liverpool,
"December 19th, 1853.

"Dear Sir,—I have great pleasure in bearing testimony of the efficiency and economy of the three and six horse portable steam-engines, which were purchased from your firm about three years ago. We have used them for pumping water, hoisting stone and bricks, sawing timber, and in various other ways, and have found that, as they do not require any permanent fixing, we have been enabled to remove them from one part of the building to another at a very trifling expense, and with little inconvenience.
"I am, dear Sir, yours truly,
"THOMAS PATRICK,
"Contractor.

"Mr. Henry Gough"

MACHINERY.—SAWING, PLANING, MOULDING, and WOOD CUTTING MACHINES.—To Timber Merchants, Contractors, and Others.—SAMUEL WORSSAM and CO. of Hortulan-place, King's-road, Chelsea, invite the attention of Timber Merchants and others to their new inventions and improvements in all kinds of machinery used in sawing, Planing, Moulding, and Wood Cutting. S. WORSSAM and CO. are able to execute orders with cheapness and despatch; they solicit an inspection of their machines constantly on hand and in progress, and they can refer to parties of the highest position and respectability, as to the goodness and efficiency of their machines.—Estimates made for Exportation, or otherwise.—Drawings and prices on application.
February 16th, 1855.

HART AND SON,
IRONMONGERS AND MANUFACTURERS,

53, 54, & 55, WYCH-STREET, STRAND.
Illustrated Catalogues post-free on receipt of six postage-stamps.

THE DRAUGHT and DUST EXCLUDER, the cheapest and most effectual preventive for the purpose, being merely glued round the frames in which doors and windows are embedded, so that they press against it. Price from 3s. to 3s. according to size and colour, per gross yard.
Sold at H. HELBRONNER'S, Sole Patentee, 265, Regent-street, London.

FIRE-PROOF CONSTRUCTION.—FOX and BARRETT'S PATENT.
This improved system of fire-proof construction has been most extensively adopted, and its application has been extended to nearly EVERY DESCRIPTION OF BUILDING, whether public or private.
The system combines ECONOMY, with great simplicity of construction, perfect security from fire, increased durability, and many other important advantages.
The floors and roofs are formed by a combination of joists of wrought or rolled iron with concrete; so constructed that each floor becomes in effect a beam of artificial stone, with ribs of iron; the structure possessing great strength and rigidity, and forming a fire-proof foundation adapted to receive a finished surface, either of the ordinary deal-boards, or of cement, asphalte, tiles, slate, or other material.
Some of the largest and most important buildings in the kingdom are now in course of erection upon this principle, which is recommended to the notice of all who are interested in building, both as superseding the necessity for cast-iron girders and brick arches, and as bringing the great desideratum of fire-proof construction, even for ordinary dwelling-houses and domestic buildings, within the reach of every one.
Further information may be obtained of the Proprietor of the patent.—Mr BARRETT, 12, York-buildings, Adelphi.

DESTRUCTION of WAREHOUSES at MANCHESTER, by FIRE—Messrs. Rylands and Sons' Books, Papers, and Bank-notes preserved in one of CHUBB'S SAFES, after fourteen hours' exposure to intense heat.
COPY OF MESSRS. RYLANDS AND SONS' TESTIMONIAL

"24, High-street, Manchester, March 6th, 1854.

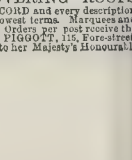
"Messrs. Chubb and Son,

"Gentlemen,—We have great pleasure in communicating to you, that the large 'Patent Fire-proof Safe' that we purchased from you 12 years ago, for our late offices in New High-street, has been the means of preserving our books, cash, notes, &c., enclosed therein, on the evening of the 1st of March, when our entire premises were destroyed by fire. The safe, after being subject to fourteen hours' intense heat, was unlocked on the morning of the 3rd of March; the locks all answered to their respective keys, and all the contents (the contents receipted) was that only some of the books were slightly singed at the edge.

"You are at liberty to make what use of this communication you may think proper.

"We are, Gentlemen, yours respectfully,
"RYLANDS and SONS."

CHUBB'S LOCKS, with all the recent improvements; Cash, Deed, and Paper Boxes, of all sizes; Fireproof Safes and Chests; Iron Doors and Frames for Strong Rooms; all fitted with the Detector Lock. Complete Illustrated Lists, with prices and sizes, will be sent on application.
CHUBB and SON, 57, St. Paul's Churchyard, London; 28, Lord-street, Liverpool; 16, Market-street, Manchester; and Horsley-fields, Wolverhampton.



BUILDERS, Contractors, Carpenters, and others are invited to inspect the stock of NAILS, TOOLS, BRASS, AND GENERAL IRONMONGERY at PEELL and SIDDALL'S,
Nos. 5 and 6, BROAD-STREET, BLOOMSBURY.
The prices will be found the lowest, and the stock one of the largest in the trade. A price list sent on application.

TO BELL-HANGERS, GAS-FITTERS, IRONMONGERS, &c. &c.—The Trade supplied on the best terms with House Bells, Zinc, Tube, and Copper Wire. Gas Pendants, Brackets, and Joints of all descriptions for Gas-fitting, in Brass and Iron; Bell Pulls, Composition, Iron and Brass Tubing, Cornice-poles, Rings and Lacquered Case Tube for Picture Rods, Desk Rails, &c. &c.
Superior Rolled Brass for Engravers, Castings in Fine and Common Brass, Gun Metal, &c. &c.
RICHARD KEYSER'S Brass and Bell Foundry and Metal Warehouses, Nos. 10, 11, and 12, Charles-street, Long-acre, London.

LIGHTNING CONDUCTORS.—R. S. NEWALL and CO. Patentees of the Copper Rope Lightning Conductor for the public, military, &c. that they supply Lightning Conductors, with the point and all staples complete for fixing, at on, shilling the foot.
R. S. NEWALL and CO.'s Patent Copper Rope Conductor is being used by architects, engineers, and scientific men in all parts of the world.
OFFICES.—Gateshead-on-Tyne.
139, Strand, London.
67, Hyde-park-street, Glasgow.
27, Dale-street, Manchester.

NAILS and IRONMONGERY, from BIRMINGHAM direct.—Builders, Contractors, and Others, supplied with Nails, Iron, and Ironmongery of every description, at the
LOWEST BIRMINGHAM PRICES.
a complete LIST of which will be forwarded upon application.
FREDERICK BLYTH,
Nail Manufacturer and General Factor,
Regent-parade, BIRMINGHAM;
or at 16, Gresham-street, LONDON.

TO BUILDERS, CARPENTERS, CABINET-MAKERS, &c.
JOHN DALE, 18 and 19, Chiswell-street, Finsbury-square, respectfully invites the above Trade, to the inspection of his immense stock of ironmongery, which surpassed in variety, quality, and cheapness by any house in London.

Elliptic Stoves, double backs, 3d. per inch, and upwards.

3-feet Cottage Ranges, with ovens and hot boilers, 25s. each.
3-feet self-acting ditto, ditto, 36s. each.
Air Bricks, 4s. per doz.
Best Town Glue, 5½d. Ditto, Scotch, 6½d. per cwt.
Best Patent Sash Line.

1	2	3	4	5	6
4s. 6d.	5s.	6s.	7s. 6d.	9s. 6d.	11s. per gross.

And every material required in the building, bell-hanging, upholstery, and brass-foundry trades on the most reasonable terms.
List of Prices had on application at the Warehouse, or by letter prepaid.

TO MANUFACTURING CHEMISTS, PLUMBERS, BUILDERS, &c.
ANDREW CLARK and COMPANY, PLUMBERS,
THE BEAR GARDEN LEAD WORKS, SOUTHWARK,
Sole Manufacturers of Debarnock's Patent Autogenous Soldering Apparatus, invite the attention of Manufacturing Chemists to their Patent method of
UNITING LEAD TO LEAD WITHOUT SOLDER.
Leaden Chambers, or any leaden vessels, made or repaired by this process, making them complete, without the introduction of any foreign metal.
PLUMBERS and BUILDERS can be SUPPLIED with SHEET LEAD and PIPE, cut to any dimensions, and EXCHANGED for OLD LEAD, on the LOWEST TERMS.

TARPAULINS for COVERING ROOFS during Repairs, SCAFFOLD CORD and every description of ROPE used by Builders upon the lowest terms. Marquees and temporary Awnings on sale or hire. Orders per post receive the most prompt attention. WILLIAM PIGGOTT, 115, Fore-street, City, Manufacturer, by appointment, to her Majesty's Honourable Board of Ordnance.

WHITE OXIDE OF ZINC AND ZINC PAINT.
(LANGSTON SCOTT'S PATENT.)

CROWLEY, WHITE, AND CROWLEY, *Sole Manufacturers.*

This healthful substitute for White Lead, of unrivalled colour and texture, may be obtained from most of the principal Paint Grinders, Oil and Colourmen, and Ship Chandlers in the United Kingdom, or direct from the Works, Grand Surrey Docks (Wholesale under Brand), either in the dry state or ground in Oil.

Zinc white, being unchangeable in colour, stands pre-eminent for the highest purposes of Art; and from its perfectly pure and innoxious qualities, is peculiarly applicable to first-class Decorations and House Painting. For Iron it possesses great affinity, and hence its preservative properties for that Metal, whether employed for Marine or other purposes. It no longer requires to be successfully employed on Stucco, or any other outside work for which White Lead is used; it sets harder, is consequently more durable, economical in first cost, and covers equal to any known pigment.

PRICE LIST AND TESTIMONIALS FORWARDED IN ANSWER TO LETTERS ADDRESSED TO

MESSRS. CROWLEY, WHITE, AND CROWLEY, 39, KING WILLIAM-STREET, CITY, LONDON.

HUBBUCK'S PATENT WHITE ZINC PAINT,
The Permanent White of the Ancient Artist.

HUBBUCK and SON, the Original Manufacturers of White Zinc Paint on a large scale in this country, are enabled, by a process, which is patented, to supply their Pure White Zinc Paint at the price of White Lead. These direful maladies, paralysis and painters' colic, will be entirely avoided. It is entirely free from any poisonous or injurious property. Neither exposure to heat, nor tropical climates act upon it. The Powdered White Zinc may be had for grinding in Oil: also for Plaster Decorations, and where it is used with Varnish, &c. To be had of the Wholesale Paint-dealers in Original Packages, each cask stamped "HUBBUCK—LONDON—PATENT." And if not so marked the quality is not guaranteed. Full particulars may be had of THOMAS HUBBUCK and SON, the Original Wholesale Manufacturers in this country. Paint and Varnish Works, Upper East Smithfield, opposite the London Docks.

THE VIEILLE MONTAGNE ZINC MINING COMPANY'S PURE PATENT WHITE ZINC PAINT is unequalled for permanency of colour, hardness, and brilliancy of surface; it is unaffected by sulphureous or any other vapours or emanations. Being completely innocuous and free from the pernicious effects of white lead, it may be employed in all apartments whilst in use without any inconvenience to the inmates.

The greatest caution is recommended to avoid any spurious compounds that might be sold at cheap rates as Pure Oxide of Zinc. If any adulteration has taken place in the oxide, either in consequence of impurity in the material primarily made use of to produce it, an imperfect mode of production, or by mixing with the oxide certain substances calculated to give it increase t weight, it then produces a very inferior instead of a very superior paint, and the economy realised by the purchasers of such oxides becomes a very expensive result to the owner of the premises painted with them.

The VIEILLE MONTAGNE'S ZINC OXIDES, dry or ground in oil, are sold with the VM mark—in Hull by Messrs. BLUNDELL SPENCE, and CO.; when ground and dry, by Messrs. T. B. MORLEY and CO. and by the Company's Grinding Agents, in London, Messrs CHARLES DEVAUX and CO. Wholesale Agents, 62, King William-street City; FREDERICK BRABY, Wholesale and Retail Agent, 8, Tottenham-court, New-road. In Manchester and Liverpool, by Messrs. LAWFORD and CO. of 49, Norfolk-street, Liverpool, who are also acknowledged Painters to the Company for Zinc Paints, and undertake painting ships, warehouses, dwelling-houses, &c. In Leith, by Messrs R. ANDERSON and CO. Timber-bush. Dry OXIDES and PAINTS, in kegs of 14, 28, and 56 lbs. and upwards, to be had of the Company's Agents in Birmingham, Newcastle, Glasgow, Bristol, Plymouth, Portsmouth, Norwich, Ipswich, Poole, and the Isles of Jersey, Guernsey, Man, and Wight; also in Dublin, Cork, and Belfast.

The Company also employ an acknowledged Painter in London, who will undertake any description of painting with Zinc Paint by contract.

For further particulars, apply to the Company's General Agent in London, Mr. SCHMOLL, 12, Manchester-buildings, Westminster.

PORTLAND CEMENT.—ASPDIN'S PATENT.

Messrs. ASPDIN, ORD, and CO. have much pleasure in informing consumers of this valuable Cement, that they have, by means of a recent discovery patented by Mr. ASPDIN made improved the quality of this Cement without any increase in price.

Engineers and architects are recommended to specify "Aspdin's Patent," as there are various imitations sold as Portland Cements resembling it only in colour.

ASPDIN, ORD, and CO. beg to call attention to their SECOND QUALITY, which is equal, if not superior, to most of the Cements sold as Portland, and is considerably cheaper.

A report of experiments made to prove the extraordinary strength of their Patent Portland Cement, may be had at their Office, New Wharf, Abingdon-street, Westminster; at their Works, Gateshead-on-Tyne; at Messrs. Rosher's Wharf, Holland's-buildings, Blackfriars, Kingsland Basin, and Limehouse; or from their Agent, Mr. HENRY ROBINSON, 31, King-street, Liverpool.

PORTLAND CEMENT.—JAMES WESTON having enlarged that portion of his CEMENT WORKS on Mill-wall, Poplar, for Manufacturing the above CEMENT, begs to inform the Trade in general that they can be supplied with any quantity they may require, either at his Works, St. Andrew's Wharf, Earl street, Blackfriars, or Middle Wharf, Scotland-yard, Westminster. Manufacturer of Roman, Lias, and Mastic Cements, English and French Plaster, &c.

6, South Wharf, Paddington.

PORTLAND CEMENT.—CHARLES RICHARDSON has the greatest confidence in introducing to the Trade the above superior CEMENT, being of uniform colour and quality,—a desideratum never before attained in Portland Cements. It possesses extraordinary crystalline qualities, resists the action of frost and heat, and is more durable than any other Cement; does not vegetate, turn green, or crack; combined with which, its eminent hydraulic properties stamp it at once as the first Cement of the day for work where all the above qualities are requisite. It is manufactured on the only principle Portland Cement can be, and contrary to the statements put forth by those who have hitherto had the monopoly.—Manufactured by R. GREAVES, Esq. at the Works, near the River Avon, and sent to all parts of the kingdom per boat or rail, at a reduced price to the trade.

PORTLAND CEMENT.—FULLWOOD THOMPSON and CO. beg to request the attention of Contractors, Merchants, and others, to the quality of their Roman, Portland, and Bath Cement, which they are manufacturing at their works, situate on the Bristol and Exeter Railway, two miles north of Bridgewater, and adjoining the Bristol Wharf, on the river Parrett.

These Cements are, they believe, the best for any purpose now in the market; they will set under water in a few minutes, and are insensible to extremes of heat or cold. The material used is such as will produce a certain and unvarying cementitious power, and a consequent regularity, the want of which is so obvious in Cements manufactured in the ordinary method.

FULLWOOD THOMPSON and Co. will be happy to forward prices by post on application, and can offer favorable terms to large purchasers and exporters.

Dated St. Mary-street, Bridgewater, July 26th, 1854.

SOUTHAM BLUE LIAS LIME WORKS. OLDHAM and TATHAM have the pleasure of announcing to Engineers, Architects, Builders, and Contractors, that they have erected extensive works near Southam, for the manufacture and grinding of BLUE LIAS LIME, the value of which is now so universally admitted, especially for hydraulic purposes, concrete, &c. &c.; and they most respectfully solicit orders.

O and T. can deliver by their own boats, or by rail to any part of the kingdom.

Office, Warwick.

SOUTHAM CEMENT WORKS.—OLDHAM and TATHAM respectfully request a trial of their PORTLAND, ROMAN, and LIAS CEMENTS, which they do not hesitate to pronounce as good as any now in the market. Their unvarying cementitious properties will ensure regularity in colour and quality.

Office, Warwick.

PORTLAND CEMENT WORKS, NORTHFLEET, KENT.—Messrs. ROBINS and CO. with much pleasure announce to their Friends and the Public, that they have completed the enlargement of their works, in order to meet the great increasing demand for their Cement; and are now prepared to supply any quantity of the very best PORTLAND CEMENT, manufactured by them for all the purposes Cement is applicable.—Orders received at Great Scotland-yard, and at the Works.

KEENE'S and PARIAN CEMENTS and FRENCH PLASTER, for internal uses These well-known hard Stuccoes dry quickly, and can be painted upon within a few days.—Made and sold by JOHN BAZLEY WHITE and BROTHERS, Millbank-street, Westminster.

PARIAN CEMENT, for Internal Use, to be painted in a few hours, and papered within a couple of days. FRANCIS, BROTHERS, Manufacturers of Roman, Parian (under patent), and all other Cements in use for building purposes, Nine Elms, London.

GEO. & THOS. EARLE, CEMENT MANUFACTURERS, HULL.—Light and Dark, equal to any made Manufacturers also, and Dealers in Plaster, Paris White, Mastic, Hair, Lias Lime, Laths, Slates, and Slate Slabs Fire-bricks, Grindstones, Cement Chimney-tops, ditto Vases, Ridging, &c. Paints, Stucco, &c. Marble Merchants and Importers of Pozzolano.

ARTIFICIAL HYDRAULIC or PORTLAND CEMENT combines the valuable qualities of the natural Cements with the additional advantage that it greatly excels them in its cementitious properties; that it is not affected by frost, and does not vegetate in damp situations. Account of COMPARATIVE EXPERIMENTS on the strength of this and other Cements (read at the Institute of Civil Engineers), to be obtained from the Makers, JOHN BAZLEY WHITE and BROTHERS, Millbank-street, Westminster, who prepare one quality only of Portland Cement.

ATKINSON'S CEMENT, so long known and esteemed in London for plastering purposes, is a quick-setting Cement, that requires no colouring.—Sold exclusively by JOHN BAZLEY WHITE and BROTHERS, Millbank-street, Westminster; and Seel-street, Liverpool.

CEMENT.—ROMAN and PORTLAND CEMENTS, and PLASTER of PARIS, manufactured by C. J. HILTON, can be had in any quantity, wholesale and retail, at his wharf, 6, Upper Thames-street, London; and also at the manufactory, Faversham, Kent.—N.B. These Cements supplied for shipment, on advantageous terms.

GREAVES'S BLUE LIAS LIME.—The superior manner in which the above is ground renders it cheaper for concrete or stucco than any other lime or cement. The whole of the mortar is burnt on an improved principle, leaving scarcely any core. The satisfaction constantly expressed by Engineers, Architects, and Contractors, of the above, is its best recommendation.

Gibbs, Canning, and Co.'s Blue Vitrified Bricks, Pipes, Junctions, Bends, and Fire Goods.

ROMAN, PORTLAND, PARIAN, ANSTON, and LIAS CEMENTS of the best quality.

SEGUNTS, PAVIORS', STOCKS, and other BRICKS.

CHARLES RICHARDSON, 6, South Wharf, Paddington.

MAW'S ENCAUSTIC TILE PAVEMENTS—a highly durable and decorative substitute for ordinary Boarding and their perfection as oil-cloth coverings; for entrance-halls, passages, verandahs, conservatories, &c.

MAW and Co. send, free of expense, their pattern and price book, with designs, to any given spaces (and estimates), free of expense.

BENTHALL WORKS, BROSELEY, SALOP

PEAKE'S TERRO-METALLIC TILES, PIPES, &c.—Notice is hereby most respectfully given, that the LONDON DEPOT for the WARE is REMOVED to No. 21, WHARF, Macclesfield-street North, City-road Basin. Secondly, that the trade term, "TERRO-METALLIC," is the exclusive right of the Proprietor; and, thirdly, that the 'REWARD OF MERIT JURIES," page 331, of the Great Exhibition, rank the Manufactories known so long as "The Tileries," Tunstall, Staffordshire, as the first of the kind in the world.

BRICKS, &c.—500,000 good well-burnt CLAMP BRICKS for SALE.—For particulars, inquire of Mr. HENRY MULETT, West-street Brewery, Horsham, Sussex. Also some PLOTS of GROUND, well adapted for building purposes, either TO BE SOLD or LET, situated within 300 yards of the Three-bridges Station on the Brighton Railway.—Apply as above.

TO BRICKMAKERS AND OTHERS.

TO BE LET or SOLD, with immediate possession, a BRICKFIELD in full work, with plant for two stools and some prepared earth It is 15 miles from London, near a market-town, with good local consumption, on a railway, and but a mile from a canal. The whole stands on the field are of the best description, and samples may be seen and further particulars had on application to Messrs. H. BROWN and T. A. ROBERTS, 22, Throgmorton-street, City.

BRICKFIELD.—TO BE LET, for a term of years, at a royalty rent, a BRICKFIELD, near Milton, next Sittingbourne, containing a large quantity of the finest brick earth, with suitable dwelling-house, sheds, stable, &c. A large quantity of earth is dug and soiled. There is an abundant supply of water.—Apply to Mr. T. CLARK, Solicitor, 3, Dean's-court, St. Paul's Churchyard.

GREAT NORTHERN WHARF, York-road, King's-cross.—WHITE BRICK and TILE DEPOT.—L. B. PEARSE and CO. Brick, Tile, Lime, and Cement Merchants. Builders, contractors, and others supplied with every description of building material at the lowest market prices.

BRICKS.—Malm Cutters, Yellow and Pale Seconds, Paviors, and Pickings, of good and sound quality, constantly on sale at H. DODD'S Brickfields, which are only a quarter of an hour's walk from the City. H. D. earnestly requests purchasers to favour him with a visit, in order to inspect his stock, and to judge for themselves.

Malm Place, half-and-half Stocks, and Place Bricks, also on sale. These bricks are sound, well burnt, and unusually free from defects; a very large proportion of the stock being suitable for external facing.

Apply to HENRY DODD and CO. at the Counting-house, Hoxton Brickfields, Grange-walk, near the Rosemary Branch, Hoxton.

N.B. Light-coloured Pit Sand of approved quality constantly on sale upon reasonable terms. This Sand, from its not containing any saline matter, is acknowledged to be preferable to river sand

MILLS and PRICE, Brick and Stone Merchants and Agents, very respectfully announce, that their business, hitherto conducted at 37, Newington-crescent, Newington-butts, will, from MONDAY, the 11th inst. be carried on at 5, ADELAIDE-PLACE, LONDON-BRIDGE.—Dec. 8, 1854.

BRICK-MAKING EXTRAORDINARY!! BY OATES AND INGRAM'S PATENT MACHINE.

TO CAPITALISTS AND BRICKMAKERS.

Messrs. OATES and INGRAM beg to announce, that the above powerful and effective machine may be seen (by order only) in daily operation at the works of the Vaughton's Hole Brick Company, near Birmingham.

The great advantages possessed by this machine over all others are, no tempering is required.

The bricks are produced at the rate of twenty-five per minute, smooth on the surface, being pressed in moulds, and sufficiently dense to be backed up in ranks before leaving the machine, which is entirely self-acting, consequently requires only the labour of feeding and carrying off.

Applications either to view the machine, or for the purchase of the patent right for counties or for royalties, to be addressed, T. WELLS INGRAM, Engineer, Birmingham; or to J. P. OATES, Inventor and Patentee, Lichfield.

WHITE SUFFOLK and RED FACING BRICKS.

COWLEY, KENT, and ESSEX BRICKS.

Also Yellow and Pale Malm Seconds, Cutters, Paviors, Shippers, &c.

KENTISH RAG-STONE of the FINEST QUALITY.

MILLS and PRICE (successors to Mr. Benjamin Gough), 5, ADELAIDE-PLACE, LONDON-BRIDGE.

TO BRICKMAKERS.—The whole of a nearly new BRICKMAKING PLANT for SALE by Private Contract, comprising two pug-mills, twenty-one off-bearing and crowding barrows, planks, breeze barrows, and all necessary utensils.—For terms, apply to Messrs. BLAKE, Croydon

O. MCCARTHY, CARMAN, and SAND and CEMENT MERCHANT, Whitefriars Wharf, Whitefriars, Fleet-street, City. Sand, from above or below bridge, delivered by the yard or per barge. Ballast screened or unscreened, by the yard or per barge. Bricks, lime, and old bricks. Dry rubbish delivered per barge, in any quantity, alongside the Thames.

SMOKY CHIMNEYS CURED EFFECTUALLY for TEN SHILLINGS, by SUTCLIFFE'S PATENT WIND-GUARD.—This Guard allows free egress to the smoke, prevents the wind blowing down the mouth of the chimney, and is not liable to be injured by the most boisterous weather.

To be had of Ironmongers and Builders; and of the Patentee, at his Office, 65, Fenchurch-street, London.

INDIA-RUBBER SPRINGS for DOORS, and for WINDOW BLINDS.—R. E. HODGES'S PATENT INDIA-RUBBER ACCUMULATORS, each supplied with proper metal fittings, and printed directions for fixing.

Size A for half doors and light doors ..... 1s. 3d. each.
" B for strong house doors ..... 1s. 6d. "
For window blinds ..... 1s. 6d. "

They are easily fixed, work soft as air, and may be stretched to six times the length of the rubber if required.

N.B. A liberal allowance to the trade. Warehouse of the Patentee, 44, Southampton-row, Russell-square.

TO ARCHITECTS AND OTHERS.

MR. EDWARD L. PARAIRE is desirous of Meeting Gentlemen who require COLOURED ARCHITECTURAL DRAWINGS, External, Internal, Isometrical Perspectives got up; outlines of same neatly coloured, with background, on terms that will insure approval. Temporary assistance given in getting up Plans, Elevations, Sections, Details, and Working Drawings.—Mr. E. L. P. makes a consideration in his charge where competation drawings prove unsuccessful.

Address, 6, Rathbone-place.

GUTTA PERCHA TUBING.—May be buried for years, without injury, and it is therefore valuable for conveying water, chemicals, &c. It is peculiarly valuable for liquid manure, drain, and soil pipes. Being a non-conductor, it is not affected by the frost of winter or drought of summer, like metal or leather. Its strength is extraordinary; the small half-inch diameter tubing having resisted a pressure of 350 lbs on the square inch, without bursting. The smaller sizes may be had in 100 feet, and the larger in 50 feet lengths. The joints are easily made. As a conductor of sound it is most valuable for conveying messages in lieu of bells. ELECTRIC TELEGRAPH WIRES INSULATED WITH GUTTA PERCHA.—GUTTA PERCHA COMPANY, Patentees, 18, Wharf-road, City-road, London.

HANCOCK'S PATENT VULCANIZED INDIA-RUBBER TUBING, HOSE-PIPES, WASHERS, ENGINE PACKING, both round and flat, and SOCKET-RINGS, for Hot-water-pipes. Vulcanized Rubber Door-springs, and Solid Round Rubber Cord of all sizes of any length. Billiard Cushions and Rubber Strips cut to any pattern for bagatelle tables.

Diving-dresses of superior make, and improved Vulcanized Rubber Supply-pipes for ditto.

Vulcanized Rubber in sheets, from three to four feet wide, and of any thickness. Air-beds, Pillows, and Cushions inflating Portable Baths, Invalid Cushions, and Articles of this kind made to any pattern to order.

N.B. All communications and orders punctually attended to, addressed to the Manufactory, JAMES LYNE HANCOCK, Goswell-mews, Goswell-road, London.

LADDERS, BARROWS, &c. for SALE or HIRE.—GEORGE ELL, 3, Tottenham-court, New-road, opposite baths, brewers, and manufacturers of every description, may be supplied with any quantity, by DAVID GREENLEY, Civil Engineer and Patentee of Boring Tools, 10, Cumming-street, Pentonville. Pumps and machinery for raising water from deep wells, boring-tools, and well-pipes for exportation. Men and tools supplied to bore for railroads, minerals, &c.

ARTESIAN WELLS, Boring for Water, Sinking Shafts, &c. The nobility, gentry, water-companies, towns, baths, brewers, and manufacturers of every description, may be supplied with any quantity, by DAVID GREENLEY, Civil Engineer and Patentee of Boring Tools, 10, Cumming-street, Pentonville. Pumps and machinery for raising water from deep wells, boring-tools, and well-pipes for exportation. Men and tools supplied to bore for railroads, minerals, &c.

PAPIER MACHE AND CARTON PIERRE ENRICHMENTS MANUFACTORY,

49 & 50, RATHBONE-PLACE.

GEORGE JACKSON AND SONS

Beg the attention of Architects, Builders, Decorators, and others, to their large assortment of ENRICHMENTS in every style, executed in the highest class of art. Enrichments for ceilings of every period, elaborate or simple, Gothic, Elizabethan, pendentive or flat, Louis XIV. in much variety, and to any degree of cost; Italian and Greek, Renaissance, and many modified characters, executed for the first houses, and from designs of architects of the highest eminence; wall dressings, rich panels of every period, rich Elizabethan and Gothic Dados, in many designs. Door-caps, mouldings, and dressings.

A large assortment of Gothic Bosses to many varied intersections of all sizes, tracery and panel headings for church works, organ dressings, of most periods, and faithfully executed to the traits of each. The general decorations of Drawing and Dining Rooms, Libraries, &c. of very considerable extent, as furniture, glass frames, tables, window cornices, screens, candelabra, and the whole range of accompaniments to reception-rooms of the first class, as well as more subdued.

The facilities and repeated enlargement of means enable GEORGE JACKSON and SONS to announce the execution of works of the above descriptions in these advantageous materials at a cost considerably below any known method, while for quality, relief, and finish, they flatter themselves they stand unrivalled.

DESIGNS MADE FOR ANY WORKS.

PAPIER MACHE AND CARTON PIERRE WORKS, 49 & 50, RATHBONE-PLACE, LONDON.

SOUND and its PHENOMENA.—By the Rev. E. C. BREWER, D.D. Trinity Hall, Cambridge. Author of "Guide to English Composition" (5s. 6d.); "Poetic & Chronology" (as 6d., &c.

"The phenomena of sound are here explained in a manner at once clear and simple, and calculated to arrest the attention of the student. The subject treated of are as wide as the science of acoustics, which, according to the author's definition, is a part of physics which embraces whatever pertains to the cause, the nature, the construction, and the laws of sound. It shows how it is produced and what physical changes take place in order to produce it. It explains how it is communicated to the air; how it is propagated in round and in media; and how the sensation is registered on the organ of hearing. It treats of music so far forth as that science is connected with physics, embraces in its range the mystery of echo; pronounces the curious workmanship of the ear; pries into the mechanism of the voice; and explains how buildings should be constructed so as to prevent the transmission of sounds into continuous rooms, and so as best to favour the orator and the musician." *Athenæum.*

CHILDE HAROLD'S PILGRIMAGE.

By LORD BYRON.

*** This Edition has been undertaken with the concurrence of the Council of the Art Union of London, expressly for the use and benefit of the Members, who may desire to bind up with their Part of Lord Byron's Poem the set of Illustrations which are about to be issued to the Subscribers (1855).

Early application should be made for this Edition, as only a limited number will be printed, regulated by the Orders received by the Booksellers previous to the 31st March, 1853, on which day the Subscription List of the Art Union of London closes.

Price to Subscribers of the Art-Union of London, 10s. 6d.—Non-Subscribers, 14s.

JOHN MURRAY, Albemarle-street.

Price 1s.

THE GILBART PRIZE ESSAY, on the application of recent inventions collected at the Great Exhibition of 1851, to the purposes of Practical Banking, with illustrations, specimens, &c.

By GRANVILLE SHARP.

"In the general arrangement of the business department, the Architect availed himself of various useful hints in Mr. Gilbart's Prize Essay on Banking" —*The Illustrated London News*, on the New Bloomsbury Bank.

London: GROOMBRIDGE, 5, Paternoster-row.

This day is published, price 1s.

A PAMPHLET, containing the First Annual Report of the ASSOCIATION for PROMOTING IMPROVEMENT in the DWELLINGS and DOMESTIC CONDITION of AGRICULTURAL LABOURERS in SCOTLAND.

To which are added, PRACTICAL HINTS on COTTAGE BUILDING, with Engravings Plans and a General Specification.

By WILLIAM BUCHER, Architect to the Association.

Sold by WILLIAM BLACKWOOD and SONS, Edinburgh and London, and all Booksellers.

THE FREEMASONS' MONTHLY MAGAZINE. Price 1s. A Specimen Number will be sent on receipt of six postage-stamps (the cost of postage). No. III. for March, just published.

GEO. ROUTLEDGE and CO. Farringdon-street; and R. SPENCER, 314, High Holborn.

FREE TRADE in BOOKS.—S. and T. GILBERT beg respectfully to inform the Public, that they supply all Books, Magazines, Reviews, and Periodicals published at 1s. and upwards, at a reduction of 2d. in the Shilling for cash. Country orders executed on the same terms, and delivered on the following morning, at a charge for postage of 6d. for each lb. or fraction of a lb. weight. School and export orders promptly attended to. Please note the address—S. and T. GILBERT, Booksellers, 4, Corphali buildings, Moorgate street.

ARCHITECTURAL and ENGINEERING BOOKS.—Published on the 1st of MARCH, E. and F. N. SPON'S CATALOGUE of BOOKS, new and second-hand, relating to Architecture, Civil and Mechanical Engineering, and Trades and Manufactures. Gratis, and post-free to all parts of the world.

E. and F. N. SPON, Scientific Booksellers, 16, Bucklersbury, London.

BANK of LONDON.—Capital 600,000*l.* (with power of extension to 2,000,000*l.*) in 6,000 shares of 100*l.* each, 50*l.* payable per share, viz.: 10*l.* upon allotment, and the remainder before or upon Incorporation; in pursuance of the Provisions of the Statute for regulating Joint-Stock Banks.

BOARD OF DIRECTORS.

Sir John Villiers Shelley, Bart. M.P. 25, Park-lane, and Maresfield-park, Sussex.

VICE CHAIRMAN.

(To be appointed by and from the Directors.)

John Edmund Auderdon, Esq. 10, Devonshire-terrace, Hyde-park.

Thomas Gooch, Esq. (Gooch and Cousens, London-wall), Brixton-rise

Jeremiah Greatorex, Esq. (Bradbury, Greatorex, and Co. Aldermanbury), Spring-hill house, U. per Clapton

Alexander Constantine Ionides, Esq. Consul-general of Greece (firm of Ionides, Segeda, and Co. Gracechurch-street.

Charles Joyce, Esq. (firm of Charles Joyce and Co. Moorgate-street), Gloucester-gardens, Hyde-park.

Henry Morris, Esq. late of the Madras Civil Service. 23, Markhane, City.

Henry Muggeridge, Esq. Alderman and Sheriff of London, St. Andrew's-hill, City, and Streatham-common, Surrey.

Alfred Wilson, Esq. (Venables, Wilson, and Tyler, Queenhithe) Fir-grove, Weybridge, Surrey.

With power to add to their number, until the first general meeting.

MANAGER.

The Bank Manager will not be appointed until the Directors shall have had the amplest opportunity of selecting for that important position a gentleman of first-class qualifications.

SECRETARY AND PROVISIONAL MANAGER.

Benjamin Scott, Esq.

SOLICITORS.

Messrs. Tyrrell, Paine, and Layton, Guildhall-yard.

BROKERS.

Messrs. J. W. and S. R. Scott, 73, Old Broad-street.

Francis Cope and Co. 7, Lothbury.

AUDITORS

To be selected by and from the body of Proprietors.

OFFICES TEMPORARY.

41, Moorgate-street, City, whe a prospectuses, with full particulars, may be obtained.

The Bank of London has been projected for the purpose of affording increased facilities for Banking in the Metropolis and the Provinces, upon the Joint-Stock principle.

Applications for Shares, addressed to the Secretary, at the Office of the Company, or to the Brokers, will be received up to and including the 31st instant.

As it will be to the interest of the Bank to have a numerous Proprietary, applications for small allotments will receive the favourable consideration of the Directors.

41, Moorgate-street, City, February 13, 1853.

FORM OF APPLICATION FOR SHARES.

To the Directors of the Bank of London.

GENTLEMEN,—I request you will allot me ..... Shares of 100*l.* each in the Bank of London, and I hereby undertake to accept the same, or any smaller number which you may allot to me, and to pay the Deposit of 10*l.* per Share thereon, and execute the Deed of Settlement of the Company in respect thereof, at such times and in such manner as you may appoint.

I am, Gentlemen, your obedient servant.

Name .....
Address .....
Profession or Business .....
Date .....

N.B. Every application for Shares must (in the case of persons not known to the Directors or Officers of the Bank) be accompanied by a good banking, commercial, or professional reference.

BANK of LONDON.—Temporary Offices, 41, Moorgate-street, City. March 1, 1853.

The public are requested to take notice, that APPLICATIONS for SHARES in this undertaking must be made on or before MONDAY next, the 5th instant, by order.

BENJAMIN SCOTT, Secretary and Provisional Manager.

MONEY to LEND upon MORTGAGE.—To BUILDERS and OTHERS.—5,000*l.* ready to be immediately LENT in one or smaller sums, upon good FREEHOLD security, not parted with, repayable by instalments, to Mr GEORGE CLARKSON, 48, Penton-street, Pentonville.

MONEY.—230,000*l.* are ready to be LENT, in various sums at a moderate rate of interest, upon mortgage or otherwise.—Apply to N. WHITE, Esq. Architect 38, Lincoln's-inn fields, London. None but principals or their solicitors will be treated with

TO BUILDERS.

A CAPITALIST wishes to invest the sum of 2,000*l.* at 4 or 5 per cent. by way of MORTGAGE on good LEASEHOLD or FREEHOLD HOUSES, well built and tenanted, at rents not less than 100*l.* per annum.—Apply by letter to Z. care of G. J. RHODES, Esq. Architect, Lincoln's-inn-fields chambers.

BUILDERS' ADVANCES OFFICE, for supplying LOANS to BUILDERS in large or small amounts, on more equitable terms. Proposals to be made to the Surveyor, Mr. K. KERR, 41, Coleman-street, City.

PATENT SOLID SWISS PARQUETERIE. This beautiful, unique, economical, and elegant description of Flooring, so extensively used in Paris and other continental cities, is now in GREEN'S WHOLESALE WAREHOUSES, 88, GREAT PORTLAND-STREET, Oxford street, where you can select from the LARGEST and MOST EXTENSIVE Assortment in the Kingdom, THIRTY PER CENT. CHEAPER than any other house in the trade. Builders, Decorators, Dealers, and large consumers will do well to visit this establishment.

PAPER-HANGINGS.—The CHEAPEST HOUSE in London for every description of PAPER-HANGINGS is GREEN'S WHOLESALE WAREHOUSES, 88, GREAT PORTLAND-STREET, Oxford street, where you can select from the LARGEST and MOST EXTENSIVE Assortment in the Kingdom, THIRTY PER CENT. CHEAPER than any other house in the trade. Builders, Decorators, Dealers, and large consumers will do well to visit this establishment.

The Builder.

SATURDAY, MARCH 3, 1855.

TO complete the illustration of the block of buildings recently erected in Threadneedle-street, London, between Finch-lane and the Royal Exchange, we give in our present number (p. 103) a view of the houses built respectively for Mr. Banister and Mr. Lemann. A view of the Australasian Bank, the other portion of the block, has already appeared. The first, which is built on land belonging to St. Thomas's Hospital, under the able direction of Mr. Henry Currey, architect, has been designed for the purposes of Mr. Banister's business, on the ground story, with a distinct entrance from Spread Eagle-court, leading to the upper floors, which are to be let as offices. This house has a frontage of 24 feet to Threadneedle-street, reduced in the rear to 13 feet 9 inches, and the average depth is 38 feet. The front is of Portland stone. The mouldings are nicely profiled, and there is a certain amount of originality about the elevation. The contract for the building was 3,020*l.* The builders were Messrs. Lucas, Brothers, of Belvedere-road, who have done their work exceedingly well.

Mr. John Shaw, of Christ's Hospital, was the architect of the adjoining premises, to which, faithful to the style he most affects, he has given, shall we call it, a Jacobean character; the roof being made a special feature.

The plan, which is very irregular in form, is strictly confined to the foundations of the old vestry of the extinct church of St. Benet Fink, and those of the line of old houses on the west side of Spread Eagle-court. The open piece of ground, westward, enclosed within the projecting sides of the building and a high iron railing, is the consecrated ground of the ancient churchyard.

The site for the new building, having a frontage of 50 feet towards Threadneedle-street, was a compensatory conveyance to Mr. Lemann in lieu of his freehold property upon the same site, as well as the portion now thrown into the public way.

The foundations for the new works having to support a very considerable weight, from the height of the superstructure, the architect decided upon going through the *débris* of all former erections, and placing the concrete on the maiden soil. The excavation in its progress passed through a mass of remains having a very miscellaneous character, and three distinct surfaces were found before the depth of 12 feet was attained. The first was formed of a close hard concrete of broken tiles and lime; the second was a rough pavement of flints, upon a concrete bed not so well formed as the last, and from the charred embers of various kinds that lay on this surface, it seemed highly probable that fire had destroyed the building whatever it might have been that formerly stood over it. The third surface was formed of rough tesseræ of broken tile, placed on a concrete bed of six inches thick. This concrete was formed of pounded tiles and lime, with but little sand, and no gravel in it, which gave the concrete a very bright appearance, and it was very hard. There were no walls of any kind lower down than the level of the old foundations of the church, or vestry-room; part of which, running in the line of the present front wall, was so bound with grouted lime, that wedges and sledge-hammers were requisite for its removal. Imbedded within this mass of rubble, cut stones, part of the tracery of a Gothic window of the perpendicular period, were found, which had, no doubt, formed part of the church that stood here before the Great Fire.

From the nature of the soil removed, the site must have been frequently applied to that purpose best conveyed to our modern sense by the notice, "Rubbish may be shot here." In evidence, the first notable things turned up were numbers of those short-headed stout clay pipes, that the painters of the Flemish school make play so prominent a part in their boors' carousals. Lower down, about 9 feet from the surface, was found part of the cover of a stone coffin or tomb, marked by an Early English cross; and near the same spot another fragment of a monumental tablet of an earlier period; but of these no other portions could be found, though search was made. Below the depth of 10 feet it was evident that the Roman surface had been reached, and portions of vases, urns, and other earthenware of their workmanship began to turn up in succession to the fragments of German pottery of a more recent date: many of the former articles were nearly perfect, though all were more or less broken. These were found at various depths from 12 to 15 feet below the present surface, the whole being very irregular. The lowest portion excavated was at the north-east corner, where a pit was cleaned out to nearly 16 feet in depth: this pit gave evidence that oysters were in demand in those early days even as at present; the shells of that relished bivalve forming the lowest foreign material found, and whether they had been the refuse of an ancient British festival or that of a *fête* of some disciple of Lucullus, might have formed a nice question for archæologists. The maiden soil, when found, proved to be a mild, loamy clay.

The new building, which has been substantially erected by Messrs. Locke and Nesham, is partly devoted to the business of Mr. Lemann, whose biscuits have long been noted, and the other portion, with an entrance from Threadneedle-street, is intended for business chambers, having a stone staircase, with closet and water supply to every floor. The facing is of rubbed paviors, with dressings of red bricks and Portland cement; the light iron castings of the balconies, pilasters of shop-front, &c. have been well executed by Handyside, of Derby.

The view from the north-west windows of the upper floors, or from that portion of the roof is, under a favourable atmosphere, very picturesque, from the grouping of the architectural features there brought before the eye. Mr. Tite's "Exchange," Mr. Cockerell's "Sun," the many-authored "Bank," form a foreground; while for the distance there is the noble dome of St. Paul's, with Sir Christopher's gem, the spire of Bow Church, relieved against it.

In this same number of our journal, wherein is depicted a portion of new London, we illustrate a morsel of old London,—a portion of the ancient city wall behind the premises on Ludgate-hill now being altered for the Milton Club,—a vestige which takes us back to the earliest period in the history of "opulent, enlarged, and still increasing London." We are reminded of the time when 380 acres constituted London, and Ald Gate, and Bishop's Gate, and Cripple Gate, and Alder's Gate, and New Gate, and Lud Gate, gave the citizens egress to the pleasant country outside. If,—

> "The more than mortall man, that did this Towne begin,
> Whose knowledge found the plot so fit to set it in;"

as Drayton sings, in his "Poly-Olbion" (1612), could have seen it when the lines were written, he would not have had more reason to be astonished than Drayton would find now. Amongst all the changes observable, nothing could be pointed out more extraordinary than the increase which has taken place in the value of land, and the enormous price it now commands. To make this apparent, we have gathered together, with some pains, a few particulars in connection with the houses we have illustrated and their immediate neighbourhood. We need not go back to that time when a house "in *Gracious*-street, in the tenure of William Gurley," was worth 7*l.* 6s. 8d. per annum; another, in the parish of St. Botolph Without, 1*l.* 6s. 8d. and four tenements in the churchyard of St. Michael's, Cornhill, produced a total of 1*l.* 9s. 4d. per annum. So far as relates to the value of land in this locality in early times, we may content ourselves with saying that when Sir Thomas Gresham was about to build the Royal Exchange, in 1566, the City of London, according to Malcolm, advanced something more than 4,000*l.* for the purchase of *eighty houses and the land they stood on*,* which, when the houses were taken down, formed the site for the Exchange. When the building was finished, Gresham let the shops arranged round the area in the first instance at *40s. a year each, and soon afterwards at 4l.* 10*s.* To come, however, to modern times: the site now occupied by the Australasian Bank and Mr. Banister's house comprehended Nos. 16, 17, 18, and 19, Threadneedle-street, Nos. 14, 15, 16, 17, and 18, Finch-lane, and a small house in Spread Eagle-court, and the *rack rent* payable for these houses before their demolition was 1,036*l.* per annum. The area covered by these buildings was 5,750 feet superficial. The area now covered is 4,550 feet superficial, about one-fifth less, the remainder having been thrown into the street to widen it; and the *ground-rent* now payable is 1,568*l.* per annum. This sum is made up of two amounts.

The Australasian Bank, at the corner of Finch-lane, pays a ground-rent of 1,300*l.* a year for a superficial area of 3,774 feet; which ground-rent, taken at thirty years' purchase (being rather under the usual rate in the City) produces the sum of 448,000*l.* per acre.

The site of the house adjoining, built, as we have said, for Mr. Banister, is held at a ground-rent of 268*l.* per annum, and has a superficial area of 775 feet. This rent is equal to 11*l.* per foot frontage for a depth of 38 feet!—valued as above, it produces 450,000*l.* per acre. Take another plot in the same street: the site of the Imperial Insurance Office, immediately opposite, has a superficial area of about 3,000 feet, and cost 40,000*l.*—equal to 600,000*l.* an acre.

Some land in Finch-lane, opposite the Australasian Bank, recently let on a building lease by the Merchant Tailors' Company, produced about 15*l.* a foot as ground-rent, the depth being about 70 feet.†

The new buildings on the south side of Cornhill, recently erected by Messrs. Savory and the County Fire Office, are subject to a ground-rent of 1,200*l.* per annum. The frontage is about 54 feet, and the depth about 80 feet, and calculating as in former cases the cost per acre, amounts to 470,000*l.* Again,—the block of buildings called "Royal Exchange-buildings," occupying an area of from 4,000 to 5,000 feet, produces a gross rental of 10,000*l.* a year.

Travelling westward to New Cannon-street, a piece of land opposite the triangular plot adjoining St. Paul's, containing 4,500 feet superficial, has been let at a ground-rent of 1,550*l.* a year, which, at thirty years' purchase, produces about 460,000*l.* an acre. To cap them all, however, we must go back to the plot of ground at the north-east corner of Threadneedle-street and Finch-lane, belonging to Mr. Alderman Moon, the present Lord Mayor, which, report says, has been recently let at a ground-rent of 1,000*l.* per annum. The superficial area of this piece is about 1,600 feet, and calculating the

* "Londinium Redivivum."

† The South Sea House estate, at the other end of Threadneedle-street, was sold by auction on the 27th, for the sum of 55,750*l.* exclusive of the top-room of the Flower Pot Tavern. The buildings occupy about half an acre of ground.

ground-rent at thirty years' purchase, we find its value is at the rate of 840,000*l.* per acre!

Much has been written about the value of the triangular plot of land between New Cannon-street and St. Paul's, already referred to, and those who, following the value we assumed for it when we commenced the agitation, to prevent it from being covered with buildings to block out the view of the Cathedral, an object not yet attained—namely, 60,000*l.* have been subjected to some abuse. Events, however, have fully justified the opinion. The area of this plot is 6,270 feet, and we understand a positive offer has been made to take it at a ground-rent of 2,000*l.* a year, which would produce, at thirty years' purchase, the sum named (60,000*l.*) being at the rate of 420,000*l.* an acre.

We need scarcely give any additional examples to prove the enormous value to which land in the City of London has arrived.

REMAINS OF THE LONDON WALL, NEAR THE SITE OF THE BLACK FRIARS' MONASTERY.

IN a recent number of the *Builder*, we mentioned the discovery, while altering for the Milton Club-house on Ludgate-hill, of a fragment of Old London, of which we this week give an engraving, and which consists of the basement of a tower of solid masonry, about 20 feet wide and 13 feet deep, situated a little to the west of a part of the city wall, still remaining in St. Martin's-court, which has evidently been a part of the wall a little to the south-west of *Lud gate*.

Under the date May 1st, 1792, Smith, in his "Antiquities of London and Westminster," mentions that, after a fire which happened on the premises of Messrs. Kay, Ludgate-hill, fragments of a barbican, or watch-tower, were exposed.

"This tower," he says, "projected 14 feet north of the wall into the city ditch, and measured 22 feet from the upper stone of its ruins to the top." An engraving of this tower is given by Smith.

In Chamberlain's "History of London," he mentions that "Edward the First ordered the citizens to erect a new wall, to run from Ludgate westward, behind the houses in Fleet-ditch, and then south as far as the Thames, at the head of which was to be built a tower for the reception of his majestie." "Edward the Second, upon information that parts of the new London wall, near Ludgate and the tower, were not finished, issued his royal mandate to the mayor and citizens of London, enjoining them to use the utmost despatch in completing the same." The subject of our engraving is evidently the wall referred to both by Chamberlain and Smith.

Through the thickness of the basement of the tower a circular-headed passage has been cut, at a comparatively recent date. During the progress of the works were discovered a quantity of bones—skulls, horns, and teeth of animals—pottery of about the time of Edward the Fourth, a few coins, and, in the immediate neighbourhood of the bones, a portion of a Roman vessel (these latter were discovered a few yards north of the wall).

Lud gate, which it closely adjoined, was situated 797 feet south of Newgate. According to Geoffrey of Monmouth, it took its denomination from King Lud, who, according to this author, built it about the year 66 before Christ. This, however, is a very questionable authority.

This gate was in the year 1373 constituted a *free* prison for debtors—freemen of the City—and was greatly enlarged (according to some authorities) by Sir Stephen Forster, some time Mayor of London, who having himself been a prisoner in this place, when begging at the *grate*, was by a certain rich widow interrogated what sum would discharge him. He replied, 20*l.* which she generously disbursed; and taking him into her service, he, by application to business, gained the affections of his mistress, who made him her husband; and having greatly enriched himself by commerce, amidst his affluence bethought himself of the place of his confinement; and having acquainted his lady with his design, she readily concurred therein; whereupon they heartily set about putting the same into execution, which was to enlarge the prison; and in order thereunto, caused divers of their houses contiguous to the gate to be pulled down, and on the sites thereof erected a strong square stone building, containing the following rooms, viz. the porch, the paper-house, watch-hall, upper and lower *lumberies*, cellar, long ward, and the chapel, in the last of which, on the wall, on a copper plate, was the following inscription:—

> "Devout soules, that passe this way,
> For Stephen Forster, late Maior, heartily pray,
> And Dame Agnes, his spouse, to God consecrate,
> That of pitie this house made for Londoners in Ludgate.
> So that for lodging and water prisoners here nought pay,
> Ax their keepers shall all answer at dreadful doomes day."

Others ascribe the works wholly to his widow.

The worthy founder not only settled a salary on the chaplain, but likewise appointed that the use of all the rooms should be free of the usual rent-charge, which at that time was made in other prisons, and for the non-payment of which many unfortunate persons—until John Howard exposed the vile system—ended their days in the pestilent and corrupt prisons of London.

One Johnson (formerly a prisoner here), in his description of Ludgate, regrets that the good intentions of Stephen Forster were not in his time carried into effect, and that an original inscription on the *street-door* of the prison had been removed, and only the words engraved, "This is the Prison of Ludgate." The same author says, "The present gate was erected anno Domini 1586, with the statue of Queen Elizabeth on the west front, and those of King Lud and his two sons, Androgeus and Theomantius, or Jemanticus, on the east." The statue of Queen Elizabeth alluded to is now in a niche in the front of St. Dunstan's Church, near Temple-bar. Lud and his sons lay for some time in the bone-house, and were eventually removed to the grounds of a gentleman in the Regent's-park.

The duties of the officers of the prison have been described, and throw light on the former condition of London.

The running post's business was to fetch in a basket "the broken meat from the Lord Mayor, clerk of the market, private families, and charities given in the street, which are often so inconsiderable as not to admit of a dividend, wherefore it is disposed of by sale in public market.

The criers are six in number, two whereof beg at the grates: he at the grate within is allowed one-fourth of what is given; and he on Blackfriars side, one moiety of what is given there."

"Ludgate-hill," says Stow, "was formerly called Bowyer-row," of bowyers dwelling there, now worn out by mercers and others.

In Maitland's "History of London," from which the plan is copied, no vestige of the wall is seen running along the side of the Fleet Ditch: in the old view of London, of about the year 1560, the wall is distinctly visible at the side of the Fleet from the bottom of Ludgate-hill to the Thames.

In a Plan of London after the Great Fire of 1666, the portion of the wall along the Fleet is quite visible.

THE IRON TRADE.—The iron forges and mills in South Staffordshire and East Worcestershire, have nearly all been brought to a stand-still, and some of the furnaces blown out for want of materials. The rivers and water-courses were all frozen up, and hundreds of hands thrown out of employment. On Saturday before last, pursuant to a resolution passed at a meeting of ironmasters previously held at Wolverhampton, notice was given to the puddlers of a reduction in their wages of 1s. per ton, and other workmen in equal proportions.

AN ARCHITECTURAL SCAMPER IN FLANDERS AND BRABANT.*

BRUGES.

FEW countries in Europe are more visited by Englishmen than the provinces forming the modern kingdom of Belgium, and yet there are few, of the architecture of which we have less definite and precise accounts. One reason for this may probably be the very nearness of the objects to be described. Once across the Channel, travellers in search of the picturesque usually hurry off on the wings of steam to the more romantic beauties of the Rhine and Switzerland; and if a hasty glance be bestowed in passing, it is the pictures at Antwerp and the gaieties of Brussels which attract the lion's share of notice. Architecture and archæology are yet an unknown tongue to the majority of tourists. Were their language more generally understood there are not many occupations which would afford a larger return of pleasure and improvement than a few weeks' ramble amongst the nooks and byways of Bruges, Ghent, Antwerp, Brussels, Mechlin, Louvain, Liége, &c. It is usual to speak of the architecture of these cities in terms of praise as picturesque, quaint, and artistic; but if more precise information should be required, it would be difficult to know where to find it.† The guidebooks could hardly be expected to be very learned in the discrimination of styles and the principles of architectural design. Murray—confessedly the best, necessarily brief—omits many of the most interesting specimens; and of those which are described, it is the pictures rather than the buildings to which attention is called. Occasionally the most ludicrous blunders are perpetrated. Thus we are told of the steeple of Antwerp Cathedral that "it is not to be regarded as a structure solely of stone, but rather as a framework of iron bars, with bits of stone strung on them like beads, held together by copper bolts, the gaps and interstices being filled up with plaster, and the joints partly covered with lead."

This would be a singular mode of construction truly, if practicable; and if practicable, it would contain within itself the elements of speedy destruction. The writer, evidently unacquainted with the subject, has totally misunderstood the mode of application and the purpose of the iron ties, with which no doubt the building abounds. In another book we are gravely informed, that "the Church of St. Jacques (at Liége) is remarkable for a similarity existing between the style of its architecture and that of the Bourse at Antwerp: both are distinguished by the *piazzas, or pillars of Gothic Moorish art!* each of different pattern, and each characterised by the same beautiful elegance of design and finish!" A really architectural and archæological description of the principal Belgian buildings, or even a descriptive tour by a person possessing the necessary qualifications in this respect, does not, I believe, exist,—at least none such has fallen under the writer's notice.

The following notes consist of memoranda made on the spot, during a short tour in Belgium last summer. They have no claim to special originality, nor do they pretend to any systematic description of the objects visited. They simply convey the impressions made at the time on the mind of one not altogether unaccustomed to survey and report on architectural subjects. We will begin with a few notes on the city of Bruges. Bruges, or Brugge, as all the world knows, is eminently a city of brick. There are a few stone buildings, principally, but not entirely, of modern date; but the structures characteristic of Bruges in its palmy state, its cathedral, its churches, and towers, its halls, its warehouses, its hospitals, its mansions, are of this common material which we are accustomed to consider somewhat beneath the dignity of architecture as a fine art. It may be so; but if buildings constructed in brick must relinquish all claims to high art, it may at least be conceded that they are capable of fine and picturesque effects. One reason of the low estima-

* The substance of this article was read by Mr. J. A. Picton before the Liverpool Architectural Association.

† The old works on the topography of the Low Countries, such as those of Le Roy, Guicciardin, and others, are vague and unsatisfactory. The only work on the subject at all clear in its descriptions, consists of the papers by M. Schayes, included in the first and second volumes of "Weale's Quarterly Papers," which may be consulted with advantage.

OLD LONDON WALL, BEHIND LUDGATE HILL.

GROUND PLAN.

tion of brick as the external facing for buildings in modern times is, that its capabilities and peculiar mode of treatment are not sufficiently studied. Heavy cornices, bold projections, and classical colonnades, are clearly out of the question in this material; but panelling, sinkings, flowing lines, and arcades in endless variety, are elements at the architect's command, which he who knows how to use them, may combine with wonderful effect. Another reason, and probably the principal one, for the low state of brickwork as a building art, is the indiscriminate and pestiferous use of compo at the present day, to vamp up rottenness and decay, and to give a meretricious air of vulgar pretence to meanness and poverty. When the face of the work has to be covered, and made to look as unlike as possible to what it really is, all pride in the construction is gone. The rougher and more worthless the material and workmanship, the better, provided they be cheap. Such was not the case in the Middle Age architecture. There is no doubt much of it is in bad taste, and not a little of inferior workmanship; but it is evident, in every line, that the builders studied the nature of the materials with which they worked, and made the best use of them which their skill allowed. This gives to their work an aspect of truthfulness and honesty, which imparts a charm of its own, irrespective of the design, and which was of material service in bringing out the best style of architecture of which the materials were capable.

The cathedral of St. Sauveur is a large building, complete in all its arrangements, with nave and aisles, transepts, apsidal east end, and western tower. When it is stated that with the exception of the piers of the nave and choir, the whole is constructed with brick, something rather paltry will naturally be expected. This inference would be unfair. The building externally is not a fine example of mediæval architecture, but so simple and characteristic is the brickwork in its adaptation to Gothic forms, that not one person in twenty, unless he were told, would ever perceive that the building was brick. Some parts of the exterior are good. The south transept is very fine, with a noble window of flowing tracery. The tracery is stone, but the tabling, the blank tracery, cornice, &c. are brick. The tower is Romanesque in character, having several tiers of semicircular arcades. It is stated to have been built in the sixteenth century: if so it is probably a copy of one previously existing. The interior is lofty and noble in aspect. Its general character is what we should call Geometrical Decorated, of the date probably of the middle to the end of the thirteenth century. The piers are cylindrical. The plain parts of the walls, internally, are covered with a thin coat of plaster. The choir screen is a fine Renaissance composition in black and white marble, surmounted by the organ,—rather an unusual arrangement in continental churches, though very common in our English cathedrals.

There are certain distinctive features in the Flemish churches, on which it may be well here to say a few words. They prevail more or less throughout the structures, to whatever age they may belong. Some of them arise from the fact that during the mediæval period, along with many striking resemblances, and even considerable identity in the pointed architecture of England, France, Flanders, and Germany, there were separate schools or centres, having peculiarities of their own which modified to some extent the practice of particular localities. Some of the features alluded to are of later origin, and are, owing to circumstances, of a social, commercial, or artistic character.

The first circumstance worthy of notice is the extensive prevalence of cylindrical piers between the nave and choir and their aisles. In England, the round pier went out with the Norman style, and with the exception of a few instances in the Early Pointed, principally where Continental architects were employed, it does not again make its appearance, though in village churches, in the Perpendicular or third Pointed style, octagonal and round piers are occasionally met with. In the Flemish churches, the round pier is met with in buildings of every period, and seems to have formed the rule; the shafted pier, of which there are some fine specimens, forming the exception. Another feature of difference is the subordinate and somewhat meagre character of the triforia in the Belgian churches. There are not many instances in which the triforium assumes the distinctive and prominent position of a separate tier of arcades, as in the English cathedrals. In some cases the clerestory windows are very large, and the panelling is continued down to the string above the pier arches: in others, an arcade of small arches, resembling a balustrade, supplies the place; and in some there is nothing beyond a set-off in the thickness of the wall at the level of the string above the pier arches. Another feature is the absence of the close screen-work, by which most of the English cathedrals are shut off from the nave and aisles. The screens are for the most part light, and pierced with gates of brass, bronze, or iron work, frequently of rich and beautiful design.

The eastern ends of the Belgian churches are, with very few exceptions, apsidal, with the aisles in most cases continued round, and in general without eastern chapels, usually called in England lady chapels. In England, the buttresses of the side aisles usually project considerably beyond the face of the wall, leaving the windows in a deep recess, casting a bold shadow. In Belgium and France, the wall is usually brought out nearly to the outer edge of the buttress, leaving the projection within, thus forming an inner recess, generally converted into a side chapel. This gives a flatness to the exterior architecture, which is reimbursed by the additional effect within.

Amongst the peculiarities of more modern date may be mentioned the beauty and variety of the pulpits in the Belgian churches. The extraordinary richness and beauty of these embellishments is one of the first things which strike a stranger. They usually consist of a group of statuary below, sometimes in marble, but more generally in wood, illustrating an incident from Scripture history, or from the life of some saint. The pulpit, richly carved, rises from the midst, forming some connection with the group. The staircases are in a similar way combined with the story, whilst a canopy towers aloft, usually supported by angels on the wing.

The profusion of carving generally is one of the most prominent features in the Flemish churches. For the most part it is of a very high class in beauty of execution, especially in the wood carving. The richness of this class of decoration has always been a characteristic of the architecture of the Low Countries, which has more or less continued to the present time.

The number, the size, and the magnificence of the parochial churches of Flanders, even in the smallest towns, are to a stranger very striking and remarkable, and are powerful reminiscences of the former wealth of the communities which could raise such structures for religious purposes. This, however, is the case in the towns only. In the country places the churches are for the most part exceedingly plain and unostentatious.

From this short digression on general topics, we will now return to the special examples brought under our notice.

The church of Notre Dame is not very remarkable for architectural beauty. It is a cross church, with apsidal east end. The tower is on the north side: the spire has recently been taken down, and is now being rebuilt: the interior is rather low and poor: the clerestory and triforium have been restored, and badly done: the pulpit is a fine piece of carving. The choir-screen contains some beautiful specimens

of wrought-iron work of the Renaissance period, in several pairs of gates, varied in design, but all possessing peculiar elegance, and of exquisite workmanship.

A side chapel in the south transept contains a rich marble balustrade, with the Last Supper introduced in the centre. A statue of the Virgin and child in this chapel is attributed to Michelangelo: whether it be the work of the great Italian master or not it is a work of much merit, possessing a simple grandeur of effect which is not often attained by the Flemish sculptors.

The Church of St. Jacques is a brick building. The exterior is in a somewhat dilapidated condition, the tracery having disappeared from the windows, a portion of which have been modernized. Many of them, however, still retain their original brick-moulded jambs and arches, which are of good design and admirably worked. The tower, which is large and lofty, is placed on the north side of the choir. Its date is ascribed to the year 1469, with which its architectural character corresponds. The plan of the church is a parallelogram, divided into three aisles, with apsidal east ends to each. The piers and vaulting are of thirteenth century character. The main ribs in the vaulting of the choir are elliptical, and are probably of later date. The choir and organ screens are Renaissance in style, executed in black and white marble. The high altar is a huge composition of the same character, with twisted columns. The stalls of the choir are divided by twisted columns, carrying a carved frieze, with bunches of fruit between the capitals. A side chapel on the north side of the nave contains some interesting brasses, which are somewhat rare on the continent.

The church attached to the Carmelite Convent has a western front of florid Renaissance character, executed in stone. The interior is a Latin cross, without aisles, vaulted in one span, having a low dome at the intersection, carried on pendentives. The walls are lined with wainscot, having confessionals at intervals, and offering a rich display of wood carving. A marble balustrade is carried across the church at the intersection of the nave with the transepts. The die of the balustrade is composed of a flowing pierced pattern of foliage and fruit, in high relief, with animals and human figures interspersed, having piers at intervals, with a detached figure in front of each. The centre has a bas-relief of the last supper.

St. Donatus, or St. Walburge (for the church is called by both names), has a western front of stone, a very respectable modern Italian composition, bearing the date 1643 on the lower frieze. The interior is divided into three aisles, without transepts, having somewhat of the basilica style. The floor is paved with black and white marble. A rich marble balustrade extending across the church separates the nave from the choir. The style of this is not unlike that of the Carmelite church, though the design is altogether different. It consists of scrolls of foliage, with grapes, fruit, and figures intermixed, and medallions at intervals, having bas-reliefs of Scripture subjects and portraits.

This profusion of rich carving is the most extraordinary characteristic of the Flemish churches. Everywhere it abounds to an almost fatiguing extent. Its lavish abundance is only equalled by the boldness and delicacy of its execution. The pulpit of St. Donatus, sculptured by Vervoort, is scarcely surpassed by any existing specimen of the kind, and is one mass of rich and varied carving.

St. Anne's Church is rather a mean looking building externally, with a western square tower and slated spire. Internally it is a plain parallelogram, with semi-circular barrel vault, in one span, held together by iron ties. The choir is separated by a screen, having a double row of columns and pilasters, forming an arcade supporting the organ, executed in marbles of different colours, the effect of which is bold and striking. The style is Renaissance. A carved oak balustrade, of fine design and execution, extends across the church. Both sides of the nave are lined with wainscot, with twisted columns and carvings. There are three confessionals, of rich design, each having two detached figures of winged angels in front, with scroll-work and cherubs over. Opposite is the pulpit, having its sound-board richly carved.

Many of the secular buildings are worthy of notice. The building called "Les Halles" is a fine specimen of brick construction of late fourteenth century date. Its lofty tower, which contains the celebrated chimes or carillons, for which the city is so famed, is more remarkable for excellence of workmanship than for elegance of design. Its projecting turrets and galleries, gathered out on corbels, the absence of buttresses and want of vertical lines, give it a clumsy, top-heavy effect, which is anything but pleasing.

The Hôtel de Ville, though small, has a handsome façade of late fourteenth or early fifteenth century date, with corbelled angle turrets, surmounted by spirets.

The hospital of St. John is interesting, not only from its valuable collection of Hemling's paintings, but from the preservation of its original mediæval arrangements, from the period of its erection in the fourteenth century down to the present time. It is built of brick with stone dressings.

The street architecture of Bruges, though not equal in scenic effect to the finest parts of Ghent or Antwerp, is yet well worthy of antiquarian and artistic study. Picturesque gables and quaint-looking dormers, abound on every hand. Intersected as the town is with watercourses, shaded in many parts with trees, many fine perspective glimpses are obtained, combining the prominent features of tower and spire, with long lines of building partly hidden by masses of foliage, and heightened by the glancing of the water below,—worthy of being transferred to canvas. One or two views from the Quai des Marbriers, looking on the back of the Palais de Justice, with the Tour des Halles and the cathedral tower in the distance, are particularly worthy of remembrance.

The common type of house front consists of large windows set as close as possible covered with arches: the space between the square lintel of the window and the arch is frequently filled in with sculpture, or with blank tracery in brick. The gables are either crow steps, or worked in fantastic scrolls. Where the gables do not face the street, dormers in every variety of form are applied to the attics. The doorways of the earlier houses are not usually prominent features. In houses of the sixteenth and seventeenth centuries, Porte-cochères of elaborate design are frequent.

Some of the warehouses for merchandise erected during the palmy state of Bruges, are still remaining,—fine specimens of the mercantile taste of the period. It is customary to speak and write of Bruges as in a state of utter decay and poverty, deserted by commerce and manufactures, and nearly half pauperised. It may possibly be so, but appearances do not present such an aspect. The streets are kept clean and well paved: there seem to be few empty houses, and much less squalor and filth than in the back slums of Paris or London.

It is true beggary somewhat abounds, but it seems to be taken up as an adjunct to some other way of getting a livelihood, and not as a distinct profession. For instance, a man not very raggedly dressed, is wheeling a barrow along the street: seeing "Messieurs les Anglais" pass, he quits his barrow, and follows with a most professional whine, perhaps for a hundred yards, until he is either rewarded for his perseverance or is driven away, when he goes back to his barrow and trudges along as before. This and similar cases have occurred to us again and again.*

ROYAL INSTITUTE OF BRITISH ARCHITECTS

AWARD OF MEDALS.

At a special general meeting held on Monday evening, February 26, Mr. B. Ferrey, V.P. in the chair, the recommendation of the council, with respect to the award of the medals and prizes of the Institute, was read and agreed to; and it was resolved unanimously to submit for her Majesty's gracious consideration, that the royal gold medal for 1854 should be conferred on M. Hittorff, of Paris, member of the Institute of France, as entitled, by his important buildings at Paris, and by his numerous published works, to this distinction.

The Institute medal was adjudged to Mr. W. P. Griffith, Fellow, for his essay on "Mediæval Decorations and Ornaments," bearing the motto,—"*Artis est celare artem.*"

The Soane medallion was not awarded to the set of drawings sent in.

Mr. Beazley, student, received the annual prize in books for his design for parochial schools, and another prize for his Monthly Sketches. Mr. Willey also received a prize in books for his Monthly Sketches.

The recommendation of the council respecting the subjects for medals and prizes for the current year, was read and agreed to.

The silver medals of the Institute are to be awarded to the authors of the best essays on any subjects tending to promote or facilitate the knowledge of architecture, or the various branches of science connected therewith.

The Soane medallion is to be awarded for the best design in not less than five drawings, for any of the following subjects:—

A town mansion, on a plot 200 feet deep by 100 feet front, with stable offices complete—two fronts.

Plans sections and details of the present remains of the church and conventual buildings of the priory of St. Bartholomew the Great, Smithfield, London, with a plan, founded on the existing indications, showing the whole of the monastic buildings as they may be supposed to have stood at the time of the suppression of religious houses, temp. Henry VIII.

A building to contain six courts of law, with a large central hall of communication, and the necessary accommodation for judges, counsel, officers of the court, and the public; or any other like subject of equal importance, at the option of the candidate.

The successful competitor, if he go abroad within three years after receiving the medallion, will be entitled to the sum of 50*l.* at the end of one year's absence, on sending satisfactory evidence of his progress and his studies.

In consequence of the lateness of the hour, the consideration of the "Public Health Bill, 1855," was adjourned to Wednesday, the 28th ult. when it was specially considered, particularly the clauses immediately relating to Buildings and Building Property.

ROMAN ANTIQUITIES IN SURREY AND ADJOINING COUNTIES.

We are continually having brought to our view the very advanced state of the Romans, as to the arts, when they were in this country, 1600 (or more) years ago. On their retirement, about the year 435, they appear to have covered up with earth all their rare and unique works of art, which they did not like to destroy, and yet could not carry away with them. Such was the case with the tesselated pavements that adorned the residences of the generalissimo or legate of the legions. These places are generally found out by accident, for, in many instances, they have been grazed or ploughed over for many hundred years, and then some fortuitous circumstance brings them to light.

A few years ago, a shepherd, in making a hole for the purpose of folding his sheep, at Bramdean Alresford, found his bar drop into a hole or cave: on excavating the spot, it was found to be a room, ornamentally paved, with hollow space under it, having square piers and brick flues to warm the room (a Roman hypocaust). On seeking farther, two other and larger rooms were discovered, paved with small tiles and ornamented with coloured borders and figure-heads in the corners: these pavings have been preserved and roofed over, and may be seen by permission of the owner, Colonel Greenwood, of Brookwood.

A single paved room was discovered, about thirty-five years ago, near Crondal, under similar circumstances, which was covered over by 2 feet of earth. Two rooms have been lately discovered, about 16 feet square, with a circular ornamental tesselated centre-piece, 6 feet in diameter, in the middle of each, being in form hearts within hearts, circles, and points, composed of three different colours, each piece not more than half an inch square, the other parts of the rooms being paved with 2-inch squares of red brick: the villa to which these rooms be-

longed, appeared occupy, within walls, seven or more acres ground, situated at Abbot's Ann, near A lover. The excavations were made by or t of the Hon. and Rev. S. Best, the rector of the parish, in May last; but as the tenar of the land demanded it again for his agricultural purposes, the pavements have been removed to London by workmen sent down for the purpose, and the site is now occupied by a cre of turnips, none the worse for having had the ground removed. The site of this villa was within view of three entrenched camps, being on the most conspicuous natural hills to be found on the chalk of the neighbourhood: they were distant two or three miles from the villa.

The Roman road from Salisbury passing near Andover to Silchester, was contiguous to this villa. Another road branched from Silchester (*Vindonum*) to Speen and Bath on the west, and to London on the east: this road had the passage of the Thames near Staines (*Pontes* of the Romans). On this road to *Pontes* there is another Roman double-entrenched camp, as if for a legion of men (the villa of the generalissimo of this legion has not yet been discovered). This camp is situated near the Royal Military College of Sandhurst, and will be near the Wellington College now proposed to be built. There is also an entrenched camp of the Romans adjoining the ground purchased by Government for the formation of a permanent camp at *Farnham* and *Aldershot*. The roads connecting these Roman camps were various, and all well made, giving us evidence up to the present day. On the site of their route to London, there was discovered a few years ago a full-sized figure of a Roman gladiator, or one of a legion, in the act of striking: it is carved in limestone, with the philabeg dress and sandals. This figure may now be seen in the far-famed American nursery of Mr. John Waterer, of Bagshot, where, in the spring of the year, may be seen this antique figure surrounded with all the gay flowers of the western world. The lover and devotee to the shrine of Flora may here contemplate her beauties, and reflect on human ambition, the rise and fall of nations, the antique remains of a great people, who were, in their time, the conquerors of the then known world, and before the American flowers or its continent were known to Europe.

When the camp is formed at and under the bold escarpment of the Bagshot sands, on the south of Surrey, and on the borders of Hants, these sites of the Romans, and their antique remains, may become more known to the British public, if there should be as much excitement in the community as occurred on the occasion of the camp at Chobham. EDWARD J. LANCE.

RAILWAYS IN THE UNITED STATES.

HAVING, in a recent short article on this subject, said rather more on the beginnings of the railway system in the United States than on its subsequent development and present enormous expansion, we now note a few particulars forwarded to us by an American friend, and from which some idea may be formed of the relative as well as absolute extent, at present, of the American railway system.

The number of miles of railway in operation upon the surface of the globe is 40,070; of which 16,964 miles are in the eastern, and 23,106 in the western hemisphere; and which are distributed as follows:—In Great Britain, 7,774 miles; in Germany, 5,340 miles; in France, 2,569 miles; in Belgium, 873 miles; in Russia, 422 miles; in Sweden, 75 miles; in Norway, 42 miles; in Italy, 170 miles; in Spain, 60 miles; in Africa, 25 miles; in India, 100 miles; in the United States, 21,310 miles; in the British Provinces, 1,327 miles; in the Island of Cuba, 359 miles; in Panama, 50 miles; and South America, 60 miles.

The longest railway in the world is the Illinois Central, which, with its branches, is 731 miles in length, and was constructed at a cost of 15,000,000 dollars.

The number of miles of railway in the United States exceeds that in the rest of the world altogether by 2,550 miles. The number of railways completed in the United States is 274; the number partially completed 63; and the number in course of construction 107: the number of miles now in operation is 21,310, which have been completed at a cost of 621,316,103 dollars. The number of miles in course of construction is 16,975. The State of Massachusetts has one mile of railway to each seven square miles of its geographical surface: Essex county, in this State, with a geographical surface of 400 square miles, has 159 miles of railway facility, which is a ratio of one mile of railway to each three square miles of its geographical surface. The permanent way of the American railways, however, is said to be of a very flimsy character compared with that of England.

MILITARY TOMBS AND INSCRIPTIONS.

THOSE who have distinguished themselves in fighting for their country, in defending their own nation, their religion, and laws, have not seen their deeds pass unrecorded, nor have they been suffered to go down to the dust

"Unwept, unhonoured, and unsung."

The living have always felt the inviolable obligation under which they were held to give fit rites of burial to the departed brave. And this is as it should be. War confessedly developes many noble qualities in the good soldier. For war, which seems to spring from and be continued by confusion and disorder, what a variety of rules does it comprehend! what a long time to discipline the soldier, to form the officer! and what a genius and experience are necessary to superintend its operations, and destroy with method!* We should only be surprised, therefore, if the art of peace had not been employed to do justice and homage to those who had gained victories; who had secured the success of military operations, which increased the stability and renown of a government and country. But we find that in peace there is reward for the conqueror, and promotion for the valiant: medals are distributed and names registered: the ornaments for victory are produced from the *atelier*, and paintings from the *studio*: hospitals of noble architecture (for example, *Les Invalides*, at Paris, and the College at Greenwich) are erected: and everywhere signs and emblems of the warlike genius of a people permit not the memory and glory of her hard-earned and well-fought battles to perish. Such homage, such honours, the present age is ever prompt and delighted to pay to past ages. In Greece, this sympathy and devotion to her warriors was carried to a great extent: privileges were accorded them of a most gratifying kind; among which it was not unusually decreed to give them (as characteristic of those times) "both maintenance in the Prytaneum, and a front seat at all the games celebrated by the state."

Conspicuously did they place before the citizens the spoils and mementoes of war. Was a temple or a grotto dedicated to a Leonidas or a Miltiades, a Simonides was solicited to write the inscription for it. Was a military pillar or *stéle* to be put up to commemorate a march or a campaign, talent bestowed some graceful ornament upon it, and it was rendered in some way remarkable.† There were ample means and opportunity afforded them to indulge their love of hero-worship. The Pœcile, which stood in the most splendid quarter of Athens (on the walls of which Micon painted his frescoes) was chosen as the spot in which the Spartan shields taken at Pylos should be suspended as trophies. It need be scarcely remarked, that this custom afterwards led to the representation in sculpture of arms and armour, of the helmet and breastplates, the buckler and spear, as ornaments of their temples.‡

The celebrated plain of Marathon (which the Greeks revered as a temple to Miltiades)§ had a striking effect of its own, and made a grand impression, though not studded with the numerous tombs, monuments, cenotaphs, and inscriptions which are found in many battle-fields. "In this level solitary place (says Dr. Wordsworth: *Athens and Attica*) the eye is naturally arrested by one object, which raises itself above the surface of the plain more conspicuously than anything else. That object is the tumulus which covers the ashes of those Athenians who fell in the battle of Marathon. It produces a sensation of awe to find oneself alone with such an object as this. It was a wise design which buried the Athenians together under such a tomb in the place on which they fell."

The epitaph on the famous Count Merci, "Siste viator! heroam calcas!" is well-known, and admired for its simplicity. The plain *Orate pro anima*, or the *Priez pour l'ame*, appeal powerfully to the passer-by. Often a great name is enough. General Hoche's monument, near Andernach, has this simple and expressive inscription, "The Army of the Sambre and Meuse to its Commander-in-chief, Hoche." F. L.

* La Bruyère.

† See British Museum.

‡ "And let me hang a Thracian target high,
Upon the pensile pole of dread Minerva's fane."
Choeprei in Ancient Drama

§ "Miltiades! from thy sword the East did flee;
And Marathon a temple is to thee."
Greek Anthology

FROM AMERICA.

Boston.—From the annual report of the superintendent of streets, Mr. A. T. Turner, it appears that the iron pavement in Court-street has stood the test of one of the severest winters ever known,—that of 1853-54. The great drawback to this pavement being extensively laid down, says Mr. Turner, is its high cost. This experiment cost 10 dols. 25 cents per square yard. It is now thought that by some change in the form of the iron blocks used, this pavement could be afforded at 6 dols. a square yard. An effort is to be made for laying down the iron pavement of the new pattern on Washington-street, between State-street and Winter-street, the main thoroughfare of the city. The continual opening of the paved streets for water, gas, and sewer purposes, by incompetent persons, so far as the replacement of the pavement is concerned, is complained of at Boston quite as much as it is with ourselves.——A spacious store has been opened in Winter-street, by a bookselling firm. The interior has been newly fitted up in what the *Transcript* describes as "a very handsome and convenient style; the architectural embellishments, cornices, book-shelves, &c. being all in excellent taste, and well adapted to the character of the business." The first-floor is devoted to the retail department: this room is 100 feet by 40 feet in size, and through the centre, nearly two-thirds of its length, runs a line of ornamental book-cases, while the walls on either side are liberally supplied with well-filled shelves, protected by glass doors. In the upper part of this capacious floor are four offices for the members of the firm, clerks, &c.

New York.—A new art-journal, named *The Crayon*, proposes to criticise the New York architecture.—"Free, impartial criticism, minute and severe if need be, but always truthful, of the buildings which are constantly rising about us," it observes, "cannot fail to be of good service to our advancement in the art of architecture, as well as of much interest to the readers of *The Crayon*. Surely, very many of what are by courtesy, or in ignorance, called the 'ornaments' of our city, deserve to be reviewed sharply and fearlessly; while yet there are others, unfortunately few, but, we believe, increasing in number, which are in many points worthy of high praise. In the architectural criticisms which may from time to time appear in our columns, we shall point out whatever seems to us right, and true, and beautiful, or wrong and ugly, sparing nothing. At the same time we shall avoid judging the architect—our issues will be not with him, but with his works." After criticizing pretty fully, but, on the whole, favourably, the details of Trinity Chapel, in Twenty-fifth-street, near Broadway, an Early English structure, which is spoken of "as being in this day of shams and deceptions especially deserving of notice for its simplicity in plan, solidity and durability of construction, and chaste richness of interior detail," the critic goes on to say,—"We have been thus minute in detailing the features of Trinity Chapel, because we deem it worthy of being carefully studied. The leaf-work in particular is deserving of notice, being much superior in spirit and freedom to what we generally meet with. We would suggest that the building now

needs, to make it complete, that the interior walls be diapered, or otherwise decorated in colour, and the colouring of the roof retouched, and made more in accordance with the spirit of Early English. The panel in the tympanum of the front door needs sculpture, and the niches of the arcade in south wall, should be filled with statues. We hope to live to see these things accomplished."

THE REFEREES OF METROPOLITAN BUILDINGS AND THE REGISTRAR.

HAVING published other opinions on the subject of the respective functions and jurisdictions of the Registrar of Metropolitan Buildings, and of the official referees, we now insert the gist of the opinion of the law officers of the Crown, to whom the matter was subsequently referred by the Commissioners of Works and Buildings.

"We are of opinion that the practice hitherto pursued with reference to the awards of the official referees, and the control of the registrar over those documents in refusing to seal such as are contrary to law, or not complete in any of the requisite forms, or beyond the competence of the official referees, either with regard to the provisions of the Act, or any rules or regulations prescribed for their guidance by the Board of Works, should be continued.

We are of opinion that the awards of the official referees fall within the provision of the 89th section, and that it is the duty of the registrar to exercise a control over them in the particulars above mentioned.

In cases where the award does not appear upon the face of it to be contrary to law, or defective in any of the requisite forms, or beyond the competence of the official referees, it is the duty of the registrar to affix the seal, and it is not competent for that officer to refer to extrinsic facts for the purpose of exercising a jurisdiction by way of appeal from the official referees. His duty is to deal with the award, and to ascertain that no objection appears upon the face of it. If none so appears, he is to express his assent by affixing the seal. The award then becomes a complete and operative instrument.

On the other hand, where the award appears upon the face of it to be contrary to law, or not complete in any of the requisite forms, or beyond the competence of the official referees, either with regard to the provisions of the Act, or the rules and regulations prescribed for the guidance of the official referees by the Board of Works, it becomes the duty of the registrar to refuse to affix the seal, subject in this latter case to the appeal given to the Board of Works by section 89.

Where the document purporting to be an award is defective, and has been rejected as such, under section 89, it is, in fact, no award at all under the Act; and if the matter be within the competence of the official referees, they ought to proceed to correct their proceedings in the particulars in which it has been defective, so as to make an award with the statutory requisites.

As regards the opinion of counsel laid before us, it is probable that the principal question discussed before the learned counsel was, whether an award *good on the face of it*, could be called in question by the registrar. This appears very distinctly, from their answer to the fourth question, and it is the omission of that qualification as to awards '*good on the face of them*,' in the early part of that opinion, which makes it impossible for us, upon consideration, to agree to what is there laid down in the terms in which it is expressed."

The opinion is signed—

A. E. COCKBURN.
RICHARD BETHELL.
JAMES S. WILLES.

Sir Richard Bethell's name, it will be remembered, is attached to the opinion previously published (p. 33, *ante*). With a complete appreciation of the extent to which the wording of the "case" submitted affects the opinion, it would seem to require an immense amount of special pleading to reconcile these two.

CHURCHES AND SCHOOLS.

Windsor.—The Queen has given 100*l.* towards the erection of a girls' school for the children of mechanics, artizans, and upper class of labourers in and near Windsor.

Over Tabley.—The new church of Over Tabley, in the parish of Rostherne, county of Chester, is to be consecrated in the third week in March.

Liverpool.—A stained glass memorial window has just been erected in St. Nicholas's Church here, by the widow of the late Mr. R. B. B. H. Blundell.

Collyhurst (Manchester).—In the new church just completed here, a meeting was lately held, at which the chairman, alluding to the funds for the erection of the church, said that 3,573*l.* had been collected or promised, and that of that sum only 417*l.* had been subscribed in the district, 3,156*l.* being contributed by persons not connected with it. The reason why the church was not completed long ago was, that some of the contracts had been broken, and in other cases it had been found difficult to obtain labour. Many things were even still required for the church, which it was to be hoped the congregation would provide. He trusted to see a parsonage-house erected for the rector, and money subscribed for the construction of schools.

Preston.—The new parish church approaches towards completion. It is in the Decorated English style. The continuance of the spire has of late been prevented by the frost. The principals supporting the roof, says the local *Guardian*, "have been found fault with as appearing small and mean: it has been surmised by some that this has been done to save expense; but we imagine that it arises from a less selfish and a wiser motive—viz. to aid the sound in so large a building." Besides the three stained glass windows already placed in the altar-end, as donations of wealthy families, two more have just been added; thus completing the chancel aisle. That at the east end represents James and John following our Lord at his request, leaving their father Zebedee in the ship with the hired servants, while they join Simon and Andrew, who had already become his disciples. The composition fills the three principal divisions. The higher traceries contain seraphim, surrounded by scroll decorations. The window at the west end of the aisle represents the Transfiguration of our Saviour: Jesus takes Peter, James, and John, and is transfigured before them, on which appeared Moses and Elias. The principal compartment contains our Saviour in the centre, the sides Moses and Elias, under whom are seen the three disciples in fear and admiration. The upper portion, like the first window, is occupied by five seraphim, surrounded with foliage. Two more windows were to be placed on the opposite side this week: these have been entrusted to a London artist. All the present windows are the work of Mr. Wailes, of Newcastle-on-Tyne. It is said that the church will probably be opened in May, with the oratorio of the "Messiah," by the Preston Choral Society.

Doncaster.—The Great Northern Railway Company have applied to Parliament for power to erect and endow a church and schools at Doncaster. They state that there are in Doncaster a thousand workmen employed by the company at weekly wages, whose families consist of more than 1,500 persons, and of these more than 1,000 are children; and that there is not now in Doncaster sufficient church accommodation for them. They propose to devote to it 6,000*l.* and bind themselves to pay, "annually and for ever," 350*l.* as a stipend, and to maintain and repair the church. The company also propose to contribute 230*l.* for elementary instruction for the children.

PROVINCIAL NEWS.

Lynn.—The public bath scheme, remarks the *Norfolk Chronicle*, seems to have been sleeping for a length of time. The corporation have granted a site, in Ferry-lane, which is at present covered by some old buildings pronounced by the grand jury of the borough to be in a dangerous state. These buildings, it is to be hoped, will be removed, and the baths at once commenced.

Shoreham.—A preliminary opening of the new canal at Shoreham Harbour took place on 18th ult. The new canal commences at Southwick with the entrance lock, and extends for a distance of nearly 2 miles, to the further extremity of the basin near the Wish Barn. The basin will hold ten or twelve vessels, each of 500 or 600 tons burden: these will ultimately be able to discharge their cargoes, afloat, and at all times of tide, alongside the quays. The canal is so constructed that it can be much enlarged. At present it is only used as a tidal harbour, until the works are complete, as they will be in about six weeks. The construction, it is said, involved many difficulties. The contractors for the canal are Messrs. Jackson and Bean; for the lock, Messrs Locke and Nesham. The advantages to a town like Brighton, in bringing the harbour to its very door, as a local paper remarks, cannot be over-estimated. To ensure completeness of arrangement, a patent slip has been erected, adjoining the lock, where vessels of large tonnage can, at any state of tide, be taken completely out of the water in a very short time to have repairs done. The whole work has involved an outlay of something like 30,000*l.*

Bristol.—The proposed building for the Bristol Academy for the Promotion of the Fine Arts, for which Mrs. Sharples bequeathed a sum of money nine years since, will be commenced without further delay. The site selected is near the Queen's Hotel. The designs of Messrs. Underwood and Hirst have, we hear, been approved of for the intended building.—At a recent meeting of the committee of the School of Practical Art here, the committee of management reported their recent proceedings. The school continues to progress satisfactorily, with an average monthly attendance of 118 pupils during the last nine months. At the autumnal exhibition in London four medals were awarded to pupils for their drawings; and the Department of Science and Art has allotted to the school one prize scholarship and two pupil teacherships for the present year. The exhibition of prize drawings held here last month was visited by 2,510 persons. On the subject of uniting with the Academy of Fine Arts, in their intended new building in the Park, it was stated that sufficient accommodation for the use of upwards of 200 pupils could be had in the building for about 1,350*l.* towards which 600*l.* are already subscribed. It was resolved to make a public appeal to supply the deficient funds. The Rev. James Heyworth was elected honorary secretary.

Altrincham.—Mr. M. Pierson, mayor of this town during 1852 and 1853, has purchased and caused to be erected in the Market-place, a lamp, comprising a centre and two branches, containing nine lights. The pillar has been executed at the Coalbrookdale Ironworks, in Shropshire (from a design shown in the Great Exhibition), at a cost, according to the *Manchester Courier*, of 50*l.* exclusive of the lamp frames, &c. The entire cost will be about 60*l.* towards which the Earl of Stamford and Warrington offered to make a donation of 15*l.* Mr. Pierson, during his mayoralty, gave to the Literary Institution of the town 20*l.* and also the "Encyclopædia Britannica," in twenty volumes, 4to. besides other small donations to various objects.

Birmingham.—The severe frost which continued till Saturday last from the 15th of January, completely paralyzed the building trade of this town and the midland district around it. Such a depression has not been known to exist for years, while the bricklayers, labourers, &c. have been crowding the poor-houses, &c. for relief. Owing to the general improvidence of this class, their sufferings have been intense. "I have visited," says a correspondent, "the homes of many that have no vestige of a fire; and scarcely bread enough for one meal has to be eked out for two and three days. When will the mass of our own workmen profit by the sad experience of the school of adversity? When will they renounce the baneful influence of the pothouse, and learn *self-respect?* When will they think of the responsibility resting on them as fathers of families, and strive to put by a few pence towards a rainy day, or when the ice-bound earth forbids man to toil as usual? The sufferings of the present time should give energy to the afflicted, and lead them to say, 'Never again shall a month's idleness plunge me into such misery, while strength is left me to gather up honey while it is yet day.' May they be induced to look to the time when 'night cometh and no man *can* work.'"

Dewsbury.—The Dewsbury workhouse, industrial schools, and infirmary buildings, containing accommodation for 600 inmates, have just been completed. Messrs. Lockwood and Mawson were the architects.

Preston.—A week or two since, as a cart laden with coals was passing through Lord-street, a portion of the road sank, and the cart was embedded up to the axles, the coals having to be taken out before it could be extricated. It was at first supposed that the accident was caused by the bursting of a water-pipe, but it is now thought that the earth sank in consequence of the falling in of an old sewer.

THE NEW GREAT WESTERN HOTEL AT PADDINGTON has turned out a good speculation, we are told. The risk was taken by a few of the directors personally. The first half-year has just terminated, and 5 per cent. for that half-year, that is, at the rate of 10 per cent. per annum, with a bonus, is about being divided amongst the proprietors.

NEW HOUSES, THREADNEEDLE-STREET, LONDON.

MR. HENRY CURREY, ARCHITECT. MR. JOHN SHAW, ARCHITECT. [See p. 97, in present number.

IRISH BUILDING MEMS.

THE city of Limerick district Model National School is nearly completed, and occupies a site on the road between Limerick and Adare, on the opposite side to the new convent of Mount St. Vincent, built for the Sisters of Mercy, and previously noticed in the *Builder*. It contains on the ground-floor a central hall; boys' school, 42 feet by 28 feet, with class and hat rooms off same; religious instruction-room, 20 feet by 22 feet; girls' school, 40 feet by 28 feet, with two class-rooms, 24 feet by 18 feet, in connection therewith. An infant school, 30 feet by 28 feet, occupies the right wing, and a maritime school, 30 feet by 20 feet, one story high, is placed at the left hand of main building, with separate entrances to each. The front elevation (two stories high) is in the Tudor Gothic style, with projecting wings of 23 feet and 32 feet respectively at the ends of the main building, having three light bay windows 7 feet wide in each, and terminated by gables finished with finials. In the centre stands an octagonal belfry louvred, and rising about 21 feet above ridge. The walls are of hammer-dressed limestone, with chiseled dressings. The cost was between 4,000*l.* and 5,000*l.* Mr. F. Darley, architect; Messrs. Ryan and Son, builders.

New buildings are to be erected in connection with the Mountjoy Prison, in North Circular-road, Dublin, and, we believe, much additional accommodation is to be provided.

We understand that plans are being submitted by local architects to the committee of the Catholic Deaf and Dumb Institution for new buildings.

A new church is to be built at Armaghmore, county Armagh, according to drawings by the architect to the Ecclesiastical Commissioners.

The City of Waterford District Model National School presents a frontage of 203 feet, and comprehends chiefly a maritime school, 30 feet by 26 feet; boys' ditto, 40 feet by 26 feet, with porch and hat-room; religious instruction room, 24 feet by 18 feet; infant school, 35 feet by 26 feet; girls' ditto, 40 feet by 26 feet, with class-room, mistress', and washing room, &c. approached by a main corridor 8 feet wide. At the right side are masters', dining, and store-room, kitchen, culinary offices, &c. The style of architecture is similar to that described for Limerick. The external walls are of hammer-dressed stone, with horizontal beds and vertical joints, and dressings, &c. of chiseled stone. Mr. F. Darley is the architect, and Mr. P. O'Toole, contractor. The expenditure will be about 6,000*l.*

A new church is to be built at Milford, county Donegal. Mr. Welland, architect.

DOWN-DRAUGHTS AND BACK-SMOKE.

REFERRING to the paragraph on this subject in your last, p. 95, I would remark that, so far as I have observed, a down-draught in one chimney is caused by the upward current in another in the same house. If there is smoke issuing from any chimney in the immediate neighbourhood of the former, the chance is that the downward current will have a considerable mixture of it: if there is no such smoke, the downward current will only consist of atmospheric air, with a taint derived from the channel it passes through. Suppose two rooms, *en suite*, with folding-doors between, and standing open: if the doors from the lobby are shut, and there are mats close against them, outside, and you get up a good fire in one of the rooms, while there is none in the other, you are almost certain of a down-draught, for the fire demands air, and will have it, and the other flue forms the freest channel. I have seen the smoke, under such circumstances, curling round out of the one fire-place into the other, the moment the door in use was shut. I have also seen, on a large floor containing a number of apartments, and when only one fire, a good one, at an extreme end, was lit, the "back-smoke" drawn down the chimney at the other extreme, until the window of the first-mentioned apartment was opened. The stronger the fire in the one flue, the greater the down-draught in the other.

These down-draughts, which it may be best to regard as reciprocal among chimneys on the same floor, are, I think, only to be prevented by adopting means for ensuring an ample supply of air at all times to each chimney; and as draughts of cold air through a room, whether from an open door, or the chinks and crannies about the edges of the doors and windows, are not very desirable—concentrating, as they do, at the chimney-opening, and making people's heels cold while their toes are comfortable, the mode of securing the supply without creating a draft, must obviously consist in forming, in each case, from the exterior of the building, or of the room, an air-channel terminating *within* the fire-place. I have formed an air-chamber underneath the fire-place, with a small opening recessed in the jamb at either end of the back-hearth, and the space between two joists constituting the ventiduct, which opened to the exterior with a cast-iron air-brick. I have also had occasion to employ 2-inch agricultural draining-tubes for conducting the supply, drawing the latter *through* a strong-room that would otherwise have become musty.

The open fire-place, it is well known, plays an important part as a ventilator; and, where there is no other means of changing the air of an apartment than by it, the course I have above indicated is hardly advisable to be pursued; but with the exterior opening and chimney-valves, coming so commonly into use, there is now no necessity for submitting to the cold draughts which usually sweep across the lower part of rooms: indeed, the ventilation obtained by means of them must be much more efficient than that by the fire opening, seeing that where there are no valves, the space above the mantel is but an inverted cistern, full of heated and impure air, emptying itself only at the mantel.

I think that each room should have an exterior or fresh-air valve, and a chimney-valve in its upper part, and that the fire-place should be supplied with air otherwise than by the chimney opening. JAMES WYLSON.

NEW HOTEL DE VILLE AND SENATE HOUSE, HAMBURG.

THE commission for the erection of the above-named building, who, it will be remembered, early in the last year, invited architects, as well foreign as national, to send designs for the same, have awarded the premiums offered as follows:—

The first premium (350 Fred. d'ors) to Mr. George Gilbert Scott, London. The two secondary premiums (250 Fred. d'ors each) to Mr. A. Meuron, of Hamburg, and Mr. Ludwig Franz Carl Bohnstedt, member of the Academy of Art, St. Petersburg.

No determination has, as yet, been come to as to the actual design to be carried into execution.

The designs of Mr. Scott and Mr. Bohnstedt are Gothic; that of Mr. Meuron, Renaissance.

MANUFACTURERS UNDER THE NEW HEALTH BILL.

WILL you kindly draw public attention as fully as possible to Sir Benjamin Hall's Sanitary Bill, now before the House of Commons?

Some of its provisions greatly interest your subscribers, and may cause great annoyance to builders, also to the proprietors of saw-mills, potteries, cement works, foundries, and similar establishments. As he does not define what are "*noxious*" trades, such places may be placed on the same level with slaughterers, bone-boilers, tallow-melters, and the usual category of trades that are enumerated as exceptional in drawing leases. The Bill is not confined to the metropolis, and does not define the limits where such trades may not be carried on. There is no clause for compensation upon the shutting up by this law any factory deemed "noxious"

A few years ago a Buildings Act was passed, which gave to manufacturers security for a given number of years, and this has induced the writer and many others to expend thousands of pounds upon their works, feeling assured they were safe for that time. But the new law will upset the old, and the owners of such property at the caprice of a few individuals may be ruined. The machinery for enforcing the law proposed is arbitrary and unjust in the extreme.

Great numbers of those who advertise in your columns, and who have factories like the writer, out of London, and even consume the smoke of their furnaces, may be annoyed or stopped altogether by the Bill. A fastidious and influential neighbour may even, in the outskirts of London, stop the burning of lime, on the ground that the carbonic acid driven off in the operation is offensive. As to potters, brick-makers, and Portland cement-makers, whose trades are carried on near any village or town, all feeling of security will be gone; and, without a compensation clause, or the introduction of a clause of security for a given number of years, they may be ruined.

The present Smoke Bill is an arbitrary law, and gives great power to the police authorities, who can now enter premises for the purposes of examination as easily as the excise man could, under the old law of excise, a glass-house; but Sir Benjamin Hall's law will be, if carried out, oppressive in the extreme. All connected with the building trades should bestir themselves, or they will rue their apathy, for the public at large have their attention so much engrossed by the war that the measure may pass hurriedly, and without much opposition. The tendency of all the recent sanitary measures is to drive manufacturers from London, but the proposed law does not specify any limit of safety to the manufacturer.

All the trades commonly admitted as nuisances are useful and important to the community at large, and it would be more just to grant special license for the carrying on of these in certain localities than to drive them about as at present.

The public are indirectly paying for this state of things at present by the enhanced value of such commodities, especially in the price of crushed bones for agricultural purposes, which, from increased demand, and the difficulty of crushing and burning in England have risen the last five years 50 per cent. and the bulk is now imported from abroad. Some branches of manufacturing chemistry are also taking up their abode in France. No chemical factory will be safe, unless greater security is given for the investment of capital. I earnestly entreat your aid and advice in this matter. A MANUFACTURER.

*** Private interests must not be overlooked, and vague legislation, such as is exhibited in parts of the new Health Bill, should be opposed: but we must not be considered, by the admission of this and a previous letter, as amongst those who oppose interference on the part of the Government.

ON MISSIONARY CHURCHES.

AS I perceive you have noticed some designs for missionary churches, sent by Mr. Hill and myself to the Architectural Exhibition, and as the same have also attracted the attention of the *Ecclesiologist*, perhaps you will allow me to insert some remarks upon them in your paper.

I had not turned my attention to the subject, when I was requested by a friend to suggest some plans and designs for churches to be built at missionary stations in the East. The gentleman in whose behalf the request was made, called upon me, and explained what kind of building would best suit the climate, and might be most readily constructed by native workmen; he also assured me that there was no prejudice either in favour of, or against, any particular style. I, therefore, sketched out one or two designs, which on a subsequent interview he told me might possibly answer his purpose. On this I thought it might be worth while to prepare some drawings in a more workmanlike fashion, and accordingly requested my friend Mr. Hill, to make plans and elevations, &c. from my rough sketches, and also to add any others that might occur to himself. The result was a number of designs, geometrically drawn, from which was selected the group that appeared in the exhibition. As among others, the heart-shaped plan is his own, without any suggestion from myself, I may be allowed to express my opinion of its merit, as exhibiting great ingenuity, and combining convenience of arrangement, with a striking outline, and good architectural effect.

I can assure you I was far from pretending to design a model church for a country, with the general aspect and character of which I am totally unacquainted. Neither did I wish that the schools of art already existing in the country should be superseded. I perfectly agree with the *Ecclesiologist*, in his remark that such churches as I have designed, "instead of being anything better than what either Brahmin or Mahommedan India has already to offer, will, in beauty of every sort, be inferior to both these antecedent schools of art." Had I been better acquainted with these schools, I should have attempted to make my drawings more in accordance with one or the other of them. As it was, I preferred leaving this to native genius, and studiously avoided such features as might denote any particular style, giving also much scope for architectural combinations, as well as for surface ornament. At the same time I wished the building, however plainly carried out or roughly executed, to present something of a church-like appearance, and not to appear as if it were put together without care and consideration. I may not have succeeded, but such was my intention and

attempt. One of the designs was an oblong area, surrounded on three sides by an open arcade, instead of a wall, supporting a timber roof. This, I was told, might be advantageously adopted, both on account of the free current of air, and the ready entrance given to strangers who might be passing by. A belfry, and a vestry, or chamber, where the minister might lodge, was attached to one of the sides, or the west end. Another was much such a church as we see in the Isle of Man, perfectly simple, with round-headed windows. Another was domical, the dome being a favourite construction in the East. By the way, the double dome, one within another, might be useful as a guard against heat.

If I am at all right in my idea of a Mahomedan mosque, I should say it is the best model that could be taken. I was reminded the other day by a friend that the normal type of a Christian church is not the Basilica, which was a mere adaptation of a Pagan form, but the Byzantine domical church, which was borrowed from nothing preceding it, and expressly designed for the purposes of Christian worship. And this seems to be the form of a great number of ancient eastern churches, and is, I suppose, of most mosques. If the forms to which the natives are accustomed are not rendered inexpedient by prejudice or likelihood of misconstruction, they are assuredly the best that can be adopted.

I cannot quarrel with the terms in which the Ecclesiologist expresses himself on our proposed ritual arrangements, as that is a point on which we have always been at issue. But I must say I do not see why we should saddle our missionary churches with usages which are certainly in no way necessary either to the decency and solemnity of public worship or to the right understanding of our Liturgy; and which must often involve some inconvenience. There is a very good reason why we should not suddenly abandon them in our own country, because experience has taught us that anything which appears like an arbitrary introduction of novelties, tends rather to stir up dissension than to promote the cause of religion. But there is no reason why such usages should be continued in the establishment of a new church, if there is an obvious advantage to be gained by abolishing them. Now, the necessity imposed upon the minister of performing different portions of the service in different parts of the church, imposes also upon the architect the necessity of providing several places in the church, instead of only one, in which the minister may officiate, so as to be well seen and heard; and this at an evident sacrifice of valuable room. I am at a loss to conceive how the arrangement of a church having a desk behind the communion-table, the same desk serving also for a pulpit, and a font at no great distance from either, can endanger the orthodoxy, or impede the spiritual improvement of a congregation, who are to learn the doctrines of Christianity from a course of straight-forward teaching and the reading of the Scriptures, and not from a system of incomprehensible symbolisms. JOHN LOUIS PETIT.

ISLINGTON INFANT POOR ESTABLISHMENT.

As some misapprehension still appears to exist with reference to the above competition, I have been induced to trouble you with the following particulars, in order, if possible, to satisfy the competitors generally that the *whole* matter has been throughout conducted in a fair and straightforward manner. Your correspondent, "A. B." is evidently in the dark. He states that "*after* the rejection of Mr. Birch's design, Messrs. Jones and Parker's was accepted, and the plans of the other competitors *then* returned to them;" but the fact is that the designs were returned *after* Mr. Birch's had been selected; and the trustees then finding that Mr. B.'s plans could not be adopted, on account of his connection with one of their members, the competitors were invited to *return* their designs, for the purpose of again having the prize awarded. Messrs. Jones and Parker's was *then* chosen, subject to the works being executed for the stipulated sum. Tenders were obtained, but the result not proving satisfactory, their designs were rejected. Mine were then selected; and the trustees, after having been satisfied, by a tender from a competent builder, that the work could be executed for the required sum, ultimately adopted them. It will be seen by this that the committee (as suggested by your correspondent, "A. B.") were never in a fix, and *did* "what clearly became their duty," viz. adopted the designs of one of the other competitors. A few words will explain the cause of increase in cost: on submitting the designs to the Poor-law Board, numerous additional matters were required beyond those mentioned in the instructions furnished to architects by the trustees. Firstly. A *separate* infirmary to contain four wards, nurses' rooms, store-rooms, kitchen, larder, bath rooms, w.-c. airing-grounds, &c., in fact, a complete building, *entirely distinct* from the main building, with all the necessary offices attached. Secondly. Receiving wards for either sex, with baths, w.-c.'s, &c. complete. Thirdly. In the main building,—infants' mistress's rooms, additional room for infants, and three work-rooms for boys and girls. Fourthly. Drainage around the entire ground, the ditches being used as a common sewer. Lastly. Several little matters,—the detail of which it is not necessary to trouble you with. The trustees themselves made one or two previously contemplated additions, which, together with the fittings and fences, make up the additional sum beyond the stipulated amount of 4,000*l*. I trust after this explanation the various other competitors (of whom I understand there were about forty) will feel satisfied that this competition has been *throughout* conducted in an impartial manner, and that the "highly honourable conduct" of the committee, mentioned in "A. B.'s" communication did *not* cease at the time the design of Messrs. Jones and Parker was rejected.

FRED. TYERMAN.

NEW SWISS PROTESTANT CHURCH, ST. GILES'S.

FOR nearly a century the Swiss Protestants have met to worship in Moor-street, St. Giles's. By subscription amongst themselves, they have now erected a new church in Endell-street. On the left, in the entrance-lobby, is, the vestry, lighted from the street: on the right is the clergyman's room, also lighted from the street, with washing-closet, &c. and stairs to gallery, which is immediately over these rooms, and will contain sixty-five people—all free seats. There is a new organ, by Walker, in the gallery. The church itself contains on the ground-floor accommodation for 262 persons, all in open pews, free sittings. It is lighted entirely from the ceiling; is 67 feet long from end to end without the apse, and 35 feet broad between the walls; the same height from floor-line to ceiling, which is semicircular, ornamented with enriched mouldings, and a guiloche band subdividing it into compartments terminating on corbels in the walls. The style is Italian: the cost of erection, including pews and fittings, 3,300*l*. Messrs. Haward and Nixon were the builders; Mr. George Vulliamy, the secretary of the Archæological Institute, was the architect. The service, we may add, commences every Sunday at half-past eleven o'clock.

OXFORD ARCHITECTURAL SOCIETY.

THE first meeting in this term was held in the Society's rooms, in Holywell-street, on Wednesday, the 14th inst. the Rev. the Rector of Exeter College, president, in the chair. The report of the committee expressed satisfaction at the selection of the successful design for the new museum. The president, in introducing the subject proposed for the evening's discussion, "The principles on which stained glass should be designed for use in churches," said that there was much need of some agreement on the very first principles which should guide those who design and erect windows. The Rev. T. Chamberlain, according to the Oxford papers, thought the great end of stained glass in churches was to excite feelings of devotion, and for this reason would exclude everything which did not tend to this end, or was calculated to suggest any other ideas to the mind. On this principle he would exclude mere mosaic pattern windows, and those in which symbols were the main subject, and simple diapers, allowing quarries surrounded by coloured borders. As in architecture, he would employ the best of its kind, namely, Second Pointed; so in glass, he would use the style of the fourteenth century. As to the subject of nationalism and conventionalism, he was opposed to the grotesque as such, but would studiously avoid in the representation of natural objects anything which might seem sensuous. He condemned mere antiquarianism in glass. The Rev. J. E. Millard maintained that a design for stained glass ought to be entirely subservient to that of the window tracery, and to the general requirements of the fabric. Consequently he considered a regard to colour more essential than even correct drawing, though he was opposed to outlines intentionally grotesque. Mosaic patterns, and groups of small figures in medallions were, he thought, preferable to large independent figures, as they distribute rich and gem-like colours harmoniously, instead of exhibiting broad masses in violent contrast. Such colours should be relieved by a liberal use of white glass. He considered these principles applicable to any style or period. Mr. Parker thought no style of glass was to be absolutely condemned. He admired fourteenth century glass above all other, but also considered windows in the style recommended by Mr. Winston, and those now made in Bavaria, as beautiful works of art, and ornaments of churches; and if he had to fit in a Norman window, he should certainly employ glass after the manner of that, for instance, at Canterbury. Mr. Bruton protested, as also did Mr. Chamberlayne, against the use of canopies: he thought mediæval artists would have inserted stone, if they were needed. Mr. Parker did not agree with Mr. Bruton in that opinion. In fact, in mediæval churches, the windows were part of the same series of decoration, with the niches and statues, coloured, which ornamented the walls. The Rev. H. B. Walton thought that colour should be as much employed on the walls as on windows, and feared that the strong prevailing taste for stained glass windows would prevent the acknowledgment of that truth. In regard to memorial windows, as in all others, he would rigidly exclude everything which was not of a sacred character; as, for instance, armorial bearings.

DANGER TO LIFE FROM RUINOUS CONDITION OF BUILDINGS.

WARNINGS as to the dangerous state of premises in London continue to be given. On Thursday morning (1st inst.) about eleven o'clock, the roof of a two-story shed, in the occupation of Mr. Jacobs, a rag and old iron merchant, near St. Chad's Well, in the Gray's-inn-road, gave way, severely injuring a number of women engaged in sorting the rags, and a workman employed. A fire had destroyed an adjoining shed, at right angles with the other, a short time since, and workmen were engaged in the rebuilding at the time of the occurrence. In the shed where the accident happened, piles of bags and materials had been accumulated, and these appear to have helped to press out the wall, which the transverse building may have previously kept up. Other portions of these premises, and of those in other occupation hereabouts, require examination. One person, whose own front wall was being gradually forced outwards, pointed to the danger he was in from Mr. Jacobs's premises, knew who was surveyor of the district, but "did not like" to let him know. Really, if calamities happen through mere childishness of this sort, we can have no pity, unless it be for the poor workpeople subjected to the results of such carelessness, or such ignorance of structural matters, as must be held, itself, criminal.

ARCHITECTS' BILLS.

H. KENDALL, JUN. AND OTHERS *v.* KING.

THE plaintiffs in this case, tried at the Court of Common Pleas, on the 16th ult. are architects, and the defendant is clerk to the Committee of Visitors of the Cambridgeshire Pauper Lunatic Asylum. In the year 1850 the visitors were desirous of building a new lunatic asylum, and they advertised for plans, and offered a premium of 150 guineas. The plaintiffs, and about fifty other persons, sent in plans, but the plaintiffs were the successful candidates, and they were informed that their plans would be adopted. The plans were also approved by the Commissioners of Lunacy and by the Secretary of State for the Home Department. A long delay occurred; but the plaintiffs' case was that they had been already appointed architects to superintend the building. It happened, however, that the visitors changed their minds, and instead of carrying out the plaintiffs' plans, thought that a plan proposed by Dr. Hill, a physician, was superior, and ought to be adopted. The plaintiffs thereupon demanded compensation for having prepared the plans, and also for the loss they had sustained by not having been allowed to superintend the erection of the asylum. The visitors offered 150 guineas for the plans, and declined to pay anything further; but this offer was not accepted, and so the present action was brought.

The Attorney-General, Mr. Bovill, and Mr. Phipson, appeared for the plaintiffs; and Mr. Serjt. Byles and Mr. Lush were for the defendants.

In the course of the case it was stated that there were a great many legal difficulties in the case, and after some discussion it was agreed that the plaintiffs should receive the 150 guineas at all events, and that all other questions in the cause should be referred to a gentleman at the bar.

A verdict was accordingly taken for the plaintiffs, subject to the reference.

Miscellanea.

THE LIVERPOOL TIMBER DOCKS.—A statement with regard to the timber trade at the south docks during the past year as compared with 1853, was laid before the Dock Committee on Thursday week. It showed that the number of vessels employed in the trade, in 1854, was 620, with a registered tonnage of 377,410 tons, and an import of 503,205 tons; while, in 1853, the number of vessels was 656, the tonnage 365,143 register, and the import 487,123; showing, during the past year, a decrease of 36 vessels, and an increase of 12,267 tons register, and 16,082 tons in the quantity of import.

THE DRAINAGE SOUTH OF THE THAMES, AND WASTE LANDS.—It is a well-known fact, that the county of Surrey contains more poor waste land than any county in England for its size, and as a considerable part of the district south of the Thames lies below that river, and there seems to be great difficulty in thoroughly draining it, I venture to propose that the whole of the sewage shall be diverted from its present imperfect and wasteful course, and be conducted direct on to the before-mentioned waste lands, to be used as manure, thus enhancing their value some 400 or 500 fold. The wilds of Chobham, Woking, Banstead, Aldershott, and other places, might thus be made the most productive market-gardens, meadows, and corn-fields. The advantage of their being so near London cannot be estimated. There should be about three lines of new connecting sewers, one of which should be run by the side of the South-Western Railway, and the others by the shortest and most economical routes to their destinations. At the mouth of each should be a pumping-station, and reservoirs and lines of pipeage throughout the district to be manured, and the use of which should be included in the price per acre at which it would be let to farmers and others.—T. GOODCHILD.

GREAT ENGINE CRANK.—At the Mersey Steel and Ironworks at Liverpool, a crank was last week made for the new line-of-battle ship *Marlborough*, the largest screw line-of-battle ship ever built, being for 131 guns, and a larger and more powerful ship than even the *Duke of Wellington*. She is to have engines of 1,000 horse-power, with a direct action upon the screw. The engines were contracted for by Messrs. Maudslay, Son, and Field, and the crank has been ordered by them. It is the largest double-throw (or locomotive) crank ever forged, and when complete it will weigh about 17 tons. It consists of masses of wrought-iron welded together, and condensed by a steam hammer of nine tons weight. The forging of the crank is in detail, each end of it being subject to operation separately. The masses of iron were suspended by a crane, and the portion to be wrought was inserted in an immense furnace and completely surrounded by its intense fires, from which it was brought out at white heat. The glowing metal was then moved by a crane, and guided by thirty-five men to the anvil beneath the steam hammer, the ponderous strokes of which brought it by degrees to the required solidity and structure.

JOINERS' STRIKE AT GLASGOW.—Upwards of 200 joiners struck work last week. The cause is a difference about time. It seems that last summer the men were paid 24s. a week of fifty-seven working hours, that is, ten hours a day, except Saturday, seven hours. When the days shortened the masters reduced the working time to nine hours a day, paying a proportionately reduced rate of wages. To obtain the summer rate, the workmen resolved to ask a return to this rate, or to strike work. The greater proportion of the masters conceded, and in cases in which they did not the men struck. Fifty-two shops are working at the terms asked by the men, and others that were working last week—about twenty in number—were doing so on the terms they worked at all winter, while nineteen shops were at a stand-still from the strike.

THE DARLINGTON BOARD OF HEALTH.—Mr. Piper, surgeon, says the *Gateshead Observer*, has presented another of his short and sensible reports to the Local Board of Health in Darlington—a model board, which promises to make the town a complete contrast to the "Darnton in the Dirt" of James I.'s day and generation. He mentions that since the application of the Lodging House Act to Darlington, he has not known one case of typhus in any of the twenty-one lodging-houses of the town! whereas, under the former system, he had attended fifteen cases of typhus, at the same period, in one house! Sewage works are making rapid progress under a scheme comprising a regular system of flushing; and before the close of 1855 Darlington will, in all probability, be thoroughly drained; the surcharged burial-ground will be closed; and water will be supplied to all the inhabitants.

RUINOUS BUILDINGS.—Nothing appears to me more illusive and delusive, than ascribing casualties resulting from ruinous buildings to the defects of the Buildings Act. No amount of legislative enactment can remedy this, or offer an effectual guarantee to the public against such casualties. One pregnant cause of evil is that of old buildings being cut into and altered by ignorant and inexperienced persons, without a surveyor's advice or opinion; and another, the unwillingness of landlords to perform necessary works. Many houses may be and are in a very bad state: there may be little apparent external defect or indication, and yet the whole be little better than a ruin. A proper board should exist, armed with powers to act summarily, when a house is ascertained to be in a dangerous condition,—armed, too, with money to take steps where the owner cannot.—S.

THE LIVERPOOL ARCHITECTURAL SOCIETY.—SIR—Will you allow me a dozen lines in your well-conducted journal, to warn my brother members of the Liverpool Architectural Society against the course which they are being led into? There are two of them at any rate, who seem to regard the society simply as a means of making their names public, and rather than say nothing they will say worse. At the last meeting a foolish person, named Boult, took upon himself to make some observations on a number of your journal with a disregard for truth which was the more remarkable as most of the respectable gentlemen who were present must have perceived it. He had the ungrateful temerity to bring prominently forward, amongst his objections, the omission of the architect's name on the useful illustration of Percy Chapel, Bath; although, as far as I know, and I have been a careful reader for seven years, such an omission never occurred before; and even this was supplied in your next number. At previous meetings the members have been led into condemnation of this, and abuse of that, to gratify the spleen or vanity of individuals, and I assert that such a course cannot be pursued without damage to the society and injury to a good cause.—A MEMBER.

LIBRARY FOR THE POOR OF EAST RETFORD.—The Rev. Alfred Brook, vicar of East Retford, has succeeded in establishing a library and news room for the use of the poor. For the small fee of one penny per week, or threepence per month, the members can read the *Times* on the evening of publication, the *Illustrated London News*, *Daily News*, histories, biographies, travels, magazines, &c. as well as many other works. The news room is in Sutton's-row.

CHRIST CHURCH, KENNINGTON.—This church, better known as Holland Chapel, was re-opened last Sunday, having undergone extensive alterations, previously to its conversion into a district church, accommodating 1,500 persons, one-third of the number being free. The alterations consist in the extension of the building longitudinally 14 feet terminating in a semicircular apse, pulpit, reading-desk, and font, with a re-arrangement of the sittings. The entire cost, little less than 3,000*l.* devolves upon the Rev. J. McConnel Hussey, the incumbent. This sum includes three stained glass windows, by Messrs. Gibbs and Son. The contractors were Messrs. Haward and Nixon, and the warming of the building was entrusted to Mr. William Jeakes. Mr. Vernon Arnold was the architect employed.

NORWICH SCHOOL OF ART AND FINE ART SOCIETY.—A *soirée* of the students of the Norwich School of Art, and their friends, was held on Wednesday week in the Institution apartments in St. Andrew's, and attended by upwards of 250 persons. The students were addressed by various gentlemen, including Sir S. Bignold, Member of Parliament for the city of Norwich. In the gallery a small collection of works of art was exhibited, including students' drawings, and an oil-painting by Mr. Nursey, the master of the school. The pupils, we understand, now number in the central school 135, and in the public schools, under the central guidance, 520; in all 655 who receive instruction in drawing. Until the present master came recently from Belfast, we are told there were at no period more than from seventy to eighty pupils. Mr. Nursey is endeavouring to revive the "Fine Art Society" in Norwich, and has already nearly obtained the required number of subscribers. An exhibition of works of art, including a large collection of paintings from London, is to be promoted by the subscribers, so soon as fifty, at 1*l.* 1s. shall have become associated for the purpose.

STATUE OF THE LATE PROFESSOR WILSON.—It has been resolved, it seems, that the monument to the late Professor Wilson should be a colossal statue of bronze, to be placed on a pedestal in the open air, in some public situation in Edinburgh. The work is to be entrusted to Mr. Steele. The subscriptions already received exceed 1,100*l.* and the sum required would be about 1,500*l.*

THE LATE BREAD RIOTS AT LIVERPOOL.—Yesterday, says last Saturday's Liverpool *Times*, a bricklayer, John Stevenson, who is in the employ of Messrs. J. and R. Duckworth, Prince Edwin-street, called at our office, at the request of the committee representing that trade, to state that the bricklayers disowned all participation in the riots, and viewed them with surprise and indignation.

MAGNETIC TELEGRAPH COMPANY.—The second ordinary half-yearly meeting of the shareholders of the Magnetic Telegraph Company was held on Thursday before last. From the general statement of accounts, it appeared that there was expended on the the works, &c. and on capital account, 259,504*l.* 7s. 3d.; capital bearing dividend for first half-year, 192,280*l.*; and for last half-year, 212,280*l.* The traffic account showed a total of 26,677*l.* 14s. 6d. After payment of five per cent. dividend for 1854, there remained a balance of 1,545*l.* 9s. 4d. The various resolutions were adopted.

THE BALL OF BUILDERS' BENEVOLENT INSTITUTION, AND "GENTILITY."—After quoting our notice of the ball recently given at Willis's Rooms in aid of the Builders' Benevolent Institution, the *Bridgwater Times* makes the following remarks:—"We notice the above extract from the *Builder* for the purpose of pointing out how universal is that false pride (*vulgo, snobbism*) throughout all classes of society. "*The leading builders*" did not show in the numbers the committee had a right to expect. Of course not; the leading builders' families would have been ashamed of their company. Anything but a builders' ball they would have patronised, but the association of a trade connection was too much for their nerves! The editor of the *Builder* is quite right to notice this weakness of the "leading builders." It is not, however, only with them, such weakness prevails; but every class is infected with the same unhealthy stuck up tone, until every attribute of honest, manly, independence of feeling is frittered away for the tinsel of gentility and "our set!" The claims of "an important and excellent charity" cannot even break down the bar; and we are compelled to the conclusion that "gentility" in modern parlance, holds the opposite meaning to "respectability." Respectability can visit anywhere without danger, but gentility is shocked at a poor relation or a humble fellow craftsman. Gentility is the lath and stucco erections of an ephemeral character,—respectability, the solid buildings which endure for all ages, and reflect credit on all connected with them."

GLAZED BRICKS.—A correspondent, in a recent number of your journal, suggests the using of "glazed bricks" as a good and useful means of decoration. If your correspondent is ever on the South Staffordshire Railway, he will see (at Whichnor) glazed bricks used in strings, &c. to some cottages built by Mr. Pigott, railway contractor, for that company. I have also adopted them for the front of a new spirit-store I have just erected in the market-place, Dudley, where the window-dressings, cornices, &c. are of Hollington stone, and the effect is very good. The bricks in this case were from Rufford's, at Stourbridge, and cost but little more than the best pressed and dressed red bricks from the Birmingham yards. The joints in this case were raked, and filled in with oil putty. The whole front can be soon cleaned, and made to look as "good as new,"—a desideratum in the "black country."—W. W.

EFFECT OF GLAZED WINDOWS ON ARCHITECTURE.—Amongst the subjects for prize competition (for medals valued at 24*l.* each), proposed by the Fine Art department of the Belgian Academy, for the current year, is the following:—"To elucidate the modifications and changes which architecture has passed through by the introduction and employment of glazed windows both in public and private buildings,—specify the time of said introduction, and mark the successive transformations and improvements this new element has brought about?"

NORFOLK ARCHÆOLOGICAL SOCIETY.—The annual meeting of the members of the Norfolk and Norwich Archæological Society was held on Thursday, the 15th ult. at the Guildhall. Owing to the extreme inclemency of the weather, there was but a very thin attendance of members, and Mr. R. Ward was called to the chair, but, by general consent, the meeting was adjourned for the transaction of the usual business of electing officers, &c. till the 8th of March. Two papers had, however, been prepared for the present occasion, and Mr. Harrod read them. One was by Mr. Greville Chester, on some Celtic Tumuli in East Norfolk: the other was by Mr. Harrod himself, on the application of photography to the purposes of archæology.

IMPROVEMENT OF DWELLINGS IN TUSCANY.—The *Labourer's Friend* quotes a decree of the Grand Duke of Tuscany, on the dwelling-houses of his subjects, as containing an example deserving the consideration at least, and as far as practicable the imitation, of other Governments. This decree gives power to the local authorities to institute cleansing and repairing committees to consist of five to seven persons, including a medical man, and an architect or engineer, the others to be members of the municipality. These commissions are to visit dwellings complained of, and order repairs, &c. necessary to render the buildings wholesome, and to report on same to the authorities and the proprietors, who are to be ordered by the magistrates to execute the required works, failing which, a fine of 20 to 50 lira is to be imposed, and a new order issued, neglect of which is to be punished by a fine equivalent to the cost of the works, and not less than 100 lira, all fines to go to the benefit of the municipal funds. Whether the necessary works, however, must still be carried out by the proprietor, or whether the second fine is to be applied to that purpose by the municipality, does not appear: it would rather seem that the dwelling is to remain in its unwholesome state while the municipality is to reap the pecuniary benefit.

THE ARCHITECTURAL EXHIBITION AT GLASGOW.—On Saturday evening before last this Museum of Art was thrown open to the working classes at the charge of sixpence, and many of them have taken advantage of the treat. Upwards of ninety tickets were sold to the employed of one house-painter that evening, according to a local paper. The spectators appear to have been delighted. The Teetotal band, adds our authority, discoursed most stirring music, and had it not been for the various floor projections and attractions, a dance would have been the *finale*.

THE MUSEUM OF LONDON ANTIQUITIES COLLECTED BY MR. ROACH SMITH.—Mr. Corner and others, it appears, have offered this valuable collection to the City, through the Lord Mayor, "at a price below what it cost." The printed and illustrated catalogue, although giving only an approximate notion of the extent of the collection and of the peculiar character of it, is itself an interesting production. The materials of this museum, as is well known, have been carefully and laboriously, and indeed at no little cost, collected from the Roman as well as from both the earlier and the later surfaces, now the subsoil, of the London site. Wherever the City authorities had men employed in digging through this subsoil, there was Mr. Smith too, as it were, employed in reaping this curious harvest; and one little anecdote may show with what results. On one occasion he happened to get hold of a nondescript bronzed article, raked up from the Thames, and something like a fan in form. This of course he carefully placed in his valuable museum. About a twelvemonth afterwards, being *in a dredging barge*, he picked up another curious-looking article of bronze from amongst the sludge or gravel. He immediately identified it as the body of the very peacock of which the fan-like article was the broken-off tail! Of such materials is the Museum of London Antiquities. It is a collection which ought to have been made by the City itself, and which at all events ought undoubtedly now to be purchased by the City.

PURIFICATION OF GAS.—In the course of last year a patent was taken out by a rev. gentleman resident at Wakefield, in association with the manager of the gasworks there, for the better purification of gas by means of a combination of lime *and clay*. About a month afterwards, or rather more, a resident of Holloway took out a patent for the better purification of gas by means of a combination of lime *and magnesia*, or of lime *and ochre*. In noticing the latter patent at the end of last year, we expressed an opinion as to the probability that it was indebted to the former for its suggestion. We have since had a note from the Holloway patentee, in which he denies that his patent was suggested by the Wakefield one, and alleges that the latter was designed for the purpose of purifying gas from ammonia; whereas, his was meant to purify it from sulphur, in the form of sulphuretted hydrogen. Moreover, he remarks that although the Rev. Mr. Bowditch's patent was dated 10th January, 1854, and his 20th February following, the former was not *published* till 10th July. We think it but justice to state thus much; remarking, however, that it is a mistake to limit the design of the Wakefield patent to the removal of ammonia, one of its chief purposes having been declared to be the purification of gas from sulphur, especially in the form of sulphuretted carbon.

THE WATER SUPPLY OF THE METROPOLIS. On Friday evening in last week a lecture was delivered in the theatre of the Royal Institution, Albemarle-street, by Mr. Dickinson, on the supply of water to the metropolis. In the course of it Mr. Dickinson developed his own plan, which is partly based, it would seem, on a proposal, made in 1641, to convey water from Richmansworth, and another, by Mr. White, in the year 1788, to construct an aqueduct for the conveyance of water from Harefield, in Middlesex, to the north side of Portland-place. Mr. Dickinson proposes to take his supply from the river Colne, which has hitherto (he observed) been unaccountably neglected. This river is much higher than the level of the Lea, and its chemical constituents, which are pretty nearly similar to those of that river, may be pronounced innocuous. It is the opinion of the lecturer that a large supply of very—if not perfectly pure water, may be supplied from the Colne, by the principle of gravitation, to the inhabitants of Kensington, Fulham, Knightsbridge, Brompton, Belgravia, and a great part of London. It is proposed to convey the water by means of an aqueduct to a large reservoir at Kilburn, at 180 feet above the Ordnance *datum*, where it will be filtered, and whence it may be delivered, by a pressure of 10 feet, to houses on the low level of Westminster, Belgravia, &c. at a high service of 40 feet above the pavement, so that water may be supplied at all times at high service. The aqueduct is to be a reservoir of moving water, well guarded by gratings, and carefully secluded from trees and the possible infusion of vegetable matter.

RAILWAY MATTERS.—Appended to the lately published report of the directors of the Great Northern Railway, is a plan of the contemplated Metropolitan Railway. It is to commence at Paddington and terminate at the Post-office. At the outset it will connect itself with the Great Western, besides having a branch terminating in a station at no great distance from the Marble-arch, Hyde-park. The first on the line will be convenient to passengers from the Edgware-road, Oxford-street, Park-lane, &c. The second and third will be open to passengers from the various localities adjacent to the west and east ends of Regent's-park. The fourth will be situated a short distance beyond the Tottenham-court and Hampstead roads; and the fifth will communicate by a branch with the North-Western at its terminus at Euston-square, and thereby with the North London. The sixth will be near the King's-cross terminus of the Great Northern. The seventh will be in Clerkenwell, parallel with about the centre of Gray's-inn-lane. The eighth in the vicinity of Smithfield, adjacent to the lower part of Holborn. The next and final station will be the Post-office. Once completed, this line will put a stop to a good deal of omnibus tyranny, caprice, and extortion.——The railway between Alexandria and Cairo, a distance of 130 miles, is now complete, with the exception of the three bridges on the two branches of the Nile and the Delta Canal, and these will be completed five or six months hence. ——A lecture on the prevention of railway accidents was delivered on Wednesday week, at the Panopticon, by Mr. Eidmans, patent agent, in which he chiefly dwelt on Mr. Ingall's inventions. That for communicating between passenger and guard and guard and driver we have already noticed. Another referred to was the train indicator, to show at any time where a train was, and how many miles it had travelled, thereby obviating collision. At each station, Mr. Ingall suggests there should be an apparatus for signals, to be used more especially in foggy weather: it consists of a pair of force-pumps, which will work a couple of whistles. By another invention, the engine-driver has power to turn himself off from one line of rails to another. Mr. Ingall has further invented a self-acting signal-post, whereby a train will register the time it has passed, whether five, ten, or fifteen minutes. The idea of the inventor is to have on a railway everything, as much as possible, self-acting, so that too great power shall not be placed in one man's hand. The self-acting apparatus ought not to be regarded, however, as a substitute for any of the signal-men now employed, but as additional security where no signal-men are employed: otherwise, inventors may depend upon it that railway directors will reject every such invention, on the very pretence of regard for the public safety itself, which inventors, they are ever ready to allege, would thus endanger by the substitution of mere mechanism in the place of watchful servants.

ELY CATHEDRAL.—Portions of two of the eight stained glass windows, the munificent gift of the late Bishop Sparke, have been temporarily placed in this magnificent building. If approved, the others are to be immediately put in hand. They will represent the principal occurrences in the life of our Saviour; and Mr. Wailes will be entrusted with their execution. The carving of the new reredos is nearly complete, and the groined canopies, which are to be supported by twisted shafts, inlaid with coloured stones, are ready for fixing. Five subjects will be illustrated in the recesses, the figures averaging about 20 inches in height: 1st, the Entry of our Lord into Jerusalem; 2nd, the Washing the Disciples' Feet; 3rd, the Lord's Supper, 4th, the Agony in the Garden of Gethsemane; 5th, the Bearing the Cross. Upon the twisted shafts, which will mark the principal divisions, six angels will stand; and a representation of the Transfiguration will surmount the canopy of the centre bay. This portion of the work will be in alabaster, the sculpture being executed by Mr. Phillips, of London.

THE ASSOCIATION FOR IMPROVEMENT OF FARM-DWELLINGS IN SCOTLAND.—The first annual report of this association has been published in form of a pamphlet. It contains also practical hints on cottage building, with engraved plans and a general specification, from the pen and pencil of Mr. Fowler, the architect to the association. Judging by our English ideas, we should fear that the plans show rather confined limits, even for cottage accommodation, but no doubt the architect is restricted by what is practicable in a pecuniary sense to many small proprietors and others in Scotland, for whose guidance they are intended. This is an association much needed in Scotland, and which will probably do great good. The architect, it appears, is open to hints or suggestions from any quarter for the improvement of the country dwellings, and no doubt he will receive many such from the canny Scottish country folks. One of the oddest *novelties* of this order we happen to have lately heard of, as to Scottish cottage *architecture*, if we may so call it, is the adoption of the Irish hovel principle for the common sitting-room fire-place, namely, in the middle of the floor, but not with merely "a hole in the roof." If we rightly understand the verbal description given us, a suitable open fire-grate, with circular hearth and fender, is placed below, in the middle of the clay or stone floor, while the smoke is received by a conical vent gradually narrowing above till it issues out by a proper chimney. The vent was described as supported on four thin iron rods or pillars below, connected with the grate. The advantages intended to be provided for by such arrangement were, the possibility of a large family sitting *all round* the fire-place, while the apartment was conceived to be thus also much better warmed, and with a smaller quantity of fuel. As this is believed to have been an invention, *con amore*, of inhabitants of such cottages themselves, the hint is suggestive.

THE CHAPTER-HOUSE, SALISBURY.—Most of your readers must be acquainted, if not familiar, with the building above named. It has been fully illustrated and noticed in Britton's and Dodsworth's Histories of the Cathedral. It has been wofully dilapidated and neglected since the time Mr. Wyatt trespassed and inflicted much injury on that sacred edifice. I learn that the late prelate employed Mr. Thomas Wyatt to examine and report on the state of the said chapter-rooms; but nothing was done beyond a report. Since the bishop's decease a new architect has been employed; and from what appeared at the late meeting of the Wiltshire Archæological Society at Salisbury in October, it seems that certain funds have been promised to repair, restore, and *redecorate* this insular building. The architect exhibited some showy drawings, and professed to give a lecture on the subject to the assembled members of the society above named. Not being able to see the said drawings, or hear the discourse, I am induced to call the attention of your readers to both, in the hope that some persons who feel interested in the fate and integrity of the building referred to, may favour the writer of this note, and the readers of the *Builder*, with some account of what has been done, is doing, and *intended to be done*, on the justly admired Chapter-house of Salisbury.—THE KEY.

TENDERS

For the Bishop Stortford Cemetery. Mr. Pritchett, architect.

NOTICE.—All communications respecting *advertisements* should be addressed to the "Publisher," and not to the "Editor;" all other communications should be addressed to the EDITOR, and not to the Publisher.

ADVERTISEMENTS.

TO CONTRACTORS. — DRAWINGS or TRACINGS of CONTRACT WORKS, Specifications, Estimates, and any other information, supplied to Contractors in the country on moderate terms, by Mr. WARREN, 53, Upper Stamford street, London.

TO ARCHITECTS, ENGINEERS, &c.

WANTED, TRACING or COPYING DRAWINGS, SPECIFICATIONS, &c.—Address, E. P. Mr. Dunn's, Stationer, 5, Heathcock-court, 414, Strand.

MORNING and EVENING CLASSES, for the Study of Architectural, Civil Engineering, and Mechanical Drawing, Measuring and Valuing Buildings, Land, &c. every day and evening except Saturday. A class for a course of Architectural Colouring of fifteen lessons of two hours each, two days a week, is being formed; for terms of which, and for prospectus of classes, apply at the Architects', Builders', Civil Engineers', and Mechanics' Drawing Establishment, 13, Old-street, City-road.

T. J. HILL, Architect, Conductor of the Classes.

TO PARENTS AND GUARDIANS.

AN Auctioneer and Surveyor, having an established City and country practice, has a VACANCY in his London office for an OUT-DOOR ARTICLED PUPIL of gentlemanly manners and address, who would have the great additional advantage of acquiring proficiency in architecture and surveying in all its branches.—Apply, in the first instance, by letter only, to T. K. Hasfield's, Stationer, Moorgate-street, City.

TO BUILDERS AND OTHERS

AN Architect and Surveyor in London is willing to take the son of a builder for one or two years, to assist in the office. He will be taught drawing and taking out quantities. A small premium required.—Address, A. B. 15, Old-street, City-road.

FOREMAN WANTED.—Wanted, a Foreman, CARPENTER by trade, to take charge of a small job for about five months in the country, thirteen miles from London. —Apply, stating wages required, to W. N. 37, Oxford-street.

TO ARCHITECTS AND SURVEYORS.

OCCASIONAL ASSISTANCE.—A qualified ASSISTANT, of eleven years' experience, is desirous of affording temporary assistance to the Profession, at their offices or his own residence. Address, A. B. 38, Duke-street, Grosvenor-square.

TO ARCHITECTS, BUILDERS, &c.

OCCASIONAL ASSISTANCE.—WANTED, by the Advertiser, EMPLOYMENT for two or three days a week, or for a few hours each evening. Is a good draughtsman and accountant. He has had considerable experience in designing and constructing dwelling-houses and farm-buildings. Can have first-class testimonials both from Government and private offices.—Address, R. E. 9, Parliament-street, Westminster.

TO BUILDERS, CONTRACTORS, AND OTHERS.

OCCASIONAL ASSISTANCE OFFERED.—WANTED, an ENGAGEMENT for one or two days a week, or upon terms to be agreed upon, by a thoroughly practical Measurer and Estimator, and one who is well acquainted with the general routine of a Builder's office. Can offer good references to builders (if required) with whom he does business.—Address, A. B. C. 8, Triangle, Upper Kennington-lane, Lambeth.—Terms strictly moderate.

TO PLUMBERS, PAINTERS, AND GLAZIERS.

WANTED for a permanancy, in the country, an active and steady THIRD HAND, about 35 years of age. He must be a good plumber and painter, and able to do lead and sash glazing, &c. None need apply but such as can produce good testimonials.—Address, H. R. No. 38, Sun-street, Bishopsgate, London

TO MASONS, &c.

WANTED, by a Young Man, a SITUATION in a Mason's Shop. The Advertiser has been used to Bookkeeping, and writes a good hand. Could fill up his time in the Counting house. Wages not so much an object as a permanency. Good references if required.—Address, Mr. SMITH, care of S. E. 4, Grove-terrace, St. John's-wood.

TO MASTER PAINTERS.

WANTED, by a Young Man, CONSTANT EMPLOYMENT as GRAINER and PAINTER. He can make himself useful at glazing.—Address, H. ROWE, 105, Bermondsey-street, London.

WANTED, a SITUATION with a respectable Builder, for a youth aged 17, to learn the business. A small premium would be given.—Address, Mr. MILLER, 25, Mount-street, London Hospital.

WANTED, by the Advertiser, a SITUATION as CLERK of WORKS or BUILDER'S FOREMAN. Can be strongly recommended from extensive works just finished.—Address, J. G. H. 30, President-street East, Goswell-road.

TO BUILDERS.

WANTED, by a competent Person, a SITUATION as SHOP or OUT-DOOR FOREMAN. No objection to the country. Good testimonials can be given. —Direct to A. B. at the Office of "The Builder."

TO STONEWARE POTTERS.

WANTED, a SITUATION, by a practical POTTER, who has a thorough knowledge of the enamel and other glazes. Samples if required. Or, if a situation is not obtainable, has no objection to dispose of receipt for glazes. Address, M. W. 11, Great Duke-street, Westminster road, Lambeth.

TO ARCHITECTS, BUILDERS, &c.

WANTED, by the Advertiser, a Situation as CLERK of WORKS, or ASSISTANT in an OFFICE; is a good draughtsman and accountant, and has had considerable experience in designing and construction. Can have first-class testimonials.—Address R. A. Office of "The Builder."

WANTED, by a Young Man, aged 19, to ENGAGE for TWO YEARS in a CARPENTER and JOINER'S SHOP, having had four years' experience in the trade Town or country.—Address R. G. at Mr. Rose's, 18, Clifton-street, Waudsworth-road, Surrey.

WANTED, a RE-ENGAGEMENT as CLERK in a BUILDER'S OFFICE, by a Young Man who is thoroughly acquainted with the trade, and is a good draughtsman. Good references.—Address, W. P. 33, Bisterne-place, Poplar.

WANTED to place out an active, well-educated YOUTH as IN-DOOR APPRENTICE to a CARPENTER and JOINER, or CABINET-MAKER. A moderate premium will be given.—Apply by letter, post-paid, to F. J. 16, Cumberland-market, Regent's-park.

TO BUILDERS AND OTHERS.

WANTED, a SITUATION as PLUMBER, PAINTER, GLAZIER, &c. by a Young Man, aged 27. A good reference.—Address, H. T. 13, Mason-street, Westminster-road, Lambeth

TO CARPENTERS, &c.

THE Friends of a Youth, aged 17, who is strong, active, and intelligent, are anxious to APPRENTICE him, in-door; in the country preferred. A moderate premium will be given.—Address, W. H. W. Mr. Steel's, 3, Spring-gardens.

TO ARCHITECTS, BUILDERS, &c.

THE Advertiser, competent to design and make working, finished, and perspective drawings, with a knowledge of cost. uring, is open to an ENGAGEMENT. Only a moderate salary required.—Address, M.M. Office of "The Builder."

THE Advertiser, having served four years in an Architect's and Surveyor's Office, is desirous of obtaining an APPOINTMENT in a first-rate office of the above-named description. Salary not so much an object as improvement.—Address, Z Messrs. Burrup and Son's, Stationers, 12, Royal Exchange.

TO ARCHITECTS.

THE Advertiser, who has completed his articles with an Architect in London, is desirous of an ENGAGEMENT, in either Town or country. As improvement is the principal object, a small salary only will be required.—Address, A. X. 10, Orchard-terrace, Clarence-road, Hackney, London.

TO ARCHITECTS.

THE Advertiser, who has served his articles, wishes for EMPLOYMENT in an ARCHITECT'S OFFICE in town.—Address, A. A. Messrs. Morris and Co.'s, Moorgate-street Chambers, City.

THE Advertiser, who is a good Plain and Ornamental DRAUGHTSMAN and COLOURIST, understands perspective, &c. is desirous of an ENGAGEMENT, either in an Office, or as Clerk of Works. He has been accustomed to draw up specifications, &c and to superintend buildings.—Address A. J. C. 7, Upper Park-street, Greenwich.

TO ARCHITECTS.

THE Advertiser, a Young Man, aged 25, a practical Carpenter and Joiner, also a neat Draughtsman, wishes for a SITUATION in an office for one or two years, at a low salary.—Address, C. B. 2, Edmond's place, Shepherd's-walk, City-road.

TO BUILDERS AND ARCHITECTS.

EMPLOYMENT WANTED, as CLERK of WORKS or BUILDER'S FOREMAN. Joiner by trade. Certificates can be produced of the highest satisfaction.—Address K. at Mr. Cook's, Hairdresser, 50, Noland-road, Nottinghill.

CLERK of WORKS.—An experienced practical Clerk of Works is open to an ENGAGEMENT. The highest references can be given; in or near London preferred. —Address, W. Y. Office of "The Builder."

TO BUILDERS AND OTHERS.

AS CLERK or TIMEKEEPER.—Wanted, by a Young Man, aged 24, a SITUATION in a BUILDER'S OFFICE. He is thoroughly acquainted with the same.—Address to G. M. G. care of Mr. Roberts, 4, James-place, Bath-street, City-road.

A MAN of thorough practical experience in Brickmaking, who has had the general management of brickfields for upwards of twelve years, is open for an ENGAGEMENT as FOREMAN. No objection to foreign service. An unexceptionable reference can be had.—Address, Y. Z. 53, Porter-street, Newport-market, Soho.

TO BUILDERS.

A THOROUGHLY qualified Party is now disengaged for town or country. Understands book-keeping by double and single entry, measuring, taking out quantities, &c. Writes a fine hand, and is an excellent draughtsman.—Address, A. W. care of Mr. Kennett, Bookseller, 14, York-street, Covent-garden.

TO ARCHITECTS.

A GENTLEMAN of great experience is open to an ENGAGEMENT as an ASSISTANT in an ARCHITECT'S OFFICE. Address to G. G. 30, Michael's-place, Brompton.

AN Architectural Draughtsman desires a RE-ENGAGEMENT in Town. Has been accustomed to the getting out of perspective, finished, working, and detail drawings. Salary moderate.—Address, A. B. No. 9, Elizabeth street South, Pimlico.

TO LOCAL BOARDS OF HEALTH, ENGINEERS, &c.

AN Engineer and Surveyor, of great practical experience, and who has recently surveyed and made a drainage plan of a large town to the perfect satisfaction of the authorities thereof, is open to an ENGAGEMENT, permanent or otherwise. Terms moderate. The highest testimonials of ability will be given.—Address, post paid, A B Z, Post-office, Edinburgh.

TO BUILDERS.

AN experienced COUNTING-HOUSE CLERK is desirous of an ENGAGEMENT. Can take out quantities, measure and square up work, and is disposed to make himself generally useful.—Address, R. N. Office of "The Builder."

TO ENGINEERS AND IRONFOUNDERS.

A PRACTICAL Man of experience and ability, conversant with engine work, and the routine of a foundry, &c. is open to an ENGAGEMENT. Is a good plain draughtsman. Respectable references given. Salary moderate. No objection to go abroad.—Address, Y. Z. Office of "The Builder."

A BUILDER'S CLERK, middle-aged, and of very considerable experience in measuring, estimating, and bookkeeping, is open to a RE-ENGAGEMENT, or to undertake the routine duties where one person only is employed. He is of irreproachable character.—Address, A. Z. No. 8, Twyford-street, Caledonian-road, Islington.

TO ARCHITECTS.

A GENTLEMAN, of considerable practical experience, is desirous of an ENGAGEMENT with any one requiring the assistance of a neat and expeditious draughtsman, who is perfectly competent in every branch of the profession. Address J. A. C. Post-office, Birmingham.

AN efficient ARCHITECTURAL ASSISTANT, of several years' experience, who can produce good recommendations, is desirous of a RE-ENGAGEMENT. —Address, R. L. Horton's Library, 1, Royal Hill, Greenwich.

TO ARCHITECTS, CIVIL ENGINEERS, AND OTHERS

A YOUNG MAN desires a RE-ENGAGEMENT. He is a good architectural draughtsman, a ready accountant, can map, plan, and take out quantities, and is thoroughly acquainted with book keeping, and the principles of levelling and surveying. Salary moderate.—Address, X. Y. Mr. Lowe's, Law Stationer, Bell-yard, Temple-bar.

PARTNERSHIP.—An Architect, in extensive and increasing practice in Scotland, wishes to assume a PARTNER.—Communications, with regard to which the strictest secrecy will be observed, to be addressed to S. A. Office of "The Builder."

MARBLE.—Mr. B. FABBRICOTTI, of Carrara, Italy, Proprietor of Marble Quarries, and the only person in the United Kingdom selling Italian Marble the produce of his own quarries, begs to inform the gentlemen connected with the Marble Trade that he has established, in London, the most extensive Depôt of Statuary, Veined, Sicilian, Dove, and Black and Gold Marbles, at CARRARA WHARF, THAMES BANK, PIMLICO, the foot of Vauxhall-bridge.

TO THE MARBLE TRADE.

MR. B. FABBRICOTTI begs to inform the public that he has REMOVED from the office lately held by him at No. 8, Crescent terrace, Millbank, to offices on his own premises, at Carrara Wharf, Thames Bank, Pimlico, where he continues to carry on the marble trade solely on his own account. Mr. Thompson being no longer his agent.

Mr. B. Fabbricotti hopes that the trade will continue to favour him as usual, as, being the absolute proprietor of the quarries at Carrara, he can supply at better advantage and quality than any one else.

N.B. The well-known qualities of Mr. Fabbricotti's marble are celebrated throughout all Italy, England, and America.

MARBLE and STONE CHIMNEY-PIECES.—A SALE of the above will take place on TUESDAY, the 13th of MARCH, consisting of a great variety of statuary, Bardilla, black, vein, and Sicilian marbles.—Catalogues, or any information, by post, one week previous to sale. A large portion of the stock is ready, and can be viewed at any time, at HUSTLER'S Marble and Stone Sawing Mills, Cambridge-heath, Hackney.

MARBLE SLABS.—MARBLE and STONE SAWING-MILLS, 8, NORTH WHARF-ROAD, PADDINGTON. The proprietors of the above mills beg to offer to masons and the building public generally, their extensive assortment of vein, Sicilian, and statuary marble, in slab and block, at prices never before offered. JAMES SIMMONS, Manager.

MARBLE.—THOMPSON and HOLMES, Marble, Stone, and Timber Brokers, Contractors, and Builders' Agents, beg to inform the gentlemen connected with the marble trade, that their STOCK of MARBLE is received direct from the principal quarry-owners in Italy and Belgium, for SALE on COMMISSION ONLY, and that they can consequently supply the Trade with the finest marbles at the lowest prices. Sawn Slab, Mortars, Vases, &c.; Yorkshire and Portland Stone for sale on commission.

The Marble Wharf, Thames-bank, Pimlico, adjoining Vauxhall-bridge.

TO BUILDERS, MASONS, AND OTHERS.

THE largest STOCK in England of MARBLE in Blocks and Slabs, veined, Bardilla, dove, black, black and gold, Sienna, St. Anne's, statuary, serpentine, verd antique, &c. Portland, Harehill, Park Spring, and other stone, in blocks, slabs, landings, and headstones. Yorkshire paving, granite curb, &c. All goods carefully packed and forwarded to any part of England.—THOMAS JACKSON, Marble and Stone Sawing-Mills, Commercial-road, Pimlico, London.

CAEN and AUBIGNY STONE.—P. FOUCARD, Stone Merchant and Quarryman. Cargoes shipped to order from Caen to any port. Contracts taken for any quantities. Depôts: Granite Wharf, East Greenwich; Lett's Waterloo-bridge. Offices: 946, High-street, Southwark, near the Townhall.

CAEN and AUBIGNY STONE.—GATES and GEORGE (late Luard, Beedham, & Co.), General Stone Merchants, Caen Wharf, Rotherhithe, are supplying the above and Bath, Portland, Yorkshire, Granite, and other stones from their depôt, at current prices by land and water carriage; also by vessel direct from the quarries, at moderate ship freight to any part of the United Kingdom.

N.B. Heavy goods landed, transhipped, or carted with despatch, and at moderate charges.

ANCASTER STONE, from the celebrated quarries of Mr. John Wilson, Ancaster, who has appointed GATES and GEORGE, Stone Merchants, his sole consignees for the London district. Ancaster Stone, so generally esteemed by the building profession, for its great durability, economy, and general utility, as to require but a trial to secure the approval of architects and others for its more extended use in building.—Samples and other information can be obtained at the Great Northern Depôt, King's-cross; Caen-wharf, Rotherhithe; and Hibernia-chambers, London Bridge, Borough; or forwarded to address, free of charge.

GODSTONE STONE.—GATES and GEORGE beg to solicit the attention of architects, engineers, and builders to the above Stone, as being suitable for all purposes of construction, either as a substitute for brickwork, or in connection therewith, the price in most respects being about the same as ordinary brickwork. It can be obtained in large quantities, and to specified sizes, in rubble or rough square blocks, direct from the quarries.—Information and samples given at Caen-wharf, Rotherhithe, and Hibernia-chambers, London-bridge, Borough.

GRANITE.—The Cheesewring Granite Company, Liskeard, Cornwall.

London Agents—TREGELLES and TAYLOR, 3, Pinner's-court, Old Broad-street. Manager—JAS J. TRATHAN, Liskeard. This Granite is selected for the New Westminster-bridge.

MARKET-WHARF, REGENT'S-PARK-BASIN.—WEST-END DEPOT for Yorkshire Paving, Portland and Derby Stone, Bangor Slates, Slabs, &c. Also Bricks, Lime, Cement, Plaster, Tiles, Laths, and Fire Goods. WOOD and ROBARTS invite the attention of Builders, Masons, and others, to their Stock as above, where everything will be charged at the lowest prices. Caddestone Paving, Steps, Landings, &c. cut on the shortest notice. Country orders promptly attended to.

BATH STONE OF BEST QUALITY.

RANDELL and SAUNDERS, QUARRYMEN AND STONE-MERCHANTS, BATH.

List of prices at the quarries and depots, also cost for transit to any part of the kingdom, furnished on application to Bath Stone Office, Corsham, Wilts.

BANGOR WHARF, King's-road-bridge, Camden-town.—STRINGFIELD and COOPER, late W. W. Rawlins, beg to call the attention of Builders and others to their stock of Bangor slates, laths, plaster, Roman, Portland, and Keene's cement, blue lias, Dorking, and chalk lime, plasterers' hair, Yorkshire plain, pan, and ridge tiles, glazed sewer pipes, closet-pans, and traps. Welsh fire-bricks, gravel and shells for garden paths, ballast, sand, &c. Materials lauded, wharfed, and carted.

By Her Majesty's Royal Letters Patent.

SILICEOUS STONE.—ORNAMENTAL WORK of every description executed at LOW PRICES in this most durable material. A large Stock kept of Mantel-pieces, Balustrades Quoins, Tombs, Fonts, &c. at the new premises, Whitehall Wharf, Cannon-row, Westminster.

VALENTIA SLATE SLABS.—The Valentia Slab Company invite attention to their Slabs now supplied, of very large dimensions and of superior quality. They have been used at the British Museum, National Gallery, Bethlem Hospital, various Lunatic Asylums, the Ordnance Works, Model Prisons, Pentonville, and other Penitentiaries; Maltese Floors in Bedfordshire and Hertfordshire, Breweries, the Race Stand at Brighton, Portsmouth Barracks, and are kept in stock in large quantities by Messrs FREEMAN, Millbank-street; also by Messrs. Sharpe, Tooley-street; and at Messrs Braby's, Belvidere-road, where terms may be obtained.

ENAMELLED SLATE.—REDUCTION in PRICE.—Mr. MAGNUS having completed some extra machinery, is enabled to announce a further reduction in price in the shape of a large and increased discount to the TRADE. His best goods are now supplied at prices below those charged by other parties for very inferior imitations of his work PIMLICO SLATE WORKS, 39 and 40, Upper Belgrave place, Pimlico.

WILKINSON'S IMPROVED ARTIFICIAL STONE CHIMNEY-PIECES.—Nearly 3,000 of the above have been Sold, although only recently brought to their present state of perfection, and offered to the public. The prices range from 6s. for a neat bedroom set; with jambs, moulded with large ogee on inner edge, set on plinths, Mantel, moulded with ovolo and filet under shelf, and shelf with hollow on edge, to 20s. for drawing-room patterns of more elaborate character. A liberal discount for quantity.—Address W. B. WILKINSON, Newcastle-on-Tyne.

BOW-BRIDGE SLATE WORKS, Stratford, near London.—A. A. ROBINSON begs to inform Architects, Contractors, Builders, and others, that his PRICE LISTS for SLATES and SLAB WORK for 1853 are NOW READY, and can be had on application, inclosing a postage-stamp.

N.B. A liberal discount to the trade.

WILL SHORTLY CLOSE.

COLOSSEUM, Regent's-Park.—Admission, 1s. The original PANORAMA of LONDON by DAY, is exhibited daily, from Half-past Ten till Five. The extraordinary PANORAMA of LONDON by NIGHT, from Seven till Ten. Music from Two till Half-past Four, and during the evening.

IMPROVED PATENT ROUGH PLATE, PLAIN, FLUTED, AND IN QUARRY PATTERNS.

BRITISH PLATE, PATENT PLATE, SHEET, CROWN, AND COLOURED WINDOW GLASS. PURE WHITE SHADES FOR ORNAMENTS.

Pumps, Water-closets, and Plumbers' Brass Work. Genuine White Lead, Paint, Colours, Varnishes, Brushes, &c.
Tariffs of the above on application to

T. MILLINGTON, 87, Bishopsgate-street Without, London.

TO ARCHITECTS, BUILDERS, CONTRACTORS, AND OTHER CONSUMERS OF GLASS.

HARTLEY'S PATENT ROUGH PLATE GLASS,

1-8th of an inch thick, or 2 lbs. to the foot; 3-16ths, or 3 lbs.; and 1-4th or 4 lbs. is now universally used for

RIDGE AND FURROW ROOFS, GREENHOUSES, RAILWAY STATIONS, MILLS, MARKET HALLS, BATHS AND WASH-HOUSES, FACTORIES, WORKSHOPS, SHIP-BUILDING SHEDS, AND OTHER EXTENSIVE BUILDINGS.

By a carefully prepared Estimate, it has been ascertained that FOUR-FIFTHS of the ROUGH PLATE, or non-transparent Glass, consumed in the United Kingdom in 1854, was manufactured by HARTLEY'S PATENT—thus affording the most incontestable evidence of its superiority over every other article of the kind, and as being the only description of Glass suitable for the purposes above named. It combines size and strength with economy of cost, and is manufactured in sizes expressly for RIDGE and FURROW ROOFS, giving a SPAN of TWELVE FEET, at a price not exceeding, weight for weight, that of Common Crown Glass. Its non-transparency renders BLINDS UNNECESSARY, and no scorching occurs in Greenhouses glazed with it; hence the preference given to this Glass for all Horticultural purposes.

For further particulars, apply to

JAMES HARTLEY AND CO. SUNDERLAND; AND PURFLEET WHARF, EARL-STREET, BLACKFRIARS, LONDON.

Sole Manufacturers of Lockhead's Patent Perforated Glass for Ventilation.

*** *Hartley and Co.'s Glass Tariff Newspaper will be forwarded gratis, on application.*

January 1, 1855.

THE LONDON AND MANCHESTER PLATE GLASS COMPANY

Beg to inform the TRADE, that the EXTENSION OF THEIR WORKS being now completed, they are enabled to execute orders to any extent at immediate notice. The Company also beg to intimate that owing to improvements effected in the reconstruction of their Works, the COLOUR and QUALITY of their GLASS will be found to be considerably improved, and that they can guarantee the maintenance of these essential requirements. They further beg to invite attention to their reduced List of Prices, which may be obtained on application at their London Warehouse, or at the Works

For the convenience of the LONDON TRADE, a large stock of POLISHED PLATE is now kept at the COMPANY'S WAREHOUSE, BARRAUD'S WHARF, WHITEFRIARS.

26, SOHO-SQUARE.

ALFRED GOSLETT begs to inform Builders, &c. that he is prepared to Tender for the supply of EVERY DESCRIPTION of Glass, now manufactured at WHOLESALE PRICES.

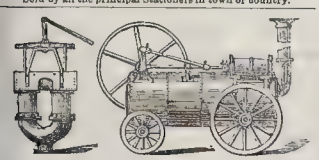
CRYSTAL WHITE GLASS, first, second, and third quality, particularly adapted for pictures and the best description of glazing, being far superior in colour to patent plate. In cases of 200 and 300 feet each, at 4d. 5d. and 6d. per foot; sizes varying from 24 by 16 to 40 by 28.—G FARMILOE and SON, 118, St. John-street, West Smithfield.

TO CONTRACTORS

PORTABLE STEAM-ENGINES TO BE LET, on HIRE, by the WEEK, MONTH, or for any period, of 8 horse, 10-horse, 12 horse, 16-horse 20-horse, and 25-horse power, adapted for Contract work generally. These engines have been successfully employed for years by all the principal contractors, and are ready for delivery at a day's notice. Several may be seen at work, at Messrs MEDWIN and HALLS, Bricklayers, 92, Blackfriars-road, Sole Patentees and only Manufacturers

N.B Any of these Engines may be purchased.

PUMPING ENGINES.—TO BE LET ON HIRE, TWO PORTABLE STEAM-ENGINES, of three and five horse power, with pumps, complete.—Apply to Mr. HENRY JOHNSON, 11, Bleeding Hart-yard, Hatton Garden, London; and 44, Broad-street, Birmingham.



TO DRAUGHTSMEN AND CIVIL ENGINEERS.

H. MORRELL, BLACK LEAD PENCIL MANUFACTURER, No. 149, Fleet-street, London.

These Pencils are prepared in various degrees of hardness and shades.

HHHH for drawing on wood.	FF light and shading.
HHH for architectural use.	F for general use.
HH for engineering.	B black for shading.
H for sketching.	BB ditto ditto.
HB hard and black for drawing.	BBB ditto ditto.
M medium.	BBBB ditto ditto.

Sold by all the principal Stationers in town or country.

PORTABLE STEAM-ENGINES and PUMPS kept in Stock for Hire at reduced Prices. M. A. RICHARDS and SON, Pump Manufacturers and Engineers, Upper Ground-street, Blackfriars-bridge (Surrey Side.

TO BUILDERS AND PLUMBERS.

The attention of the Trade is called to JOHN WARNER & SONS' PATENT VIBRATING STANDARD PUMP,

which is recommended for the simplicity of its construction, and the ease with which it works.

By the introduction of the vibrating standard, the cumbrous carriage and expensive slings and guides are unnecessary, rendering the price considerably less than pumps made on the old plan.

Beer and Water Engines for raising fluids from a depth not exceeding 30 feet; also, Garden Engines constructed on the same principle.

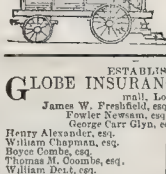
JOHN WARNER & SONS,
8, Crescent, Jewin-street, London,
Manufacturers and Patentees.

M. A. RICHARDS and SON, PUMP MANUFACTURERS and ENGINEERS.

Pumps in Wrought and Cast Iron and Brass, bored by machinery, and fitted in the best possible manner, suitable for excavators, roads, brickmakers, farms, gardens, stables, liquid manure, ships, barges, well-sinking, &c. adapted for any depth. Hydraulic Pumps for deep wells.

PUMPS ON HIRE.

Pumps of any size, single or double barrel, up to double 12-in. diameter, kept ready for use at reduced prices.



N.B. The above can be worked either by hand, horse, or engine power.

Iron Pails 38s. per doz. painted.
Ditto .... 48s. per doz. galvanized.

Upper Ground-street, Blackfriars Bridge, Surrey Side.

STEAM PUMPING ENGINES.—PATENT PORTABLE STEAM-ENGINES, from four to ten-horse power, always ready to let on hire, by the week or month, for pumping, sawing pile-driving, raising materials, &c &c.

Contracts taken for pumping any quantity of water.

WILLIAM HARRIMAN and CO.
FIRE-BRICK
and
SANITARY TUBE WORKS,
BLAYDON, NEWCASTLE-UPON-TYNE.

PATENT SANITARY GAS SHADES.—These Shades, manufactured exclusively by RICE HARRIS and SON, Islington Glass Works, Birmingham, on an entirely new principle, effectually destroy the effluvia and smoke which have hitherto made the use of gas so objectionable in dwelling-houses and offices where cleanliness and freedom from smell are of importance. They are simple and inexpensive, and may be had at the Works in a variety of forms adapted to the style of fitting, or the taste of purchasers; also at Mr. JOHN SHORTOR'S, Crispin-street, Spitalfields, London.

THE PERMANENT WAY COMPANY, 26, Great George-street, Westminster, beg to call the attention of Civil Engineers, Contractors, and others interested in the construction of railways to the present low price of iron, by which a saving may be effected of nearly 80l. per mile, simultaneous in the adoption of Mr. W. H. BARLOW'S Patent Wrought-iron Permanent Way over that of the ordinary road.—Every information can be obtained on application to

WILLIAM HOWDEN, Secretary.

ONE THOUSAND BEDSTEADS to CHOOSE FROM.—HEAL & SON have just erected extensive Premises, which enable them to keep upwards of One Thousand Bedsteads in stock. One Hundred and Fifty of which are fixed for inspection, comprising every variety of Brass, Wood, and Iron, with Chintz and Damask Furnitures, complete. Their new warerooms also contain an assortment of BED-ROOM FURNITURE, which comprises every requisite, from the plainest Japanned Deal for Servants' Rooms, to the newest and most tasteful designs in Mahogany and other Woods. The whole warranted of the soundest and best manufacture. HEAL & SON'S ILLUSTRATED CATALOGUE of BEDSTEADS and PRICED LIST of BEDDING, sent free by post.—HEAL & SON, 196, Tottenham Court-road.

TO LANDLORDS AND OTHERS.

HARDY and CO. Estate Agents, &c. undertake the entire management of house property in town and country, the collection of rents, superintendence of repairs, and surety of good tenants, at a great saving of expense.—Offices, 33, Castle-street, Holborn-bars.—Established fifteen years.

TO EMIGRANTS, SPECULATORS, &c.

TO BE SOLD, cheap, a PORTABLE IRON HOUSE, suitable for the Colonies, &c.—For particulars apply to Mr. E. GIBBS, 6, Bromell's-road, Clapham.

A BARGAIN.—TO BE SOLD, a JOINER'S CHEST and TOOLS, in excellent condition.—Apply at No. 7, Neville's-court, Fetter-lane, Fleet-street, between the hours of ONE and EIGHT, P.M.

PURE WATER, for manufacturing purposes, may be obtained at very moderate cost by RANSOME'S FILTERING STONE. Estimates given for large or small quantities. Builders and Plumbers supplied with the ascension and other Filters at trade prices. These filters, at one, two, three, and four guineas each, yielding 50, 100, 150, and 200 gallons per diem, will be found sufficient for ordinary domestic requirements; are self-acting, and not liable to get out of order. References to parties satisfactorily supplied with quantities up to 30,000 gallons per diem, may be obtained on application at the depôt, 71, Baker-street, Portman-square, London.

ARUNDEL SOCIETY.—FIFTH YEAR'S ISSUE to SUBSCRIBERS.—SIX LARGE WOOD-ENGRAVINGS, by Messrs. LINTON and WILLIAMS, from MR. WILLIAMS'S Series of Drawings, from the frescoes, by GIOTTO, in the Arena Chapel, Padua (being the continuation of the Eight Engravings from the same Series published for the first year); together with a NOTICE of GIOTTO and his WORKS in PADUA, by JOHN RUSKIN, Part I.—Annual subscription to the Arundel Society, 1l. 1s.

24, Old Bond-street. JOHN NORTON, Secretary.

CLASSES for the study of CONSTRUCTION, ARCHITECTURAL, MECHANICAL, and ORNAMENTAL DRAWING, are held at the LONDON MECHANICS' INSTITUTION, every Monday and Friday Evening throughout the year. Charge to Members of the Institute, 4s. per quarter. To Non-Members, 8s. per quarter.

Master, Mr. T. E. KNIGHTLEY.

February 18th, 1855.

TO ARCHITECTS.

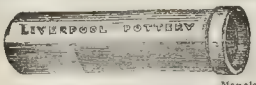
A COUNTRY PRACTICE for immediate SALE, established eight years, yielding 300l. to 400l. per annum. The purchaser will be introduced to the connexion and works in hand. Apply to Mr KEARDEN, 91, Piccadilly.

BUILDING ACCOUNTS, Measurements, Dilapidation Surveys, Quantities, Land Surveys, &c.—Architects, Builders, or Employers, in town or any part of the country, requiring a practical and experienced SURVEYOR, would find prompt and undeviating attention to any business of this nature, combined with a scale of moderate charges, on application to Mr. A. ANDERSON, Offices, 63, St. Martin's-lane, and Acton-hill.

TO BUILDERS AND OTHERS.

THE Advertiser is desirous of negociating with some Party willing to BUILD him BUSINESS PREMISES (House and Shop), for his own occupation, in a most eligible spot, about twenty miles from London, close to a railway; he will engage to take lease at a liberal rental, and make arrangements for purchase.—Apply to A. Z. Post-office, Greenwich.

TO ARCHITECTS.



COLOURED DRAWINGS prepared for the Royal Academy Exhibition (or Competition purposes), by Mr. T. J. RAWLINS, whose productions have been placed annually since 1838. Estimates and specimens given for lithographs.—38, University-street, University College, London.

DRAWING, CARTRIDGE, TRACING, and MOUNTED PAPERS, TRACING LINEN, CONTINUOUS CARTRIDGE, &c. &c. for the use of Architects, Engineers, Surveyors, Builders, &c. are sold by EDWARD STANFORD, Mapseller and Stationer, 6, Charing-cross.—A book of samples and prices may be obtained on application, or per post for six stamps.

SWISS DRAWING INSTRUMENTS, equal in quality to the very best London-made instruments, and considerably cheaper.—Apply to Mr S. BARLOW, 2, Thavies-inn, Holborn (between 1 and 4 p.m.); or to Mr. H. B. BARLOW, Office for Patents, Duke-place, Exchange, Manchester.

MATHEMATICAL DRAWING INSTRUMENTS.—JOHN ARCHBUTT, 20, Westminster-Bridge-road, Lambeth (near Astley's Theatre), begs to call attention to his Stock of Instruments manufactured by superior workmen. The prices will be found considerably lower than ever charged for articles of similar quality and workmanship. Rules, scales, tapes, &c. at equally low prices. A detailed price-list will be immediately forwarded, free, on application.

OFFICES: HIGH-STREET, LAMBETH, LONDON, & GRANVILLE-WHARF, BROAD-STREET, BIRMINGHAM.

Twenty-one large and important Towns have been drained with Doulton's Glazed Stone-ware Pipes, and in no case has the slightest failure occurred, or any necessity arisen for examination.

Messrs D and Co do not publish Testimonials, but references can be given to any of the Engineers and Surveyors under whom they have executed works. DRAWINGS, WITH PRICES, MAY BE HAD ON APPLICATION AS ABOVE.

WILLIAM NORTHEN'S
WHITE ENAMELLED STONEWARE,
UNION POTTERY, 14, VAUXHALL-WALK, LAMBETH, LONDON.

W. N. solicits an inspection of his IMPROVED WHITE ENAMELLED STONEWARE CLOSET PANS, being an entire new description of stoneware, perfectly vitrified and highly glazed, far surpassing anything of the kind yet offered to the public.

SAME PRICE AS BROWN STONEWARE—Closet and Trap, 5s. 6d.; Closet, 3s. 6d.; Trap, 2s.

ANCIENT-HOUSE-FURNITURE

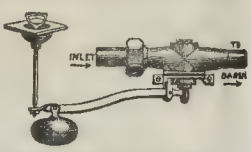
In order to supply the deficiency which has hitherto existed in Furniture suitable for the many Mansions that have been erected or restored in the MEDIÆVAL STYLES, Messrs. CHAFE have directed their particular attention to this subject, in addition to their other works, and have prepared appropriate specimens in the various branches of Furnishing.

STUFFS for HANGINGS, in simple Worsted Damask, in Silk, also in Tapestry of Bauderkin.
CARPETS, plain or in rich Velvet pile, with appropriate Borders.
PAPER-HANGINGS of various kinds.
OAK CABINETS, Buffets, Octagon Library and Occasional Tables, Benches, Chairs, and other useful and appropriate Furniture
The whole of the above-mentioned Furniture, &c. is designed by the late Mr. A. W. PUGIN, Architect.
To render this Furniture generally available, a considerable portion has been arranged in the simplest manner, consistent with it ancient character.
14, Wigmore-street, January, 1853

GENUINE SEYSSEL ASPHALTE.
ORSI AND ARMANI.
THE EXCLUSIVE SUPPLY OF SEYSSEL ASPHALTE (FRANGY)
DIRECT FROM THE MINES.
REDUCTION IN THE PRICE FOR VARIOUS WORKS FIFTEEN PER CENT.
AND THE
WORK GUARANTEED FOR THREE YEARS.
Offices, No. 6, Guildhall Chambers, Basinghall-street, City.

PATENT METALLIC LAVA.
A printed List of the important Works for Flooring, Roofing, Covering of Arches, &c. &c. executed from 1848 to 1852, with this Material, may be obtained at the Office of
ORSI AND ARMANI.
THEIR PATENT METALLIC LAVA IS FIFTEEN PER CENT. CHEAPER
THAN THE GENUINE SEYSSEL ASPHALTE OF MESSRS. O. AND A.
OR THIRTY PER CENT. LOWER THAN ANY OTHER MATERIAL CALLED BITUMEN OR ASPHALTE.
Offices, No. 6, Guildhall Chambers, Basinghall-street, City.

CHEAP, LIGHT, AND DURABLE ROOFING.
CROGGON'S PATENT ASPHALTE ROOFING FELT, has been extensively used and pronounced efficient, and particularly applicable for warm climates.
1st. It is a non-conductor.—2nd. It is portable, being packed in rolls, and not liable to damage in carriage.—3rd. It effects a saving of half the timber usually required.—4th. It can be easily applied by any unpractised person. 5th. From its lightness, weighing only about 49 lbs. to the square of 100 feet, the cost of carriage is small.—6th. Under slate, metal, or tiles, it is a most effective non-conductor.
INODOROUS FELT, for damp walls and for damp floors, under carpets and floor cloths. Price ONE PENNY per Square Foot.
CROGGON and CO.'S PATENT FELTED SHEATHING, for Covering Ships' Bottoms, &c., and
DRY HAIR FELT, for Covering Steam Boilers, Pipes, &c., preventing the radiation of Heat, saving 25 per cent. of Fuel and deadening Sound.
Samples, testimonials, and full instructions, on application to CROGGON and CO. 2, DOWGATE-HILL, LONDON.



PAVING, 2s. 9d. per SQUARE YARD.—Basements, Foot-walks, Malt-houses, Corn Stores, Floors of Warehouses and every description of Pavement laid down at the above low price, and the work guaranteed.
Apply to JOHN PILKINGTON, POLONCEAU'S BITUMEN, PAVEMENT OFFICE, MONUMENT CHAMBERS, 14, FISH-STREET-HILL.
N.B. Country Agents and Railway Engineers and Contractors supplied with the best Bitumen for covering Bridges and Arches.

ASPHALTE.—GERVASE FOOTTIT, Trinidad Asphalte Works, Rotherhithe; established 1834. Every description of Flooring laid with the above durable material in the best manner. Asphalte for Railway Arches, 30s per ton. Importer of Trinidad Asphalte.
Shipping Depôt, Devon Haytor Wharf, Rotherhithe.
G. H. CLARK, Agent.

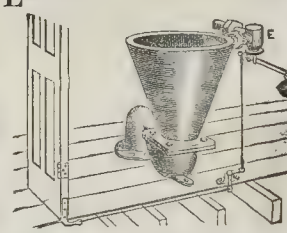
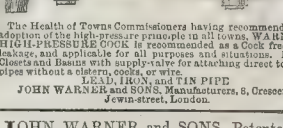
A JIB for a Warehouse also wanted.



YORK STONE supplied direct from the Quarries.—NOWELL and ROBSON respectfully invite the attention of Architects, Surveyors, Contractors, Builders, &c. to their excellent STOCK of STONE, combining good colour with strength. Samples may be seen at Kennington Basin and the Great Northern Railway Depôt, King's-cross.—Prices will be sent, and country orders promptly attended to, and delivered at all the Stations on the principal lines of railway, by addressing NOWELL and ROBSON, Quarries, Lile, near Leeds. Purchasers will find the stone of first rate qualities, and the prices very reasonable

BURSTING of PIPES by FROST.

This accident is prevented by the use of LAMBERT'S PATENT LEVER VALVE-COCKS, which act as safety valves.
The lever is weighted, to resist the pressure of the column of water upon the valve, but it is not weighted sufficiently to resist the powerful expansion of water caused by the frost, which lifts the lever, and thereby prevents injury both to valve and pipe. When reaction takes place, the lever and weight resume their original position
Many thousands of these Valve-cocks are now in use under pressures of from 3 to 300 feet, with uniform success.
Price of ½ inch bore, with sunkplate and handle, 10s. 6d. each.
Patentees and Sole Manufacturers, Short-street, New-cut, Lambeth.



LAMBERT'S DOOR-ACTION CLOSET.

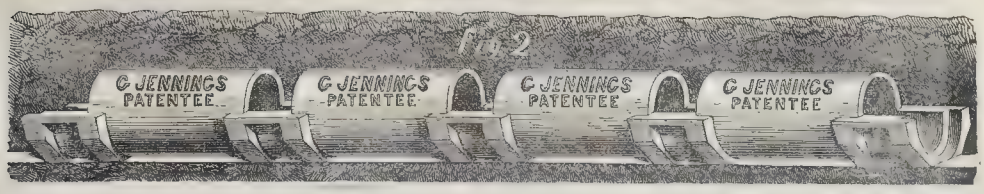
100 of these Closets have been four years in use at Colney Hatch Asylum. They are also in use at St. Mary's Hospital, Wilts County Asylum, &c. Price, complete with enamelled iron basin and trap, and 1½ inch patent valve cock, lever, weights, &c. £1 18s. Cottage Closet complete, with white wedgwood basin and trap with ½ inch patent valve-cock, lever, and handle to pull up 17s 6d.
THOMAS LAMBERT and SON,
Patentees and Manufacturers, Short-street, New-cut, Lambeth.

COLLIER'S TERRO-METALLIC and RED EARTHENWARE SOCKET DRAIN PIPES, BENDS, JUNCTIONS, and SYPHONS.—This ware, allowed by all to be of the best manufacture, for the unparalleled quality, combined with expedition, will be found to meet the approbation of consumers.—Sole Agents, L. B. PEARSE and CO. Great Northern wharf, York-road, King's-cross.

TO WATER COMPANIES AND PLUMBERS.
HIGH-PRESSURE COCKS & CLOSETS.

The Health of Towns Commissioners having recommended the adoption of the high-pressure principle in all towns, WARNER'S HIGH-PRESSURE COCK is recommended as a Cock free from leakage, and applicable for all purposes and situations. Patent Closets and Basins with new valve for attaching direct to main pipes without a cistern, cocks, or wire.
LEAD, IRON, and TIN PIPE
JOHN WARNER and SONS, Manufacturers, 8, Crescent, Jewin-street, London.

JOHN WARNER and SONS, Patentees of IMPROVEMENTS in the MANUFACTURE of LARGE BELLS.



J. W. & SONS having of late years devoted much time and study to the long neglected art of Bell Casting, have recently invented and patented a new process connected therewith, by which they are enabled to manufacture Bells of any size, note, or weight, of superior tone, truer in form, and at less cost than has heretofore been accomplished.
Bells for Churches, Chapels, Colleges, Schools, Turret Clocks, &c. cast for any size, note, or weight, singly or in peals.
TUNED BY MACHINERY.
Stocked and wheeled ready for fixing. Old Bells re-cast or taken in exchange.
MUSICAL HAND-BELLS tuned to the Chromatic Scale, with improved Clappers, and pegged on a new system, which gives a superior tone and facility for ringing

FORSTER and SLATE'S PATENT CONSTANT SUPPLY FILTERS, tested and approved by the first water engineers in the country. Used and approved at the Offices of the General Board of Health. Exclusively adopted by the Crystal Palace Company. Easily cleaned without trouble or expense. To be seen in operation daily, at J. EVANS and SON'S, Iron-mongers, &c, being William-street, London-bridge.

TO SAW-MILL PROPRIETORS BUILDERS, &c.—On SALE, a first-class PLANING MACHINE, with 12 inch rollers and the latest improvements. This machine will plane thicknesses and tongue boards at the rate of 3 feet per minute up to 4 inches thick and 12 inches wide. It will require about 4 horse power. May be seen at Mr. JNO. HALL WALKER'S Sawing and Planing Mills, Hildersham

WINDOW BLINDS.—TYLOR & PACE Window Blind Manufacturers, 104, New Bond-street, and 3, Queen-street, Cheapside, London, submit the following PRICES of WINDOW BLINDS, which they can recommend as being made in the best manner.—Venetian blinds, per square foot, 8d.; best holland blinds, on rollers, 6d.; best ditto, on spring rollers, 8d.; gauze wire blinds, in mahogany frames, 3s.; perforated zinc blinds, in ditto, 1s. 10d.; outside blinds of striped cloth, 1s. Transparent blinds in great variety. Engravings, with prices and discounts to builders and the trade, forwarded on application, post free.

JENNINGS'S PATENT DRAIN-PIPES.

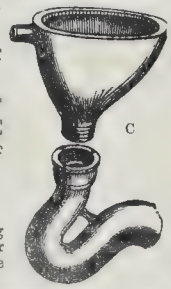
The above Illustration shows a series of JENNINGS'S PATENT PIPES laid, and READY FOR EXAMINATION (by Clerk of Works or other Superintendent), prior to the Saddle-pieces being fixed. ENGINEERS and ARCHITECTS describing these Pipes to be used will effect a GREAT SAVING IN THE LABOUR OF LAYING, will ensure BETTER WORK, more PERFECT JOINTS, and they will have the satisfaction of knowing the Drainage can be at any time examined, and Junctions introduced, WITHOUT TEARING UP THE INVERT OR GENERAL DRAIN. Pipes may never need examination, and Junctions to finished Drains may never require to be made, but it must be an advantage to be able to do either, or both, in case it should be necessary. Oxford and many other Towns are now being drained with these Pipes, and many Public and Private Works, to which references are permitted.

JENNINGS'S CLOSETS ARE FREE FROM ALL COMPLICATION, imperishable in their material, and can be had highly glazed for TWELVE SHILLINGS EACH.

These are WATER-CLOSETS having a LARGE WATER SURFACE, and NO BACKS TO SOIL,—NOT INVERTED EXTINGUISHERS.

A Book containing Illustrations and Particulars of JENNINGS'S DRAIN-PIPES, WATER-CLOSETS, URINALS, LAVATORIES, SLUICE-VALVES, FIRE-COCKS, GULLY-TRAPS, SHOP-SHUTTER SHOES, &c. &c. can be had free on application, or by post, if two postage stamps are inclosed to

GEORGE JENNINGS, SANITARY ENGINEER, 29, GREAT CHARLOTTE-STREET, BLACKFRIARS-ROAD.



REDUCTION IN THE PRICE OF CLOSET-PANS.

DOULTON AND WATTS,

This effective Article has not any Crank or Wire to get out of order, and is all complete and ready for use, and may be seen in operation at STEPHEN GREEN'S Manufactory, Lambeth.

IMPORTANT TESTIMONIALS

TO THE EFFICIENT WORKING OF

STEPHEN GREEN'S

PATENT SYPHON FLUSHING BASIN,

AND

SELF-ACTING CLOSET CONNECTIONS.

Oxford, November, 1849.

GENTLEMEN,—Sixteen of your Closets having been put into operation at Christ Church College, I have great pleasure in giving you my testimony as to their efficiency and simplicity.

HENRY J. UNDERWOOD, Architect.
R. S. HOGGAR, Engineer.

Royal Arsenal, Woolwich, June 24, 1850

GENTLEMEN,—I have much pleasure in giving my testimony in favour of your Patent Syphon Flushing Basin, with Self-acting Closet Connections. There are several fixed here, which I have been in use for upwards of twelve months, giving perfect satisfaction.

I am, Gentlemen,
Your obedient Servant,
WILLIAM CARTWRIGHT.

PATTEN'S PATENT HIGH-PRESSURE WATER-CLOSETS and WATER REGULATORS, manufactured upon an improved principle, discharging with cistern, cranks, wire, lead trap, &c. Any number of Closets can be supplied from one main.

Also PATTEN'S improved powerful FLUSHING LOW-PRESSURE WATER-CLOSETS, patronised by the Board of Health, Government, and other large public establishments, in addition to numerous private individuals. Drawings, testimonials, and references of the highest respectability forwarded by post. Price for Closet and Apparatus complete from 25s. and perfect action guaranteed. Fixed specimens to be seen on the premises of the Patentee, WILLIAM PATTEN, 29, Old Fish-street, near St. Paul's, London.

E. and W. STURGE invite special attention to their reduced LIST of PRICES of Drain Pipes, Junctions, Pans, Traps, &c.; also, to their Paving, Sinks, &c.; Slates of the best quality, wholesale and retail. Country builders and others supplied with all information, on application to E. and W. STURGE, Bridge-wharf, City-road

N B. The wharf is well situated for carriage by canal boats, or to the railways, to which but a small charge for cartage is made.

January, 1850.

THE COLOSSEUM.

MESSRS. WINSTANLEY are directed to SELL BY AUCTION at the MART, Bartholomew-lane, on WEDNESDAY, MARCH 14, pursuant to a Decree of the High Court of Chancery, with the approbation of the Master, in the Causes of "Phillipson and another v. Turner and others" THE COLOSSEUM IN THE REGENT'S-PARK; an Establishment of Science and Art, which has justly merited and received the patronage of Royalty, the support of the public, and universal approbation, 150,000 persons having paid for admission, and as much as 20,000 received in the course of one year. THIS VALUABLE AND IMPORTANT PROPERTY, viewed merely as an investment, would produce a very large return for capital, but as a place of public amusement, in the hands of another spirited proprietor (who would add to the numerous great objects of attraction now exhibited the original Diorama, in addition to other remunerative advantages, and possesses capabilities unequalled by any other establishment. THE MAGNIFICENT EDIFICE, with its finely-proportioned PORTICO and DOME, was originally designed by Mr. Decimus Burton; the interior of the building was rearranged and decorated, at an enormous cost, under the superintendence of the late Mr. W. Bradwell; works of extraordinary merit, by talented artists, have from time to time been produced, and the present Exhibition now presents the following leading features, viz.:—THE GLYPTOTHECA, or MUSEUM OF SCULPTURE (the far famed Panoramas of "LONDON BY DAY" and the no less splendid moreable Panoramas of "LONDON BY NIGHT," and "PARIS BY MOONLIGHT;" the fantastic Caverns, Swiss Cottage, Cascade and Lake, Rustic Arbours, the Classic Remains and Models of celebrated Greek and Roman Temples in the exterior promenade; the extensive and beautiful ranges of Conservatories, Gothic Aviary, splendid Saloon, or Refreshment-room, &c. In addition to the foregoing is the

GRAND CYCLORAMA IN ALBANY-STREET,

a building 300 feet long, constructed especially for exhibiting Dioramas, on an unprecedented scale. In connection with it is the ELEGANT AND CHASTELY-DECORATED THEATRE with beautiful draw-scenes and other paintings by Danson, of "THE DIORAMA OF NAPLES," by M'Neyin, is now exhibiting, showing the great ERUPTION of VESUVIUS and DESTRUCTION of POMPEII, and which, like the preceding one of Lisbon, by Danson, is a masterly production. This portion of the Property might be let off as an independent undertaking and would readily produce a very considerable rental. The working machinery, steam engine, gas, and other fittings, fixtures and sundry effects, will be included in the purchase. The property comprises a FRONTAGE OF ABOUT THREE HUNDRED FEET, both to the Park and Albany-street, and is held by one lease under the Crown, for an unexpired term of sixty-one years, at the GROUND-RENT of TWO HUNDRED AND SIXTY-TWO POUNDS EIGHTEEN SHILLINGS PER ANNUM. Printed particulars may be had, three weeks prior to the day of Sale, at the Colosseum, of Messrs. Chatfin and Hurland, Solicitors, 3, Gray's-inn-square; of Messrs Hine and Robson, Solicitors, Charterhouse-square; of Mr. Ancell, Surveyor, 19, Gower-street, Bedford-square; at the place of Sale; and of Messrs. Winstanley, 10, Paternoster-row; of whom may be had orders to view the whole, at the each person, at stated times.

PRELIMINARY ANNOUNCEMENT

MR. W. BUTCHER has received instructions to submit for SALE by AUCTION, some time in the month of MAY next, unless an acceptable offer is made by private contract, about TWENTY-FIVE ACRES of valuable FREEHOLD LAND, a small part of the Estate of the late Mr. Wilde, divided into four lots. It is a pleasing the turnpike road from Ewell to Kingston, in the parish of Ewell, where the parochial rates are extremely moderate.

Epsom, February 26th, 1855.

PRELIMINARY ANNOUNCEMENT.

MR. W. BUTCHER has been directed to SELL by AUCTION, at the end of the ensuing month, TWO PAIRS of SEMI DETACHED VILLAS, only partly finished, in Raphael-park, Kingston-on-Thames; also Three unfinished Houses next the Cullum Hotel and other property, the particulars of which will speedily be published.

Epsom, February 26th, 1855.

BOROUGH of SOUTHWARK. Ninety-three Freehold Houses in single lots, each House entitling to a Vote.—Particularly worthy the attention of small Capitalists.

MR. W. F. HAMMOND has been favoured with instructions from the proprietor to SELL by AUCTION, at GARRAWAY'S, on FRIDAY, MARCH 16, at TWELVE for TWELVE, in single lots, the above valuable FREEHOLD ESTATE, comprising Ninety-three Houses, all lying compact, in four blocks, and known as Rotary-street and Eldham-street, with a frontage in Kent street, Borough. The description of the property is of the third and fourth rates, well built, having been erected about thirty years, consisting of shops and small two-pair, which are well occupied, and producing rentals from £7 to £27 each, making a total sum of £1,351, 6s. 8d. per annum, each house entitling to a vote. This forms an important investment to small capitalists, being sold in separate lots, with a special condition granting to every purchaser the option of leaving one half of the purchase money upon mortgage. Further particulars, with conditions of sale, at 3 plans of the estate, to be had of Messrs Jaxon, Cook, and Pearson, Solicitors, Bucklersbury-street; at Garraway's Coffee-house, Cornhill; of Mr. Seager, the Collector on the Estate, 6, Henry street; and at the Auctioneer's Offices, 3, Carey street, Lincoln's-inn.

Superior Chimney-pieces of Statuary Marble, some richly sculptured, and of Sienna and Veil Marble in great variety.

MESSRS. ROBINS will SELL by AUCTION, at their ROOMS, Great Piazza, Covent-garden, on TUESDAY, MARCH 6th, at TWELVE, superior STATUARY MARBLE CHIMNEY-PIECES, principally of one truck, suitable for first-class drawing-rooms, others of a less expensive character, with trusses; black and Sicilian marble for dining-room and libraries, several of Sienna marble, and a great variety of vein marble of smaller size. Now on view in Covent garden

IN BANKRUPTCY.—To Stone Merchants, Wharfingers, and Builders.—Lesehed Wharf, with Residence, Travelling Crane, Plant, Stock in Trade, &c.

MESSRS. TOPPIN and CLARK (successors to Mr. W. W. Simpson) are directed by the assignees of Mr. W. Foster to SELL by AUCTION, on the PREMISES, Bridge-wharf, Millbank, Westminster, on THURSDAY, MARCH 15th, 1855, at TWELVE o'clock, about 1,000 feet run of Granite, Bath, Aubigny, Portland, and other BLOCK STONE; a few feet of Portland and York landings; 200 squares of paving; Purbeck and York stairs; York steps, curbs, sills, and copings; granite posts and paving, marble, tiles, &c.; two four-wheel stone trucks, wading chains, harness, to-ls, &c.—May be viewed the day preceding, and catalogues had of the Assignees of Messrs. Foster and Goods, Solicitors, Bateman-chambers, London bridge; and of the Auctioneers, 7, Coleman-street, City.

Important Sale of upwards of 200 Marble and Stone Chimney-Pieces.

MR. BRAY, Jun. will SELL on the PREMISES, Hustler's Marble Saw Mills, Cambridge-heath, Hackney, on TUESDAY, MARCH 6, at TWELVE PRECISELY, upwards of 200 CHIMNEY-PIECES in Statuary, Black, Bardilla, Vein, and Sicilian Marbles, many with carved trusses and other ornaments. The whole are complete for fixing.—May be viewed, and Catalogues had on the Premises, and at the Auctioneer's Office, 239, High Holborn.

THREADNEEDLE STREET and FINCH-LANE. Building Materials of Three Houses.

PULLEN and SON are directed to SELL by AUCTION, on the PREMISES, on TUESDAY, MARCH 13, at TWELVE all the valuable BUILDING MATERIALS of THREE HOUSES, situate at the corner of Threadneedle-street and Finch-lane, comprising sound brickwork, plain and tile and slates, stout timber in roofs and floors, glazed sashes, doors, floor-boards, shop-fronts, iron columns, lead flats, gutters, and pipes, stoves, and useful fittings up.—May be viewed the day previous. Catalogues had of Edwards Ransom, Esq. Architect, 9, Lawrence Pountney-lane; and of Pullen and Son, 8, Pore-street, Cripplegate.

SALES BY AUCTION.

KING'S-ROAD, CHELSEA.—Valuable Timber-yard, producing 130£ per annum, free of ground-rent.

MR. GEORGE BERRY will SELL by AUCTION, pursuant to a decree of the High Court of Chancery, made in a cause of Archbutt v. Clarkson, at the AUCTION MART, near the Bank of England, on TUESDAY, the 20th day of MARCH, 1855, at ONE o'clock precisely, in one lot, a valuable LEASEHOLD ESTATE, comprising a timber-yard, erected sawing workshop, counting house, sheds, and other buildings, situate on the north side of the King's road, Chelsea, in the county of Middlesex, and also a Cottage, situate on the east side of Robert-street, Chelsea. The property is held direct from the freeholder for about 44 years unexpired, and is in mortgage for 1,000£ for a period of five years from 5th of May, 1854, and is sold subject to such mortgage. The whole of the premises are free of ground-rent, and are let to Mr. Thomas Witford for 43l years from Midsummer, 1853, at a clear annual rental of 130£. The property may be viewed by leave of the tenant and particulars and conditions of sale had of Mr. J. H. Kaye, 9, New-inn, Strand; Messrs. Jenkinson and Co. 29, Lombard-street; and Mr. J. Weathrone, 43, Chancery-lane; and of the Auctioneer, at his office, Motcomb-street, Belgrave-square.

VALUABLE BUILDING LAND TO BE LET, adjoining the New Metropolitan Cattle-market, Islington, with eligible Sites for warehouses, builders' or other premises requiring space.—For plans and particulars, inquire of Mr. THOMAS BURTON, Surveyor, No. 1, Charlotte-row, Mansion-house

TO BE LET, with immediate possession, seventeen acres of FREEHOLD ARABLE LAND, tithe free, in the county of Surrey, ½ mile from stations on the South-Western Railway, adjoining the Guildford and Basingstoke canal, well situate for a gentleman's seat or a building society. Particulars of Mr. CLARK, Grosier's-hall, Basinghall street, City.

TO TIMBER MERCHANTS, WHARFINGERS, MANUFACTURERS, &c.

TO BE LET, on Lease, extensive WATER-SIDE SITES for wharfs or manufacturing buildings, situate in the Commercial-road, between Waterloo and Blackfriars bridges. The land will be let in one or more plots. An exc-llent residence and offices are attached. Apply to Mr. HIGGINS, Architect, 13A, Cannon-row, Westminster; Mr. J. B. CLARK, 9, Guildford-place, Kennington-lane; or to Messrs. HODGSON and BURTON, 3, Salisbury street, Strand.

TO BUSINESS PREMISES.—TO BE LET, extensive PREMISES, adapted for manufacturing or business purposes requiring space, with a residence and stabling, and also a wharf attached, if required, situate in Princes-street, Lambeth.—Apply to Mr ROBINS, Architect, Palace-chambers, Lambeth, or 13A, Cannon-row, Westminster; or Mr J. B. CLARK, 9, Guildford-place, Kennington-lane; or to Messrs. HODGSON and BURTON, 3, Salisbury street, Strand

TO BUILDERS and MEMBERS of BUILDING SOCIETIES.—TO BE LET, a valuable PLOT of LAND, situate at Peckham rye hill, Surrey, facing the Common, 100 feet by 200 feet deep.—Apply to J. S. 3, Sutherland-terrace, Lorrimore-road, Walworth.

TO BUILDERS and OTHERS.—Compact and commodious PREMISES, with house, yard, workshops, and garden, conveniently situated in the best part of Camden town, TO BE LET, cheap.—Apply to Mr. ROBERTS, No. 1, Bayham street, Camden town.

TO RAILWAY CARRIERS, INN KEEPERS, and OTHERS.—Important and extensive PREMISES known as the George Inn, High-street, Borough, TO BE LET. The Governors of Guy's Hospital will meet at the Hospital, on WEDNESDAY, the 7th MARCH next, to receive TENDERS for LETTING on a RENEWING LEASE, the PREMISES called the George Inn, High street, Borough. A plan of the premises and form of Tender, may be obtained at the Counting house of Guy's Hospital, St. Thomas's-street, Southwark; or at the Office of Mr. HENRY CURRY, Architect, No. 4, Lancaster-place, Strand, any day between TEN and FOUR o'clock. The Tenders are to be delivered at the Hospital, on WEDNESDAY, the 7th MARCH, at or before TWO o'clock, and the parties or their agents, invited to attend at the Counting house at that hour to receive the Tenders, or do not bind themselves to accept the highest or any Tender.

DORSETSHIRE.—CLAY LANDS.—TO BE LET, on long leases, several valuable parcels of LAND, in a good clay district, with water and rail communication. Also, a large BRICKYARD, in working order, with kilns and plant.—Apply to THOMAS KINGDON, Lot 3 Station, Wimborne, Dorset.

TO CAPITALISTS.—WESTON-SUPER-MARE.—TO BE SOLD by PRIVATE CONTRACT, nearly FOUR ACRES of BUILDING LAND abutting upon the sea beach, and entirely overlooking the sea, adapted for the erection of eighty houses, forming a new town, called Hutchinsburysquare, where lithographed plans and further particulars may be had. These possess the parish church, and most valuable restrictive non building covenants over the surrounding lands. The purchase money may remain on mortgage, if wished. Immediate possession may be had.—Plans and all particulars obtained of B. GUY PHILLIPS, Esq. Weston-super-Mare

TO BE SOLD, within a few minutes' walk of the Kilburn station on the North Western Railway, and immediately adjacent to the intended line of the Hampstead Junction Railway, about EIGHTEEN ACRES of copyhold LAND, having a frontage next West end lane, of more than 900 feet. The estate, which is beautifully situated, is at present let to a yearly tenant, and immediate possession may be had. The soil is capable of being made into bricks, and a specimen of the earth may be seen on the premises. Apply to Mr. BRUNSBURY-square, where lithographed plans and further particulars may be obtained; or of R. B. ARMSTRONG, Esq. 8, Staple inn

BUILDING PREMISES.—TO BE DISPOSED OF, in the City of London, an old established BUILDING BUSINESS, with a very extensive Jobbing connection. The premises are most conveniently adapted for the trade. It is to be disposed of only in consequence of the illness of the proprietor, in whose family it has been for upwards of half a century. Principals only dealt with on application to Mr. LUSH, 47, Hanover street, Portsea.

WATER-SIDE PREMISES.—TO BE SOLD, freehold and part leasehold, BRUNSWICK WHARF and DRAW DOCK, BLACKWALL, many years established in the brick, tile, stone, slate, and lime trade, &c. Excellent RESIDENCE, offices, stabling and Wareh uses, the whole in substantial repair, adjoining, the South-Western Railway Goods Station, and abutting on the navigable river Wandsworth, with 150 feet frontage to the river Thames. Apply on the premises; or to Messrs. NELSON and INNES, Architects and Surveyors, Regent Chambers, No. 48, Regent-street, Piccadilly

LEASEHOLD or FREEHOLD.—Wanted to PURCHASE, TEN to TWENTY good Freehold or Long Leasehold HOUSES, in or near Town, rentals from 20£ to 40£.—Address full particulars to Mr. BRETT, 4, Wellington-chambers, London-bridge, Southwark

FREEHOLD LAND.—Wanted to PURCHASE, FIVE to TWENTY ACRES of FREEHOLD LAND, near a railway station, within twenty miles of London.—Address full particulars to Mr. BRETT, 4, Wellington-chambers, London-bridge, Southwark.

TO PUBLIC COMPANIES and OTHERS. The corner of Hanover-square and Hanover-street (between Regent-street and Bond-street, two of the greatest thoroughfares at the West End). FREEHOLD PREMISES, with a frontage of nearly 30 feet, and a depth of 140 feet, opening to a mews. TO BE LET on lease, or otherwise disposed of. Apply to Mr LARKE, at his usual Offices, No 45, New Bond street.

FREEHOLD LAND.—To BUILDERS or Parties wishing to build Suburban Residences

FREEHOLD LAND TO BE SOLD on some of the most eligible building estates in the neighbourhood of London, viz.:—

Forest-hill, Croydon Railway.
St. Margaret's, near Richmond, South Western Railway.
Oaklands Grange, Weybridge, Surrey, ditto.
Tottenham green, Eastern Counties Railway.
Putney, South Western Railway.
Rectory Estate, Ealing, Great Western Railway.
The Waddington Estate, Enfield, Eastern Counties Railway.
Wood-green, Green lanes, Hornsey, Great Northern Railway.
Old Fort, Stratford, Eastern Counties Railway.

Each of the above estates offers its own peculiar advantages. Plots of land of any size, or for any class of houses, to the extent of One acre, can be obtained. On the two first estates, large pleasure-gar leas are allotted to the freeholders or tenants of houses. Part of the purchase-money may remain at 5 per cent. interest. Parties assisted in the building of their own residences. Builders may obtain the freeholds of plots of land to build upon, and the greater portion of purchase money may remain at an annual charge (for about ten years) equal to the interest and principal of the same under the usual system. In addition, therefore, to the amount to be raised on the building mortgage, they can sell the ground-rent created by the land as a large sum. Several plots to be let on building lease. Money advanced to responsible parties.—Apply to Mr. GEORGE MORGAN, Architect, 5, Chancery-lane.

BUILDER'S YARD WANTED, for stacking Timber, with or without Workshops, West or North-west side of London, on lease or to purchase. Particulars to be addressed, A. B. Mr. Blackwell's, Charles-street, Middlesex Hospital

TO TIMBER MERCHANTS, BUILDERS, and OTHERS.—To be DISPOSED OF, the STOCK and TRADE of the late Mr Joseph Wardale, deceased, at Newport, Isle of Wight. Any gentleman desirous of being partially engaged in business, and of residing in the Island, would find this a favourable opening. The timber and deal yard may be rented with or without a convenient residence adjoining the yard.—Address to Mrs. WARDALE, Castle View, Newport, Isle of Wight, or to Messrs DRIVER and SHEPPARD, Timber Merchants, Southampton.

TO CARPENTERS and CABINETMAKERS.

THE Proprietor of an old-established BUSINESS, in the neighbourhood of Hanover-square, wishes to DISPOSE OF the MANUFACTURING PART. He will give his time and assistance to secure the connexion.—For particulars apply, by letter, T. K. Mr Whitbread's, 142, Oxford-street.

TO ARCHITECTS, ENGINEERS, BUILDERS, &c.—TO BE DISPOSED OF, in consequence of death, a powerful LIFT, quite new, with chair, guide-rods, balance-weights, chains, and every requisite, suitable for a prison, hospital, club-house, or any large establishment.—For particulars, apply to J. MILLS, Ironmonger, 40, Great Russell-street, Bloomsbury.

TO STOVE-GRATE MANUFACTURERS, Founders, Engineers, Builders, Smiths, and Others.—TO BE DISPOSED OF, spacious MANUFACTURING PREMISES, most favourably situate in a central part of London, and in a leading thoroughfare. The freehold may be purchased if desired. The tools and stock may be relieved to a fair extent.—For further particulars apply to Messrs. FULLER and HORSEY, Billiter-street, City.

THE FREE-TRADE FREEHOLD LAND Society, Offices, 86, St. James's-street, Pall-mall.—Notice is hereby given, that the ANNUAL MEETING of the FREE-TRADE SOCIETY, INCLUDING BOOTHIANS, will be held at FREEMASONS' HALL, Great Queen-street, Lincoln's-inn-fields, in the county of Middlesex, on TUESDAY, the 9th day of MARCH next, at TWELVE o'clock. Being precisely, for the purpose of receiving the Annual Report to ELECT Members of the Executive Committee, and Auditors, and for such other business as may properly come before such meetings.

Feb 24, 1855. THOS SHERWOOD SMITH, Secretary.

N.B. On and after MARCH 25th, the Offices of the Society will be removed to No 17, Adam-street, Adelphi

LAMBETH and PROVINCIAL FREEHOLD LAND SOCIETY.

Enrolled as the "Borough of Lambeth Benefit Building Society," pursuant to the Act 6 & 7 Will. IV. c. 32.

The Hon. John Locke King, M.P. President.

George Singer, Esq. James Sinee, Esq. S. Etches, Esq. Offices, 211, High-street, Borough. Open from Ten a.m. till Seven p.m.

Shares, 30£.

Entrance fee, 1s. Payments, 1s. monthly.

Allotments distributed by rotation, ballot, and to completed Shares in the order of their completion.

No Fines on unadvanced Shares. No back payments.

This Society within four years has divided five estates, satisfying 1,814 Shares out of 5,536. The value, as divided amongst members, being 67,57£.

A Bonus of 5 per cent. in addition to 5 per cent. interest, in all to per cent. was declared upon all unadvanced Shares at the annual meeting of 30th January last.

WM. BANKS, Secretary

211, High-street, March 1, 1855.

SECURITY for MEMBERS of BUILDING and FREEHOLD LAND SOCIETIES. The LAW PROPERTY and LIFE ASSURANCE SOCIETY will ASSURE, for a very moderate annual premium, the payment of all future subscriptions, in the event of the death of a member before his property is redeemed. Every information forwarded on application.

EDWARD S. BARNES, Secretary.

30, Essex street, Strand.

LECTURES to WORKING MEN, being the second of these courses for the present session, at the Museum of Practical Geology, Jermyn-street. Six Lectures on MECHANICS, by Professor WILLIS, M.A. F.R.S. to be commenced on MONDAY, MARCH 12th, at EIGHT o'clock, p.m. Tickets may be obtained at the Museum by Working Men only, on MONDAY, MARCH 5th, and following days, from TEN to FIVE o'clock, upon payment of a registration fee of 6d. for the whole course. TRENHAM REEKS, Registrar.

ADVERTISEMENTS.

ROYAL ACADEMY of ARTS, Trafalgar-square.—NOTICE to ARTISTS.—All works of Painting, Sculpture, Architecture, or Engraving, intended for the ensuing EXHIBITION at the ROYAL ACADEMY, must be sent in on MONDAY, the 9th, or TUESDAY, the 10th of APRIL next, after which time no work can possibly be received, nor can any works be received which have already been publicly exhibited.

FRAMES.—All pictures and drawings must be in gilt frames. Oil paintings under glass, and drawings with wide margins are inadmissible. Excessive breadth in frames as well as projecting mouldings may prevent pictures obtaining the situation they otherwise merit. The other regulations necessary to be observed may be obtained at the Royal Academy.

JOHN PRESCOTT KNIGHT, R.A. Sec.

Every possible care will be taken of works sent for exhibition, but the Royal Academy will not hold itself accountable in any case of injury or loss, nor can it undertake to pay the carriage of any package. The prices of works to be disposed of may be communicated to the Secretary.

ARCHITECTURAL ASSOCIATION.—At the next Ordinary Meeting, MARCH 16, a Paper will be read by Mr ROSSER, on the subject of "Warming by Hot Water."

The Class of Design will meet on MARCH 23. Subject for sketch, a Three-light Window.

The Register of architects requiring assistance, and of draughtsmen wanting employment, may be consulted daily, free of any charge, between the hours of TEN and FIVE, at the office of Mr. ARTHUR BILLING, 10, Buckingham-street, Strand.

ARTHUR CATES, } Hon. Secs.
Lyon's-inn Hall, Strand. T. W. GOODMAN, }

THE ARCHITECTURAL MUSEUM, CANNON-ROW, WESTMINSTER.

The next COURSE of LECTURES will commence on the first MONDAY in MAY, and will be continued on each alternate MONDAY till the completion of the course.—Further particulars will be advertised.

An unavoidable delay having occurred in the issue of the catalogue of the collection, the subscribers are informed that it will be ready in the course of the following month.

March 8, 1855. HENRY CLUTTON, Hon. Sec.

INSTITUTION of BUILDERS' FOREMEN and CLERKS of WORKS.—NOTICE to MEMBERS.—In consequence of WEDNESDAY, the 31st day of MARCH being appointed for a general fast, the ordinary Meeting of this Institution is postponed until the FIRST WEDNESDAY in APRIL next.

W. ALLARD, Secretary.

BOROUGH of MIDDLESBROUGH.—SURVEYOR WANTED.—The Town Council of Middlesbrough are desirous to ENGAGE an active and competent person as BOROUGH SURVEYOR. He must be sufficiently acquainted with engineering to be able to survey, plan, and level, and carry out sewerage and drainage works. Population about 11,000. Salary, 150l. per annum. The person appointed will be required to devote his whole time to the office. Further particulars, with respect to the duties to be performed, may be had on application to the undersigned, and applications in the handwriting of the party, and with testimonials of his character and ability, and a statement of his age, and previous and present occupation, must be at my Office not later than TWELVE o'clock at noon, on TUESDAY, the 20th MARCH next.—By order,

JOHN S. PEACOCK, Town Clerk.

Middlesbrough, February 23rd, 1855.

COMPETITIONS.

PREMIUMS for DESIGNS.—The Woolwich Burial Board offers a PREMIUM of TWENTY GUINEAS for DESIGNS and ESTIMATES for the necessary CHAPELS, LODGE, &c. and the laying out, draining, and planting the intended burial-ground at Woolwich; which sum will be increased to THIRTY GUINEAS if the approved designs be accompanied by detailed working drawings and specifications sufficiently comprehensive to enable the Board at once to enter into contracts for the execution of the works. Designs to be sent into Mr. HENRY BLAND, Clerk to the Woolwich Burial Board, on or before THURSDAY, the 29th day of MARCH next. Any person desirous of competing for the above will be furnished with a plan of the ground and other particulars upon application to the Clerk to the Burial Board, at the above address, on and after MONDAY, the 12th inst.

COMPETITIONS.

TO ARCHITECTS AND OTHERS.

THE BURIAL-BOARD for the PARISH of BRIDPORT, in the county of Dorset, is desirous of receiving PLANS, DESIGNS, and ESTIMATES, comprising Ground Plans, Sections, and Elevations, for LAYING OUT a NEW BURIAL GROUND of FOUR ACRES the plan of which may be seen at my house, in East-street, INCLOSING the GROUND, BUILDING a LODGE with ENTRANCE-GATES, and BUILDING TWO DETACHED CHAPELS. The party whose plans may be approved, will, at the discretion of the Board, either have the superintendence of the works, or be paid 1311 15s for the plans, designs, estimates, &c. The person who prepares, in the judgment of the Board, the second best plan, will be paid 52l. 5s. which must be delivered at my house, free of all expense, without the author's name, but with a motto, on or before the 17th of MARCH. A sealed letter, containing real names and address, should accompany each design, which will be opened after selection made, and those not approved will be returned.

W. K. BROWN, Clerk of the Board.

Bridport, February 26, 1855.

PROPOSED CORN-EXCHANGE for LEICESTER.—To ARCHITECTS.—The Committee intend ERECTING a CORN-EXCHANGE over the present Market-House, and hereby invite architects to send in plans, elevations, and sections complete. All designs are required to be on the same scale, one-eighth of an inch to a foot; the plans to be sent in on or before the 6th day of APRIL next, addressed to the Honorary Secretary, T. CHAPMAN BROWNE, Bible and Crown, Market-place, Leicester. Competitors are requested to put a distinguishing mark or motto on their designs, but not to attach their names. The architect who shall produce the most suitable plan will receive a Premium of 50l. which will merge into the commission in the event of the scheme being carried out; and the second best design will receive a Premium of 10l. No plans will be received into competition which cannot be carried out for a sum not exceeding 1,400l. For a view of the present building, and particulars of requirements, apply to the Honorary Secretary, Leicester. By order of the Committee.

CONTRACTS.

TO BUILDERS.

NEW MARKET at GLOUCESTER.—The Corporation of Gloucester is desirous to receive TENDERS for the ERECTION of the above Market, in accordance with the plans, specifications, and conditions, prepared by Messrs. MEDLAND and MABERLY, Architects, Gloucester, which may be seen on application to them on and after 5th MARCH next. The Tenders to be delivered, free of all charge, before TWELVE o'clock, on MONDAY, 19th MARCH next, at the Architects' Office, sealed and endorsed, "Tenders for New Market, Gloucester."—The Corporation will not be bound to accept the lowest or any Tender if the amount be unreasonable. The works will be divided into two Contracts, viz.—No. 1. The excavators, bricklayers, masons, carpenters, joiners, slaters, plumbers, painters, and glaziers' works. No. 2. The smiths and ironfounders' works.

A. H. JENKINS, Town Clerk.

Gloucester, February 21st, 1855.

RYDE, ISLE of WIGHT.—To BUILDERS and CONTRACTORS.—ESPLANADE.—The Commissioners for Improving the town of Ryde are ready to receive TENDERS for BUILDING a SEA WALL and forming an ESPLANADE and CARRIAGE DRIVE from the Pier Gate to the Castle, at the bottom of Dover-street. Plans and specifications of the works to be performed, and the conditions to be observed, can be inspected at the Office of the Town Surveyor, 16, George-street, between the hours of TEN a.m. and FOUR p.m. until the 19th day of MARCH next, on or before which day and hour, sealed Tenders marked on the outside, "Tender for Esplanade," are to be sent to me at my Office, at the Town-hall.—The Commissioners do not bind themselves to accept the lowest Tender.

By order,

WILLIAM HENRY PULLEN, Clerk.

Town-hall, Ryde, March 2, 1855.

TO BUILDERS AND CONTRACTORS.

MILITARY DEPOT for the County of DENBIGH, at Wrexham.—Any person willing to CONTRACT for BUILDING the new MILITARY DEPOT, for the custody of the stores, arms, and accoutrements of the Royal Denbighshire Rifles, and for ERECTING a HOSPITAL, with QUARTERS for the Sergeant-Major and SIX Sergeants of the Permanent Staff, together with all necessary Outbuildings, and for forming the PARADE GROUND, may see the plans and specifications, after the 9th of MARCH next, upon application to Mr. WHITTAKER, at the Turf Tavern, near the Railway Station at Wrexham, or at my Office in Oswestry. Sealed Tenders to be sent, addressed to me, at Gwesyllt-hall, on or before the 26th day of MARCH, endorsed "Tenders for the Military Depôt at Wrexham." The Contractor will be required to enter into security, with sufficient sureties, for the due completion of the works. The lowest Tender may not be accepted, without having due regard to the eligibility of the parties.—Any further information may be obtained at my Offices at Oswestry, and Gwesyllt-hall, near Wrexham.

THOMAS PENSON, Architect.

Oswestry, February 21, 1855.

RUNCORN UNION.—To BUILDERS and OTHERS.—Parties desirous of CONTRACTING for the whole of the works required in the ERECTION of a new WORKHOUSE, intended to be built at Dutton, in the county of Chester (about one mile from the Preston-brook station on the London and North Western Railway), may see the plans and specification at the Office of Mr. CULSHAW, Architect, Runford-place, Liverpool, until the 14th day of MARCH next, and after that date at my Office, Frodsham, until the 28th day of MARCH. Sealed and endorsed Tenders to be delivered at my Office, on or before the 28th day of MARCH next, addressed to me. The Guardians do not pledge themselves to accept the lowest or any other Tender. Security will be required for the due performance of the contract when entered into.

DANIEL ASHLEY, Clerk to the Runcorn Union.

Frodsham, Feb. 22, 1855.

CONTRACTS.

Royal Engineer Office, Eastbourne, Feb. 16th, 1855.

TO BUILDERS.

SUCH Persons as are desirous of undertaking the several branches of ARTIFICERS' WORK, IRONMONGERY, CAST-IRON, and METAL WORK, required in the Ordnance Department at the places undermentioned, including REPAIRS to the several BARRACKS, upon a CONTRACT for THREE YEARS from the 1st of APRIL next, determinable at any period after the expiration of one year, on either party giving three months' notice in writing, may be furnished with printed schedules of prices, and the conditions of the contract, with every necessary information respecting the same, by application at this office.

Stations for which separate Tenders will be received:

From SHOREHAM to the WEST SIDE of CUCKMERE HAVEN;

From the WEST SIDE of CUCKMERE HAVEN to FAIRLIGHT.

The Tenders will be required to be delivered before TWELVE o'clock at noon, on TUESDAY, the 13th day of MARCH next, at the Ordnance Office, Pall-mall, addressed to "The Secretary to the Board of Ordnance." The persons whose Tenders shall be approved, will be required to provide eligible securities, and execute a bond for the due performance thereof, and to pay half the amount of the stamp on the bond.

TO BUILDERS AND OTHERS.

SEALED TENDERS, in one specific sum, will be received at the Ordnance Office, Pall-mall, London, on or before the 20th MARCH, 1855, for the following SERVICES at Bull Point, in the parish of Saint Budeaux, near Devonport, viz.:—

1.—Building Cottages for a Foreman and sixteen Labourers.
2.—Building a Cook-house and Wash-house for the Crews of the two Powder Vessels, with Privy and Urinal.
3.—Building an Office for the Ordnance Storekeeper.
4.—Building a Civil Watch-house and a Shed for Waggons.
5.—Building a Warder's Lodge and a Shot-house.
6 Building an Engine house.
7.—Building a Boat-house.
8.—Removing the present wooden Filling and Examining-house at Keyham to Bull Point.

Detailed specifications of the above eight services, with addenda thereto, and every requisite information may be obtained at the Royal Engineer Office, Bull Point, daily (Sundays excepted), between the hours of TEN and FOUR o'clock, from THURSDAY, the 1st, to FRIDAY, the 16th of MARCH, 1855, both days inclusive.

Royal Engineer Office, Devonport, 23rd February, 1855.

Commanding Royal Engineer's Office, Dublin, 26th February, 1855.

NOTICE to BUILDERS.—ORDNANCE CONTRACT.—The Commanding Royal Engineer in Ireland hereby gives Notice, that he will receive PROPOSALS for the following CONTRACT, viz.:—

For the CONSTRUCTION and ERECTION of 430 WOODEN BUILDINGS to accommodate Soldiers; Ten for Staff purposes, and Four for Officers' Stables, at the Curragh of Kildare, in the Dublin District.

Persons desirous of Tendering for the same, will receive every information on application at the Commanding Royal Engineer's Office, Lower Castle-yard, Dublin; and may obtain specifications, with the terms of contract, upon making a deposit of 1l. for the same, which deposit will be repaid when the specification is are returned uninjured. The whole of the Buildings to be completed within sixty days after the acceptance of the Tender, but the Tenders to state the period less than sixty days within which the Contractor will undertake to perform the work, on which point a preference will be given in the consideration of the offers. The letters of Tender to be sealed, and transmitted, under cover, to "The Commanding Royal Engineer in Ireland, Lower Castle-yard, Dublin," so as to be received on or before the 12th day of MARCH, 1855; and to be marked on the outside, "Tender for Work at the Curragh of Kildare." The build ngs are to accommodate ten battalions of infantry, viz. forty-five huts for each battalion; and it is to be understood that parties have the option of Tendering for one or more battalions, or for the whole.

BETHESDA GAS WORKS.—TENDERS for BUILDING, and IRON WORKS. The Commissioners under the "Bethesda Improvement Act, 1854," are desirous of receiving TENDERS by the 14th MARCH, 1855 (such TENDERS to stand good for six weeks from that date), for the following Works to be done, and materials to be delivered at Bethesda, near Bangor. Any party who would like to contract for the whole is at liberty to Tender for the same according to plans and specifications, lying at the Douglas Arms Hotel, Bethesda. First, Tender to comprise the BUILDINGS, TANKS, and EXCAVATIONS, complete. The second Tender, the heavy CASTINGS, and CAST-IRON PIPES.—8, 3, and 2 inches. Third Tender, the GAS-HOLDER, 35 feet diameter by 13 feet deep, erected at Bethesda. Fourth Tender, supplying the remaining parts: FITTING UP the GAS APPARATUS, complete; LAYING and JOINING MAIN PIPES.—The Commissioners do not bind themselves to accept the lowest or any Tenders.

By order, H. WILLIAMS,
Clerk to the Bethesda Improvement Commissioners.

Glanadda, Bangor, March 1, 1855.

CHUBB'S LOCKS & FIREPROOF SAFES.

INFFECTUAL ATTEMPT UPON THE STRONG ROOM OF THE LONDON AND NORTH WESTERN RAILWAY COMPANY.

"London and North Western Railway Company.

"Liverpool, May 17, 1853

"Gentlemen,—I have much pleasure in bearing testimony to the efficiency of the iron door and locks of your make, which secure the strong room at this office, and which completely baffled the efforts of one or more burglars to force open the money chest on the night of Tuesday last, although it is evident that considerable force was used to break open the door.—I am, gentlemen, your obedient servant, "GEORGE PALMER.

"Messrs Chubb and Son."

FROM MR. OTWAY, SUPERINTENDENT OF POLICE, C DIVISION.

"8, Great Vine-street, May 3, 1853.

"Gentlemen,—I have the pleasure to inform you, that having one of your locks on the private door of my house, prevented my being robbed last night. The thief tried to open it, but not succeeding, has so damaged it that I have sent it to you for inspection, and shall feel obliged if you will have it repaired.—I am, gentlemen, your obedient servant, "C. OTWAY.

"Superintendent C Division of Police.

"Messrs Chubb and Son."

CHUBB'S LOCKS, with all the recent improvements: Cash, Deed, and Paper Boxes, of all sizes; Fireproof Safes and Chests; Iron Doors and Frames for Strong Rooms; all fitted with the Detector Lock.

Complete Illustrated Lists, with prices and sizes, will be sent on application to

CHUBB and SON, 16, MARKET-STREET, MANCHESTER; 57, St. Paul's Churchyard, London; 28, Lord-street, Liverpool; and Hornsey-fields, Wolverhampton.

PARNELL and PUCKRIDGE'S DEFIANCE and NATIONAL LOCKS, "which cannot be picked," are made of all sizes and for every purpose.

FIRE PROOF SAFES, DOORS, and FRAMES;

DEED and CASH BOXES, COPYING and LEVER PRESSES

STREET-DOOR LATCHES, warranted safe from picklocks, with two small master keys, 15s. each.

Descriptions and lists of prices may be had, or sent, upon application to

PARNELL and PUCKRIDGE, 52, STRAND, London.

A PRIZE MEDAL for SUPERIOR LOCKS was awarded to J. H. BOOBYER at the Great Exhibition of 1851, who invites the attention of Builders, &c. to his Stock of Ironmongery, Brass, Fenders, Nails (wrought and cut), Copper and Zinc; Patent Locks of all descriptions; China, Glass, and Wood Furnitures of all kinds, with Patent Shifting Spindles; Dr. Arnott's Ventilator, &c.; and the new registered Venetian Ventilator, so much admired, &c. &c. &c.

J. H. BOOBYER late STURCH and BOOBYER), established nearly 200 years, for the supply of Goods from the best Manufactories, at the lowest prices.

14, Stanhope street, Clare-market, London.

HOBBS'S PATENT AMERICAN and ENGLISH LOCKS.

Messrs. HOBBS and HILLEY, and CO. are now manufacturing their celebrated American and English Locks, on the premises, 97, Cheapside, and 73, Lawrence-lane, London; where, by the introduction of their patent steam machinery they are enabled to guarantee superior workmanship, combined with greater security, at a moderate price, than in any locks produced either in town or country.

EVERY LOCK being MADE and FINISHED at the MANUFACTORY, is warranted, and bears their OWN STAMP, without which none are genuine.

These Locks can be procured by order through any respectable Ironmonger in the United Kingdom; or at the Warehouse, as above, Wholesale and Retail.

PATENT FIRE and BURGLAR-PROOF SAFES MAKERS PATENT, fitted with HOBBS'S PATENT POWDER-PROOF LOCKS, form the strongest Safeguards against Fire and Robbery, they are made of various dimensions, adapted for the security of Money, Plate, and important Documents, Parish Registers, &c. Lists of prices and dimensions can be had on application to HOBBS, HILLEY, and CO. Wholesale and Retail Warehouse, 97, Cheapside, and 73, Lawrence-lane, London.

PUBLIC INVITATION.—HEATING by HOT WATER with ONE BOILER. JOHN WEEKS and CO. King's-road, Chelsea, Horticultural Builder and Hot-water Apparatus Manufacturer, most respectfully invite the nobility, gentry, and Horticulturists, to visit their nursery establishment during this severe weather, and witness the efficient working of their hot water apparatus. The establishment consists of forcing houses, conservatories, &c. &c. many of which are of wide and lofty dimensions, and to get at measuring upwards of 1,000 feet in length; the whole effectually heated by one boiler, on the small cost of 5s. 3d. per day for fuel and labour. The various houses are divided into about forty different compartments, either of which can be heated separately, and the whole regulated at pleasure with a greater command of heat than is required. Boilers of all sizes, and apparatuses, both plain and ornamental, adapted for warming churches, schools, warehouses, and buildings of every description; also a great variety of horticultural buildings, to be seen in full operation, so that a lady or gentleman can select the design required for their own particular purpose. Also a splendid collection of plants.

JOHN WEEKS and Co. Horticultural Establishment, King's-road, Chelsea.

SYLVESTER'S HOT WATER STOVES, for Warming Halls, Staircases, Galleries, Warehouses, Stores, Hotels, and Offices, require no Flue, create no Dust, and are safe from all risk of fire.

Any number of these Stoves may be heated from one Boiler, and may be used equally well with Steam or Hot Water.

SYLVESTER'S IMPROVED AIR WARMER

Is the most powerful, salubrious, and economical Apparatus yet invented for Heating Churches, Chapels, Schools, and Public Rooms, by means of Hot Air

Prospectuses and Estimates may be obtained on application to

SYLVESTER and CO. Engineers, and Manufacturers of Heating Apparatus, 39, Great Russell-street, Bloomsbury.

WARMING and VENTILATING.—COTTAM and HALLEN, 2, Winsley-street, Oxford-street, having had thirty years' experience, and having warmed by the circulation of hot water upwards of 1,000 buildings, consisting of churches, private houses, mansions, halls, and staircases, galleries, conservatories, forcing-houses, &c. can with confidence recommend their system, which, by various improvements they have made, has perfected the construction and economised the expense. Greenhouses, conservatories, verandahs constructed entirely of iron or wood, and heated as combined. Estimates upon application.—COTTAM and HALLEN, Engineers and Ironfounders, 2, Winsley-street, Oxford-street.

ROYAL POLYTECHNIC GAS FIRE, BACHHOFFNER and DEFRIES'S PATENT.—The public is respectfully informed that arrangements have now been made for the supply of this unique and beautiful mode of warming private houses, shops, public buildings, &c. Smoke, dust, ashes, and accidents from fire are effectually prevented by its use, while it presents all the comfort and appearance of an open coal fire, burning, at the same time, perfect ventilation. To be seen in action at DEFRIES'S Office, 145, Regent-street, London.

HEATING by HOT WATER.—JOHN WEEKS and CO. King's-road, Chelsea, solicit the attention of architects, &c. to their improved APPARATUS. At Messrs. Weeks' establishment, an apparatus with one boiler can be seen daily in full operation, heating buildings measuring 1,000 feet in length, at the small cost of 5s. 3d. per day for fuel and labour. This achievement in heating by hot water is unprecedented.

THE SMOKE-CONSUMING STOVE, invented by Dr. ARNOTT, and explained by him at the Society of Arts, on WEDNESDAY, MAY 10, 1843, requires perfect combustion, economises fuel, requires much less attention than the register stoves in general use, and produces by the use of Dr. Arnott's improved Chimney Valve, a much greater degree of Ventilation. Manufactured by D. and E. BAILEY, 272, Holborn.

FIRST PRIZE KITCHEN RANGE.—The only prize ever competed for, the prize of public approbation, has been and is now obtained by BROWN and GREEN'S celebrated KITCHEN RANGE, which is pre-eminently the best, most perfect, economical, and simplest examples for all cooking operations. It is warranted a certain cure for a smoky chimney.—Wholesale agents, R. W. KENNARD and CO. 67, Upper Thames-street, London. Manufactory, Luton, Beds.

UNIVERSAL SMOKE-CONSUMING COMPANY; Offices, 4, Furnival's-inn, London.—No Smoke, more Steam, and less Fuel. References—Messrs Thurston and Co. Billiard-table Makers, 14, Cathenine-street, Strand; Mr. J. T. Hunt, Bone-mills, Lambeth-wharf; Messrs. Fields, Wax-candle Manufacturers, Lambeth; and Messrs. Ross and Co. Great Guildford street, Southwark, where Witty's patent apparatus is at work.

THE PATENT PRIZE KITCHENER, with Boiler to supply Bath, Scullery, Hot and Steam Closet, is Manufactured with all its recent improvements, by THOMAS RADCLYFFE, Leamington, Warwickshire, of whom plans, prices, and testimonials may be had on application. It is made from three feet to twenty, all worked by one small fire. A great saving in fuel is effected by having these kitchener, and it effectually cures smoky chimneys, and is the best cooking range extant.

COOKING APPARATUS for SALE, cheap, in excellent condition, suitable for a club or hotel. May be seen at SYLVESTER and CO'S Factory, 39, Marlborough-mews, Bleinheim-street, Oxford-street.

PATENT GALVANIZED IRON.
(IMPROVED PROCESS.)
JOHN SYMONDS and CO.
WORKS.—GLASS-HOUSE YARD, opposite the principal Entrance to the London Docks.
GALVANIZED SHEET-IRON and WIRE of every description, superior in all respects to that produced by any other process, THE TOUGHNESS AND MALLEABILITY of the Iron being preserved.
Estimates given for IRON ROOFS, Corrugated Sheds, Houses, Telegraph-Wire, Submarine Cables, WIRE-ROPE, Fencing, &c.
Roofs fixed complete.

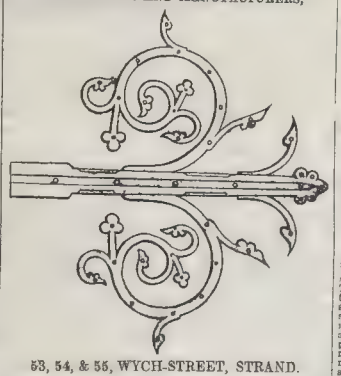
JACKSON and COOK, Ironfounders and Manufacturers of CORRUGATED and GALVANIZED IRON ROOFS and BUILDINGS, beg to call the attention of Architects, Builders, and others, requiring roofing, to the superiority of iron as manufactured by them for that purpose, in point of lightness, cleanliness, durability, cheapness of construction, and being fire-proof. Drawings and estimates furnished.
Island Foundry and Ironworks, Millwall, London.
Offices: 12, Penchurch-street, City.

SAMUEL HEMMING'S PATENT much approved PORTABLE BUILDING and ROOFING MANUFACTORY, REMOVED from BRISTOL to DOVE, near London, close to the Dow Railway Station. A large variety of buildings always on view, churches, chapels, shooting boxes, lodges, bazaars, ornamental villas, dwelling-houses, farm buildings, and fire-proof stores. Also, railway stations, trucks, and carriages made to any plan on the shortest notice.

RAIN-WATER PIPES.—O-G and Half-round Gutters, Sash Weights, Railway Bars, Air Bricks, &c.
J. JONES, Iron Merchant, Iron-bridge Wharf, No. 6, Bankside, has the largest stock in London of the above and other castings, of the very best quality Ass cast-iron pipes for gas, water, or drainage; bends, tees, &c.; flange and hot-water pipes, with all the usual connections; lamp-posts and retorts, stable fittings, pig-troughs, &c. &c.
J. JONES, IRON MERCHANT, IRON-BRIDGE WHARF, No. 6, BANKSIDE, LONDON, near the Southwark Iron Bridge.

VALUABLE PATENT MACHINES FOR WORKING IN WOOD.

PLANING MACHINE.



PRIZE MEDALS have been awarded to these celebrated machines, both by the Great Exhibition in London, and many scientific institutions. They are extensively used throughout the United Kingdom, by joiners, contractors, coach and cabinet makers, railway carriage and waggon builders, machinists, agricultural implement makers, shipbuilders; and also by the British and French Governments, for planing and squaring up, moulding, tenoning, mortising, grooving, rebating, sawing and boring. Their operations are in every respect perfect, either in hard or soft wood, and will perform all the ordinary descriptions of work required in the above trades in a very rapid and superior manner, and at a great reduced cost.—Sold only by WILLIAM FURNESS, Patentee, 20, Lawton-street, Liverpool from whom full particulars may be obtained.

NEW PATENT MACHINE for MORTISING and TENONING HARD or SOFT WOOD, and BORING WOOD or IRON House and Coach Builders, Joiners, Cabinetmakers, and others, doing similar work, are invited to call at the Patentees, POWIS, JAMES, and Co. Wholesale Builders and Cabinet Makers, Ironmongers Establishment, 26, Watling-street, City, and see in action this very simple, powerful, and expeditious machine, which is the only one yet brought out, for performing these three separate kinds of work by one machine, and as it is self-feeding, it does not require any skill or care in using like the older inventions introduced. It can either be worked by a boy, or made to go by steam power.
P.S. Steam Engines and Machinery contracted for.

MACHINERY. — SAWING, PLANING, MOULDING, and WOOD CUTTING MACHINES.
To Timber Merchants, Contractors, and others SAMPL. WORKSAM and CO. of Hortulan-place, King's-road, Chelsea, invite the attention of Timber Merchants and others to their new inventions and improvements in all kinds of machinery used in Sawing, Planing, Moulding, and Wood Cutting. SAMPLE-SAM and CO. are able to execute orders with cheapness and despatch; they solicit an inspection of their machines constantly on hand and in progress; and they can refer to parties of the highest position and respectability, as to the goodness and efficiency of their machines. Estimates made for Exportation, or otherwise.—Drawings and prices on application.
February 16th, 1852

TO BUILDERS, JOINERS, &c.
ON SALE, price reduced, MORTIMER'S PATENT IMPROVED MORTISE CUTTING-MACHINE, complete; manufactured by A. MATHEW, 9, Denburn-street, Aberdeen.

HART AND SON,
IRONMONGERS AND MANUFACTURERS,

53, 54, & 55, WYCH-STREET, STRAND.
Illustrated Catalogues post-free on receipt of six postage-stamps.

NAILS and IRONMONGERY, from BIRMINGHAM direct.
Builders, Contractors, and Others, supplied with Nails, Iron, and Ironmongery of every description, at the
LOWEST BIRMINGHAM PRICES,
a complete LIST of which
will be forwarded upon application.
FREDERICK BLYTH,
Nail Manufacturer and General Factor,
Regent-parade, BIRMINGHAM;
or at 16, Gresham-street, LONDON.

STEWART'S PATENT CASTIRON GAS and WATER PIPES.
Office, No. 7, Size-lane, London.

GAS CHANDELIERS and BRACKETS.—The increased and increasing use of gas in private houses has induced WILLIAM S. BURTON to collect from the various manufacturers all that is new and elegant in Brackets, Pendants, and Chandeliers, adapted to offices, passages, and dwelling-rooms, as well as to have some designs expressly for him; these are now ON SHOW in one of the TEN LARGE ROOMS at present, for novelty, variety, and purity of taste, an unequalled assortment. They are marked in plain figures, at prices proportionate with those which have tended to make his Ironmongery Establishment the largest and most remarkable in the kingdom, viz. from 12s. 6d. (two light) to 30l. 0s.
WILLIAM S. BURTON has TEN LARGE SHOW-ROOMS devoted to the show of GENERAL FURNISHING IRONMONGERY (including cutlery, nickel silver, plated and japanned wares, iron and brass bedsteads), so arranged and classified that purchasers may easily and at once make their selections.
Catalogues, with engravings, sent (per post free. The money returned for every article not approved of.
39, OXFORD-STREET (corner of Newman-street); 1 and 2, NEWMAN-STREET; and 4 and 5, PERRY'S-PLACE.

TO MANUFACTURING CHEMISTS, PLUMBERS, BUILDERS, &c.
ANDREW CLARK and COMPANY, PLUMBERS,
THE BEAR GARDEN LEAD WORKS, SOUTHWARK,
Sole Manufacturers of Delbruck's Patent Autogenous Soldering Apparatus, invite the attention of Manufacturing Chemists to their Patent method of
UNITING LEAD TO LEAD WITHOUT SOLDER.
Leaden Chambers, or any leaden vessels, made or repaired by this process, making them complete, without the introduction of any foreign metal.
PLUMBERS and BUILDERS can be SUPPLIED with SHEET LEAD and PIPE, cut to any dimensions, and EXCHANGED for OLD LEAD, on the LOWEST TERMS.

MARBLE.—Mr. B. FABBRICOTTI, of Carrara, Italy, Proprietor of Marble Quarries, and the only person in the Trade licensed to select Italian Marble for the use of his own quarries, begs to inform the gentlemen connected with the Marble Trade that he has established, in London, the most extensive Depôt of Statuary, Veined, Sculptur, Dove, and Black and Gold Marbles, at CARRARA WHARF, THAMES BANK, PIMLICO, the foot of Vauxhall-bridge.

TO THE MARBLE TRADE.
MR. B. FABBRICOTTI begs to inform the public that he has REMOVED from the office lately held by him at No. 8, Crescent-terrace, Millbank, to offices on his own premises, at Carrara Wharf, Thames Bank, Pimlico, where he continues to carry on the marble trade solely on his own account. Mr. Thompson being no longer his agent.
Mr. B. Fabbricotti hopes that the trade will continue to favour him as usual, as, being the absolute proprietor of the quarries at Carrara, he can supply at a better advantage and quality than any one else.
N.B. The well-known qualities of Mr. Fabbricotti's marble are celebrated throughout all Italy, England, and America.

MARBLE SLABS.—MARBLE and STONE SAWING-MILLS, 8, NORTH WHARF-ROAD, PADDINGTON. The proprietors of the above mills beg to offer to masons and the building public generally, their extensive assortment of vein, Sicilian, and statuary marble, in slab and block, at prices never before offered. JAMES SIMMONS, Manager.

MARBLE.—THOMPSON and HOLMES, Marble, Stone, and Timber Brokers, Contractors, and Builders' Agents, beg to inform the gentlemen connected with the marble trade, that their STOCK of MARBLE is received direct from the principal quarry owners in Italy and Belgium, for SALE on COMMISSION ONLY, and that they can consequently supply the Trade with the finest marbles at the lowest prices. Sawn Slabs, Mortars, Vases, &c.; Yorkshire and Portland Stone for sale on commission.
The Marble Wharf, Thames-bank, Pimlico, adjoining Vauxhall-bridge.

MARBLE WORKS by PATENT MACHINERY, Commercial-road, Pimlico, London.
THOMAS JACKSON begs to draw the attention of the public to the most extensive stock of Marble Chimney-Pieces in the Metropolis; consisting of a selection of upwards of two hundred, and manufactured by steam power from the finest Italian and other marble, and with that careful attention to the details and finish so necessary in good marble work. The Stock consists of elegant Drawing-Room Chimney-Pieces in Statuary Marble; bold, massive Chimney-Pieces, in Black, Black and Gold, Bardilla, Sienna, Verd Antique, Brocatella, Dove, St. Anne's, and Serpentine Marble, suitable for Dining-Rooms, Libraries, Vestibules, and Entrance-Halls; and a great variety of others in Veined, San Juan, Emperor's Red and Amber Marble, for Boudoirs, Breakfast-Rooms, best and secondary Bed-Rooms, &c.; also, Monuments, Tombs, Tablets, and Pedestals for Busts and Statues, and Slabs for Cabinet Work, &c.; the whole executed from the most classical designs, and in all the varieties of the finest Italian and British Marble, at the lowest remunerative prices.

BUILDERS, &c. &c.—Take Notice of the extraordinary Reduction made in the price of marble work at the WESTMINSTER MARBLE WORKS.—Address, WEST-MINSTER MARBLE COMPANY, EARL-STREET, MILLBANK.

BRAMLEY-FALL STONE and LARGE LANDINGS.—Mrs. ANN HUSLER can supply any quantity of BRAMLEY-FALL STONE, large landings, flags, steps, sills, copings, slabs, &c. &c. at the lowest wholesale prices. Note.—No charge made for supplying to dimensions.—Apply for price, &c. to S. TRICKETT, Stone Wharf, Isle of Dogs.

CAEN and AUBIGNY STONE.—P. FOUCARD, Stone Merchant and Quarryman. Cargoes shipped to order from Caen to any port. Contracts taken for any quantities. Depôts: Granite Wharf, East Greenwich; Lett's Waterloo-bridge. Offices: 246, High-street, Southwark, near the Townhall

CAEN and AUBIGNY STONE.—GATES and GEORGE (late Luard, Beedham, & Co.), General Stone Merchants, Caen Wharf, Rotherhithe, are supplying the above and Bath, Portland, Yorkshire, Granite, and other Stones from their depôt, at current prices by land and water carriage; also by vessel direct from the quarries, at moderate ship freight to any part of the United Kingdom.
N.B. Heavy goods landed, transhipped, or carted with despatch, and at moderate charges.

ANCASTER STONE, from the celebrated quarries of Mr. John Wilson, Ancaster, who has appointed GATES and GEORGE, Stone Merchants, his sole consignees for London and district. Ancaster Stone, generally esteemed by the building profession, for its great durability, economy, and general utility, as to require but a trial to secure the approval of architects and others for it near at hand. Specimens on building.—Samples and other information can be obtained at the Great Northern Depôt, King's-cross; Caen-wharf, Rotherhithe; and Hibernia-chambers, London Bridge. Borough; or forwarded to address, free of charge.

GODSTONE STONE.—GATES and GEORGE beg to solicit the attention of architects, engineers, and builders to the above stone, as being suitable for all purposes of construction, either as a substitute for brickwork, or in connection therewith, the price in most respects being about the same as ordinary brickwork. It can be obtained in large quantities, and to specified sizes, in rubble or rough square blocks, direct from the quarries. Information and samples given at Caen-wharf, Rotherhithe, and Hibernia-chambers, London-bridge, Borough.

GRANITE.—The Cheesewring Granite Company, Liskeard, Cornwall.
London Agents—TREGELLES and TAYLOR, 4, Pinner's-court, Old Broad-street, and R. J. TREGELLAS, Liskeard.
This Granite is selected for the New Westminster-bridge.

GRANITE, MONUMENTS, TOMBS, TABLETS, LEDGERS, LANDING STEPS, &c polished or otherwise, as required. Granite blocks, ashlar tramway, &c. Bramley fall and other stone. Cargoes of the above stone supplied direct from the quarries. Goods landed and shipped. Apply to Mr. G. H. CLARK, Stone Merchant and Granite Agent, Devon Haytor Wharf, Rotherhithe, London.

MARKET-WHARF, REGENT'S-PARK-BASIN.—WEST-END DEPOT, for Yorkshire Paving, Portland and Derby Stone, Bangor Slates, Slabs, &c. Also Bricks, Lime, Cement, Flues, Tiles, Lath, and Fire Goods. WOOD and ROBARTS invite the attention of Builders, Masons, and others, to their Stock as above, where everything will be charged at the lowest prices. Headstones, Ledgers, Steps, Landings, &c. cut on the shortest notice. Country orders promptly attended to.

BATH STONE OF BEST QUALITY.
RANDELL and SAUNDERS, QUARRYMEN AND STONE-MERCHANTS, BATH.
List of prices at the quarries and depots, also cost for transit to any part of the kingdom, furnished on application to Bath Stone Office, Corsham, Wilts.

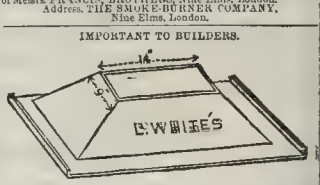
By Her Majesty's Royal Letters Patent.
SILICEOUS STONE.—ORNAMENTAL WORK of every description executed at LOW PRICES in this most durable material. A large Stock kept of Mantel-pieces, Balustrades, Quoins, Tombs, Fonts, &c. at the new premises, Whitehall Wharf, Cannon-row, Westminster.

ENAMELLED SLATE.—REDUCTION in PRICE.—Mr. MAGNUS having completed some extra machinery, is enabled to announce a further reduction in price in the shape of a large and increased discount to the TRADE. His best goods are now supplied at prices below those charged by other parties for very inferior imitations of his work. PIMLICO SLATE WORKS, 32 and 40, Upper Belgrave place, Pimlico.

TREVALGA SLATE.—T. B. HANNAFORD, Sole Consignee of the above beautiful Slate, is in a position to supply the same at extremely low prices. Cisterns, sinks, and every description of slate-slab work, executed with despatch.
Trevalga Wharf, Ratcliff-cross

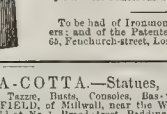
BOW-BRIDGE SLATE WORKS, Stratford, near London.—A. A. ROBINSON begs to inform Architects, Contractors, Builders, and others, that his PRICE LISTS for SLATES and SLAB WORK for 1855 are NOW READY, and can be had on application, inclosing a postage-stamp.
N.B. A liberal discount to the trade.

VALENTIA SLATE SLABS.—The Valentia Slab Company invite attention to their Slabs now supplied, of very large dimensions and of superior quality. They have been used at the British Museum, National Gallery, Bethlem Hospital, various Lunatic Asylums, the Ordnance Works, Model Prison, Pentonville, and other Penitentiaries; Malting Floors in Bedfordshire and Hertfordshire, Breweries, the Race Stand at Brighton, Portsmouth Barracks, and are kept in stock in large quantities by Messrs. FREEMAN, Millbank-street; also by Messrs. Sharpe, Cooler-street; and at Messrs. Braby's, Belvidere-road, where terms may be obtained.



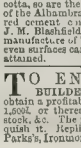
WILKINSON'S IMPROVED ARTIFICIAL STONE CHIMNEY-PIECES.—Nearly 3,000 of the above have been Sold, although only recently brought to their present state of perfection, and offered to the public. The prices range from 8s. for a neat bedroom set; with jambs, moulded with large ogee on inner edge, set on plinths. Mantel, moulded with ovolo and fillet under shelf, and shelf with bollow on edge, to 50s. for sitting-room patterns of more elaborate character. A liberal discount for quantity.—Address W. B. WILKINSON, Newcastle-on Tyne.

TO BUILDERS, PLASTERERS, AND OTHERS.
HER MAJESTY'S LETTERS PATENT have been granted to the subscriber for valuable Improvements in the manufacture of ARTIFICIAL STONE, and which he is desirous of disposing of, either the whole patent, or licenses for counties, &c. on the most liberal terms.—Specimens can be seen, and all information given on application to THOS. HODGSON, Architectural Modeller, 131, Drummond street, Euston square.



TO BUILDERS, &c.—Sixteen modern CHIMNEY-PIECES and STOVES complete; three Water-closets, best apparatus, cisterns, mahogany fittings, &c. TO BE SOLD.—Apply to the Messenger at 23, Threadneedle-street, City.

TO BUILDERS AND OTHERS.
THE ANNUAL SALE of the ARTIFICIAL STONE WORK, 74, Borough road, opposite the Queen's Bench Prison, will take place on the 22nd MARCH, at TEN o'clock, when the whole collection, consisting of Fountains, Figures, Vases, &c. will be SOLD by PUBLIC AUCTION, without reserve. Catalogues to be had eight days before the day of sale, on the premises.



LARK'S PATENT SMOKE-BURNER is an improved means of perfecting Combustion, and thereby destroying Smoke.
This invention is now in operation upon Steam-engine Furnaces, of Cornish and Waggon Boilers, and upon Ovens. It is adapted to other descriptions of Furnace, such as Marine Boilers, Coppers, Coke Ovens, Bakers' Ovens, Potteries, Chemical Works, &c. Its effect is acknowledged by Government Inspectors to be amongst the most perfect of the inventions extant in subduing the Smoke Nuisance, and in many instances with a diminished consumption of fuel.
Ten furnaces, of various construction, to which it has been successfully applied, may be seen in operation at the Cement Works of Messrs. FRANCIS, BRIGHTLING, Nine Elms, London.
Address, THE SMOKE-BURNER COMPANY, Nine Elms, London.

IMPORTANT TO BUILDERS.

REGISTERED CAST-IRON CHIMNEY-HOPPER and CHIMNEY-BAR COMBINED, ensuring a perfect formation of the Flue, and rendering smoky chimneys impossible. One trial will cause their adoption in every building. Price from 8s. 6d. each, according to size.
IRON GIRDERS and COLUMNS to MODEL or DRAWING.
IRON PIPES and connections for gas, water, and liquid manure
RAIN WATER PIPE and EAVE GUTTERS, at wholesale prices. Also, STABLE FITTINGS: pumps, tomb railing, cattle and pig troughs, and COLUMNS with caps and bases, and every kind of builders' castings, in stock at 34, CONSTANCE'S Iron Wharf, Upper Ground-street, London, near Blackfriars-bridge.

VENTILATION.—PURE AIR.

EXTERNAL WALL.
With single pulley, from 6s. each; with leading pulley, from 6s. 6d.
These Ventilators are arranged that the requisite quantity of air may be admitted for the use or ventilation of an apartment without the slightest draught being felt by the occupants; and as they are placed in the external wall, their action is not impeded when the house is closed for the night, at which time a constant supply of fresh air is most required.—HAYWARD, BROTHERS, sole Manufacturers, 166, Blackfriars-road, and 117, Union-street, Borough; and of all respectable ironmongers, builders, &c.

SMOKY CHIMNEYS CURED EFFECTUALLY for TEN SHILLINGS, by SUTER'S PATENT WIND-GUARD. This Guard allows free egress to the smoke, prevents the wind blowing down the mouth of the chimney, and is not liable to be injured by the most boisterous weather.

To be had of Ironmongers and Builders; and of Terra-cotta and pottery, wherein larger and more even surfaces can be produced, and a higher degree of vitrification attained.

TO ENGINEERS, PLUMBERS BUILDERS, &c.—An excellent opportunity now offers to obtain a profitable practical ENGINEER'S TRADE, in London; 1,500l. or thereabouts will be required to purchase lease, book stock, &c. The proprietor is compelled through ill health to relinquish it. Replies, by letter, to be addressed to No. 1,01, M Parks's, Ironmonger, Fleet-street.

DAMP WALLS.

STENT'S COMPOSITION FOR PREPARING NEWLY-PLASTERED OR DAMP WALLS FOR PAPERING,

is the result of practical experiments and long experience; it is unfailing in its application. Entire houses have been papered a few days after plastering. In repairs of old plastering it is invaluable. A moderate room can be papered for 2s. 6d.

Prepared only by W. J. STENT, Warminster. Price 1s. per bottle.

London Agents: Messrs. GEO. and THOS. WALLIS, 54, Long-acre. Agent for Ireland: Mr. S. BOYD, 46, Mary-street, Dublin.

HUBBUCK'S PATENT WHITE ZINC PAINT,

The Permanent White of the Ancient Artist.

HUBBUCK and SON, the Original Manufacturers of White Zinc Paint on a large scale in this country, are enabled, by a process, which is patented, to supply their Pure White Zinc Paint at the price of White Lead. These dreadful maladies, paralysis and painters' colic, will be entirely avoided. It is entirely free from any poisonous or pernicious property. Neither exposure to heat, nor tropical climates act upon it. The Powdered White Zinc may be had for grinding in Oil; also for Plaster Decorations, and where it is used with Zinc Varnish, &c. To be had of the Wholesale Paint-dealers in Original Packages, each cask stamped HUBBUCK LONDON—PATENT. And in case so marked the quality is not permitted. Full particulars may be had of THOMAS HUBBUCK and SON, the Original Wholesale Manufacturers in this country. Paint and Varnish Works, Upper East Smithfield, opposite the London Docks.

WHITE OXIDE OF ZINC AND ZINC PAINT.

(LANGSTON SCOTT'S PATENT.)

CROWLEY, WHITE, AND CROWLEY, *Sole Manufacturers.*

This healthful substitute for White Lead, of unrivalled colour and texture, may be obtained from most of the principal Paint Grinders, Oil and Colourmen, and Ship Chandlers in the United Kingdom, or direct from the Works, Grand Surrey Docks Wholesale under Brandi, either in the dry state or ground in Oil.

Zinc Paint, being unchangeable in colour, stands pre-eminent for the highest purposes of Art; and from its perfectly pure and innoxious qualities, is peculiarly applicable to first-class Decorations and Shop Painting. For Iron it possesses great affinity, and hence its preservative properties for that Metal, whether employed for Marine or other purposes. It is now ground in Colours, and may be successfully employed on Stucco, or any other outside work for which White Lead is used; it sets harder, is consequently more durable, economical in first cost, and covers equal to any known pigment.

PRICE LIST AND TESTIMONIALS FORWARDED IN ANSWER TO LETTERS ADDRESSED TO

MESSRS. CROWLEY, WHITE, AND CROWLEY, 39, KING WILLIAM-STREET, CITY, LONDON.

THE VIEILLE MONTAGNE ZINC MINING COMPANY'S PURE PATENT WHITE ZINC PAINT is unequalled for permanency of colour, hardness, and brilliancy of surface; it is unaffected by sulphurous or any other vapours or emanations. Being completely innoxious and free from the pernicious effects of white lead, it may be employed in all apartments whilst in use without any inconvenience to the inmates.

The greatest caution is recommended to avoid any spurious compounds that might be sold at cheap rates as Pure Oxide of Zinc. If any adulteration has taken place in the oxide, either in consequence of impurity in the material primarily made use of to produce it, an imperfect mode of production, or by mixing with the oxide certain substances calculated to give it increased weight, it then produces a very inferior instead of a very superior paint, and the economy realised by the purchasers of such oxides becomes a very expensive result to the owner of the premises painted with them.

The VIEILLE MONTAGNE'S ZINC OXIDES, dry or ground in oil, are sold with the VM mark—in Hull by Messrs. BLUNDELL, SPENCE, and CO; when ground and dry, by Messrs. T. B. MORLEY and CO and by the Company's Grinding Agents in London, Messrs. CHARLES DEVAUX and CO, Wholesale Agents, 62, King William-street City; FREDERICK BRADY, Wholesale and Retail Agent, 8, Tottenham-court, New road, In Manchester and Liverpool by Messrs. LAWFORD and CO of 49, Fenfield-street, Liverpool, who are also acknowledged Painters to the Company for Zinc Paints and undertake painting ships, warehouses dwelling-houses, &c. In Leith, by Messrs R. ANDERSON and CO. Tinsmiths. Dry OXIDES and PAINTS in Kegs of 14, 21, and 28 lbs and upwards, to be had of the Company's Agents in Birmingham, Newcastle, Glasgow, Bristol, Plymouth, Portsmouth, Norwich, Ipswich, Poole, and the Island of Jersey, Guernsey, Man, and Wight; also in Dublin, Cork, and Belfast.

The Company also employ an acknowledged Painter in London, who will undertake any description of painting with Zinc Paint by contract.

For further particulars, apply to the Company's General Agent in London, Mr. SCHMOLL, 12, Manchester-buildings, Westminster.

SOUTHAM BLUE LIAS LIME WORKS. OLDHAM and TATHAM have the pleasure of announcing to Engineers, Architects, and Contractors, that they have erected extensive works near Southam, for the manufacture and grinding of BLUE LIAS LIME, the value of which is now so universally admitted, especially for hydraulic purposes, concrete, &c. &c.; and they most respectfully solicit orders.

O. and T. can deliver by their own boats, or by rail to any part of the kingdom.

Office, Warwick.

SOUTHAM CEMENT WORKS.—OLDHAM and TATHAM respectfully request a trial of their PORTLAND, ROMAN, and LIAS CEMENTS, which they do not hesitate to pronounce as good as any now in the market. Their unvarying cementitious properties will ensure regularity of colour and quality.

Office, Warwick.

6, South Wharf, Paddington.

PORTLAND CEMENT.—CHARLES RICHARDSON has the greatest confidence in introducing to the Trade the above superior CEMENT, being of uniform colour and quality,—a desideratum never before attained in Portland Cements. Its possesses extraordinary cementitious qualities, resists the action of frost and heat, and is more durable than any other Cement; does not vesicate, turn green, or crack; combined with which, its eminent hydraulic properties stamp it at once as the first Cement of the day for work where all the above qualities are requisite. It is manufactured on the only principle Portland Cement can be, and contrary to the statements put forth by those who have hitherto had the monopoly. Manufactured by H. GREAVES, Esq. at his Works, near the River Avon, and sent to all parts of the kingdom per boat or rail, at a reduced price to the trade

PORTLAND CEMENT.—FULLWOOD THOMPSON and CO. beg to request the attention of Contractors, Merchants, and others, to the quality of their Roman, Portland, and Bath Cement, which they are manufacturing at their works situate on the Bristol and Exeter Railway, two miles north of Bridgewater, and adjoining the Dunball Wharf, on the river Parrett.

These Cements are, they believe, the best for any purpose now in the market; they will set under water in a few minutes, and are insensible to extremes of heat or cold. The material used is such as will produce a certain and unvarying cementitious power, and a consequent regularity, the want of which is so obvious in Cements manufactured in the ordinary method.

FULLWOOD THOMPSON and CO. will be happy to forward prices by post on application, and can offer favourable terms to large purchasers and exporters.

Dated St. Mary-street, Bridgewater, July 26th, 1854.

PORTLAND CEMENT.—ASPDIN'S PATENT.

Messrs. ASPDIN, ORD, and CO have much pleasure in informing consumers of this valuable Cement that they have, by means of a recent discovery patented the Mr. ASPDIN much improved the quality of this Cement without any increase in price.

Engineers and architects are recommended to specify "Aspdin's Patent," as there are numerous imitations sold as Portland Cement resembling it only in colour.

ASPDIN, ORD, and CO beg to call attention to their SECOND QUALITY, which is equal, if not superior, to most of the Cements sold as Portland, and is considerably cheaper.

A report of experiments made to prove the extraordinary strength of their Patent Portland Cement, may be had at their office, New Wharf, Abingdon-street, Westminster; at their Works, Gateshead-on-Tyne; at Messrs. Rosher's Wharfs, Holland-street, Blackfriars, Kingsland Basin, and Limehouse; or from their Agent, Mr. HENRY ROBINSON, 31, King-street, Liverpool.

PORTLAND CEMENT.—JAMES WESTON having enlarged that portion of his CEMENT WORKS on Mill-wall, Poplar, for Manufacturing the above CEMENT, begs to inform the Trade in general that they can be supplied with any quantity they may require, either at his Works, St. Andrew's Wharf, Earl-street, Blackfriars, or Middle Wharf, Scotland yard, Westminster. Manufacturer of Roman, Lias, and Mastic Cements, English and French Plaster &c

PORTLAND CEMENT WORKS, NORTHFLEET, KENT.—Messrs. ROBINS and CO. with much pleasure announce to their Friends and the Public, that they have completed the enlargement of their works, in order to meet the great increasing demand for their Cement; and are now prepared to supply any quantity of the very best PORTLAND CEMENT, manufactured by them for all the purposes Cement is applicable.—Orders received at Great Scotland-yard, and at the Works.

KEENE'S and PARIAN CEMENTS and FRENCH PLASTER, for internal uses These well-known hard Stuccoes dry quickly, and can be painted upon within a few days. Made and sold by JOHN BAZLEY WHITE and BROTHERS, Millbank-street, Westminster

PARIAN CEMENT, for Internal Use, to be painted in a few hours, and papered within a couple of days. FRANCIS and BROTHERS, Manufacturers of Roman, Parian (under patent), and all other Cements in use for building purposes, Nine Elms, London.

GEO. & THOS. EARLE, CEMENT MANUFACTURERS, HULL—Light and Dark, equal to any made. Manufacturers also, and Dealers in Plaster, Paris White, Mastic, Hair Lias Lime, Laths, Slates, and Slate Slabs Firebricks, Grindstones, Cement Chimney-tops, ditto Vases, Ridging, &c. Paints, Stucco, &c. Marble Merchants and Importers of Porcelano.

ARTIFICIAL HYDRAULIC or PORTLAND CEMENT combines the valuable qualities of the natural Cements with the additional advantage that it greatly excels them in its cementitious properties; that it is not affected by frost, and does not vesicate in damp situations. Account of COMPARATIVE EXPERIMENTS on the strength of this and other Cements read at the Institute of Civil Engineers, to be obtained from the Makers, JOHN BAZLEY WHITE and BROTHERS Millbank-street, Westminster, who prepare one quality only of Portland Cement.

ATKINSON'S CEMENT, so long known and esteemed in London for plastering purposes, is a quick-setting Cement, that requires no colouring. Sold exclusively by JOHN BAZLEY WHITE and BROTHERS, Millbank-street, Westminster; and Steel-street, Liverpool.

CEMENT.—ROMAN and PORTLAND CEMENTS, and PLASTER of PARIS, manufactured by C. J. HILTON, can be had in any quantity, wholesale and retail, at his wharf, 6, Upper Thames-street, London; and also at the manufactory, Faversham, Kent.—N.B. These Cements supplied for shipment, on advantageous terms.

GREAVES'S BLUE LIAS LIME.—The superior manner in which the above is ground renders it cheaper for concrete or stucco than any other lime or cement. The shell lime for mortar is burnt on an improved principle leaving scarcely any core. The satisfaction constantly expressed by Engineers, Architects, and Contractors, of the above, is its best recommendation.

Gibbs, Canning, and Co.'s Blue Vitrified Bricks, Pipes, Junctions, Bends, and Fire Goods.

ROMAN, PORTLAND, PARIAN, ANSTON, and LIAS CEMENTS of the best quality.

SECONDS, PAVIORS', STOCKS, and other BRICKS.

CHARLES RICHARDSON, 6, South Wharf, Paddington.

MAW'S ENCAUSTIC TILE PAVEMENTS a highly durable and decorative substitute for ordinary flooring and their portable oil-cloth coverings; for entrance-halls, passages, verandahs, conservatories, &c.

MAW and CO send, free of expense, their pattern and price book, with designs, to any given spaces (and estimates), free of expense.

BENTHALL WORKS, BROSELEY, SALOP

PEAKE'S TERRO-METALLIC TILES, PIPES, &c.—Notice is hereby most respectfully given, that the LONDON DEPOT for this WARE is REMOVED to No. 21, WHARF, Macclesfield-street North, City-road Basin. Secondly, that the trade term, "TERRO-METALLIC," is the exclusive right of the Proprietors; and, thirdly, that the "REPORTS OF THE JURIES," page 881, of the Great Exhibition, mark the Manufactories known so long as "The Tileries," Tunstall, Staffordshire, as the first of the kind in the world.

MINTON and CO.'S ENCAUSTIC and other PATENT TILES, for Churches, Entrance Halls, Conservatories, Balconies, &c; Antique, Geometrical, and Alhambric Mosaics, manufactures of a highly decorative character, and extreme durability, Slabs and Tiles for Fireplaces and Hearths, Copings for Grates, Door Furniture, White Glazed and Ornamental Tiles for Baths, Dairies, and Kitchen Ranges, may be had in great variety at their Warehouse, 9, Albion-place, Blackfriars-bridge, London; and at their Manufactory, Stoke-upon-Trent, Staffordshire.

BRICKS.—Best Kent Grey Stocks, delivered alongside in the River; also Patent Perforated and Solid White Suffolk and Red Facings.—Apply to W. ALLAWAY, 4, Catherine-court, Tower-hill.

BRICKS.—10,000 good PLACE WANTED, for cash on delivery, at Warwick-street, Pimlico.—Address, with lowest price, by letter, A. B. 85, St. Martin's-lane, Charing-cross

GREAT NORTHERN WHARF, York-road, King's-cross.—WHITE BRICK and TILE DEPOT.—L. B. PEARSE and CO. Brick, Tile, Lime, and Cement Merchants. Builders, contractors, and others supplied with every description of building material at the lowest market prices.

BRICKS.—Malm Cutters, Yellow and Pale Seconds, Paviors, and Pickings, of good and sound quality, constantly on sale at H. DODD'S Brickfields, which are only a quarter of an hour's walk from the City. H. D. earnestly requests purchasers to favour him with a visit, in order to inspect his stock, and to judge for themselves.

Malm Place, half washed Stocks, and Place Bricks, also on sale. These bricks are sound, well burnt, and unusually free from defects; a very large proportion of the stock being suitable for external facing.

Apply to HENRY DODD and CO. at the Counting-house, Hoxton Brickfields, Grange-walk, near the Rosemary Branch, Hoxton.

N.B. Light-coloured Pit Sand of approved quality constantly on sale upon reasonable terms This Sand, from its not containing any saline matter, is acknowledged to be preferable to river sand

MILLS and PRICE, Brick and Stone Merchants and Agents, very respectfully announce, that their business, hitherto conducted at 37, Newington-crescent, Newington-butts, will from MONDAY, the 11th inst. be carried on at 5, ADELAIDE-PLACE, LONDON-BRIDGE.—Dec 8, 1854.

BRICK-MAKING EXTRAORDINARY!! BY OATES AND INGRAM'S PATENT MACHINE.

TO CAPITALISTS AND BRICKMAKERS.

Messrs. OATES and INGRAM beg to announce, that the above powerful and effective machine may be seen (by order only) in daily operation at the works of the Vaughton's Hole Brick Company, near Birmingham.

The great advantages possessed by this machine over all others are, no temper-ing is required.

The bricks are produced at the rate of twenty-five per minute, smooth on the surface, being pressed in moulds, and sufficiently dense to be barked up in ranks before leaving the machine, which is entirely self acting, consequently requires only the labour of feeding and carrying off.

Applications either to view the machine, or for the purchase of the patent right for counties or for royalties, to be addressed, T. WELLS INGRAM, Engineer, Birmingham; or to J. P. OATES, Inventor and Patentee, Lichfield

WHITE SUFFOLK and RED FACING BRICKS

COWLEY, KENT, and ESSEX BRICKS.

Also Yellow and Pale Malm Seconds, Cutters, Paviors, Shippers, &c.

KENTISH RAG-STONE of the FINEST QUALITY.

MILLS and PRICE (successors to Mr. Benjamin Gough), 5, ADELAIDE-PLACE, LONDON-BRIDGE.

ASHES and BREEZE FOR SALE, in large or small quantities, put into barges, in the Regent's Canal or River Lee; also into trucks on the line, by the undersigned.

F. FREUND, Contractor, High-street, Bow, Middlesex.

DUTCH CLINKERS, imported by H. VANKEMPEN, 4, Brabant-court, Philpot-lane, City.

O. M'CARTHY, CARMAN, and SAND and CEMENT MERCHANT, Whitefriars Wharf, Whitefriars Playhouse-street, City. Sand, from above or below bridge, delivered by the yard or per barge. Ballast screened or unscreened, by the yard or per barge. Stocks, lime and old bricks. Dry sand delivered per barge, in any quantity, alongside the Thames.

BRICK MOULDS (improved), STEEL-FACE STOCKS and PLATES, with regulating screw pegs, used three seasons by the leading brickmakers, bowls, hoes, cuckholds, pugmills, &c. Numerous references where in use J. LEACH, Manufacturer, 26, Critchill place, New North-road, Hoxton.—N B. A variety of sizes kept on hand.

TO BRICKMAKERS, CONTRACTORS, BUILDERS, AND OTHERS

TO BE LET, a BRICKFIELD in full working order, with the entire Plant and Machinery necessary for working five Stools, in the centre of a neighbourhood where immense building operations are in progress, and adjoining one of the contemplated metropolitan railways which have passed the standing orders of Parliament, a short distance from the Regent's-park, the station of the North-Western Railway, and the principal public works of the Regent's-canal Dirt for two millions of bricks is already turned, and sales for three berths. This presents an admirable opportunity for any one desirous of entering into this lucrative business, as he would not be required to purchase the plant.—A good practical FOREMAN is open to Engagement, fully competent to conduct the same.—Particulars with Mr. Norris, Auctioneer, 1, York-place, Kentish-town.—Five horses, and 3 one thousand brick-carts for sale

BRICKFIELD.—TO BE LET, for a term of years, at a royalty rent, a BRICKFIELD, near Milton, next Sittingbourne, containing a large quantity of the finest brick earth, with suitable dwelling house, sheds, stable, &c. A large quantity of earth is dug and sold. There is an abundant supply of water.—Apply to Mr. T. CLARK, Solicitor, 3, Dean's-court, St. Paul's Churchyard.

TO CAPITALISTS, BUILDERS, and BRICKMAKERS A Plot of FREEHOLD LAND, of about Twenty Eight Acres, all excellent brick earth, in a highly favourable locality for building purposes, 2 miles from London, five minutes' walk of a Railway Station and Coal Depot, TO BE SOLD a bargain, for cash only.—Apply to ALLDRIDGE and CO. 24, Rood-lane, Fenchurch-street.

LADDERS, BARROWS, &c. for SALE or HIRE—GEORGE ELL, 3, Tottenham-court, New-road, opposite the Hampstead road, and corner of Praed-street, Paddington, has on hand at all times, a large stock of LADDERS, EXCAVATORS', BRICKMAKERS', and other BARROWS, PAINTERS' TRESTLES, MACHINES, STEPS, &c. Price lists can be had on application, at 3, Tottenham-court.

ARTESIAN WELLS, Boring for Water, Sinking Shafts, &c The nobility, gentry, water-companies, towns, baths, brewers, and manufacturers of every description, may be supplied with any quantity, by DAVID GREENLEY, Civil Engineer and Patentee of Boring Tools, 10, Cumming-street, Pentonville. Pumps and machinery for raising water from deep wells, boring-tools, and wells bored for exportation. Men and tools supplied to bore for railroads, minerals, &c.

WHITE OXIDE of ZINC.—Addington-Wharf, Camberwell.—This article in its pure state can be obtained at the Patent Oxide of Zinc Works, Addington-Wharf, Camberwell, where it is manufactured.

THE PERMANENT WAY COMPANY, 26, Great George-street, Westminster, beg to call the attention of Civil Engineers, Contractors, and others interested in the construction of railways to the present low price of iron, by which a saving may be effected of nearly 3 cwt per mile, single line, in the adoption of Mr. W. H. BARLOW'S Patent Wrought-iron Permanent Way over that of the ordinary road.—Every information can be obtained on application to

BRADBURY AND EVANS, 11, BOUVERIE-STREET.

In 8vo with Woodcuts, price 2s. 6d.

SOUND and its PHENOMENA.—By the Rev. E. C. BREWER, D.D., Trinity Hall, Cambridge, Author of "Guide to English Composition," 5th ed., "Poetical Chronology," &c. &c. &c.

"The phenomena of sound are here explained in a manner at once elegant and delightful, and calculated to attract the attention of the student. The subject is treated of as far as is the science of acoustics, which, according to the author's definition, is a part of physics which embraces whatever pertains to the cause, the nature, the extension, and the laws of sound. It shows how it is produced and what are the things that take place in order to produce it. Explanations are given adequate to the task, how it is propagated through different media; and how the sensation is rendered on the organ of hearing. It treats of music, so far forth as that science is connected with physics, and points out in a clear manner the mystery of reflection in the mechanism of our sensibility of the ear, prices into the mechanism of the voice, and explains how buildings should be constructed so as to prevent the transmission of sounds into certain rooms, and so as best to favour the contrary and the transmission."—*Athenæum.*

London: LONGMAN, BROWN, GREEN, and LONGMANS.

A new edition, in 8vo. price 10s. 6d.

HISTORY of the IRON TRADE, from the Earliest Records to the Present Period.

Price to Subscribers of the Art-Union of London, 10s. 6d.—Non-Subscribers, 14s.

JOHN MURRAY, Albemarle-street.

FREE TRADE in BOOKS.—S. and T. GILBERT beg respectfully to inform the Public, that they supply all Books, Magazines, Reviews, and Periodicals published at 1s. and upwards, at a reduction of 2d. in the Shilling for cash. Country orders executed on the same terms, and delivered on the following morning, at a charge for postage of 6d. for each lb. or fraction of a lb. weight. School and export orders promptly attended to. Please note the address.—S. and T. GILBERT, Booksellers, 4, Copthall buildings, Moorgate-street.

THE FREEMASONS' MONTHLY MAGAZINE. Price 1s. A Specimen Number will be sent on receipt of six postage-stamps (the cost of postage). No. III. for March, just published.

GEO. ROUTLEDGE and CO. Farringdon-street; and K. SPENCER, 314, High Holborn.

THE ASYLUM LIFE ASSURANCE OFFICE, 72, CORNHILL, LONDON.

Established 1824.

Policies on healthy and diseased lives, at home and abroad, for civil, military, and naval employments.

The only office on purely proprietary principles, involving therefore no partnership among policyholders.

For prospectuses, proposal papers, &c. apply to

MANLEY HOPKINS, Resident Director.

LEASEHOLDS RENDERED AS MARKETABLE AND MORTGAGEABLE AS FREEHOLDS BY THE

LAW PROPERTY and LIFE ASSURANCE SOCIETY.

*** Healthy and Diseased Lives Assured, Redemption of Mortgages and Loans, &c.

EDWD. S. BARNES, Secretary,

4, Essex Street, Strand, London.

HOUSEHOLDERS and GENERAL LIFE ASSURANCE COMPANY, 15 and 16, Adam-street, Adelphi.

Money received at interest at 5 per cent. per annum, payable in April and October.

Agents (with references) may apply.

T. HODSON, Secretary.

THE ALBERT ASSURANCE COMPANY. (Established in 1838.)

MORTGAGE and other LOANS, in connexion with life assurance are granted by this Office, either for long or short periods, on freehold and leasehold property, reversionary interests, and on good personal security.—EASTERN BRANCH, 7, Finsbury-square.

W. S. VARDY, Manager.

INDISPUTABLE LIFE POLICY COMPANY.

72, Lombard-street, and 2, Connaught-terrace.

TRUSTEES.

Richard Malins, esq. Q.C. M.P. | Richard Spooner, esq. M.P.
James Fuller Maddox, esq. | John Campbell Renton, esq.
William Wilberforce, esq.

A reduction of 25 per cent has been made on the premiums of all policies of five years' standing.

ALEX. ROBERTSON, Manager.

LAST WEEK WILL CLOSE ON SATURDAY, 17th instant WILL SHORTLY CLOSE.

COLOSSEUM, Regent's-Park.—Admission, 1s.—The original PANORAMA of LONDON by DAY, is exhibited daily, from Half-past Ten till Five. The extraordinary PANORAMA of LONDON by NIGHT, from Seven till Ten. Music from Two till Half-past Four, and during the evening.

PATRON—H.R.H. PRINCE ALBERT

ROYAL POLYTECHNIC INSTITUTION.

Important Lecture on Siege Operations in connexion with Sebastopol. E. Jekyll, Esq. late Captain, Grenadier Guards, having kindly consented to repeat his Lecture on Tuesday Evening next the 13th inst. at half-past Eight o'clock, notice is hereby given, that the Tidal and Diving Bell will be admitted on that evening, as on Monday evening, at half-price. Monday Evening, the 19th inst. Lecture by J. H. Webber, Esq. on Australia and Kindred Topics, being the result of his personal experience. Dramatic Reading by Mr. Hugh Reinagle, on the 19th inst. Oxhydric Lecture on Astronomy, by Dr. Bachhoffner, illustrated by a splendid Equipment of Gas Apparatus, on Wednesday, with music from the Creation, by a Band and Chorus of Fifty Performers, under the direction of Mr. W. W. Waud, of the Royal Italian Opera. Principal performers—Miss Julia Bleaden, Mr. Montem Smith, and Mr. Henry Buckland. The celebrated Tyrolese Minstrels will sing a selection of their National Melodies on Monday Evening, Tuesday Evening, Thursday Evening, The Seven Gun, Dissolving Views of the War. Drama of Sindbad the Sailor, Cosmoramas, the Concert by Invisible Performers, and all the Lectures on the New Bank Notes, &c. as usual.

MORNING and EVENING CLASSES, for the study of Architectural Civil Engineering, and Mechanical Drawing, Measuring and Valuing Buildings, Land, &c. every day and evening except Saturday. A class for a course of Architectural Colouring of fifteen hours of two hours each, two days a week, is being formed; for terms of which, and for prospectus of classes, apply at the Architects', Builders', Civil Engineers', and Mechanics' Office and Establishment, 18, Old-street, City-road.

T. J. HILL, Architect, Conductor of the Classes.

EVENING INSTRUCTION given in taking out Quantities, Measuring, and Estimating, by a practical Surveyor and Builder. For cards of address, apply to H. B. Mr. Rowden's, No. 4, Wilmot-street, Brunswick square, if by letter, post-paid.

ARCHITECTURE, CIVIL ENGINEERING, and SURVEYING CLASSES. Established by Messrs. HYDE, SMITH, and LEWIS, Architects, Civil Engineers, Surveyors, &c. For Preparing Gentlemen for Architects, Builders, Engineers, Surveyors, Draughtsmen, Measurers, &c. and for giving EVENING INSTRUCTION in Architectural and Civil Engineering, Drawing, and Colouring. Masons Furnished and Working Drawings, Preparing Specifications, Taking out Quantities, Estimating, &c. &c.—Terms One Guinea per Quarter, which includes Drawing Materials, Instruments, Colours, Paper, Drawing Boards, T Squares, Squares, &c. Prospectuses and full particulars may be had at the Offices, 24, Guildford-street, Russell-square.

TO ARCHITECTS.

COMPETITION and other DRAWINGS.—Mr THOMAS S. BOYS, Member of the New Society of Painters in Water Colours, and author of "The Picturesque Architecture of Paris, Ghent, Rouen," &c. and of "London as it is," offers his services in Tinting Backgrounds, Landscapes, Perspective Views, Interiors, &c. From the long experience he has had in such subjects, he is fully aware of the points essentially necessary to be attended to. Drawings and designs lithographed in a superior manner.—Address, Mr. BOYS, 33, Albany-street, Regent's-park.

MARYLEBONE ASSOCIATION for IMPROVING the DWELLINGS of the INDUSTRIOUS CLASSES, Incorporated by Royal Charter.—The Directors are willing to negotiate for the purchase, or taking on repairing or building Leases of Houses and Land, in the parish of St. Marylebone.—Communications to be addressed to the Secretary, No. 32, Dorset-street, Portman-square.

PATENT SANITARY GAS SHADES.—These Shades, manufactured exclusively by RICE HARRIS and SON, Islington Glass Works, Birmingham, on an entirely new principle, effectually destroy the effluvia and smoke which have hitherto made the use of gas so objectionable in dwelling-houses and offices, by their cleanliness and freedom from smell are of the highest importance. They are simple and economical, and may be had at the Works in a variety of forms adapted to the style of fitting, or the taste of purchasers; also at Mr. JOHN SHORTON'S, Crispin-street, Spitalfields, London.

PAPER-HANGINGS.—The CHEAPEST HOUSE in London for every description of PAPER-HANGINGS is CROSS'S WHOLESALE WAREHOUSE, 22, GREAT PORTLAND-STREET, Oxford-street, where you can select from the LARGEST and MOST EXTENSIVE Assortment in the Kingdom, THIRTY PER CENT. CHEAPER than any other House in the trade. Builders, Decorators, Dealers, and large consumers will do well to visit this establishment.

The Builder.

SATURDAY, MARCH 10, 1855.

THE practical process of decorative painting, the character of *design* frequently entering into the embellishment of important public and private edifices, and the opportunities for professional influence—alike towards the general use of decoration, and the recognition of a higher standard of art,—none of these are, yet, quite what they should be, even with regard to the general state of architecture and professional practice. It may have been imputed to architects, lately, and with some degree of truth, that little attention, comparatively, is given by them to branches of art referred to. Their mistake, such as it is, has been of some standing; and at length, a distinct class of "decorators" has grown up,—some of the number possessing qualifications of higher order than would have been met with a few years back. Indeed, we could name one or two individuals entirely deserving to be ranked as artists, and whose works might, therefore, be examined by any of us with advantage. Still there are points of view in which this modern distinction of professions and objects deserves attention, more than it has received. A principle of action may be right or wrong, but it should be accurately designated, and either fully received or actively combatted.

The object of the present article being mainly to place before our readers, some particulars which we think may become useful in practical house-painting, we would now merely get rid of some of those points of discussion which strike us at the threshold of any subject connected with decoration. Everything relative to interiors of houses, as regards design, forms really one chief department of our art, and should be made to take part with the development of art, now progressing through the ordinary practice of architects. What, then, are the anomalies which exist, and the changes in practice which otherwise need consideration?

If the particular nature of the profession of architect, as understood, be a thing to be adhered to, as asserted, it would certainly call for *observation*, that in the ordinary practice of decorative works, the vocations of the designer and executor are sought to be united. Either the principle acted upon by the Institute is wrong, or will not work in certain cases, or it might be expected to be capable of general application. At all events, the public regularly demand, in regard to decoration, from individuals, what compels the union of offices which architects hold to be distinct; and even more regularly as a set practice than they demand in similar manner from the builder. The question then presented seems to be,—Are the public necessarily to supply their wants referred to, without the assistance of architects? Is it for their pecuniary interest, and for the interests of art, that they should do so, or can the same hand which usefully governs the structural disposition, direct the decoration and furnishing, with advantage as to higher character of art, to ultimate durability, and immediate saving? Plainly, is the architect to continue to resign half his work? or is it for the public advantage that those who maintain now a professional *status*, should use their abilities only by becoming contractors?

It should, when inquired into, be obvious that it is an erroneous position for one to be in, to have the design of the plan and of the outside of a building, and to be generally warned off from the interior; for, even where the architect is disposed to attempt that for which we say he would be best qualified, but for which some say he is unfitted—the fancy which people have, that the paying for a thing gives the right to indulge "a taste," counteracts all his aims and undertakings. A trading class of decorators is naturally more subservient, and *art* suffers.

Interior decoration is neglected as a study, simply because in the present state of taste, the knowledge would seldom do much for the architect, either in reputation or in another way. The position of the department of architecture referred to, however, is, that whatever it may *not* lose by supposed inability of individuals, the general art loses much, and the subordinate branch the very elements of all good art, which the training of one whose ideas are ever grounded on structure could best supply.

To maintain his position, the architect must be not only familiar with the nature of all the practical processes of decorative art, but he must have the insight into their scientific principles which the workman does not possess. He will then be able, from time to time, to suggest better as well as cheaper means of attaining results, than many of those which prejudice or ignorance now employs.

One reason why it seems to us the required attention from the designers of buildings, to their decoration, can hardly yet be anticipated, is that the decorative processes do not allow to be realized, durability and monumental character.

Till there is some more decided change in the atmosphere of towns, than even the new Smoke Act affords, and till some modification is effected in decorators' work, either by a radical change in the practice of house-painting, or by the introduction of some durable substitute, we can hardly expect architects to take much trouble about what—in ten, or even two years—may be completely concealed from view, and "renovated," or replaced with other work by any incompetent tradesman.

We know of no invention of a material, or coating to walls, whereon the ever-present carbon of a London atmosphere will light harmlessly, unless it be glass; and we are surprised that we have heard of no soluble glass varnish that has had a general trial. For soluble glass, indeed, there have been several inventions; but what is required for the protection of mural decorations and woodwork, as also we may say for paintings and sculpture, is something free from the disagreeable oily or shiny appearance of paint and varnish,—the effect which is got in distemper work, and in that finished in turpentine, but in both cases by a sacrifice of durability. A ceiling ornamented in distemper colour is an entirely different thing in effect, from one painted in oil; and one finished with "flatted" colour, undergoes a complete change if it receive the "dead varnish," which some painters make up, with a view to preservation. We think, however, more use might be made of plates of glass in architectural framework,—either simply protective of the work on the walls, or painted at the back, as used in some cases recently. Where the exact configuration of pattern is not concerned in effect—as in marbles—we ought to say, that polish is a recommendation.

But, under existing disadvantages, it is desirable that more should be generally known of the ordinary processes. There are some things regarded as "common" and simple, of which the first principles are the last got to; and we go on using the methods which may or may not be best, without pausing to consider whether we thoroughly understand them. We ourselves do not see that a matter of such ordinary character, as common house-painters' work, is to be exempted from this comprehensive statement. Even the simple question of,—How long will particular coats of paint take to dry? like that of,—How soon is the surface ready for them? may have a great deal to do with the comfort of the proprietor of a house—and his pocket. For, painters' work, which under the present system has to be renewed constantly, is always, in such cases, carried on with much personal inconvenience to the occupier of the house.

To Mr. F. Crace Calvert, who has given much attention to the chemistry of pigments, and to the views of Chevreul on the science of colour—subjects on which he lectured recently at Marlborough-House—we are indebted for having first drawn our attention to the elaborate researches on painting in oil, which it is our more immediate object to notice, as helping towards that intimate theoretical and practical knowledge for which we have contended.

These researches are given in a paper which was read before the Academy of Sciences of the French Institute, by M. Chevreul, an extract from the proceedings of which academy is now before us.* It is not necessary to lay before our readers, the minute particulars which the author has properly embodied in a work of authority and reference. But we thereby deprive ourselves of the opportunity to show,—as it would have been a pleasure to us to do,—the extraordinary devotion of labour and attention given by one of the most eminent men of science in France—and which he properly considered necessary—towards placing on a sound basis, what might seem a very ordinary subject. We are not about to supply our qualified readers with a horn-book on the practice of decorators' work,—though our author begins his *Mémoire* by avowing some embarrassment, and an entire ignorance of what might constitute the system of painting in oil. He had been charged to report upon painting in white of zinc, a material which, we need hardly say, has been put forward as free from some of the disadvantages of white of lead. On this further subject, therefore, we may hope some day to have researches by M. Chevreul, to lay before our readers, beyond what may be contained in this present notice. The long series of experiments now before us were merely preliminary, and to ascertain the nature of painting in oil, generally. At present, eighty pages, with six folding sheets of tables, besides those in the text of the paper, comprise only the experiments which would appear to supply the foundation of the practice of house-painting; whilst to a second memoir, are deferred general considerations which appear to the author consequent upon the facts. Many conclusions are, however, arrived at now. At first sight of the particulars given—of examinations, carried on daily for months, of common coats of paint,—it might appear that the nicety of observation had gone far beyond the requirements. But, if observations of that character are not made at the outset of the use of practical processes, there is really nothing else to be done, but to pursue them from the beginning,—that simple elements may be somewhere recorded as the basis of science. This is what M. Chevreul has done with a degree of minuteness, most extraordinary, and which leads us to even a higher opinion than we had, of the habits of systematic analysis, common with our scientific friends on the Continent. Let us also remark, that the frequent "commissions" of the French Institute, for the examination of particular inventions and subjects of research, are worthy of imitation in our country. In our own particular field, there is ample ground for the exercise of a little more energy on the part of the Institute of British Architects,—in which body, the standing committees for research remain only talked about, and by which some of the few professional questions that have been broached, have not

* Institut National de France: Recherches Expérimentales sur la Peinture à l'Huile, par M. E. Chevreul. Premier Mémoire, lu à l'Académie des Sciences dans la Séance du 8 Juin, 1850. [Extrait du tome xxii des Mémoires de l'Académie des Sciences]. Paris, 1850.

been very conclusively treated. The heads of M. Chevreul's researches may be here stated. After setting down the chief materials used in the composition of a pigment, and the object sought by their introduction,—he first inquires, of what that which is called the drying of the work consists. In a second chapter, he inquires whether substances have an influence upon the duration of the "drying" of the paint which covers them. He next examines whether turpentine augments the *siccative* or drying property of linseed oil, and that of the same oil mixed with white of zinc. The fourth chapter contains researches on the influence of litharge, of peroxyde of manganese, and of heat, in rendering linseed oil "*siccative*." He then finds what influence substances mixed with the white of lead, or white of zinc, may have upon the drying of the painting; and the sixth chapter is an examination of different compounds of substances, and oils with reference to the theory and practice of painting in oil. The work winds up with general conclusions. We shall not follow the exact order of the experiments, but shall give certain facts, along with a few of our own suggestions, which may lead to comparison with the results of our readers' observations, and perhaps to improvement in methods now practised,—if not to the invention of substitutes, free from the objections which we have believed to exist.

As M. Chevreul states the objects of painting, they are,—to gain different colour from that of the material painted upon, and to render the surface less susceptible to the weather, or to dirt. For these, there are three essential conditions of the process:—the first, that the paint should have sufficient liquidity to extend itself with the brush, and sufficient of viscidity to adhere to surfaces, so as not to run when they are placed inclined, or vertically, and to preserve the equality of thickness with which it has been laid on; the second condition, that after the application the paint should become solid; and the third, that after becoming so, it should adhere strongly to the surface. We might name other requirements as to be *desired*, such as that to which we have referred—the drying without the ordinary shining surface. Without considering colours, he finds that three ingredients usually go to the composition of paint. First, white, whether the substance be the white of lead (*céruse*), or the oxide of zinc prepared by heat; secondly, an oily liquid—whether that be linseed oil solely, or oil of poppies (employed at Paris especially)—to reduce the white to a paste,—to which paste are added afterwards, variable proportions of linseed oil and of essence of turpentine; and thirdly, of a "dryer" (*siccatif*)—whether the linseed oil prepared with litharge, or the same oil prepared with manganese, or the litharge in powder for the first coats and the deep tones. Sometimes, and for the clear tones only, the acetate of lead ground in oil is employed. The "dryer" is added, it would appear, merely to gain time, and he says, is occasionally to be dispensed with. It can, however, hardly be omitted in this country, and it is judged indispensable in France, wherever the coat of paint would not otherwise be completely dry in forty-eight hours, or in seventy-eight at the most, after the application. This limit appears to be chosen mainly with reference to the time which it is usually convenient to give to the operations, and in practice the first coat is seldom thoroughly dry, unless at the mere surface, before the next is applied; indeed, we believe the absolute dryness is not preferred by most painters. M. Chevreul, in his experiments, treated the coat as ready for another, when it did not receive a mark from the finger, but he admits that the entire drying might not have taken place. Any existing practice must, it is true, be viewed cautiously, especially where it may be of a labour-saving nature. M. Chevreul does not appear to have had much opportunity for considering the element of durability; but it appears to us that this might turn out to be affected by the properties of "dryers," if not also by the hastening of the drying. Theoretically, it would seem that the first coat should be as much as possible absorbed by the pores of the wood. This might, perhaps, occupy some time. The "dryer," however, on the other hand, acts mechanically as well as chemically, and therefore might to a certain extent be like the coat of size, which is introduced by ignorant or unprincipled workmen, and which saves material by interposing an obstacle to the absorption, but at the expense of durability. We notice this, in order that we may suggest that the ordinary *litharge* priming, at least, may be more to the saving of time and material than to durability. It may be said that the ordinary process, when fairly executed, answers the purpose; but when we consider the inconvenience in painting, even at longer intervals than seven years, and the necessity which we have urged there is, for getting at some process by which decorations may be rendered permanent, it will, we think, not be held unimportant to inquire into even the practice as observed by the best hands. To invite opinions is our chief reason for broaching the present subject. The painting of a street door even once in three years, is comparatively trifling in expense and inconvenience; but when we find the elaborate and costly decorations of a public room under the necessity of renewal in three years, or less (as in a case within our knowledge), it may be supposed that there is room for economy somewhere, as to preparation of paint or final coating, if there be not also reason for researches such as those of M. Chevreul, out of regard for the interests of *art*.

Coming first to the question of the *drying*, it must be stated that although the term is used for want of a better, it is really a misnomer. Our experimentalist finds that paint "dries"—not by the evaporation of something, but by absorption, and that of oxygen. Work would dry quicker in oxygen than in the ordinary compound—atmospheric air—and it was found that it would not dry at all in carbonic acid. The entire advantage of using a charcoal stove, even where evaporation doubtless is required, as in the setting of plaster, may therefore be worth considering. Paint is indeed found to dry quicker in summer than in winter, in fact, so much so as to allow the ordinary "drier" (*siccatif*) to be sometimes even dispensed with, as we said, in France. The well-known property of bodies to oxidise under favourable circumstances at high temperatures seems to be concerned in this.

Oil possesses the property of absorption of oxygen and the consequent solidification. But the process does not go on rapidly in the original condition of the liquid. The delay is lessened by previous boiling, or by exposure to the air; but would still interfere with the object, unless the boiling, or storage, could be conducted on such a scale as to answer commercially, having regard to variations in price, and the large quantities required by house-painters, as compared with artists. The oils and substances used in painting possess in varying degrees, the power of absorbing oxygen, and, using the French terms, may be called *siccative*, or *anti-siccative*, relatively to one another. It is by supplying the deficiency in one case by the advantages in another that the desired quickness of drying is obtained; but care must, of course, be taken that other conditions of a disadvantageous character do not arise. Both white of lead and white of zinc will manifest the *siccative* or "drying" property; and the same property may exist in materials to which paint is applied. The surfaces of metals seem to act rather in a negative way than in a positively *siccative*; but the drying influence is strikingly exhibited by a surface of lead; whilst in wood, as might be expected from the porous nature of the material, the *siccative* property is small. It is curious that a great proportion of the experiments were tried on oak, which is so seldom painted with us. There is reason for this, the acid of the wood having a powerful action on lead. In the old churches, lead was often laid on oak boarding, and we have known very thick lead converted into a salt, by the action. M. Chevreul found the coating to dry with exceeding slowness. A coat of pure linseed oil took to dry, on the *surface*, thirty-two days, in the spring; whilst on poplar, three coats of the same occupied twenty-seven days, and on fir twenty-three days.

The ordinary mode of increasing the drying property of linseed oil is by boiling with it a certain quantity of oxide of lead, called litharge. The peroxide of manganese can, however, be used with great effect. Care must be taken as to the introduction of a yellow tinge, which would, of course, be injurious to white and some tints.

It must not be supposed that all the substances lately recommended as substitutes for white-lead are *siccative*, rather than *anti-siccative* to oil,—for it was found that the oil with antimony took half as long again to dry as the pure oil, in a first coat on glass. It is, however, impossible to say, without experiment, what may be the behaviour of particular siccatives in different circumstances. The resultant action of bodies entering into the composition of a particular pigment, as in the case of two siccatives, is by no means the sum of the separate qualities. M. Chevreul found, that if to a portion of pure linseed oil was added about a third of manganesed oil, the three parts of pure oil, which would have gained alone a quantity of oxygen which may be represented by the figures 1·985, and the one part of manganesed oil, which would have received as much as is represented by 4·719—the numbers together making 6·704—in combination actually absorbed a quantity represented by 30·826.

We therefore see that the siccative properties of the manganesed oil, are far greater than those of the pure oil;—but we discover further, that an enormous increase of these properties may be made by mixture. Thus, it is well remarked, that had such a fact been known earlier, time would not have been occupied in attempts to improve the siccative properties of the pure oil: but the manganesed oil would have been made the subject of such efforts. Boiled linseed oil with manganese, in place of the same oil with litharge, is, we believe, almost unknown in England, though we are aware it has been recommended for general use in combination with the white of zinc—where that base is required—as carrying out the principle of avoiding in the work all injurious ingredients.

As we said, pure linseed oil, having the capacity of absorbing oxygen, is to be regarded as siccative. The property is nearly always augmented by a mixture with white of lead, or white of zinc. If this mixture is not sufficiently siccative, it may be made so, as in accordance with the usual practice, by the addition of a "drier,"—say either the litharged oil, or the manganesed oil. But the white of zinc would have been found much less siccative than the white of lead. The white of antimony is still less siccative. In the spring of 1845, M. Chevreul compared the drying properties of the three substances as below. Equal quantities of oil were mixed with as much of each as was judged requisite in the opinion of an experienced hand: coats were laid upon a prepared canvas, and this was the result:—

	Grammes Linseed oil, pure ... 10 White of lead ("de Lille") ... ... 18·5	Grammes Linseed oil, pure ... 10 White of zinc, prepared by M. Mathieu de Vitry-le-Brûlé ... 7·4	Grammes Linseed oil, pure ... 10 White of antimony, prepared by M. Rousseau 40
The first coats respectively dried in	4 days.	13 days.	50 days.
The second ditto.	3½ "	16 "	28 "
The third ditto. ...	3 "	6 "	27 "
	10½ "	38 "	105 "

Thus it appears that unless we had the means of adding to the siccative properties of the white of zinc, it would be hardly possible to apply it in house painting.

The white of antimony we will defer speaking of. But it will be seen that the zinc has some advantage over the lead in regard to the quickness of drying which characterizes the later coats. It also appears to take up a greater proportion of oil, which corresponds with what is stated to us in London. On the other hand, M. Chevreul says, it "covers" less than the

white of lead, though better than the antimony. We shall find that this is not borne out by English experience. Experiments in the summer and autumn of the same year gave similar results, excepting that the difference of the temperature was felt, thus:—

	Days.	Days.
First coat of white of antimony only took	14 instead of	50
Ditto white of zinc ditto	7 ditto	18

The arseniate of the protoxide of tin, which had been proposed as a material, was found to be absolutely unfit for use, as it would not set at all. As to the properties of the oxide of antimony, tried on glass, it is found to be anti-siccative, that is, relatively to the glass. Litharged oil neutralizes this property, as shown below:—

	Linseed oil, pure.	Grammes Oil, pure..... 9·11 Oxide of antimony ..... 14·50	Grammes. Oil, pure..... 8·35 Oil, litharged..... 2·00 Oxide of antimony ..... 14·50
First coats respectively dried in	17 days.	26 days.	21 days.
Second ditto.....	17 ,,	8 ,,	9 ,,
Third ditto	9 ,,	9 ,,	2 ,,
	43 ,,	43 ,,	32 ,,

It should be remarked that the increased rapidity of drying in the later coats, was not due entirely to the influence of the preceding coats. The increased age of the mixture prepared for the first coat, has to be taken into account.

The proportion of the drier as an ingredient in winter, varies from 3 to 10 parts per 100 of linseed oil; whilst in summer, 2 parts down to the smallest possible quantity may be enough, the white appearing to be sufficient in the latter case. The drying, or rather setting, by the absorption of oxygen, explains why paint can be preserved under water without its drying, provided that the pellicle which forms upon the surface of the paint be not broken.

In case of adding the "drier," consideration must be given to the surface,—as, whether we are using a first, second, or third coat, and as to the temperature of the air. Thus the "drier," ordinarily so called, loses much of its importance in certain cases. On the other hand, a proper knowledge of the combinations which may be made, and which are inquired into in these researches, may allow of some substitute for the litharged or manganesed oil; where, as in the case of clear colours, a yellow or brown tinge would be injurious. Thus, linseed oil exposed to the light and air, losing its colour, and becoming siccative—it could then be employed with either the white of lead or the white of zinc, without altering the whiteness.

The researches, however, contain many more important particulars, bearing not only upon the questions with which we started, but upon the use of white of zinc, and these may be further drawn upon with advantage, if they do not also call for some other remarks of our own.

ORIGINALITY *v.* COPYISM.

Is originality inconsistent with the modern practice of architecture?

Time was, and not very long ago, when the answer to the question would have been,—What do you want with originality, or what has it to do with the subject? Is not the Gothic architecture you may now see for yourself, if you will, good enough for you, that you wish to alter it? Here are the choicest possible examples before you, prepared, drawn, and engraved with the greatest minuteness and accuracy. Copy them, and you will attain to a like perfection.

This is, however, happily, the reasoning of a bygone age; and with the new developments of the present generation, there has arisen a different and a more enlightened estimate of the objects, aims, and perfection of architecture as a fine art.

I am induced to discuss the question I have proposed, for the purpose of eliciting, as far as possible, without prejudice, the true meaning of originality; and in what manner the practice of it in the architecture of the present time, will lead to the formation of a broad, comprehensive unity of style, consistent with the true conceptions and dignity of the most useful, important, and beneficial of the fine arts.

Assuming, then, that the system of copyism is dying out, and a new and wider field opening to the future tillage of intelligent and earnest hands, it may be well to consider what its influence has been, both good and bad.

It was beneficial in this respect, that it put a stop to the wildness of eccentricity and almost universal bad taste of the preceding age, and induced men to examine and explore the relics and remaining works of a long-despised but fertilely-artistic generation. It detected beauties whose existence apathy and indifference had long ignored, discovered principles which might otherwise have been lost to us for ever.

But on the other hand, it has led into deplorable errors and misconceptions, falsified the intent, as it has corrupted the purity of truth in art, and if persisted in, will change its whole fabric into a shapeless lump of clay, with no living feature on its surface to tell of any vital essence within.

We must, however, on no account, deny the real claims of Gothic (as indeed of all true art) to our admiration and emulation. Is it not the expression of the very life of the age which produced it? and which it adorned and ennobled. Are not its principles as true, as perfect, as those of any development of art in any period of any nation? Does it not point out to us clearly and authoritatively the path we must trace, the road we must follow, to attain to corresponding results?

If, then, such are its lessons, let us accept them in the right spirit, nor longer hanker after that most fruitless source of design—precedent. Our movement is forward, not backward: we have the wants of the nineteenth, not the fourteenth century to contend with, beautify, and adorn.

The main consideration with regard to the revival of Gothic architecture may be thus stated:—Are the manners, customs, and wants of the inhabitants of this country in the present century to be suitably expressed, conveniently rendered, and consistently treated by an application of Gothic architecture? or is it possible so to graft a new shoot upon the stem of Mediæval art as to obtain the necessary requirements with the same fitness and beauty, and a like expression of architectural character?

This opens out a wide field of inquiry and investigation, and one attended with no small difficulties, by the way; but the importance of the question will well repay the most minute, careful, and elaborate analysis and consideration.

With reference to Domestic and *Street* Architecture, and the adaptability of Gothic to the requirements of every-day life, there are several matters to be duly considered, such as convenience or fitness, cost (by no means the least), adornment, beauty of general effect, and consistency of treatment, unitedly producing a truly artistic expression of the useful.

In this case it may be said that much depends upon this,—whether the plan be made subservient to the design, or the reverse. Granted: but as one of the main beauties of the style is a certain irregularity of plan, producing picturesque effect in design, so is the style more adapted to buildings where the site is not limited within three square walls and a street; as, for instance, in villas and country residences, where there is plenty of ground attached to take advantage of, as you choose, and as most adapted to the character of your design.

If this be admitted, the conclusion is, that for town architecture, the Gothic style is not so well adapted, because the squareness of plan and uninterrupted lines of a regular street façade do not afford advantageous grounds to work upon with success; though I do not for a moment assert that it might not be made infinitely superior to the no-style at all of prevailing no-taste.

Still, it will, I think, be generally admitted that the attempts at *regular* design in Gothic street architecture have been failures, and most of them such as no one desires to see repeated. This is, of itself, no argument at all against the possibility of its successful adaptation; but the question is this,—Is there not a violation of principle in the confinement and regularity of plan, with the aspiring form, the distributive support, and thrust principle of Gothic architecture?

There is not in it the same means of breaking up a blank wall, of getting light and shade on vertical surface or background, as in Classic art. There are no pediments to windows, projecting columns, pilasters, and massive cornices; not the same opportunity of gaining effect by slight breaks, by introducing quoins at angles, &c.; and its principal means of obtaining picturesque effect, and contrast of light and shade, are by breaking up the lines of the façade by projecting turrets, detached roofs, pointed arches, high gables, pyramidal towers, and pierced tracery. Even buttresses are to a great extent inadmissible, for they would not be allowed, by district surveyors, or public approbation, to project into streets and crowded thoroughfares; and excepting in the out-districts of large towns, ground is much too valuable to waste the space they would occupy in front of a long range of buildings; besides which, a long unbroken line of front, a large flat extent of surface, is not suited to the development of Gothic design; there is nothing of the Gothic character about it—no scope for its consistent treatment.

For villa and cottage architecture the case is somewhat different, on account of the advantages in the disposition of parts before alluded to, and such buildings may have both the Gothic spirit and character infused into them. It sits more naturally upon them, and is ductile, capable of becoming a valuable means of expression both of fitness, constructional treatment, and beauty of design; but this only in most able and skilful hands. But here comes the consideration of cost.

Now, whatever may be *said* of the cheapness of Gothic applied to domestic purposes and simple uses, it is generally found very different in practice; and the really consistent handling of the style is anything but economical.

As the majority of persons *will* consider this question of cost in the matter of building, in spite of all the fine writing and æsthetic principles elaborately prepared and levelled at them, it may become questionable whether true art would recognise a style in which the wants of the majority are sacrificed to those of the minority,—would allow of one building of merit to be erected, to a hundred—nay, a thousand—with none at all, not even the ghost of one; for, of all the wretched abominations in the world of architecture or building, Starvation-Gothic is, without a doubt, the worst; and all attempts to make a building *look Gothic*, when from the very circumstances of the case it cannot by any possibility, are of the most futile and beggarly description.

In hotels and large public buildings—as, for instance, town-halls, courts of law, hospitals, exchanges, and the like—the circumstances of the individual cases will materially decide whether an adaptation of Gothic is admissible. Hotels and town-halls, or what serve for such, are to be found on the continent of Gothic character, with great beauty of design and picturesque effect, without a sacrifice of utility or convenience; and I believe it quite possible to produce a like good effect in modern times by as skilful a treatment, but at the same time not on a limited scale or economical principles. The interior fittings and finishings, to be consistent, will necessarily prove expensive; and as such buildings are frequently erected with an eye to a certain per-centage, they would not be very agreeable speculations to the parties interested.

The revived Italian style would prove much more suitable, and admit of much more scope in treatment and design, as indeed it may be said to have already done, in the club houses of Pall-mall, and similar instances.

The foreign "Hotels de Ville" are perhaps, of all others, the most interesting specimens of civil Gothic architecture, unique as they are, and eminently picturesque; but we do not, in

these days, require a copy of them for the mere sake of having something like them in our own country.

In the case of public hospitals, I think it may be said, that when in a town Gothic is inadmissible. Compactness and economy of space, room, and materials, become essentially requisite. In the country the case is different, and such buildings may be carried out with more advantage in a style which admits of producing the most effect by means of irregularities of site, or other circumstances, and which, in able hands, are the very foundations of its beauties.

But here again, dispensing with the classic Italian of the Renaissance, the more ductile and picturesque *rural Italian* will be found admirably adapted to such purposes, admitting of as much variety in plan and design as the Gothic, having, in fact, the same, or rather *similar* means of expression of architectural character, viz. projections, overhanging roof, towers, turrets, and gables; the chief and really distinguishing feature being the form of the arch. Here, then, we have a choice of styles, both proper and expressive. Which are we to follow, having no style of our own? That which is the more universal in its application, which, so far, we have found to be "modern Italian."

Law courts and public halls, on a large scale, do not seem fitted for the minute detail of the Gothic, or for its solemn character. If we may judge from modern instances, it is inferior in capacity to the classic in almost all respects. We need go no further than St. George's Hall, Liverpool, for an example of what effect can be produced; and I do not hesitate to assert that there has, as yet, been no Gothic design to be at all compared with it for merit of originality, adaptation, or design.

The fact is, that Gothic is rather the expression of the religion of an age, than of its civil uses, an age when piety, or the assumption of it, was illustrated in every action; when the belief was universal, that no greater offering of sacrifice could be presented to the God of all, and the saints, than to build churches, chapels, oratories, shrines, abbeys, and colleges; and a natural belief, too, where there were no public, and but few private duties to attend to. But as the duties of a citizen and a Christian are not thought *now* to be incompatible, that those of the former, if honestly performed, are in reality those of the latter, is it not also natural and possible that architecture, which is but the expression of the wants and customs of an age, may have changed also, and what can possibly be the object, what the utility of persisting in the reasoning and practice of by-gone times, as if we were now living in, or preparing for, the fourteenth or fifteenth centuries.

But we will now turn to the consideration of schools and churches, and their treatment in design, and in these lies the chief difficulty, I mean with respect to determining whether they can be carried out in the Gothic style, without sacrificing utility and fitness to an imaginary standard of architectural perfection. I have already remarked that I consider the Gothic to be peculiarly a religious style, as it undoubtedly was in its time. Is it so also now? Whether or no, these subjects really afford most scope for successful adaptation and treatment in the modern practice of Gothic architecture, and to the great variety, both in plan and external arrangements, that schools and churches both afford, is owing this beneficial development of ways and means to produce a really good Gothic design.

The church of the Middle Ages is the *beau idéal* of Gothic, as the heathen temple is of Egyptian, Greek, or Roman, or the mosque, of Moorish; and, for my own part, I believe the cathedral of the fourteenth century to be as much the perfection of its style as the Parthenon of Greek, or the Pantheon or Coliseum of Roman.

But herein lies the solecism in modern attempts after Gothic design,—that it was in the first instance contended, on the revival of the style, that all that was necessary to produce a like consistent (!) effect, and one of as much beauty of design and conception, was to set about making an exact copy of what had been before executed; to re-erect a building as nearly as possible a *facsimile* of something or other still in existence, and persuade yourself and others into the belief that you had done something equally clever, beautiful, and original! Yes, copy all you can, jumble it up together, work it in somehow or other, and, so long as you have the authority of precedent to back you, what criticism need you fear? But of this we have had enough and to spare.

The style itself, carried out in as nearly the same spirit as it is possible to attain to that which guided the old masters, does afford, however, abundant scope both for new conceptions and true artistic design in buildings for religious purposes, or for school-houses; and I, for one, am still so much prejudiced in its favour, that I should regret to see it abolished in modern practice, if only for the reason that it would disallow all future attempts to render it applicable to such purposes.

But unless we look upon the style as a tractable one, and one also in which originality is to be introduced at discretion, one in which we are not to be compelled to produce authority for all that we think, and all that we execute, we had better give it up at once and for ever, and try no more to infuse life into a style by dressing it out in the winding-sheets of five centuries ago, dug up from the accumulated heaps of neglect, prejudice, and bigotry in which it had been buried, and its everlasting features of truth, consistency, and genius, obscured from the eye of man.

In these latter days we have been called upon to abjure all our old notions of right and wrong in matters of art and architectural taste, to condemn all that is not Mediæval; and, still later, we have been commanded, in a voice of thunder, to abhor all Classic art as vile, unnatural, and all but devilish, and to bow down before the altar of "Venetian Gothic" (neither one thing nor the other), with all the devotion, affected or real, of the most complete system of slavery ever forced upon ignorant and superstitious men by the cunning dexterity of very considerably self-interested priests.

It may, and must require a peculiar constitution of mind to detect the immensely superior beauties of such a style as this mixed Gothic of Venice over that of the really majestic cathedrals and churches of our own land, or the softly beautiful façades of "*La belle Italie*;" but it must require something more than such a constitution to declare all such to be "pestilent rubbish,"—positively contaminating to sight, sense, and touch; and it is as certain that no amount of such invective, however foully it may be uttered, or declamatorily hurled, will ever, in any wise, prove such to be as poor in effect, as false in principle as the models set up for the exclusive admiration of the present and all-succeeding generations.

It would appear, then, that in by far the majority of cases supplied by the requirements of the present time, the Gothic style does not prove itself adapted to them, inasmuch as it may be, and frequently is, from the circumstances of site, position, &c. deprived of its principal attributes and characteristics, the further objection of expense may be also added to the number of its detractions.

For hotels, hospitals, and public buildings generally, it is found to be inconvenient, and there is a difficulty of obtaining that most essentially requisite of all things,—an abundance of light,—without marring the effect of the design, and destroying its character.

For schools and churches, and all ecclesiastical buildings, it has a peculiar beauty of its own, which is certainly not surpassed, if equalled, by any style of any other period.

But, on the other hand, we find that the Italian style is a more extended basis of adaptation for modern requirements, and these, when summed up, will be found to be more in accordance with its principles and capabilities, than the Gothic; that the former is all but universally applicable in modern practice, the latter only very partially so.

But it must not be inferred from this, or any such conclusion, that the *copying* of anything Italian will ensure a satisfactory result (such a practice only brings it down to the modern level of Gothic architecture, which hitherto has been almost all sopyism), or that by tacking a Palladian window to this front, and a door to the other,—a portico here, and rustic work there,—any originality of composition or design, or any consistency of treatment, can be obtained.

The days of copying Italian in the same slavish style as we have been doing Gothic, or as we did with the style in question before the Gothic revival, we will hope are past and gone.

It will be well for us if it should prove that we have not copied altogether in vain, but now that we have been surfeited with it, we set to work in earnest to act upon the *principles* it was thought more easy to ignore.

It is almost impossible that a universality of style can be obtained in the present generation, if it ever will be done again. It must necessarily be a work of progression and education. The main object now is to give such a bias to the artistic portion of the rising generation, as shall tend to a beneficial and satisfactory ultimate result; that by acting upon such principles as we are able to discover in those perfect styles of past ages,—principles alike founded on consistency, utility, and true artistic beauty,—that in due time we may attain to a like perfection, by starting from the same point along the road of the art-history of the world; and pursuing the straight and narrow path, we may be led onwards through many discoveries and new developments to a like grand climax of all that is beautiful, glorious, and true. E.

THE IRON INDUSTRY OF THE UNITED STATES.

ON 28th ult. a highly interesting discussion took place at the Society of Arts, opening with a paper on the Iron Industry of the United States, by Professor John Wilson, F.R.S.E. the commissioner who reported to our Government on this subject, at the American Exhibition.

Iron, said Professor Wilson, appears to have been first made in Virginia about the year 1715, previous to which the colony was supplied from the mother country; and, shortly after, the manufacture was established in Maryland and Pennsylvania. The manufacture progressed but slowly, though the quantity exported exhibits a regular increase, averaging during the ten years from 1740 to 1750, about 2,360 tons per annum, which was gradually increased for the next twenty years, until in 1770 it reached 7,525 tons, being rather more than one-sixth of the entire quantity of all kinds of iron imported into England at that time. As the country settled down after successfully asserting its independence, and the works of industry were resumed, we find a great advance was made in iron-making. In 1810, the whole number of furnaces in the United States was 153, giving a production of 54,000 tons per annum;—equal to about 16lbs. per head of the population. In 1830, it was 165,000 tons. In 1840, the census returns give the gross production at 286,903 tons. In 1847, it is supposed to have reached its maximum amount, not less than 800,000 tons being the furnace returns for that year.

The iron-making resources of the United States are very great: the distribution of ores, many of the richest description, is general throughout the Atlantic and Western States; while the enormous area occupied by the coal measures testifies to the abundance of fuel for the development of industrial applications. The ores comprise every variety found in Europe: those principally used for smelting are the magnetic oxides, the hæmatites, and the clay carbonates of the coal veins. Besides these, the "spathic or sparry carbonate," and the "oligist or specular ore," are used in some of the New England States, but only to a limited extent. Quite recently a discovery has been made of rich seams of black band, in connection with the bituminous deposits of the great Eastern Coal field, which will probably hasten the development of this industry in that favoured region. The following divisional arrangement will show the chief seats of the industry, with their respective advantages and capabilities, their production in the last year (1853-4), and the estimated cost of manufacture:—

1. The Housatonic district—Production, 10,000 tons; cost per ton, 20 dols. to 25 dols.

2. The Hudson River district — Production, 80,000 tons; cost per ton, 18 dols. to 20 dols.

3. The Delaware and Lehigh Rivers district — Production, 120,000 tons; cost per ton, 16 dols. to 18 dols

4. The Schuylkill River district — Production, 100,000 tons; cost per ton, 20 dols.

5. The Susquehanna River district—Production, 120,000 tons; cost per ton, 15 dols. to 18 dols.

6. The Potomac River district — Production, 125,000 tons; cost per ton, 20 dols.

7. The Ohio, Cumberland, and Tennessee Rivers district—Production, 150,000 tons; cost per ton, 20 dols.

Besides these well-defined districts we must allow about 100,000 tons as the production of the numerous isolated works scattered throughout the upper portions, especially of the Atlantic States, where charcoal as fuel is universally used. In these iron of the best quality is made, but at a cost of nearly double that of the coal furnaces.

The present consumption of iron in the United States may be taken at 1,200,000 tons. To meet this the home production is not at present equal. About half the present make is consumed for castings, and the remaining portion is converted into wrought iron, at a loss in waste, &c. of about one-third. This practically reduces the total or available production to 700,000, leaving a deficiency of 500,000 tons to be supplied by other countries.

This large importation to meet the home consumption is obtained entirely from this country, and forms a very important item in the commercial intercourse of the two countries.

To retain this good customer of course is very desirable, and Mr. Wilson is strongly of opinion that this may be done for many years to come; but the time and the quantity will depend materially upon our "economy of production."

The iron industry of the United States (continued the reader) is at present only in its infancy, an offspring quite of the present century. Its growth has been somewhat irregular, it is true, but when we find that it has already reached the gross amount made in this country only twenty years ago, and when we recollect the vast mineral resources of the United States, the rapid increase of population, with its increasing demands, and its unquestionable energies and power of application, it forces upon our minds the conviction that the time is not far distant when it will not only furnish sufficient for its own consumption, but be in a position to compete with us in the other importing markets of the world.

The discussion was opened by Mr. T. M. Gladstone, who defended the English ironmasters as improvers of processes, to their backwardness in which Mr. Wilson had referred. He also differed with him as to the more immediate future prospects of the States, either as regarded their home supply or their capability of supplying neutral markets. Our present generation of ironmasters, he appeared to think, were perfectly safe on these points. Mr. Macgregor followed. He also felt convinced that those interested in iron property in this country had no reason to apprehend injurious competition on the part of America. Mr. Bird spoke at some length. He alluded to the fact that the production of iron in this country had reached the enormous amount of 3,000,000 tons of pig-iron, which three years since had been produced at 36s. a ton. He agreed with Mr. Macgregor that they would not lose America as a customer. Indeed, various of the speakers dwelt much more on the iron industry of this country than on that of America. To this, after Dr. Percy, Mr. May, and Mr. R. F. Davis had taken part in the discussion, Mr. Bevan alluded. He himself, however, was mainly anxious that our ironmasters should discover why the Americans were unable, even now, to compete with us who had to contend with heavy charges of freights and duties, 80 per cent. on the English shipping price. On this point, after Professor Wilson had reviewed his notes of what the various speakers had said, Mr. Campbell, of New York, shed some light. In reference to the manufacture of iron generally in the United States, he remarked that the prominent difficulty, in the minds of several gentlemen, appeared to be the transportation of the article from its insulated position to a market at the seaboard. At present, and probably for years to come, the western states would require the largest proportion of iron consumed in that country; and the fact was overlooked that iron manufactured in the interior was, in most cases, adjacent to the channels of navigation, and already half the distance from the seaboard to its destination and place of consumption in the west, while English rails landed at New York had to pass through the same channels, double the distance, and at a corresponding increase in cost of transportation. American rails were generally very much superior in quality to English, and were invariably preferred for curves, and all places requiring the best iron; and such was the desire for these rails that the manufacturer found a ready market at his own furnace for all he could produce. In reference to the inability of Americans to compete with the English in this department of industry, Professor Wilson had very properly remarked that they had not the necessary capital; and he would add, that America was comparatively a young country, with a rapidly increasing population, and a large portion of her capital was as yet employed in opening up channels of navigation and communication for developing the vast resources of the great west.

The chairman, Lord Granville, closed the discussion by some well-placed remarks in harmony with much that had been said, to the effect that in every assembly of liberal men in this country it was now an acknowledged thing, that the time was passed when to depreciate, intellectually or physically, their cousins on the other side of the Atlantic was considered a mark of their own superiority. As an ironmaster himself, he had felt some twinges at the prospect of American competition; and it was, therefore, very satisfactory to him to hear of the power possessed by England for such a competition; but his greatest comfort was derived from what fell from Professor Wilson himself, and it was strengthened by the last observations of Mr. May,—namely, that in proportion as the American iron trade increased, the import of iron from this country had increased in a still greater ratio.

PROVINCIAL NEWS.

Stamford.—The new cemetery here was consecrated by the Bishop of Lincoln on Wednesday before last.

Landbeach.—The little church of Landbeach is under repair. The whitewash that has been plastered on the pillars, arches, and windows has been scraped off. Under the whitewash on the walls have been discovered several ancient paintings and texts of Scripture, much defaced.

Isle of Wight.—Ground has been broken at Freshwater-gate, Isle of Wight, preparatory to the construction of a strong redoubt there.

Oxford.—The site intended for the new museum has been opened, to ascertain the nature of the soil, which, it appears, has turned out to be a bed of gravel of great depth. This material being thus found on the spot will, it is thought, make a difference of some few hundreds in the contract.

Wexford.—The church here has just had two stained glass windows added to it: they are of Early English design. The one represents the Nativity and Baptism and the Last Supper of Our Lord, in panels upon a scrollwork of vine, on a ruby ground, and is surrounded by crocketed borderings, with inscription at the base. The second window represents Christ's Agony in the Garden, the bearing of the Cross, and the Ascension, surrounded by angels bearing inscribed labels. These subjects are arranged on a similar ground-work to the other window, with borderings, &c. There is an inscription underneath. The windows have been designed and executed by Mr. George Rogers, of Worcester, who was commissioned by the committee to erect the memorial window to the late Queen Dowager in Worcester Cathedral.

Wolverhampton.—The gas company of this town have just held their half-yearly meeting. The report by their engineer showed that for the half-year ending 31st of December, 1854, the profits of the company were 2,853*l.* 10s. 10d. which enabled the directors to recommend a dividend of 4½ per cent. for the half-year, amounting to 2,502*l.* upon the paid up capital, a balance of 351*l.* 10s. 10d. to be transferred to the reserve fund, which would then amount to 2,673*l.* 18s. 3d.: balance remaining in hand, 451*l.* The chairman stated that, notwithstanding these fair results, during the past half-year coals had cost 1,000*l.* more than in the corresponding portion of last year, and other expenses had showed an excess of a further sum of 200*l.*

Ashton-under Lyne.—The committee of the district Odd Fellows have decided upon the erection of a hall for the use of their order, according to a design by Mr. Lindley, of this town, architect. The cost will be between 2,000*l.* and 3,000*l.*

Liverpool.—While the chapel connected with the workhouse here was undergoing alteration, on Tuesday in last week, the wall very suddenly fell, and caused the death of one man and the serious wounding of two others.——Here, too, as elsewhere, the severe weather, as we have already noted, threw thousands idle. In Birkenhead not less than 10,000 masons, navvies, and other artizans have been out of employment, and walking the streets in a state of almost absolute starvation.——It is stated to be more than probable that an arrangement will be agreed upon by which the Liverpool people will become the owners of the entire Dock estate on the Cheshire side of the Mersey. The terms have not been finally settled; but it is understood that the Birkenhead people have offered to sell their interest for something over ten shillings in the pound upon the amount expended. The purchase of these works by Liverpool is recommended as much preferable to extending the Liverpool docks northward.——The Conservator of the Mersey, in his annual report, just published, states, in regard to the progress of the Birkenhead Dock-works during 1854, that for the stone coffer-dam partly overturned by the water impounded within it on 14th March, 1854, a clay dam has been substituted and completed. 100 lineal feet of the south reserve river wall has been completed, and joined to that portion of the stone dam left uninjured at the south side. About 300 lineal feet of the north reserve river wall has been added, and about 500 lineal feet of it, built in 1847, raised 3 feet higher. The sea embankment at Leasowe has again been injured by the late heavy gales.——The Liverpool Improvement Bill, under conditions, specified in the Parliamentary proceedings, was read a second time, on Tuesday before last, in the House of Commons. It is brief, and contains twenty-two clauses. It gives power to the corporation to purchase the land, premises, &c. required for making the proposed streets along the docks, for cutting away part of the Old Churchyard—rights of dead and living respected,—and for widening Shaw's-brow. In the event of unoccupied land being caused by the making of streets, the corporation is to have the privilege of selling it to the Dock Trust or to private individuals.——The half-yearly meeting of the Liverpool United Gas-light Company was held on Tuesday in week before last. The directors recommended a dividend of 5*l.* per cent. for the last half-year, on the consolidated stock, and 2s. 6d. per share on each 25*l.* A share, on which a call of 2*l.* 10s. per share had been made, previous to 1st July, 1854. The chairman said the affairs of the company were never in a better position than at present. The report was adopted.

Manchester.—Two new warehouses are being erected in this town, one for a wholesale house, which forms a block of masonry occupying the entire area between two streets, and is 300 feet long by 75 feet wide. The cost of erection has been about 11,000*l.* The other is just commencing: the estimates for it were 45,000*l.* It will be 300 feet long by 90 feet wide, and 95 feet extreme height. It is to have four floors besides the basement, so that it will have a total available area for goods of nearly 135,000 square feet. It is estimated to require from 60,000 to 70,000 cubic feet of timber to supply the internal fittings of woodwork alone.

Blackburn.—At the twentieth half-yearly meeting of the local waterworks company, held on Saturday week, it appeared from the chairman's statement that the directors had determined to increase the capacity of their reservoirs. The embankment of the Guide Reservoir was to be raised 3 feet, which would increase the capacity of the reservoir to the extent of 12,000,000

SEDILIA AND PISCINA, HYTHE CHURCH.

gallons, at a cost of 800*l*. It was also intended, to create an additional service reservoir, to hold ten days' supply, the present only containing about one. The estimated cost would be 3,500*l*. A dividend of seven per cent. per annum was then agreed to.

Gateshead.—The mayor of this town has invited all who are desirous of seeing a proper music-hall erected to unite with him in carrying out the project.

Edinburgh.—A part of the ancient city wall has been removed, in order to improve the appearance of the south front of the Royal Infirmary. In lieu of the rampart or wall, a low wall of hewn stone has been constructed, which is topped with a railing. The privacy of the ground is secured by the masonry, and the rails admit a freer circulation of air than the old ponderous screen masonry. The local *Post*, in alluding to this alteration, remarks that "the south front of the infirmary is heavy, dull, and gloomy, while that of the Surgical Hospital is not so handsome and pleasing as might be desired."——The paling has been removed from the north part of the new National Gallery, revealing the whole masonry of that part of the building.——Among other new buildings recently raised in this city, the paper just quoted refers to an addition made to house and shop accommodation on the George IV. bridge. The loftiness of the pile, the beauty of the stone, and the elegance of the arrangements, it remarks, render this block of buildings one of the finest additions to the city architecture.

Glasgow.—The Loch-Katrine water supply scheme is to be carried. At all events, the two engineers employed by the corporation have reported in favour of it. The report, by Mr. Robert Stephenson and Mr. I. K. Brunel, was received by the council on Tuesday in week before last. It approves, according to the local *Gazette*, of Mr. Bateman's plans, and recommends that Loch Katrine should be taken as the source of supply for the city.

Dunfermline.—The Dunfermline passenger-station of the Edinburgh, Perth, and Dundee Railway Company has been totally destroyed by fire; neither books nor money could be saved, and the appliances of the electric telegraph were also destroyed.

Kirkwall (Orkney Isles).—"In rescating the ancient cathedral of St. Magnus," says a northern contemporary, "the chief difficulty is to supply the requisite accommodation without destroying the appearance of the interior. A plan has been adopted in the case of the Glasgow cathedral, which may not be unworthy the notice of those having before them the various plans for refitting St. Magnus as a place of public worship. At a meeting of the Town Council of that city, on Thursday last, the Lord Provost said that he had the gratification of announcing that it was now resolved that the only screen to be placed at the entrance of the portion of the nave used as a church was one of cloth, which could be dropped during the hours of divine service, and raised till out of sight when not required. The magnificent vista of the nave might thus be seen from end to end at one view."

Jersey.—The monument to the memory of the late Mr. Le Sueur, according to the *Jersey Times*, is at length to be commenced. The committee of subscribers met on Tuesday week, when a letter was read from those who had undertaken the construction of a monument, after what is known as the design of "the lions." In this letter it was stated that they could not now undertake the work at the price agreed upon, the cost of materials and workmanship being of late so much enhanced. The committee then adopted another design submitted to them; after which design the monument is to be erected, by Messrs. Thomas Le Gros and John Le Cras, for 425*l*. sterling. The new contractors were to begin their work in a week or ten days, and are to complete it by the end of the year.

THE CHANCEL OF HYTHE CHURCH.

In our last volume we gave a view of the Chancel of Westwell Church, one of the most curious examples in the county of Kent. That which we now give, although of equal merit, is of quite a different character. The work at Westwell is of extreme simplicity, while here it is of a more elaborate description.

The church at Hythe stands on a commanding eminence to the north of the town. The work, principally in the style of the 13th century, is externally very plain. The chancel is by far the best portion, the boldly projecting buttresses and lofty narrow windows being its principal features. Internally the church has suffered greatly by modern and tasteless alterations. It would be impossible to say too much as to the ugliness of the ceilings, both in nave and chancel. As will be seen to some extent by our illustration, the chancel is raised some feet above the nave, and under the eastern end there is a fine crypt. The entrance to this is by what has once been a splendid doorway, but it was the pleasure of a late churchwarden to chop off the whole of the arch-mouldings: it is satisfactory

THE CHANCEL OF HYTHE CHURCH.

to know that the archdeacon, on his next visit after the perpetration of the enormity, expressed his great disapprobation of such a proceeding. This crypt is well kept, and its recesses are entirely filled with bones, said to be those of Danes slain in a battle which took place in the neighbourhood. All the detail in the chancel is worth the most attentive examination: it would be difficult to find a greater variety in so small a space, and the whole is in good preservation.

Our minor illustration is of the sedilia and piscina on the south side of the chancel. Their principal peculiarity is in the form of the arch, and in the ornamental band above.

The station at Westenhanger offers no great temptation to the traveller, but if he can make up his mind to leave the train there, he will be repaid by a pleasant walk through a picturesque country, and at the end of it an opportunity of examining one of the best specimens of ecclesiastical architecture in the country.

ECLECTICISM IN ARCHITECTURE.

WILL you allow me to offer a few observations on some remarks in a late number of the *Builder*, especially as these latter bear on a subject on which I have been recently permitted to occupy a few of your columns?

"Eclecticism in matters of art has been vigorously attacked by able minds, and they are probably right in denying its value as an end; but those who would do so, considering it simply as an instrument of transition, would be wrong. Eclecticism, or the amalgamation of styles, will not suffice to form a new style of art, but it will be of the utmost use as affording a road to it, and providing materials."

Now it seems to me there are two different translations of this same word eclecticism. The first is the mere abstract eclecticism, which has for its basis the study of the *expression* of edifices, quite separated from the adoption of their various parts. Sublimity, purity, impressiveness, the several ideal characteristics of Egyptian, Greek, and Gothic architecture, are certainly independent of their respective materialism; or rather, they may be made so—may certainly be tangibly conveyed to the mind by combinations of other and totally dissimilar shapes. Thus we illustrate this: "Let nature be your model, not an artist,"* being set down as a generic axiom; then let one not learned in technicalities, glance at the ancient structures, and, while the impressions of their peculiarities are full upon him, shut his eyes, and shadow forth inwardly how he would subjectively reproduce the dreamy imagery. Such a one, not knowing the stipulated outlines and profiles, the objective peculiarities, but with skill in creation, would be most likely to vivify the vision, and vaguely sketch at first, and afterwards definitely clothe the original fabric he aims to erect.

The second is a more practical eclecticism: it has little to do with abstract sentiments, and is what is generally understood when the term is applied to architecture. You phrase it, "the bringing together the most beautiful portions of previous styles, and even improving them." And it is the more feasible of the two; the other requiring a masterly ability, and a more independent genius; for creation, irrespective of what definitely exists, is, in my opinion, the very highest range of the intellect of human kind. Many would find it facile to blend without any great discord Grecian, Gothic, Saracenic, and Italian details. And this is the great benefit of such attempts, which all must observe who have practically sought to combine the parts of different designs, viz. that it is hardly possible to do so without greatly modifying those parts; and there is no limit to such modifications. They *must* lead to it; and thus the architect, making such efforts, with all the varied expressions, the tangible thoughts of different styles contending the one with the other for the mastery, is forced, in his perplexity to dash at *something*,—like the painter Protogenes, who, in his despair, not having before himan example, and ignorant how materially to express the foam at a dog's mouth, dashed his sponge at the canvas, and lo! the foam was there. These *somethings*, first floating, "airy nothings," in the imagination, will, after all, probably come, as the fabrics of visions, from the accidents by which so many great inventions have been produced. E. L. TARBUCK.

* Pliny, xxxiv. 19.

THE CHARTER-HOUSE.†

OF Thomas Sutton, the benevolent founder's, birth and lineage little is known, beyond the fact that he was educated at Eton, and that on the 27th of November, 1551, he matriculated, or entered, at St. John's College, Cambridge. During the reign of Mary, he travelled on the Continent, probably on account of the troubles and discord of the times; and having acquired the knowledge of languages, with great experience, and the accomplishments which were then not attainable in England, he returned, in 1562, to pursue a career in commerce the most successful even in the annals of this city of merchant princes. So early as 1569 he was appointed Master-General of the Ordnance for life. This office naturally withdrew him from mercantile affairs; and while on service in Scotland during the Rebellion, a "*liaison*" formed "*more patriæ*" produced a son, Roger Sutton, to whom he was greatly attached, but whose premature death before his father, caused a revulsion of feeling that seems to have cast a shadow over his life. In 1582 he married Mrs. Elizabeth Dudley, widow of John Dudley, of Stoke Newington, but had no issue. His City residence was at Broken-wharf, between Trig-stairs and Queenhithe; but whenever his affairs permitted, he retired to the Manor-house, Stoke Newington, where, from narratives detailed in his wife's letters (now preserved in the Charter-house), he indulged the natural bent of his mind and heart, in boundless liberality and charities, his house there being literally an open hospital. At the same time he devoted himself to commercial affairs, and became the most distinguished merchant of the age, employing factors in all countries trading with England; and it was said of him that "freights of wealth were borne in to him by every tide." He also became chief contractor for victualling the navy, and actually served in that fleet which destroyed the wreck of the Spanish Armada. Having fitted out the barque *Sutton*, of seventy tons and thirty men, he commanded her in person, and captured a Spanish vessel with cargo valued at 20,000*l*.

After the death of his wife, which occurred at Balsham, in 1602, his noble spirit stood isolated on earth; and about this time he matured the plan which appears to have been the leading object of his existence, to found the noble charity of the Charter-house, and "to give all that he had to feed the poor." His pious intentions were not, however, altogether unknown to his contemporaries, for many and frequent were the attempts made to divert him from his purpose. Sir John Harrington, then high in authority, was most sedulous to procure a succession to his large estates for the Duke of York (afterwards Charles I.). One sentence extracted from a letter in reply to Sir John, will reveal better than lengthened eulogies the true simplicity of heart of the founder. A peerage had been offered as a lure to the proposition. Thomas Sutton writes:—"My minde in my younger times hath ever been free from ambition; and now I am going to my grave, to gape for honours might be accounted mere dotage in me, so unworthie a person." Not of the aristocracy, nor noble by birth, but by nature, he identified himself with the people, to whom he bequeathed his vast wealth, and he framed the ordinances by which, under his will, the institution should be governed. That will and those ordinances constitute the foundation, therefore, as a great public trust, and not a private association (as some assume it to be) to be governed and dispensed by the governors or master *pro tem.* with his actuaries; it is, in the fullest sense, amenable to public scrutiny; and neither its income, nor its management, nor any of its operations, ought to be concealed, but, on the contrary, every account should be as overt as the army or navy estimates, or those of any other national establishment.

There is at present a commission in authority to inquire into the Charter-house, as has been done also with respect to Christ's Hospital, and much and general anxiety is felt and expressed as to the issue of both. There are, however, but too many evidences of errors, faults, and delinquencies, detected by inquisitors appointed after the same fashion in other establishments, which having only met with censure, and mayhap, reproof, have been suffered to rest in the silent record of a blue-book, and still slumber and smoulder on.

As many attempts were made to seize upon the oblation of these estates to charity, so one in particular by the great Sir Francis Bacon, in favour of James I. cannot be omitted—that distinguished, but more than suspect judge, suggested that they should be sequestered to the Crown! And as a last struggle, Mr. Simon Baxter, a near kinsman of the testator, instituted a suit in Chancery to obtain the inheritance. This suit was most signally defeated by a decree of the twelve judges, who adjudicated that the estate should pass by testament. A sacrifice was, however, somehow combined with the decision, for a sum of 10,000*l*. was applied out of the estates towards rebuilding the bridge of Berwick! and to raise that sum, the manors of Littlebury and Hadstock (Cambridgeshire), were sold to Lord Thomas Howard, earl of Suffolk, for that (even at that time) very inadequate price.

In the year 1614, the Charter-house was first opened, and on the 3rd December of that year, there were eighty pensioners and forty scholars, together with officers, servants, &c. on the foundation. The ordinances of the founder were (*in the text*), that *the whole of the funds and income* of the estates should be devoted to the objects of charity; and on the 26th April, 1642, a meeting of the governors fixed the regulations as follows:—

"That there should be admitted as pensioners, only such persons as had been servants to the king, decrepit or old; captains, either by sea or land; men fallen into decay through shipwreck, casualty of fire, or such evil incident, &c.

That no children should be placed there whose parents had any estates in land to leave them, *but only the children of poor men that wanted means to bring them up.*"

Such was the animus and intent of the founder, and so conveyed in trust, with an *obseeration to fidelity* of succeeding governors express as unmistakeable.

For the establishment of a school for forty boys, the sum of 5,000*l*. was bequeathed expressly; and a sum of 40*l*. was limited to be paid with every boy, either to advance him in college, or as an apprentice fee in trade. It is rather significant of the inadequacy of that sum for the purpose, and of the greatly reduced value of money, that we find the exhibitions to college enlarged by the governors, to more than 40*l*. a year for four years; and also that the amount of 40*l*. as an apprentice premium, was wholly useless and insufficient; so much so, that those premiums have been discontinued, no youth having been apprenticed from the school since John P. Kemble was bound apprentice to his uncle, the comedian, to learn the histrionic art! In truth, the 40*l*. in 1611, as compared to the same nominal amount of our currency, may be estimated at 400*l*. or ten times the sum. This calculation ought to be borne out in all the details, for most assuredly the value of the estates has increased tenfold; and yet the gross rental, which was in the year 1691 5,391*l*. averaged for the last six years less than 21,000*l*. representing an increase little exceeding *three times* that amount!

This falling back (for it is nothing less) of the property, arises from some error in the principle of management, is too palpable to require proof: to arrive at correct data without a terrier of the farms and acreage of the lands is impossible. It may, nevertheless, be urged that the mode of leasing for twenty-one years, a custom long disused by the landed proprietors of England, is, of all others, the most likely to lead to depreciation: the term is not long enough to give a biding interest to the tenant, so that he should keep tenements, barns, hovels, gates, &c. of a farm in repair, and it is too long for a cultivating lease on fair reciprocal terms, as the value of land is ever fluctuating: in fact, were fines paid *to the Hospital* (which are not so), the advance could never compensate for losses sure to accrue on surrender of farms in a state of exhaustion, a result certain to arrive, unless renewals should be granted *on the lessee's terms;* but the system is vicious, and the possibility should be avoided (however remote the probability) of *favouritism*, or of *corruption*, in conceding renewals.

Complaints and remonstrances have long been put forward by the pensioners of the pitifulness of their allowance, but little increased since the days of the founder, and invidious comparison made with the splendid provision for the master (1,000*l*. a year salary and allowances, together with a noble mansion and luxurious table). These perturbations were followed by an increase of their dole from 16*l*. to 20*l*.; but whether "post or propter hoc" doth not appear. A pamphlet alluding to this, as lately published by the master, goes to show that the increase

† See p. 83, *ante*. In first article, for Humfry de Bohun, "Earl of Hanford," read, "Earl of Hereford."

of the estate, however large, involves no right on their part to an increase; but on the contrary, asserts that the governors have the whole discretion and regulation, under the charter of James I. He deplores the spirit of discontent and insubordination, and especially that some bad characters should have intruded there! winding up the whole with the truly Christian resolve that he himself would persevere in teaching and preaching forgiveness and charity, as it was his wont to do.

Forbearance towards calcitrants and recusants, is certainly most commendable; but especially so in cases like this, wherein the master and his colleagues had absolute power to expel.

Important as is the branch of the charity devoted to the Brothers Pensioners, that of the school, limited though it be, is of far greater moment to society: the one with angel beneficence softens the rigours of adversity, by sustaining and cheering the latter years of men descending to the grave; the other imbues the youthful mind with literature, science, and those arts which, advancing and growing in the national family, fructify a hundredfold, and increase and multiply in the ratio of acquirement.

The school is a large building, occupying a large plot of ground (eight acres): it has salaried masters and attendants, and yet it embraces only forty-four boys on the foundation: these boys are not of the class prescribed by the ordinance of 1642 "the children of poor men that wanted means to bring them up:" much less are they such as the founder prescribed, for the sons of the wealthy, the independent, and the distinguished, are of them! Perhaps there are no poor in mighty London.

But there is a greater departure from the testamentary injunction, in the fact that whilst there are only forty-four boys on Thomas Sutton's foundation, there are 130 boys, externs, boarders with the identical masters who are paid on the institution for the education of the 40! The masters, the buildings, the servants, are employed thus for a purpose alien to the founder's objects: either the teachers are too many for the forty, or too few for the 170; but in any case, the school and benefits of the establishment ought not to be surrendered as an object of commerce for the advantage of one or more masters: the funds are ample, even now, reduced though they be, for the sustentation and liberal education of the number limited by will.

Like Christ's Hospital, the Charter-house is now under the supervision of a parliamentary commission; and it is expected and earnestly desired that a searching scrutiny shall be instituted into all the details of control, but above all, into the sources and management of the large estates and incomes hitherto collected and dispensed without question.

The position as well as the nature of both institutions is similar: both are in the very worst possible situation for the education of youth, or for the solace of old age. Smithfield market intervenes between them, about 150 paces only distant from either. The market may be deemed defunct, but it is in contemplation to fix the great central railway terminus on the site. This very fact, while it unfits the more each institution for its purpose, increases exceedingly the value of both as great building centres. The Charter-house occupies 15 acres, which, if sold, would realise 300,000*l.* (and this is not one-fourth part of the value set by the corporation on building sites in the vicinity). Christ's Hospital has 5 acres, besides convertible buildings of great value; and these are worth also little short of 300,000*l.* Both hospitals have extensive and widely-spread freehold estates, lands producing (if one may judge from the acerage rental) little beyond 10s. an acre! Some of the farms are let at less than even that rent: both have most eligible lands near the metropolis. Surely then, seeing the advantages of a large scope of land for educational purposes; seeing that for one-half the amount to be realised by the sale and dedication to commercial purposes of the City sites, buildings of a magnificent character, with glorious grounds, in every way suited to such hospitals, might be erected; no man of common sense or common prudence would hesitate to sell out, and to remove from the worse to the better situation. The brothers might then adopt the motto, "Deus nobis hæc otia fecit."

No argument is necessary to prove the baneful influence of a metropolis or even of a great town upon a college or school. The same holds with regard to a refuge and retirement for the aged; and when the concentric railways pour their torrents in upon Smithfield-bars, those regions will not be better adapted for seats of learning, nor for academic groves.

Respecting the accounts and income of the hospital, so far as they have erred into light, little need be said beyond the fact, that no balance at Bank, no reserve or sinking-fund (at least of any consideration) has been made, either to meet contingent demands or the requirements so sure to arise for renewed or restored buildings! A small per centage (say 3 or 5 per cent.) would soon have made an immense sum. No, the income is said to have been expended, the trust being to apply it in totality and trust to the charity. Private estates so managed would soon dwindle. Farms out of heart, premises out of repair, and landlords out at the elbows! The adage of charity is true—that it covereth.

Quondam.

THE GREAT BELL OF ST. PAUL'S, LONDON.

We have much pleasure in giving the information desired by your correspondent Mr. Wylson, relative to the weight and size of St. Paul's great bell, which was made at this foundry by our predecessor, Richard Phelps, in 1709. Its dimensions are: diameter, 6 feet 9½ inches; height to top of crown, 6 feet 4½ inches; thickness at sound bow, 5½ inches; weight, 5 tons 4 cwt. We have a portion of the agreement made between the dean and chapter of St. Paul's and Mr. Phelps, dated July 8th, 1709, in which it is stipulated that the hour-bell and quarters should be delivered at the cathedral by the 1st of October in the same year.

As it may perhaps be interesting to some of your readers, we send you the dimensions and weights of the other large bells made by us, viz. Lincoln,—cast, 1834; diameter, 6 feet 10½ inches; height, 6 feet 5 inches to the top of crown; thickness at sound bow, 6 inches; weight, 5 tons 8 cwt. York, St. Peter's—diameter, 8 feet 4 inches; height, 7 feet 10 inches; thickness, 8 inches; weight, 10 tons 15 cwt. One for the Cathedral of Notre Dame, at Montreal,—diameter, 7 feet 3 inches; height, 6 feet 8½ inches; thickness, 6¾ inches; weight, 7 tons. Another for the same place, diameter, 8 feet 7 inches; height, 8 feet 1 inch; thickness, 8½ inches; weight, 12 tons 15 cwt. This last is the largest that has been made in England up to the present time, we believe.

Chas. and Geo. Mears.

ARCHITECTS' BENEVOLENT SOCIETY.

The general meeting of the subscribers took place on Wednesday, the 7th inst. in the rooms of the Royal Institute of British Architects. Mr. Sydney Smirke, A.R.A. the President, was chairman on the occasion, and read the report of the council, which contained the following passages:—

"It has long been a project, which they have much at heart, to suggest the appointment, at all the largest provincial towns, of local committees to advise and assist in the administration of the funds at their disposal; but this course can only with propriety be adopted when a willingness has been shown to co-operate with us.

With all sincerity and earnestness therefore, the council call upon their country friends to consider our claims, and no longer to withhold their assistance. We might urge upon their notice that no distinction has ever been made by the council in selecting objects for the Society's aid: at least one-fifth of those who have received assistance, have been professional men resident in the country, or their families.

The council is happy to perceive no backwardness in this respect on the part of professional gentlemen in London. The list of the Society's members now embraces nearly every distinguished name, and the continued favour of the Royal Institute of British Architects, in permitting us to use their rooms for our meetings, may well be regarded as satisfactory evidence of the approval of the whole profession.

The Council cannot omit to state here, that since the closing of the balance-sheet our eminent member and trustee, Sir C. Barry, has forwarded a donation of 10*l.* as an earnest of his goodwill. A donation of 10*l.* 10s. has also been just received from Mr. Reeks; also donations have been received of 5*l.* 5s. from Mr. Booth, 5*l.* 5s. from Mr. Mocatta, 5*l.* 5s. from Mr. Mair, and 3*l.* 3s. from Mr. M. D. Wyatt, which are all sums in addition to their former liberal contributions.

The members of the society, however, are still entreated to recollect its infant condition, and not to relax in their endeavours to promote its welfare by giving a wider extension to the knowledge of its objects and of its results. The enormous demands of a great war have a depressing influence, which falls with peculiar severity on those whose professional success is founded on the cultivation of arts which need to be nurtured by Peace, and which derive their supplies from the exuberance of domestic prosperity; and already the council have had painful evidence of its effects upon our own art.

The Council have reason to fear that an impression still remains in the minds of some, that there is something derogatory to our profession in the existence of this society. Surely a most erroneous impression! Is *our* art less exposed to the vicissitudes of fortune than the sister arts? Is a *literary*, or a *legal*, or a *medical* career more subject to reverses than our own?

Yet all these classes, to their honour be it said, have their peculiar institutions not distinguishable from our own, either in their object, or in the means of attaining it."

The sum of 187*l.* 10s. has been distributed to applicants during the year. The balance at banker's is 107*l.* 1s. and the sum invested is 535*l.* 6s. 5d.

Mr. Mocatta, Mr. Hakewill, Mr. Scoles, Mr. Poynter, Mr. Edwin Nash, Mr. Baker, Mr. C. C. Nelson, Mr. Malliphant, Mr. Brandon, Mr. Dobson, Mr. Leicester, Mr. Ferrey, Mr. Sancton Wood, Mr. Hodson, and others, took part in the proceedings and business of the society, and manifested the most kindly interest in its well doing.

Mr. John Turner, the honorary secretary, was duly thanked for his exertions.

THE INSTITUTE OF BRITISH ARCHITECTS AND THE HEALTH BILL.

At a special meeting of the Institute, convened for the purpose of considering this Bill, resolutions were come to,—1st. That a Health Bill was desirable for the protection of her Majesty's subjects. 2ndly. That a committee should be formed to draw up a petition to both Houses of Parliament against the one now proposed becoming a law in its present state. It was stated that Sir Benjamin Hall had removed many of the objectionable clauses, leaving with local boards the power of making bye-laws, but this, it was thought, would simply tend to place the matter in a worse position, and was open to the most serious opposition.

WAR APPLIANCES.

The two newly-appointed sanitary commissioners, Dr. John Sutherland for Balaklava, and Dr. Gavin for Scutari Hospital, are now on their way to the East, together with Mr. R. Rawlinson, C.E. as the general organizer of the sanitary labour required by his colleagues. Mr. Newlands, the Liverpool borough engineer, together with Messrs. Ainsley, Freeney, and Wilson, of the staff of Messrs. Fresh, of Liverpool, have also left as a sanitary staff along with their chiefs, so that a sanitary brigade will at once be formed wherever our army or its sick and wounded may require their services.——At Paisley, a number of unemployed weavers have offered their services to Government, as militiamen, for five years, or to the close of the war, on condition of each receiving fifty acres of land, in Canada, Australia, or New Zealand. This is suggestive, so far as regards a want of men. As we have before said, however, the virtual strength of our army might be multiplied at least fourfold by available war appliances alone, without additional men beyond a certain moderate number. We recollect of more than one instance in the present war, where possession of a revolver or two, for example, enabled an officer to dispose of four or five Russians in rapid succession, or in other words, to do the work of four or five additional men. Would it not be cheaper then, and in every respect better, to send to the Crimea one revolving rifle, or pistol, rather than two, or even three men? or, to sum up the result, 10,000 revolvers in place of 25,000 or 30,000 men? Of course, revolvers are of no use without men; but we mean that beyond the available number of men (and sanitary rules and common sense being observed), our army might thus and in various other ways be, at the very least, tripled or quadrupled. Thus, as we before suggested, why should not the life of *every individual soldier* in our army be protected at all events from rifle, musket, or pistol bullets, or even from bayonet, sword, or lance thrusts, by some light proof armour over the vital organs in front while facing the enemy? We have much gratification in observing it stated by the Paris correspondent of the *Morning Herald*, that the French Emperor has ordered 12,000 cuirasses, and as many helmets, for the division of his army, which is to storm the city of Sebastopol. The

armour is said to be on a new principle, and extremely light in construction.——A trial of a newly-invented self-breech-loading and priming carbine has been made at the School of Musketry at Hythe. *Sixty* shots, it is positively declared, can be fired from this weapon in seven minutes: out of that number, at a range of 100 yards, forty-seven are said to have struck the bull's-eye.——The *four* old contractors in Birmingham for military small arms supplied 10,000 Minié rifles from 1st December last to 17th ult. Other thousands were then also on the way to completion. A new rifle, too, the Pritchett, said to be superior to the Minié, is on trial.——Our foes, meanwhile, are not idle. In consequence of the departure from Russia of foreign engineers and workmen, several manufacturing establishments in that country have lately sent agents, it appears, to Konigsberg to procure workmen by offering very high rates of wages.——Improvements in the weightier implements of war, too, are ever turning up among the nunberless new inventions of engines of destruction to which the war has given birth. One much talked of at present in the scientific world of Paris is a shell invented by M. Chaslin, which he asserts will not only double the force of the powder used, but, being without a match, will have the inestimable advantage of falling on the spot desired without giving notice to the enemy by that stream of light in the air which accompanies the present shell.——Mr. Murdoch, of the *Sanspareil*, has performed the operation of "bouching" (or fitting new vents into guns) on several large pieces of ordnance in the trenches. Thus instead of a piece of useless metal, in a few hours there is a gun as good as new, and ready for instant use. It unfortunately happened that a Russian spy was actually allowed quietly to look on while Mr Murdoch was instructing some of our own military engineers in this useful art, and then to saunter off in the direction of Sebastopol, towards which he bolted, and which he safely reached, in the midst of a shower of shot! Here was one most useful invention and advantage virtually lost to us almost in a single instant!——The Mersey Steel and Iron Company lately completed a contract for 160 tons of iron plates for Government, to be used in the construction of the gun-boats for the Baltic. These plates are 12 feet long, 4¼ inches thick, and 2 feet 10½ inches wide. Each plate weighs 2 tons 13 cwt. and they are all finished and planed on the edges. The plates were made at the rate of 40 tons a week. Several of these gun-boats, or iron batteries, are ready, it appears, or at least upon the list of "a hundred pennants" destined for the Baltic, but not a whisper is uttered yet as to the destination of any of them being the Black Sea. We now hear, however, that Mr. Nasmyth's wrought iron ordnance *was* destined, partly, at least, for these floating batteries; but can it be possible, as alleged, that "General Routine" has interfered with Mr. Nasmyth's progress, and that his labours have been suspended? It appears that some years since Lieut.-colonel Simmons of the Royal Engineers, strongly recommended the formation of wrought iron guns; that a Woolwich committee reported to the Ordnance Board that this was an old invention; and that wrought iron was too soft. Col. Simmons is said to have then placed before the committee two specimens of wrought iron, one as soft almost as timber, and another hard enough to cut a diamond, and he very naturally asked which of these materials they meant, when they reported that wrought iron was too soft. Nevertheless, nothing appears to have come of this endeavour till Mr. Nasmyth was called in, and now again we appear to be as far off as ever from the attainment of what seems so desirable.——The metal ordinarily employed in the casting of cannon not having been found suitable for the Lancaster guns, Messrs. Krupp, of the ironworks of Essen, in Rhenish Prussia, are reported to have made a Lancaster gun of *cast-steel*, and sent it to Woolwich to have it experimented on. Before being bored, it weighed about 7,000 lbs.——Mr. W. Austin has, it appears, submitted to the French Emperor, and also to our own Government, a new kind of land battery and revolving floating batteries, capable of resisting shot, shell, and red-hot shot. These inventions are believed to be now under consideration. The same gentleman proposes a thin metallic covering for tents, and for ground beds, &c.; but the Ordnance, while admitting its suitability in other respects, object to the weight (½ lb. per foot), as more than army regulations would allow. Waterproof materials, however, could be readily made of the very lightest weight that could be desired; and why canvas or linen tents should ever be made without being waterproofed, it is difficult to imagine. Similar material might be laid on damp ground within the tents.——Another of our correspondents, Mr. John Elliot, of Southampton, architect, has forwarded to Lord Panmure the details of a rough-and-ready railway, or tram-road rather, which might be of great use and easy formation for temporary or other purposes in war, and although our navvies are pushing on with admirable efforts the formation of the "Balaclava and Sebastopol Direct," and are even contemplating, or at least talking of another "little surprise" for the new Czar, in the shape of what he will doubtless regard as rather an impudent scheme for a "Crimean Central" line,—still we hope that due consideration will be given to Mr. Elliot's plan, which simply consists of a cargo of 12 feet ordinary deals, some of which are to be cut into three pieces, and bolted together, the middle piece being shorter than the others, so as to form a chair, into which, when sunk in the ground, the ends of the 12-feet deals are to be slipped, when a tramway may thus be made, of say six or seven miles, by a sufficient number of soldiers, in twenty-four hours. Trucks on similar simple principles, with deals planed and put together so as to form small rollers, to cross over the tramway, in place of wheels, with simple triangular iron plates bolted on the track sides for axle plates, complete the whole apparatus, the precise details, measurements, and plans of which Mr. Elliot has given, as well as the cost of the whole line, which he estimates at some 2,550*l*.

COMPETITIONS.

OXFORD MUSEUM.

BEING at a loss to understand the hesitation of the delegacy in announcing their decision as to the prizes, I thought it right to apply to the secretary for an explanation. This has been immediately and courteously given, and is to the effect that the delegacy have determined to wait until the contract for the selected design be accepted (or otherwise) by convocation. As this intelligence will interest many of your readers, I forward it to you for insertion if you think fit. A MEMBER OF THE FIRST SIX.

TOXTETH-PARK CEMETERY.

The burial board has decided on the plans of Mr. Barry, of Liverpool, for the chapels and lodges for the Toxteth-park cemetery, and on those of Mr. Gay, of Bradford, for laying out the ground, drainage, &c.

BRECHIN.

The designs of Messrs. Hay, of Liverpool, architects, have been selected for the erection of a new free church here.

BELPER.

The premium for the People's Institute, Belper, has been awarded to Messrs. Mason and Layland, architects, Liverpool. The style adopted is Elizabethan.

OXFORD ARCHITECTURAL SOCIETY.

THE second terminal meeting of this society was held February 28th. The president introduced the subject of "The Application of Colour to Mediæval Sculpture" to the meeting, and called on Mr. Lygon (secretary) to commence the discussion.

Mr. Lygon, according to the local journals, said he was not disposed to call in question a judicious application of polychrome, but objected to an indiscriminate profusion of colour. Quoting from Mr. Ruskin's "Seven Lamps," that "sculpture is the representation of an idea, while architecture itself is a real thing: the idea may be left colourless, but a reality ought to have reality in all its attributes, its colour as fixed as its form,"—he would substitute *must* for *may*, and accept this as a sound principle.

Mr. Street said that he could not agree as to the objection to colour on sculpture. In old examples it was universal in its application, and generally under two rules,—the first that of giving distinctness at a distance; the second, that of producing more exact resemblance to designs represented. Of the first rule the ordinary mode of painting foliage with gold on a red ground was an example, and of the same rule some fragments of ancient colour in alabaster, which he was able to exhibit to the meeting, were remarkable examples: here colour or gold was only used for the hair, the edges of draperies, and the linings of vestments and their drapers, giving marvellous distinctness to the forms of the sculpture.

Mr. Parker said that beyond all doubt every thing inside a mediæval building was coloured, in a complete system: there was no doubt, therefore, that sculpture was treated as a part of the whole. So far were the mediæval artists from fearing to lose the fineness of chiselling, that they covered the figure with a paste before colouring it; as in the tomb of Lady de Montsente at Christ Church. Whether colour was used outside buildings was still a question: he did not himself see proof of it.

Mr. Freeman could not conceive how you were to paint an idea on the representation of an idea. Mr. Lygon had said that all precedent was drawn from debased examples, and though it had been proved that colour was used in the earliest sculptures, he must protest even in Mr. Lygon's absence against the abuse heaped on Perpendicular architecture. He demanded tolerance in matters of taste where no moral obliquity was exhibited, and objected to such terms as "unspiritual bombast" to Perpendicular art. He thought it absurd to exclude colour from representations of animate objects, when applied to everything else; and thought a complete system of colour enhanced the beauty of every building.

Mr. Meyrick agreed in the main with Mr. Freeman. He did not think that pure form could be used in conjunction with united form and colour without a disagreeable result. He wished to ask what objection there was to papering interiors of churches? He thought it reasonable, where paint would be too expensive, to use the best means of producing the required effect.

CAMBRIDGE ARCHITECTURAL SOCIETY.

THE second meeting for the Lent Term was held on Feb. 23rd, when Mr. W. Lloyd Jones, of Emmanuel College, read a paper on the Ecclesiology of the Isle of Man, containing much information on the Runic Crosses which abound in the island. Mr. S. Baring Gould, the junior secretary, read a paper on Mediæval Symbolism, especially with reference to King's College Chapel. The Rev. W. M Campion made some remarks on the subject of Mediæval Symbolism; after which it turned upon the rose and Virgin's head at the west end of King's College Chapel, and it was suggested that it might have been the badge of Catherine Parr and Henry VIII. the stone having been left in the rough till after the roof was completed, which would allow for the lateness of date attributed to it.

LONDON-WALL, LUDGATE-HILL.

IN the course of further excavations for the works of the Milton Club, part of an ancient arch (about 9 feet 10 in. to the soffit), has been exposed since our notice appeared. The wall, we should have said, is formed mainly of chalk. The works for the new Club are being performed under the direction of Mr. W. Wright, architect, by Messrs. Ashby and Sons, and have been of a difficult character. The walls have been taken down and reinstated, without removing the floors and roof.

SHOREHAM HARBOUR WORKS.

A CORRESPONDENT enables us to add some particulars to our notice of the preliminary opening of the new ship canal at Shoreham Harbour.

The chief difficulty arose from the treacherous nature of the substratum upon which the entrance lock is built, and the great influx of water through the bottom of the lock pit. The water was kept down by one of Appold's pumps, which, making 600 revolutions, threw 1,300 gallons per minute to a maximum height of 27 feet, and the faulty substratum was rendered secure by sheet piling and concrete.

The engineer to whom the construction of the excavation and embankment of the canal was entrusted was Mr. J. Sewell, late of Brighton. The subsequent works, comprising the entrance lock, the basin, and the quays, were placed under the charge of Mr. E. Leader Williams, Jun. C.E. his father, Mr. E. L. Williams, of Worcester, acting as consulting engineer.

NEW PUBLIC BUILDINGS AT DUNDEE.

WITHIN the last two years this town has taken a stride in the acquisition of public buildings; three of the largest and most ornate of which Dundee can boast having been undertaken within that time. We refer to the New Infirmary, the Royal Exchange, and St. Paul's Episcopal Church on the Castle-hill, the first now all but completed, and the others more or less advanced. The following remarks on these are given on the authority of the *Northern Warder*:—The style of the infirmary is Tudor. The plan takes the form of the letter ⊔. The household apartments, &c. are placed in the central wing, while the wards, stairs, &c. are extended into the wings on either side of the centre. The stairs, which should be unusually easy of access, are said to have been constructed as if for the purpose of breaking people's legs, and the kitchen is described as so poorly lighted by four "boles" up at the ceiling, that for half the year gaslight will be indispensable. The want of special provision for warming and ventilating, beyond what ordinary fireplaces and open windows furnish, is objected to, as quite inadequate to provide an equal diffusion of temperature throughout the wards. The architectural character of the building is said to be still more unsatisfactory. Apart from its extravagant size, and consequent cost, a heavy outlay, it is said, has been put upon portions not having even architectural propriety to justify them, while sound and durable construction has been elsewhere neglected.

The battlements all round the roof are held to be utterly indefensible on this ground; giving to the building an opposite character from that it should possess; necessitating lead gutters behind them, an endless source of trouble in winter; and swallowing up a deal of money, which would have been better spent in procuring corner-stones something larger in size and better in quality than those used—in providing a few more fireplaces—or making sightly doors internally. These, however, are regarded as minor points, which must not be held to interfere with the critic's good opinion of the edifice, as a well-arranged and commodious structure.——Of the Royal Exchange, says the writer, we are hardly in a position to speak, until it be farther advanced: the unfortunate settlement of its foundations, the effects of which seem to be still spreading higher up the building, entitle the promoters of this elaborate building to the most favourable consideration for their work, and half-finished productions cannot of course be justly criticised.——St. Paul's Episcopal Church is regarded as decidedly the most promising addition to the public buildings of Dundee. Had it occupied a proper site, this church would have been a model of the revived Gothic architecture of the day; and as it is, it will be in many respects an edifice to boast of. The spire, completed the other week, rises to a height of about 220 feet, surmounting a tower of large dimensions, and excellent design,—almost wholly inappreciable, however, from its awkward site. The spire will appear to many as too broad at the base for its altitude; but this is not the case. In plan, the Episcopal Church consists of a nave, with side aisles, transept, and choir, with side chapels, terminating in a semi-octagonal apse at the *south* end, as we have been accustomed to call it, or the *east*, as it is wished to be called. This apse is to be groined in stone, and the windows are to be filled with stained glass. The other roofs are open to the ridge, the timbers stained and plastered between, with scrolls illuminated upon the plaster. The lofty piers and arches, the tall traceried windows, and the whole proportions of the interior admirably realise the upward, vertical spirit of Gothic architecture, and cannot fail to be strikingly effective. The style adopted is Decorated Gothic, early in the period. The Chapter-house at York has furnished much of the details. The architect is Mr. Scott, of London. The contractor is Mr. W. Cooper, of this place. It is expected the church will be consecrated early in autumn.

Notices of Books.

The Best Site for Trinity College Church (Edinburgh), &c. Printed for the Author by W. Burness: Edinburgh, 1855.

This is a folio volume of 140 pages, on "The Best Site for Trinity College Church; with Ten Years' Discussion on the Subject; and Seven Lithographs, illustrative of the Science of City Building," by Mr. R. F. Gourlay, a veteran promoter of "city building," or rather, of city improvement or rebuilding, especially with reference to Edinburgh, but on principles, he urges, applicable to cities or towns in general. The work is "respectfully submitted to his Royal Highness Prince Albert." It advocates the re-erection of the much talked of church alluded to, in connection with other and collateral improvements, in a district certainly much needing improvement, both municipal and moral, as well as sanitary, namely, amongst the wretched class of buildings lying between the North-bridge and Leith Wynd, that is eastward of the bridge, and in a space long known as "Ireland's Woodyard." The very reasons why others object to such a site, namely, its sunk and wretched condition, are adduced in favour of its selection by the present author, who appears also to keep in view what others have lost sight of altogether,—that there was a parish attached to the old church where it formerly stood, not far from the site now indicated; and the proposed site for its re-erection is within the limits of its own parish, while other and more favourite sites suggested are actually out of that parish altogether. Mr. Gourlay suggests in this work the formation of a Joint Stock Association, in connection with his scheme for the improvement of the locality in question, as well as for that of the city at large, and he specially keeps in view the erection of improved dwellings for the poorer classes, to which end he himself proposes, on certain conditions, to contribute 500*l.* as part of the joint stock.

The Bank of Scotland directors, we understand, have of late been consulting Mr. Bryce, architect, regarding a plan for opening up the whole of the ground between their bank and the High-street, including a site for this church. The East Princes-street Garden, is said to be the favourite site for it with the public.

Miscellanea.

Inkermann was called Theodorus up to 1475, when the Turks gave it its present designation, from *In*, cavern, and *Kerman*, fortress. An article in *Bentley's Miscellany* gives some interesting particulars of its antiquities. The cliffs below the fortress of Eupatorium, afterwards Theodorus, and those on the opposite side of the valley where the hill is tunnelled, are completely dotted over with excavated grottoes of various shapes and sizes, and which have been applied to different uses by different possessors. The observations and researches of De Montpereux fully establish the fact that these mountain caves, from whence Inkerman derives its name, were the work of the Tauro-Scythians, and existed before the Heraclean colonists of Khersonesus called on Mithridates for assistance against the aborigines, who are called Tauri by many writers. We find many remains of early Christian times in these caves of Inkerman. Among these remains are those of two churches and a monastery, one on the Inkerman, the other on the Sebastopol side of the ravine. There is nothing remarkable in their construction as works of art. The Rev. Mr. Elliott described scraps of fresco painting and the remains of sarcophagi as yet discernible in several of these caverns in his time. Strange it is to think that these fortresses, rock monasteries, and subterranean churches, these caverned dwellings, and sepulchral grottoes, and this valley, with its dark fishy stream below, once the scene of struggle between Hellenic Greeks and Tauro-Scythians; between Byzantine Greeks and Goths; between Goths and Alains, and Huns, and Khazars, and Komans, and other Asiatic hordes, and the place of refuge of early Christians of various denominations, Gothic, Alain, and Greek, should be now the frontier line of battle between Great Britain, France, and Turkey, and Russia!

The closed Graveyards.—Your article, "Young Mortality amongst the London Graves," will draw the attention of your readers who reside in their neighbourhoods to their neglected state, and to the moral obligation due to these consecrated spots, where the mortal remains of their relations and old friends are deposited. I live in the neighbourhood of one of these burial-grounds, and from the back of the house I have a full view of it, and I have observed that since it was closed for burial purposes it is partly used as a receiving place for mourning coaches, workhouse vans, and other vehicles, without any regard to its original purpose; and this appropriation has been placed on a permanent footing by the erection of a timber building extending some yards into the ground, which was cleared for the occasion by the levelling of graves and rooting up of trees. These acts are much talked of and censured in the neighbourhood, and your assistance in exposing the desecration will lead to the correction of such abuses, and the protection and due veneration of the London graves.—A Tyburnian.

Zinc Flues, Tubes, and Chimney-pots.—Schedule F, page 145, Metropolitan Buildings Act, shows the regulations and restrictions to be observed, and directs how, and the peculiar mode in which, zinc flues, exceeding "*four feet*" in height, shall be fixed, that is, two feet into solid brickwork of flue, and is clearly an operation under the Act. The Act, in addition, section XIII. makes either the cutting into, or altering of any flue, without notice, an offence under the Act, making the whole liable to be pulled down and abated as a nuisance, and directing for the recovery of a treble fee, and a 20*l.* penalty for such default. If these restrictions and regulations are not put in force, it must be obvious that the public safety will be endangered, which with every half-gale of wind will be the case, as these flues are being put up in the most insecure way, and, in a great many cases, without the requirements of the Act being met.—Lex.

Forged Names to Subscription Lists.—We have received a letter from the Rev. H. T. Ellacombe, complaining of grievous annoyance which he has experienced, in consequence of some person forging his name to a printed order for a subscription copy of a certain work. So deliberately would the forgery appear to have been committed, that even Mr. Ellacombe's personal friends saw a resemblance in it to his autograph. It would also appear that a gentleman in Exeter has been annoyed in a similar way in connection with the same book. Mr. Ellacombe's denial of its authenticity is sufficient evidence to our minds, and to all who know him, that the signature in question must be a forgery. The circumstance should be investigated by the author of the book.

Chelmsford Water Works: Well and Engine.—This undertaking has now been completed, after eighteen months' incessant labour to procure water by Artesian boring, and to erect the machinery necessary to supply the town. The Artesian well is now 270 feet deep. Mr. Fenton was the engineer, and Mr. Baker the well-sinker. Difficulties arose from the bursts of sand into the well, and above seventy cart-loads have been thrown up by the pumps and engine, and carted away. The supply has now reached 100 gallons per minute, with every prospect, we hear, of an increase. The well has been sunk 80 feet more than was originally contemplated. The main is connected with the pump, so as to raise the water to the reservoir when it is clear; and a 12-inch iron pipe will be placed so that the pump will take the water as it rises from the mouth of the pipe. The engines are Gilbert's Patent Double Cylinder, and have several peculiarities with a view to save room, fuel, and cost. A pair of these engines were procured from London, each of twenty-horse power, and each capable of delivering 200 gallons per minute. The total cost is estimated at 700*l.* for the well, 200*l.* for the iron cylinders, 200*l.* for the engine-turn, &c.; and 1,700*l.* for two engines, set of three pumps, and two boilers, besides the pipes round the town.

Mr. C. R. Smith's Collection.—The *Literary Gazette* of last week contains letters from Mr. Thomas Wright, the Rev. Henry Christmas, Mr. Collingwood Bruce, and others, urging the trustees of the British Museum to purchase Mr. Roach Smith's collection of London Antiquities, at the price which has been named for it, namely, 3,000*l.* The desirability of preventing its distribution cannot be questioned. If the Museum will not buy it, the City should.

The Ordnance Estimates.—These estimates for the ensuing financial year amount to 7,801,042*l.* being an increase of 1,821,380*l.* on the past year. The principal increase is of course for stores for land and sea service, 1,033,000*l.* but thereare heavy sums for building works. These include an item of 30,000*l.* for the defences of Dover and the coast of Kent; 60,000*l.* for a new barrack at the western heights of Dover; 48,170*l.* for improving the fortifications of the Channel Islands; 24,163*l.* for new barracks at Devonport; 39,047*l.* for additional barracks at Cambridge; 61,000*l.* for barracks at Gosport; 10,000*l.* for the defences of the coast of Sussex; 48,597*l.* for the defence of commercial harbours; and 250,000*l.* for new barracks at Aldershot. These sums are only those required for the year, and by no means represent the gross total expense, which will have to be provided for hereafter. There are numerous items of sums required for the erection of forts and batteries. The amount required for works and buildings at home is thus divided, viz.—295,215*l.* for fortifications, 109,999*l.* for civil buildings, and 623,624*l.* for barracks. The charge for the scientific branch includes 12,000*l.* for surveys in the United Kingdom, and 6,109*l.* for the establishment at Chatham for instructing engineers, &c.

Australian Railways.—It is said to be the intention of Mr. Stephenson to pay a visit to Melbourne, immediately after his return from Canada. This visit, it is stated, has been prompted by several of the largest English railway contractors, who are prepared, if Mr. Stephenson's report should prove favourable, to undertake the enterprise of providing railways for Victoria.

Starting of a New Blooming Machine.—A new "patent squeezer" has been erected at the Ebbw Vale Ironworks. It is the invention of a Mr. Jeremiah Brown, a Welshman, and is declared to be the best machine yet invented for blooming iron. The workmen call it "Jerry Brown." It is very ponderous, but moves, it is said, apparently with the ease of a lady's crimping machine. It bolts red-hot balls with as much ease as the workmen are said to do "Old Parr's Pills," and speedily converts them into bars 17 inches long and 7 inches thick.

Value of Land in the City.—Sir: Finding in your publication of March 3rd, p. 97, a statement respecting "the plot of ground at the north-east corner of Threadneedle-street and Finch-lane, belonging to Mr. Alderman Moon, the present Lord Mayor, which, report says, has been recently let at a ground-rent of 1,000*l.* per annum," I beg to assure you that such report is incorrect, as the ground has not been, up to the present moment, let to any party whatever.

Yours faithfully,

Mansion House. Fras. Graham Moon.

Mr. Barber Beaumont, on the part of Messrs. Savory, requests us to say, with regard to their land in Cornhill, partly sold to the County Fire Office, that they do not hold it at a ground-rent, but have purchased the freehold. This, however, does not interfere with our statement as to value, but serves to confirm it; for the land has been purchased by Messrs. Savory, at the rate of 470,000*l.* per acre,—*exactly* the sum we named.

DOWN DRAUGHTS.—I have generally found the cause to arise from the flues at the apertures being all on one level, the usual consequence of which is, on the smoke ascending a flue, the down draught or "suction" from the adjoining flues causes the smoke to descend, which is partly owing to the door or window being often open, causing, as it were, a syphon to draw in the smoke. The following is a remedy I have often used with success:—A good well-fitted register-flap to the fire-places or grates of the rooms not in use, or where no fire is made (for it is in those rooms it usually occurs), with an Arnott's ventilator in the flue, communicating as nearly as possible on a level with the ceiling of the room. Also place pots of an irregular height on the stacks, or where these are objected to on account of the appearance, I have used a cylinder of sheet-iron or terra-metallic about 2 feet in length, with a flange in the centre to rest on the top of chimney-stack, so that about 1 foot is fixed above the stack, and the other part in the flue. The smoke is thus carried sufficiently high above the adjoining flues to permit of a current of air between them and the smoke, which will prevent any down draughts.—W. S.

LIVERPOOL ARCHITECTURAL SOCIETY.—Touching a letter from "A Member," in our last, commenting, amongst other things, on the ungenerous observations on a number of this journal made by another member of the Liverpool Society, and accusing the latter of a "disregard for truth," we have received from the gentleman commented on, a report in a local paper, of what he said, with a request that we should publish it to confute the charge. We do not intend to do so, and it would surely not serve his purpose if we did, seeing that while professing to give an account of the contents of a number, in order to show that these were of too general a character, not sufficiently professional, he actually omitted mention of the principal articles in it, such as "County and Parochial Assessment," Professor Donaldson's "Account of the New Works in Paris," "Flow of Water through Pipes," "Architectural Literature in Germany," &c. &c. We are not about to enter into any explanation of the course pursued in the management of this paper. It has obtained for architecture and architects, buildings and builders, a larger public than they had theretofore enjoyed, and has given us, in return for earnest and honest effort, a strong answer to those whose views may differ from us on the subject, namely, success. We have received statements from some of the principal members of the society repudiating participation in the remarks made, but it is unnecessary to insert them.

THE LATE MR. MACKENZIE'S WORKS.—We are asked to mention that the sale of the collection of the late Mr. Frederick Mackenzie, an artist well known to the admirers of architectural design, will shortly take place. It consists of a large number of Mr. Mackenzie's sketches, distinguished by his peculiar accuracy and material faithfulness, rendering them alike useful as studies to the young architect, and interesting to the admirer of fine art. It includes likewise an assortment of books, etchings, and fine impressions of choice engravings. The professional labours of Mr. Mackenzie not having proved sufficiently remunerative to provide satisfactorily for his surviving family, a subscription has been promoted by a few friends; and, in addition to this, several members of the Society of Painters in Water-Colours, and others of his professional brethren, are kindly contributing drawings and sketches intended to be disposed of by art-union, for the benefit of the family. Cordially sympathising in these kind exertions, we shall feel gratified if this notice should prove a further recommendation to the cause in which they are exerted.

WINE CELLARS.—"A Wine Merchant of Forty Years' Experience," writing to the *Times*, says, "Most houses that were built before the present century have much better cellars for the keeping and improvement of wines than those erected within the last fifty years. There would be a great improvement in the enjoyment of wine if our eminent architects and builders were to direct more attention to building wine cellars.

POWER OVER TOMBSTONES.—May I ask, through your valuable journal, whether a layman, who claims and holds the freehold of the parish churchyard of Waterfall, Staffordshire, can prevent any person from placing a fitting tombstone in the churchyard, to mark the should-be resting-place of a dear father or a friend, paying the usual, or any reasonable fee, for tombstones are (at the present time) rearing up in fields, and stables, disgusting a civilized community? If in the dark ages men had such tyrannical powers given to them, surely they do not retain them in the nineteenth century. If they do, I hope you will use your powerful pen to bring about a better state of things, before the hangers-on of the Church *hang the Church*, as most assuredly they will do, if they are allowed much longer plenty of rope.—T. R.

WEST'S SNOW CART.—Not discouraged by the doubt we hinted, in our notice of the cart invented by Mr. West, for the removal of snow from the streets, the inventor put himself to work, and has made an entirely fresh arrangement, wherein the melting surface occupies a much greater portion of the cart. Whether or not the right thing is even yet quite achieved we cannot say, but our readers may see the model at the Polytechnic Institution, and judge for themselves. The inventor deserves credit for the idea.

ROYAL COMMISSION ON THE MANAGEMENT OF THE RIVER TYNE.—At the inquiry before the Royal Commissioners at Westminster, four eminent engineers were lately examined: all of them, though differing in opinion respecting the piers, agreed as to the general improvement of the river. Those examined were Messrs. Stephenson, Rendel, Walker, and Murray, the last being the late engineer of Sunderland harbour. Mr. Stephenson said he approved of the entire system pursued, commencing with jetties, and then making parallel walls to guide the ebb and flood tides; and considered the full tide training-wall much superior to the half tide wall in scouring power. The river has been greatly improved in every respect; and he approved of Mr. Walker's piers. Mr Murray produced plans of the piers at the sea entrance to the south dock at Sunderland, which resemble those proposed for the Tyne. Would himself, however, propose, for the Tyne, piers differing from those recommended by Mr. Walker.

THE FRIEZE OF THE PARTHENON.—At the Royal Society of Literature on the 14th ult. Mr. Watkiss Lloyd read a paper "On the Central Group of the Panatheniac Frieze of the Parthenon." The intention of this paper was an attempt to identify the twelve seated principal figures of this group, which are marked by superior proportions, as of a superior nature, heroic or divine, to those that take part in the procession. After an exposition of the proofs by which he had satisfied himself of the correctness and significance of the names he assigned, Mr W. Lloyd said, the more the frieze is studied the greater will be the admiration of the genius displayed upon it in plan, invention, drawing, and execution: whatever inequalities there are, appear to be due to differences in execution alone, not, as in the case of some of the metopes, to the original defect of inferior design. Some of the excellences find most room for display in the more complicated groups on the flanks of the cella,—as in the marvellous breadth, simplicity, and distinctness of forms most unsparingly combined, accomplished by the aid of resources limited to an extreme projection of relief not exceeding two inches. The succession of broad and close or narrow spaces and surfaces is so managed, that they aid and express each other as harmoniously as the quick and the tardy metrical feet in a Doric rhythm of Pindar; while the broad masses blend into the broad, and the crowded into the crowded, with a repose and sweetness, a refinement and a vigour, not surpassed in the art with which Correggio blends lights into lights and shadows into shadows. The copy of the frieze, which is placed round the exterior of the Athenæum Club in Pall-mall, affords in some respects the best opportunity of studying the art of its design, though of course the position is still too high, and has other disadvantages, as every position other than the original always must have. It was from observation of the Pall-mall copies that I first pointed out the order of the cavalcade, as following on in ranks of six or eight horsemen abreast. The broad smooth surface of each outside horse gives rest to the eye, and marks or accentuates the sequence.

CATERHAM RAILWAY.—The works of this undertaking were commenced on Monday, the 5th inst. on land belonging to Sir William Clayton, Bart. about six miles from Croydon, on the Godstone-road, the Hon. Sydney Roper Curzon performing the office of turner of the first sod, in the presence of a large concourse of visitors. This line of railway starts from the Godstone-road station of the Brighton Railway, running into the South-Eastern district along the Caterham valley. It is anticipated that by this line there will be brought to London, under the superintendence of Messrs. Jackson, of Pimlico, a good description of lime, made from the grey limestone of the district, particularly adapted, it is said, to hydraulic purposes; also building stone, well adapted, it is said, for building in London, at or about the same cost as brick. As a passenger line it is very important, not only to the immediate vicinity, but to the surrounding towns and villages, now sending their traffic by way of Edenbridge and Godstone, on the South-Eastern line. There is another circumstance connected with this company, also worth notice, viz.—the landowners on the line (so anxious are they for its construction), have conveyed to the shareholders a sufficient quantity of freehold land, for one acre to be allotted to every twenty shares. This land is in close proximity to one of the principal stations on the line, and well adapted for building purposes. It is reported that Mr. Thomas Jackson, of Pimlico, is likely to become the lessee of the line, and intends to develop the mineral riches of this district in the manner before alluded to. Large fire-stones for Scotland, and the North of England, will be attainable also.

PARGETTING.—In the article on "Clerical Economics," in the last number of the *Quarterly*, in which several hints are given for the arrangement of parsonage-houses, it is said, "Where old walls require external plastering, let it be the old-fashioned pargetting instead of rough-cast, or modern scored stucco. The recovery of old parget patterns and the invention of new is a field of architectural study hitherto most undeservedly neglected." This is worth the attention of students.

PAPER FROM WOOD SHAVINGS.—A number of an American paper called *The Albany Journal* was lately printed on paper made from basswood shavings of a peculiar form thrown off by a machine called Beardslee's planing machine. The quality is said to have been good, and even fit for the tranfer of line engravings. The pulp is said to be cheaply manufactured by a simple but secret process, applicable to different kinds of wood shavings, and the expectation is, that rags will be ultimately driven out of the market altogether by this new process.

PETERBOROUGH.—A meeting of the Northampton and Lincoln Architectural Societies is announced for the 23rd and 24th of May, at Peterborough, under the patronage of the Bishop and the Dean: the second day will be devoted to an excursion to Croyland and Thorney Abbeys The Leicestershire, Cambridge, and Bedfordshire Societies, are also expected to join.

TO BUILDERS' CLERKS.

WANTED, in a first-class house at the West-end, as CLERK and BOOK-KEEPER (to supply the place of one who has been there for twenty years), an active, intelligent business man, of good address quick writer, and correct accountant, with strict integrity. To any one possessing these qualifications, and willing to render himself useful, a permanent situation is now open. Security will be required for 200. Letters only will be attended to, stating where employed for the last three years, and salary required, addressed to X. Y. Z. No. 43, Piccadilly.

WANTED to APPRENTICE, a stout Youth, to learn the trade of a PLUMBER or GASFITTER: the two combined would be preferred.—Address, with particulars of terms, to Mr. TURNER, 12, Kingsgate-street, Holborn.

TO BUILDERS AND PAINTERS.

WANTED, by a Young Man, a Permanent SITUATION as PLUMBER, PAINTER, GLAZIER, and PAPERHANGER, and understands general house repairs. Address H W 26, Brunswick-place, City-road.

TO ARCHITECTS, BUILDERS, &c.

WANTED, by the Advertiser, an ENGAGEMENT as Clerk of Works, or Assistant in an office, either in town or country. He is a good draughtsman and accountant, and has had considerable experience in designing and constructing country villas, farm buildings, &c. Can have first-class testimonials, both from Government and private offices, and eight years' character.—Address, P. R. Stanmore's Library, Edgeware-road.

WANTED, an ENGAGEMENT as STAIRCASE HAND, either by the day or piece-work. No objection to the country.—Address F. M. Office of "The Builder."

TO BUILDERS, PAINTERS, DECORATORS, WRITERS, AND GRAINERS.

WANTED, a permanent SITUATION in the writing, graining, gilding, and writing on glass. No objection to fill up time with painting.—Address, R. C. 36, Gilbert-street, Grosvenor-square. Specimens to be seen.

TO BUILDERS DECORATORS &c.

WANTED, by a Young Man, a RE-ENGAGEMENT as Clerk. Thoroughly conversant with estimating, book-keeping, &c. Address, M. Mr. Dunston's, News Agent, Upper Eaton-street, Pimlico.

TO BUILDERS AND OTHERS

WANTED, a RE-ENGAGEMENT, by a clerk and accountant, in town or country. He is experienced in pricing the trade's charges, and in arranging the prime cost of works, weekly if required. No objection to a temporary engagement. Address, A B Messrs. Bulson's, Grocers, Larkhall-lane, Clapham, Surrey.

TO BUILDERS AND BRICKMAKERS.

WANTED, a SITUATION as FOREMAN, or by contract, by a person who is thoroughly acquainted with Brickmaking in all its branches, having been employed in it for years. An undeniable reference can be given by his last employers.—Address, S. C. Mr. London's, Burrough's-place, Hendon, Middlesex.

WANTED, by a steady, experienced, middle-aged Man, a SITUATION as a STONE-WARE and DRAIN-PIPE BURNER, &c. A man of many years' practice, both in country and town.—Address C. SIMPSON, No. 9, Newstreet, Lambeth-walk, Lond n.

TO MASTER BUILDERS AND OTHERS.

WANTED, EMPLOYMENT, by a Young Man, aged 23, as a JOINER. Constancy more object than wages. Would not object to engage himself to any person going abroad, or any part of England. Address A. B. at Mr. Lawson's, 77, High-street, Whitechapel.

TO MANUFACTURING IRONMONGERS, BUILDERS, AND OTHERS.

WANTED, by the Advertiser, a Situation as FOREMAN. Has been many years used to the manufacturing of all kinds of smiths' work, and is thoroughly acquainted with every description of hot-water apparatus, bath-work, gas-cooking stoves, &c.—Address to G. H. Office of "The Builder."

TO MASTER PAINTERS, BUILDERS, UPHOLSTERERS, HOUSE AGENTS, &c.

WANTED, by a thorough practical Man, a PERMANENT SITUATION as FOREMAN of PAINTERS. He is a good grainer, writer, &c could take the management of a business, can measure and estimate, and can have a ten years' reference.—Address to M. N. 5, Union-place, Lower-road, Islington.

TO CIVIL ENGINEERS, SURVEYORS, ARCHITECTS, &c.

WANTED, a SITUATION in either of the above, by the advertiser, aged 16, who has been a year a pupil, and since in the employ of a civil engineer, &c. who can be referred to for a testimonial. Is a good draughtsman, understands railway and land surveying and levelling, mapping, and plan-drawing, and can make finished and working drawings.—Address (prepaid), C. H. L. 63, Westbourne-street, Pimlico.

TO PLUMBERS AND BUILDERS.

WANTED, by an experienced Plumber, a SITUATION as PLUMBER. Can turn his hand to any other part of the business if required.—Direct to A. B. No. 19, Harrow-road, Paddington.

WANTED, by an experienced Clerk of Works, a SITUATION, having just completed a large work in the City. Address, A. B. 29, Canterbury-road, Kingsland.

TO BUILDERS, DECORATORS, AND OTHERS

WANTED, by a respectable Man, a Situation as FOREMAN of PLASTERERS; accustomed to all the different cements of the day, and a good modeller; would take piece-work, if required, or superintend works generally. No objection to the country. Respectable references given.—Direct A. B. Golden Canister, Three Cob-street, Limehouse.

WANTED, by a competent Builder's Foreman, a SITUATION, either as SHOP, GENERAL, or as CLERK of WORKS.—Direct, Z. C. care of Mr. Sturges, 7, Brewer-street, Pimlico.

TIMBER TRADE.—A Gentleman of many years' experience in the wholesale deal and timber business in London, having several hours daily disengaged, wishes to employ the same profitably, in any department that may be most conducive to his employer's interests. Or the advertiser would not object to devote the whole of his time to the superintendence of a business of magnitude, either in town or country.—Address, to B C. care of Mr. Fisher, Stationer, 50, Lombard-street, City.

TO ARCHITECTS, &c.

THE Advertiser, who is competent to make working, finished, and perspective drawings, is desirous of a RE-ENGAGEMENT.—Address, P. Office of "The Builder."

TO BUILDERS requiring a steady practical Man, aged 34, accustomed to the entire management of the business and accounts. Can work at the bench. The most satisfactory references will be given.—Address, A. D. 3, Lower Baker-street, Clerkenwell.

AS WORKING FOREMAN of MASONS, an experienced Man. Can make working drawings, set out work, carve and cut letters, and undertake the management of public works, or a general yard. Unexceptionable reference and testimonials. Town or country.—Address, A. P. C. Office of "The Builder."

TO NOBLEMEN AND LAND PROPRIETORS.

A YOUNG MAN, aged 26, is in want of a SITUATION as FARM BAILIFF. He has had the management of a farm and stock farm of 300 acres in Suffolk. Unexceptionable references can be given.—Apply to A. B Mr. E. Haward's, Eversham-street, Bungay.

AS CLERK of WORKS.—An experienced practical Clerk of Works, who is about completing his present engagement, would be glad to meet with a similar SITUATION, the highest references can be given; in or near Town preferred. Address, M. P. Office of "The Builder."

TO ARCHITECTS

AN experienced Architect, having the command of capital to the amount of 20,000l. for advances to builders, may have the professional management of an important building estate.—Apply by letter, addressed to L. S. D. Messrs. Thomas and Co. Universal Advertising Offices, 19 to 21, Catherine-street, Strand.

TO LAND SURVEYORS AND CIVIL ENGINEERS.

A RE-ENGAGEMENT required by a thoroughly experienced and practical Surveyor, competent to take the sole management of a railway, either in town or country. First-rate reference will be given. For further particulars, address Y. Z. Town Surveyor's Office, Burton-upon-Trent, Staffordshire.

A YOUNG GENTLEMAN, who has been for three years in an architect's office, is desirous of obtaining a SITUATION where he would have opportunities for improving himself in his profession. Salary at first no particular object.—Address A. O. Messrs. Dawson's, Stationers, 74, Cannon-street, City.

TO BUILDERS.

AN experienced Foreman of Carpenters and Joiners, having just completed a large job for a private gentleman, wishes for an ENGAGEMENT, either as such or foreman, or to take charge of buildings. Unexceptionable references from his late employer.—Address, T. S. 5, Water-lane, Brixton Rise, Surrey.

A GENTLEMAN, who is well versed in CONSTRUCTION, a good Draughtsman, and accustomed to take out quantities, offers his SERVICES for a period, gratuitously, to any Architect or Builder of considerable practice, who is in want of assistance.—Address, O. C. Mr. Hailes, Stationer, 27, Lendenhall-street, City.

TO ARCHITECTS, &c.

A WELL-QUALIFIED ASSISTANT, who can be satisfactorily recommended by a London Architect, is desirous of a RE-ENGAGEMENT. Address C. A. 46, Queen Anne-street, Cavendish-square.

TO LIME, TILE, BRICK, AND CEMENT MERCHANTS.

A YOUNG MAN, aged 25, who has been accustomed to the above trades for the last nine years, desires EMPLOYMENT. He is capable of keeping books by double entry, and is used to collecting. Satisfactory references as to ability, integrity, &c. can be given.—Address (pre-paid), W. H. Palmer's Library, 97, Lamb's Conduit-street.

TO ENGLISH EXHIBITORS FOR THE PARIS EXHIBITION

A PRACTICAL CARPENTER, lately returned from Paris, wishes for an ENGAGEMENT. Can speak French well, and knows Paris very well.—Address, S. C. Office of "The Builder."

TO ARCHITECTS, &c.

AN Artistic Colourist, Draughtsman, and Designer, OFFERS his SERVICES in the preparation of Perspective Views, with landscape and figures, also in general drawing, on moderate terms.—Address, A. Z. 61, Denbigh-street, Belgravia.

TO BUILDERS AND OTHERS.

AS FOREMAN.—Wanted, by a respectable and steady MAN, a SITUATION with a SHOP or OUT-DOOR FOREMAN, or CLERK of the WORKS. Is theoretically and practically acquainted with the above duties, and is also a first-rate staircase hand. References.—Address, H. P. 3, Swinton-street, Gray's-inn-road.

AN ARCHITECT of good practice, in a large commercial town in the West Riding of Yorkshire, wishes for a PARTNER.—Address, J. B. care of Messrs. Newton and Co. Warwick-square, Newgate-street, City, London, stating name, age, and other qualifications.

MONEY on LOAN, at 3l. per Cent. per Annum.—ARNEWAY'S CHARITY.—NOTICE IS HEREBY GIVEN, that the Trustees of this Charity are enabled to lend out the Trust Moneys to poor occupiers or traders resident within the City and Liberty of Westminster, that is to say, within the parishes of St. Margaret and St. John the Evangelist, St. Anne, Soho, St. Clement Danes, St. George, Hanover-square, St. James, St. Martin-in-the-Fields, St. Mary-le-Strand, and St. Paul, Covent-garden. The amount of each loan is not to exceed 100l. is to clear interest after the rate of 3l. per cent. per annum, and is to be secured by the bond of the borrower, with two sureties. Printed Forms of Application, and all necessary information, may be obtained by applying personally, between the hours of Ten and Three o'clock in the day, at the office of the Clerk and Solicitor to the Trustees, No. 14, Great Queen-street, St. James's Park.

By order,
EDWARD S STEPHENSON,
Clerk and Solicitor to the Trustees.

NOTE. The Trustees meet on the second Wednesday in every month, to consider such applications for loans as have been sent in one clear week at the least before the first day of the month.—The sureties must be unexceptionable.

LOANS from 25l. to 1,000l. upon approved personal or other security, repayable by easy instalments, extending over any period not exceeding fifty months, are readily available from the BRITISH MUTUAL SUBSCRIPTION LOAN ASSURANCE CLASSES. Prospectuses, reports, and every information may be obtained on application at the British Mutual Life Office, 17, New Bridge-street, Blackfriars. Rules 6d. each copy. 1s. per post.

CHARLES JAMES THICKE, Resident Secretary.

PARTNERSHIP.—An Architect, in extensive and increasing practice in Scotland, wishes to assume a PARTNER.—Communications, with regard to which the strictest secrecy will be observed, to be addressed to S. A. Office of "The Builder."

THE LONDON AND MANCHESTER PLATE GLASS COMPANY

Beg to inform the TRADE, that the EXTENSION OF THEIR WORKS being now completed, they are enabled to execute orders to any extent at immediate notice. The Company also beg to intimate that owing to improvements effected in the reconstruction of their Works, the COLOUR and QUALITY of their GLASS will be found to be considerably improved, and trust they can guarantee the maintenance of these essential requirements. They further beg to invite attention to their reduced List of Prices, which may be obtained on application at their London Warehouse, or at the Works

For the convenience of the LONDON TRADE, a large stock of POLISHED PLATE is now kept at the COMPANY'S WAREHOUSE, BARRAUD'S WHARF, WHITEFRIARS.

The Works, Sutton, St. Helen's, January, 1855.

TO ARCHITECTS, BUILDERS, CONTRACTORS, AND OTHER CONSUMERS OF GLASS.

HARTLEY'S PATENT ROUGH PLATE GLASS,

1-8th of an inch thick, or 2 lbs. to the foot; 3-16ths, or 3 lbs.; and 1-4th or 4 lbs. is now universally used for

RIDGE AND FURROW ROOFS, GREENHOUSES, RAILWAY STATIONS, MILLS, MARKET HALLS, BATHS AND WASH-HOUSES, FACTORIES, WORKSHOPS, SHIP-BUILDING SHEDS, AND OTHER EXTENSIVE BUILDINGS.

By a carefully prepared Estimate, it has been ascertained that FOUR-FIFTHS of the ROUGH PLATE, or non-transparent Glass, consumed in the United Kingdom in 1854, was manufactured by HARTLEY'S PATENT—thus affording the most incontestable evidence of its superiority over every other article of the kind, and as being the only description of Glass suitable for the purposes above named. It combines size and strength with economy of cost, and is manufactured in sizes expressly for RIDGE and FURROW ROOFS, giving a SPAN of TWELVE FEET, at a price not exceeding, weight for weight, that of Common Crown Glass. Its non-transparency renders BLINDS UNNECESSARY, and no scorching occurs in Greenhouses glazed with it; hence the preference given to this Glass for all Horticultural purposes.

For further particulars, apply to

JAMES HARTLEY AND CO. SUNDERLAND; AND PURFLEET WHARF, EARL-STREET, BLACKFRIARS, LONDON.

Sole Manufacturers of Lockhead's Patent Perforated Glass for Ventilation.

*** *Hartley and Co.'s Glass Tariff Newspaper will be forwarded gratis, on application.*

January 1, 1855.

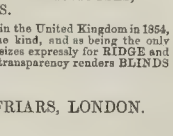
Spruce Deals	"	3d.	per foot.
Yellow ditto	"	4½d.	"
Six-feet Pipe-staves	"	2s. 6d.	each.
Spanish Mahogany	"	8d.	per foot.
Honduras ditto	"	6d.	"
Wainscot	"	8d.	"

Prepared Flooring, Veneers, &c. at equally low prices.
Borough-road, Southwark, and Elm street, Gray's-inn-lane.

ALFRED ROSLING begs to inform his Customers and the Building Trade generally, that he is enabled to allow a discount of 15 per cent. upon his flat prices for Mouldings.—A large stock of dry flooring at low prices.—Southwark-bridge Wharf, Bankside



TIMBER and DEAL YARD.—A large CONSIGNMENT of PREPARED FLOORS (dry), DEALS, BATTENS, &c. for SALE on COMMISSION, at very low prices for cash. Timber Deals, &c. received for sale on Commission. THOMPSON and HOLMES, Wood and Stone Brokers, the Marble Wharf, Thames-bank, Pimlico, adjoining Vauxhall-bridge.

By Her Majesty's Royal Letters Patent.

VENEERS CUT for the TRADE (by Knife only), by the PATENT VENEER-CUTTING MACHINE by which process a hundred per cent. benefit is guaranteed upon the ordinary method of cutting veneers. For particulars of prices, and specimens of work done by the machine, apply to J. CHACK, Sole Patentee, Veneer-cutting Works, 44, Robert-street, Chelsea, adjoining the King's-road Saw-mills.

STAINING WOOD, to imitate Oak and all other woods, twenty-two different shades.—A perfect substitute for paint 6s. per gallon; varnish prepared for ditto, 10s and 12s per gallon. WILSHERE'S, 3, Talbot court, Gracechurch-street. Agents: WILSHERE, Edinburgh; SMITH and SONS, Northampton. Specimens sent, and estimates given for staining churches, chapels, &c.

JOHN WARNER and SONS, Patentees of IMPROVEMENTS in the MANUFACTURE of LARGE BELLS.
J. W. & SONS having of late years devoted much time and study to the long neglected art of Bell Casting, have recently invented and patented a new process connected therewith, by which they are enabled to manufacture Bells of any size, note, or weight, of superior tone, truer in form, and at less cost than has heretofore been accomplished.
Bells for Churches, Chapels, Colleges, Schools, Turret Clocks, &c. cast for any size, note, or weight, singly or in peals.
TUNED BY MACHINERY.
Stocked and wheeled ready for fixing. Old Bells recast or taken in exchange.
MUSICAL HAND-BELLS tuned to the Chromatic Scale, with improved Clappers, and pegged on a new system, which gives a superior tone and facility for ringing

FORSTER and SLATE'S PATENT CONSTANT SUPPLY FILTERS, tested and approved by the first water engineers in the country. Used and approved at the Offices of the Admiralty, Board of Health. Exclusively adopted by the Crystal Palace Company. Easily cleaned without trouble or expense.—To be seen in operation daily, at J. EVANS and SON'S, Ironmongers, 33, King William-street, London-bridge.

TO SAW-MILL PROPRIETORS, BUILDERS, &c.—ON SALE, a first-class PLANING-MACHINE, with 12-inch rollers and the latest improvements. This machine will plane thickness and groove boards at the rate of 30 feet per minute up to 4 inches thick and 12 inches wide. It will require about 1-horse power. May be seen at Mr. JNO. H. WALKER'S Sawing and Planing Mills, Huddersfield.

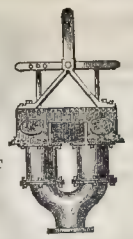
WINDOW BLINDS.—TYLOR & PACE, Window Blind Manufacturers, 104, New Bond-street, and 3, Queen-street, Cheapside, London, submit the following PRICES of WINDOW BLINDS, which they can recommend as being made in the best manner:—Venetian blinds, per square foot, 9d.; best holland blinds, on rollers, 6d.; best ditto, on spring rollers, 9d.; gauze wire blinds, in mahogany frames, 2s.; perforated zinc blinds, in ditto, 1s. 10d.; outside blinds of striped cloth, 2s. Transparent blinds in great variety. Engravings, with prices and discounts to builders and the trade, forwarded on application, post free.

YORK STONE supplied direct from the Quarries.—NOWELL and ROBSON respectfully invite the attention of Architects, Surveyors, Contractors, Builders, &c. to the re excellent STOCK of STONE, combining good colour with durability. Samples may be seen at Kensington Basin and the Great Northern Railway Depôt, King's-cross.—Prices will be sent, and country orders promptly attended to, and delivered at all the Stations on the principal lines of railway, by addressing NOWELL and ROBSON, Quarries, Idle, near Leeds. Purchasers will find the stone of first-rate qualities, and the prices very reasonable.

BUILDING MATERIALS.
BECK'S WHARF, ISLEWORTH.—Builders having works to execute south-west of London, will find a good supply upon this wharf, on reasonable terms, with every convenience for speedy loading by travelling cranes, either into barges or carriages. Portland, Caen Bath, and Yorkshire Block Stone, always in stock; Landings, Paving, &c. Also, Marble in Slab, Dimension pieces, &c. Slate and Roofing Slates from the Llanfrynn Quarries. Timber, Deals, Limes, Cements, Clay Goods, &c.—N.B. This wharf is very near the St. Margaret's estate

TARPAULINS for COVERING ROOFS during Repairs. SCAFFOLD CORD and every description of ROPE used by Builders upon the lowest terms. Marquees and temporary Awnings on sale or hire. Orders per post receive the most prompt attention.—WILLIAM PIGGOTT, 113, Fore-street, City, Manufacturer, by appointment, to her Majesty's Honourable Board of Ordnance.

PATENT SOLID SWISS PARQUETERIE. This beautiful, unique, economical, and elegant description of Flooring, so extensively used in Paris and other continental cities, is now introduced into this country. an extensive assortment of specimens and patterns commencing at 1s per foot super. together with every particular of its cost and adaptation, can be obtained of Mr. BUIET, 2, Charlotte-row, Mansion House; or of Messrs. ARROWSMITH and CO. 59, New Bond-street.



FOWLER'S

ON SINGLE PUMPS, BARRELS AT SHORTEST FOR HAND STEAM

HIRE, AND DOUBLE 3 in. to 15 in. to any depth, NOTICE, OR POWER.

FOWLER'S IMPROVED WROUGHT IRON PUMPS,

FOR CONTRACTORS, BUILDERS, EXCAVATORS, and OTHERS.

A LARGE STOCK, from 3-inch to 9-inch Barrels, with Plain or Sliding Telescope Suction, always on hand.

This description of Pump Work varying in almost every case, it is impossible to quote a general price, but the fullest particulars will be given on application.

BENJ. FOWLER, WHITEFRIARS-ST. FLEET-ST. **NOT DORSET-ST.** as formerly.

TO BE LET, a PIECE of GROUND for a FOURTH RATE HOUSE, near Sloane-street, at a ground-rent of 4l. per annum, and being the only house to complete the street. Houses in the street always let before they are finished. Apply to Mr. WATTS, Builder, 2, South-street, Grosvenor-square.

FREEHOLD LAND.—To BUILDERS or Part's wishing to build Suburban Road-nes.

FREEHOLD LAND TO BE SOLD on some of the most eligible building estates in the neighbourhood of London, viz.:—

Forest-hill, Croydon Railway.
St. Margaret's, near Richmond, South Western Railway.
Oatlands Grange, Weybridge, Surrey, ditto.
Tottenham green, Eastern Counties Railway.
Putney, South Western Railway.
Rectory Estate, Ealing, Great Western Railway.
The Waddington Estate, Enfield, Eastern Counties Railway.
Wood-green, Green-lanes, Hornsey, Great Northern Railway.
Old Ford, Stratford, Eastern Counties Railway.

Each of the above estates offers its own peculiar advantages. Plots of land of any size, or for any class of houses, to the extent of One acre, can be obtained. On the two first estates, large pleasure-gardens are allotted to the freeholders or tenants of houses. Part of the purchase-money may remain at 5 per cent. interest. Parties assisted in the building of their own residences. Builders may obtain the freeholds of plots of land to build upon, and the greater portion of purchase-money may remain at an annual charge (for about ten years) less in amount than the ground rent of the same under the usual system. In addition, therefore, to the amount to be raised on the building by mortgage, they can sell the ground-rent created by themselves at a large profit. Several plots to be let on building lease. Money advanced to responsible parties.—Apply to Mr. GEORGE MORGAN, Architect, 6, Chancery-lane.

TO BUILDERS. — Mr. J. SHEPPARD SCOTT, Architect and Surveyor, has some eligible FREEHOLD PROPERTY at Stratford, TO LET on lease for 99 years, at a ground-rent of 3l per house, 65l. will be advanced per house as the works proceed, and there is space for twenty four small houses, to contain four rooms and kitchen, with small room over. Apply for particulars at No. 19, Commercial-road, St. George's East.

TO MANUFACTURERS. — TO BE LET, with immediate possession, with or without the machinery, CHEMICAL WORKS and COPPERAS MANUFACTORY. The copperas manufactured will, in addition to the rent, leave a clear profit of 100l. per annum. The premises are in a populous and within one tide's sail of London; suitable for carrying on manure or other noxious manufacture.—Application to RICH. COTTON, Esq. 31, Lime-in's-inn fields, by letter only.

NEW METROPOLITAN CATTLE MARKET.—HAY STORES TO BE LET.—The Markets Improvement Committee of the Corporation of London will meet at Guildhall, on THURSDAY, the 15th day of MARCH, at ONE o'clock precisely, to receive TENDERS for the HAY STORES at the New Market. Tenders must be sealed up and endorsed "Tender for Hay Store, No.—" The Committee do not bind themselves to accept the lowest or any Tender. Plans may be seen and particulars obtained at the City Architect's Office, Guildhall.

MEREWETHER.

NEW METROPOLITAN CATTLE MARKET.—SLAUGHTER-HOUSES TO BE LET.—The Markets Improvement Committee of the Corporation of London will meet at Guildhall, on THURSDAY, the 15th day of MARCH, at SEVEN o'clock precisely, to receive TENDERS for the SLAUGHTER-HOUSES, public and private, at the New Market. Tenders must be sealed up, and endorsed "Tender for Slaughter-house, No.—" (public or private, as the case may be). The Committee do not bind themselves to accept the lowest or any Tender. Plans may be seen, and particulars obtained, at the City Architect's Office, Guildhall.

MEREWETHER.

HAMPTON-COURT. — BUILDING LAND TO BE LET, for ninety-nine years, with option of purchase, near the above station, and close to East Moulsey Church. A portion of the estate has been laid out for villa residences, some already erected, with gardens running down to the river Mole. The plots vary in depth from about 180 feet to 400 feet, and in price from about 8s. 6d. to 5s. per foot frontage. Another portion has been devoted to cottages (which are much required in this locality), at extraordinarily low rates. The residue of the estate is admirably adapted for shops or small houses.—Apply to F. LETT, Esq. Architect, 30, Essex-street, Strand, London.

GUILDHALL, March 6, 1855.—The Committee for Letting the City's Lands will meet at GUILDHALL, on WEDNESDAY, the 14th MARCH instant, at ONE o'clock precisely, to receive PROPOSALS for LEASES of a House, No. 18, on the east side of South-street, Finsbury; a House, No. 2, on the north side of South-place, at the corner of South-street; and Premises, No. 24, on the north side of South-place; a House, No. 8, City-terrace, Old street-road; and Four Houses, Nos. 6, 7, and 8, Sycamore street, and No. 9, Ragged-row, Old-street. The premises are to be let for 21 years (less three days), from Lady-day next.—Further particulars and plans may be seen, and forms of Tender obtained, at the Architect's Office, Guildhall.

FERDINAND BRAND, Comptroller.

TO CAPITALISTS. — WESTON-SUPER-MARE.—TO BE SOLD by PRIVATE CONTRACT, nearly FOUR ACRES of BUILDING LAND, abutting upon the sea-beach, and entirely overlooking the sea, adapted for the erection of eighty houses, to form a grand square, terraces, and streets. It is now the only frontage land to the sea remaining unbuilt on in this rapidly-increasing bathing place. There are several thousand feet of frontage, a large cottage ornee, with two other cottages, three pews in the parish church, and most valuable restrictive non-building covenants over the adjoining lands. The purchase-money may remain on mortgage, if wished. Immediate possession may be had.—Plans and all particulars obtained of B. GUY PHILLIPS, Esq. Weston-super-Mare.

WATER-SIDE PREMISES. — TO BE SOLD, freehold and part leasehold, BRUNSWICK WHARF and DRAW DOCK, VAUXHALL, many years established in the brick, tile, stone, slate, and lime trade, &c. Excellent RESIDENCE, Offices, Stabling and Warehouses, the whole in substantial repair, adjoining the South-Western Railway Goods Station, and abutting on the road leading to Wandsworth, with 135 feet frontage to the river Thames.—Apply on the premises; or to Messrs. NELSON and INNES, Architects and Surveyors, Regent Chambers, No. 38, Regent-circus, Piccadilly.

VALUABLE BUILDING LAND.—TO BE SOLD in PLOTS, or LET on BUILDING LEASES at moderate ground rent (especial advantages will be offered to Builders). The land is Freehold, and the situation singularly eligible near to a first-class railway station, surrounded by a park and open meadows; the soil gravel, of which there is an unlimited supply; the neighbourhood highly respectable and proverbial healthy, and the demand for villas far exceeds the supply. Further particulars may be obtained of Mr. S. S. SCOTT, Surveyor, 19, Commercial-road, St. George's East; and of Mr. ABRAHAMS Auctioneer and Estate Agent, London road, Twickenham.

DORSETSHIRE. — CLAY LANDS. — TO BE LET, on long leases, several valuable parcels of LAND, in a good clay district, with direct railroad communication. Also, a large BRICKYARD, in working order, with kilns and plant complete.—Apply to THOMAS KINGDON, Esq. Solicitor, Wimborne, Dorset.

TO SURVEYORS.—TO BE DISPOSED OF, a superior SURVEYING LEVEL, in perfect order, with mahogany case, &c. Also, a 6 inch THEODOLITE, divide on silver, complete, with tripod-stand, &c.—Apply to L. Y. No. 14, Wimbourne-street, New North-road, Hoxton.

SLUICE-VALVES, fitted with square double-threaded screws, springs, brass nuts, glands, and facings; price, from 2½ inch to 12 inch, 2s. per inch. These valves, being steam tight, and of the best workmanship, are particularly applicable to Baths and Washing-use, and the better class of work. Liberal discount allowed to architects and the trade.—Falcon Engine Works, Loughborough; orders in London kindly received by W. H. WALENN, C.E. 7, Duke-street, Adelphi.

FARM AND COTTAGE PUMPS.

WARNER'S PATENT CAST-IRON PUMPS, for the use of FARMS, COTTAGES, MANURE TANKS, AND SHALLOW WELLS.

Patent Pump £1 12 0
Patent Pump, with 15 feet of lead pipe attached, and bolts and nuts ready for fixing 2 12 0
Larger sizes if required.

The smaller sizes are also much used for supplying Hot, Forcing, and Plant Houses, from underground Water Tanks, and can be readily fixed in any situation.

May be obtained of any Ironmonger or Plumber in Town or country, or of the Patentees and Manufacturers,

JOHN WARNER AND SONS,
8, CRESCENT, JEWIN-STREET.

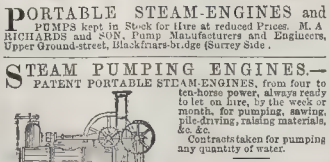
Every description of Machinery for raising Water, Fire Engines, &c.

The usual allowance to the Trade.

M. A. RICHARDS and SON, PUMP MANUFACTURERS and ENGINEERS

Pumps in Wrought and Cast Iron and Brass, bored by machinery, and fitted in the best possible manner, suitable for excavators, roads, brickmakers, farms, gardens, stables, liquid manure, ships, barges, well-sinking, &c. adapted for any depth. Hydraulic Pumps for deep wells.

PUMPS ON HIRE.



Pumps of any size, single or double barrel, up to double 12-in. diameter, kept ready for use at reduced prices.

N.B. The above can be worked either by hand, horse, or engine power.

Contracts taken for pumping any quantity of water.

JAMES BURTON & SONS,
Engineers and Contractors,
John's-place, Holland-street,
Southwark, London.

A SAVING of TIME and MATERIALS, with Solidity of Building.

HENRY GOUGH'S PATENT PORTABLE STEAM ENGINES of two, three, four, and six horse power, for grinding mortar, raising building materials, driving piles, circular-saws, pumps, &c. 46, Albert-street, Manchester.

"Railway Contractor's Office, Wellington, Salop.
"December 1, 1854.

"DEAR SIR,—We have much pleasure in bearing testimony of the value of your Patent Portable Engine that you fitted for us, for the construction of the tunnels on the Bacup Branch of the East Lancashire Railway in 1851, and have since used for sawing timber, and driving other machinery up to the present time, during which period, although, for weeks the fire has never been out, we have no stoppage for repairs.

"We remain, dear sir, yours most faithfully,
"Mr. Gough." "DICKSON and McKENZIE."

TO CONTRACTORS.

PORTABLE STEAM-ENGINES TO BE LET, on HIRE, by the WEEK, MONTH, or for any period, of 8-horse, 14-horse, 12-horse, 16-horse, 20-horse, and 25-horse power, adapted for contract work generally. These engines have been successfully employed for years by all the principal contractors, and are ready for delivery at a day's notice. Several may be seen at work, at Messrs MEDWIN and HALLS, Engineers, 92, Blackfriars road, Sole Patentees and only Manufacturers.

N.B. Any of these Engines may be purchased.

TO ARCHITECTS AND SURVEYORS

TO BE DISPOSED OF, upon moderate terms, a small but increasing PRACTICE, in a rising and beautiful watering-place.—For further particulars, address, S. S. Office of "The Builder."

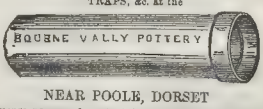
IMPORTANT TESTIMONIALS
TO THE EFFICIENT WORKING OF
STEPHEN GREEN'S
PATENT SYPHON FLUSHING BASIN,
AND
SELF-ACTING CLOSET CONNECTIONS.



Oxford, November, 1849.

GENTLEMEN,—Sixteen of your Closets having been put into operation at Christ Church College, I have great pleasure in giving you my testimony as to their efficiency and simplicity.
HENRY J. UNDERWOOD, Architect.
R. S. HOGGAR, Engineer.

Royal Arsenal, Woolwich, June 24, 1852.

GENTLEMEN,—I have much pleasure in giving my testimony in favour of your Patent Syphon Flushing Basin, with Self-acting Closet Connections. There are several fixed here, which have been in use for upwards of twelve months, giving perfect satisfaction.
I am, Gentlemen,
Your obedient Servant,
WILLIAM CARTWRIGHT.

SALT-GLAZED STONEWARE PIPES, BENDS, JUNCTIONS, CLOSET-PANS, TRAPS, &c. at the

NEAR POOLE, DORSET

These Pipes being made under immense pressure by patented machinery, and burnt by intense heat to an unusual degree of hardness, are very far superior to the best ware hitherto manufactured in Hants and Dorset; they are made of clay of the finest quality, the produce of the estate, and will bear comparison with any Pipes in the kingdom, and can be had upon application to
THE AGENTS:—
Mr. G. S. WHITTON, 17 and 18, Princes-street, Lambeth, London;
Mr. J. S. HUDSON, the Pottery, Bournemouth, Poole;
Where a large stock is always kept on hand.

GUTTA PERCHA TUBING.—Many inquiries having been made as to the durability of this tubing, the Gutta Percha Company have pleasure in drawing attention to the following letter received from Mr. C. Hacker, surveyor to the Duke of Bedford:—"Office of Works, Woburn-park, Jan. 1, 1852.—In answer to your inquiries respecting the gutta percha tubing for pump suctions, I find that the water has not affected it in the least, although it will eat lead through in two years; we have adopted it largely, both on account of being cheaper than lead, much easier fixed, and a more perfect job. Yours, &c. C. Hacker." N.B. The Company's Illustrated Circulars, containing instructions to plumbers for joining tubes, lining tanks, &c. will be forwarded on the receipt of three postage stamps.—The Gutta Percha Company, Patentees, 18, Wharf-road, City-road, London.

Patent Closets and Basins with supply-valve for attaching direct to main pipes without a cistern, cocks, or wire.
LEAD, IRON, and TIN PIPE.
JOHN WARNER and SONS, Manufacturers, 8, Crescent, Jewin-street, London.

BURSTING of PIPES by FROST.

This accident is prevented by the use of LAMBERT'S PATENT LEVER VALVE-COCKS, which act as safety-valves.

The lever is weighted, to resist the pressure of the column of water upon the valve, but it is not weighted sufficiently to resist the powerful expansion of water caused by the frost, which lifts the lever, and thereby prevents injury both to valve and pipe. When reaction takes place, the lever and weight resume their original position.

Many thousands of these Valve-cocks are now in use under pressures of from 2 to 300 feet, with uniform success.

Price of ½ inch bore, with sunkplate and handle, 10s. 6d. each.

THOS. LAMBERT AND SON,
Patentees and Sole Manufacturers, Short-street, New-cut, Lambeth.

E. and W. STURGE invite special attention to their reduced LIST of PRICES of Drain Pipes, Junctions, Pans, Traps, &c.; also, to their Paving, Sinks, &c.; Slates of the best quality, wholesale and retail. Country builders and others supplied with all information, on application to E. and W. STURGE, Bridge-wharf, City-road.

N.B.—The wharf is well situated for carriage by canal boats, or to the railways, to which but a small charge for cartage is made.

January, 1855.

TO BUILDERS AND HOUSE DECORATORS.

THE LARGEST STOCK of Upholsterers' Cloths, Baizes, and Druggets, in every width, colour, and quality, is kept at HILL and SON'S, 88 and 89, St. Martin's-lane, Charing-cross. Patterns forwarded upon application.

SCAFFOLDING.—Wanted, to Purchase, 1,000 POLES, 1,000 PUTLOGS, 1,000 BOARDS, 1,000 CORDS.—Apply by letter only (prepaid), addressed, Y. Z. 9, Stratford-grove, Putney.

WILLIAM BATLEY, Engineer and Boiler Maker, Northampton. Manufacturers, Local Boards of Health, or any persons requiring Engines, Machinery, or Boilers of any description, may be supplied with the same of the very best material and workmanship on the shortest notice.—For catalogues, estimates, or contracts apply as above.

PURE WATER, for manufacturing purposes, may be obtained at very moderate cost by RANSOME'S FILTERING STONE. Estimates given for large or small quantities. Builders and Plumbers supplied with the necessary and other Filters at trade prices. These filters, at one, two, three, and four guineas each, yielding 50, 100, 150, and 200 gallons per diem, will be found sufficient for ordinary domestic requirements; are self-acting, and not liable to get out of order. References to parties satisfactorily supplied with quantities up to 30,000 gallons per diem, may be obtained on application at the depôt, 71, Baker-street, Portman-square, London.

GREAT REDUCTION IN THE PRICE OF

JENNINGS'S PATENT WATER-CLOSETS.

LOCAL BOARDS of HEALTH, BOROUGH ENGINEERS, and all interested in SANITARY PROGRESS, are respectfully informed that the commonalities of

JENNINGS'S PATENT IMPERISHABLE WATER-CLOSETS,

can now be had at very reduced prices. These Brown Stone, or Yellow Glazed Pans, in point of efficiency, are equal to the best qualities of Enamelled Ware. Many thousands of these Closets were fixed during the last year in the dockyards of Woolwich, Deptford, Chatham, Sheerness, Plymouth, Devonport, Keyham Steam-yard, the Royal Victualling Establishment, Plymouth, Model Lodging Houses in Town and Country, Prisons, Unions, Asylums, &c., and among the many first-class dwellings fitted with these Closets, may be named the residence of the proprietor of the *Times*, and J. Simon, Esq. Medical Inspector for the City of London; other references if necessary.

JENNINGS'S PATENT DRAIN-PIPES.

The demand for these pipes is proof positive, that some alteration in Drain Pipes was necessary; every week adds a town, or some public work to those already to be drained with these pipes. Last week the Town Council of Oxford decided to use them; this week the Improvement Commissioners for Keovil have decided to use them; as also the Wilts County Magistrates, through their Architect, Thomas Henry Wyatt, Esq. for the Wilts County Militia Barracks and Stores.

A Book containing Illustrations and Particulars of JENNINGS'S Drain Pipes, Water Closets, Urinals, Lavatories, Sluice-Valves, Fire-Cocks, Gully-Traps, Shop-Shutter Shoes, &c. &c. can be had free on application, or by post if two postage stamps are inclosed to

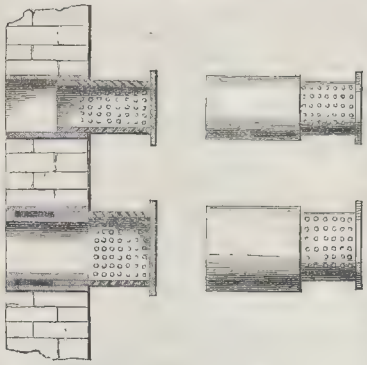
Twenty-one large and important Towns have been drained with Doulton's Glazed Stone-ware Pipes, and in no case has the slightest failure occurred, or any necessity arisen for examination.

Messrs. D. and Co. do not publish Testimonials, but references can be given to any of the Engineers and Surveyors under whom they have executed works. DRAWINGS, WITH PRICES, MAY BE HAD ON APPLICATION AS ABOVE.



LOOKER'S PATENT VENTILATORS.

This invention consists of a tubular piece of pottery, or other material, of any size or shape, fixed into the wall of a building, in which another with a closed end is made to slide, the latter being perforated about two-thirds of its length with small holes, made in a slanting direction.

When the ventilator is open, or drawn out to any extent, fresh air may be admitted, or impure air find egress, without the slightest draught being felt. It may be closed entirely, opened to admit or carry off as much air as will pass through the larger tube, or regulated with perfect ease to any point.

The engravings represent round ventilators, but they may be square, or any other shape, with the perforations only on the upper part, or the top of the sliding piece may be entirely open.

The fixed tube may be double, the sliding one working in the middle, by which the ventilator may be adapted to any apartment.

Among the advantages which this invention possesses are:—

1. The simplicity of its arrangement.
2. It can be made of any shape, size, or design, and in any kind of pottery to suit every situation.
3. It may be made ornamental, the closed end admitting of any embellishment or device.
4. The pure air is much rarefied by the manner in which it passes through this ventilator.
5. It may be made an effectual preventive of down-draught and back-smoke.

MANUFACTURED in RED POTTERY, for the USE of WORKHOUSES, BARRACKS, FACTORIES, STABLES, FARM BUILDINGS, &c. &c. by the INVENTOR & PATENTEE, BENJAMIN LOOKER, JUN. KINGSTON-ON-THAMES, of whom further particulars, with terms of license to manufacture the above in other material, may be obtained.

TO SANITARY COMMISSIONERS, SURVEYORS, ARCHITECTS, BRASSFOUNDERS, PLUMBERS, BUILDERS, ENGINEERS, &c.

61,000 of the Deaths in England during the Year 1854 are referable to the imperfect operation of the sanitary organisation of our towns.—*Globe*, 1st February, 1855.

AND THE SANITARY POTTERY NAILSEA (Late Couthupes and Co.)

SALES BY AUCTION.

THE COLOSSEUM.

MESSRS. WINSTANLEY are directed to SELL BY AUCTION, at the MART, Bartholomew-lane, on WEDNESDAY, MARCH 11, pursuant to a Decree in the High Court of Chancery, with the approbation of the Master, in the cause of "Phillips and another v. Turner and others," THE COLOSSEUM IN THE REGENT'S-PARK; an Exhibition of Science and Art, which has justly merited and received the patronage of Royalty, the support of the public, and universal approbation, 15,000 persons having paid for admission, and as much as 5,000*l.* received in the course of one year. THIS VALUABLE AND IMPORTANT PROPERTY, viewed merely as an investment, would produce a very large return for capital, but as a place of public amusement, in the hands of another spirited proprietor (who would add to the numerous great objects of attraction novelties suited to the present time) it offers greater pecuniary advantages, an unsuccessful capability as a public to any other establishment. THE MAGNIFICENT EDIFICE, with its finely-proportioned PORTICO and DOME was originally designed by Mr. Decimus Burton; the interior of the building was rearranged and decorated, at an enormous cost, under the superintendence of the late Mr. W. Bradwell; works of extraordinary merit, by talented artists, have from time to time been produced, and the present Exhibition now possesses the following leading features, viz.: THE GLYPTOTHECA, or MUSEUM OF SCULPTURE. The enchanted Panorama of "LONDON BY DAY," and the two splendid moveable Panoramas of "LONDON BY NIGHT," and "PARIS BY MOONLIGHT," the Stalactite Caverns, Swiss Cottage, Chasm and Lake, Rustic Bridge, the Classic Ruins and Models of celebrated Greek and Roman Temples in the exterior promenade, the extensive and beautiful ranges of Conservatory, Gothic Aviary, splendid Saloon, or Refreshment room, &c. In addition to the foregoing is the GRAND COLORAMA IN ALBANY STREET,

a building of the first order, constructed especially for holding Dioramas on an unparalleled scale. In connection with it is the ELEGANT AND CHASTELY-DECORATED THEATRE, with beautiful stage scenery and other paintings by Mr. Banks, the "THE DIORAMA OF NAPLES," a MUSEUM in the exhibition, showing the great ERUPTION OF VESUVIUS and DESTRUCTION OF POMPEII, A.D. 79, and which, like the preceding one of Lisbon, by Danson, is a masterly production. This portion of the property might be let off as an independent undertaking, and would readily produce a very considerable rental. The working machinery, steam engine, gas, and other fittings, fixtures, and sundry effects, will be included in the purchase. The property occupies a FRONTAGE OF ABOUT THREE HUNDRED FEET, both to the Park and Albany street, and is held by one lease under the Crown for about sixty-seven years, at the very low ground-rent of TWO HUNDRED AND SIXTY-TWO POUNDS EIGHTEEN SHILLINGS PER ANNUM.—Printed particulars may be had, three weeks prior to the day of Sale, at the Colosseum; of Messrs. CHARLIN and HILLIARD, Solicitors, 3, Gray's-inn-square; of Messrs. HINE and ROBINSON, Solicitors, Charterhouse-square; of Mr. ARCHER, Surveyor, 18, Lower-street, Bedford-square; at the place of Sale; and of Messrs. WINSTANLEY, 10, Paternoster-row; of whom may be had orders to view the whole, at 1s. each person, at stated times.

THREADNEEDLE-STREET and FINCH-LANE.—Building Materials of Three Houses.

PULLEN and SON are directed to SELL by AUCTION, on the PREMISES, on TUESDAY, MARCH 31, at TWELVE, all the valuable BUILDING MATERIALS of THREE HOUSES, situate at the corner of Threadneedle-street and Finch-lane, comprising sound brickwork, plain and pan tiles and slates, at 3d. timber in roofs and floors, glazed sashes, doors, floor-boards, shop-fronts, iron columns, lead flats, gutters, and pipes, cisterns, stoves, and useful fittings up.—May be viewed the day previous, and catalogues had of Messrs. JAMES and JOHN, Architect, 9, Lawrence Pountney-lane; and of PULLEN and SON, 80, Fore-street, Cripplegate.

The Materials of the Outer Walls of the Gaspar street Compter, containing 2,000 capital Bricks.

PULLEN and SON respectfully announce that they will SELL by AUCTION, on the PREMISES, on MONDAY, MARCH 19, in lots (unless an acceptable offer be previously made by private contract), the capital BRICKWORK and MATERIALS of the outer walls (with a surrounded the late Giltspur street Prison, comprising about 2,000 cubic stock bricks, 200 feet run of stone coping, &c. May be viewed, and catalogues had of PULLEN and SON, 80, Fore-street, Cripplegate.

FARRINGDON-STREET EXTENSION.—Important Sale of Building Materials of Fifty Houses.

PULLEN and SON have the honour to announce that they will SELL by AUCTION, on the PREMISES, on THURSDAY, MARCH 22, and following days, at TWELVE, by order of the Commissioners of Sewers for the City of London, the whole of the VALUABLE BUILDING MATERIALS of about fifty houses, shops, factories, and various premises, situate in Turnagain-lane, Clark's-place, Wild-street, Bittern-place, and Ray-street, Cockerwell, comprising about 1,000,000 excellent bricks, several tons of lead, plain and pan tiles, prime timber, sashes, doors and fittings, floor boards, paving, slate, and an immense assortment of useful materials, fixtures, and fittings. May be viewed two days previous. Catalogues had at the Architect's Office, Guildhall, and of PULLEN and SON, Fore-street, Cripplegate.

Important Sale of upwards of 200 Marble and Stone Chimney-Pieces

MR. BRAY, Jun. will SELL on the PREMISES, Hunter's Marble Saw Mills, Cambridge-heath, Hackney, on TUESDAY, MARCH 24, at TWELVE for ONE, upwards of 200 CHIMNEY-PIECES in Statuary, Black, Bardilla, Vein, and Siberian Marbles, many with carved trusses and other ornaments. The whole are complete and ready for fixing.—May be viewed, and catalogues had, on the Premises, and at the Auctioneer's office, 57, High Holborn.

IN BANKRUPTCY. Stock of Deals, Dry Pine Boards, and other Timber, Steam engines Sawing frame, and Circular Bench, by order of the Assignees of Mr. W. BOWLER.

MESSRS. HAMMOND and EILOART will SELL by AUCTION, on the PREMISES (old Jamaica Wharf, Upper Ground-street, Dowgate), on FRIDAY, MARCH 16th, at TWELVE, about 70 tons 2nd and 3rd yellow planks, deals, and battens; 45 tons boards, from 1½ in. to 3 in. cut; 1,500 prepared Mordecai's match boarding, feet or edge dittо; two sheet coils of fine tarred Petersburgh flax; beech planks and quarters, for poles, quartering, &c.; also the tire and timber erections of sheds; a three horse high-pressure portable steam-engine and boiler, with capital saw-frame for two sets of saws, circular bench, 28 frame and circular saws, and complete fittings of the saw-mill, &c. To be viewed the day prior and morning of sale. Catalogues on the Premises; of Messrs. RYDON and SON, 11, King William-street, City; J. NICHOLSON, Esq. Official Assignee, Basinghall-street; and at the Auction Offices, 38, Chauncery-lane.

BOROUGH of SOUTHWARK. Ninety-three Freehold Houses, in single lots, each House entitling to a Vote,—particularly worthy the notice of capitalists.

MR. W. F. HAMMOND has been favoured with instructions from the proprietor to SELL by AUCTION, at GARRAWAY'S, on FRIDAY, MARCH 30 at ELEVEN for TWELVE, in single lots, the above valuable FREEHOLD ESTATE, comprising Ninety-three Houses, all lying compact in four blocks, and known as Henry-street and Elham-street, with a frontage in Swan-street, Borough. The description of the property is of the third and fourth rates, well built, having been erected about thirty years, consisting of shops and dwelling houses, which are well occupied, and producing rentals from 10*l.* to 35*l.* each, making a total sum of 1,234*l.* 4*s.* 0*d.* per annum, each house entitling the fortunate purchaser to an important investment to small capitalists, being sold in separate lots, with a special condition granting to every purchaser, as a further facility, the option of leaving one half of the purchase-money upon mortgage, to be paid off by such instalments, and at such periods, as may be mutually agreed upon between the vendor and purchaser; but the vendor will not object to receive proposals for allowing a larger proportion of the purchase-money to remain on mortgage.—N.B. Although the property is appropriated into separate lots, to meet the interests of small capitalists, the auctioneer will be prepared to put up several lots together should it be desired by those present at the time of sale.—Further particulars, with conditions of sale, and plans of the estate, to be had: Messrs. JACOB, COBB & BUCKLE, Solicitors, 4, Basinghall-street, City; at Garraway's Coffee-house, Cornhill; of Mr. SAXON, the Collector on the Estate, 47, Henry street; and at the Auctioneer's Offices, 3, Carey street, Lincoln's-inn.

BAXTER, on THURSDAY, MARCH 15, 1838, at TWO o'clock at the GEORGE INN, Beckenham, Kent, all readily felled, and lying on Thayer's park, Elm Farm, and Village Farm, near to Penge and Beckenham, Kent, 11 mile from the Sydenham Station, on the Croydon Railway. May be viewed four days prior to the sale; and catalogues had at the Dover Castle Inn, Deptford; Crooked Billet, at Penge; and of the Auctioneer, Bromley, Kent.

GREAT WESTERN RAILWAY. Further portion of the valuable Materials of the Old Terminus of Paddington.

MESSRS. FIELDER and HORNE are instructed by the Directors of the Great Western Railway Company to SELL by AUCTION, on the PREMISES, on TUESDAY, MARCH 20, at TEN for ELEVEN, the valuable MATERIALS and FITTINGS of the BUILDING, consisting the solid board-room and offices, together with the engine-house, smiths' sheds, and other erections, comprising 100 squares of slates, a large quantity of Elm and Deal boarding, excellent doors, sashes, and other fittings, several tons of lead, capital stock brickwork, iron columns, and other effects.—May be viewed one day previous, and catalogues had on the Premises; and of the Auctioneers, 49, Parliament-street, or Coal Exchange.

TO BRICKLAYERS, BUILDERS, and MASONS.—To be DISPOSED OF, in consequence of the death of the proprietor, the GOODWILL, Stock, &c. of an Old established Business, in a good and healthy situation a few miles from Town, at the West End.—The premises being close to the Regimental Barracks, offer a desirable opportunity for a Mason, and would be an excellent opportunity for a Statuary Mason. To any purchaser the coming in would be low. Apply by letter, p.p. to C. D. care of Mr. Spiller, Stationer, 109, Holborn-hill.

TO STOVE-GRATE MANUFACTURERS.—To be Founders, Engineers, Builders, Smiths, and Others. TO BE DISPOSED OF, spacious MANUFACTURING PREMISES, in most desirably situate in a central part of London, and in a leading thoroughfare. The freehold may be purchased if desired. The tools and stock may be reduced to about 200*l.*—For further particulars apply to Messrs. FULLER and HORSEY, Billiter-street, City.

TO BUILDERS, &c.—TO BE SOLD, a well established BUSINESS in the City of London in the PAINTING, PLUMBING, and BUILDING LINE; with an old and respectable connection, which might, with judicious management, be secured to a successor; to which end every facility and long date of lease would be given. The business which has been conducted by the widow of the late proprietor under great disadvantages, is capable of much improvement. Every explanation relating to the amount of business done and doing, will be freely afforded. No agent need apply, as principals only will be treated with. Offers will be taken—Address, prepaid, J. N. X. Mr. Greig's, Baker, Holloway.

LARGE HOUSE and GROUNDS WANTED, by the Committee of the Soldiers' Orphan Asylum, in the vicinity of London, for a temporary Asylum; a healthy site, easy of access, with good drainage and water indispensible. A suitable House and Building Land for the Asylum intended to be built, which might be erected during the occupancy of the temporary building will be preferred.—Particulars to be sent to the Architect, F. HALMAN POWELL, Esq. 4, Gardener's-court, Temple

FREEHOLD LAND.—Wanted to PURCHASE, FIVE to TWENTY ACRES of FREEHOLD LAND, near a railway station, and within twenty miles of London. A direct full particulars to Mr. R. BRETT, 4, Wellington-street, chambers, London-bridge, Southwark.

LEASEHOLD or FREEHOLD.—Wanted to PURCHASE, TEN to TWENTY Long Leasehold or Freehold HOUSES, rentals from 20*l.* to 40*l.* in or near London.—Address, prepaid, to Mr. R. BRETT, 4, Wellington-chambers, London-bridge, Southwark.

WANTED to PURCHASE, a detached Freehold Six or Seven roomed COTTAGE, with a garden, situate in the suburbs of London.—Direct A. Z. 190, Southwark-bridge-road, Borough, London.

OFFICES for an ARCHITECT, with or without apartments, close to the British Museum. An Architectural Draftsman lives in the house. Apply at 25, Great Russel-street, Bedford-square.

LONDON: Printed by CHARLES WYMAN, of 13, Hunter-street, Brunswick-square, in the Parish of St. George, Bloomsbury, Printer, at the Printing-office of COX (Bros.) & WYMAN, 74 & 75, Great Queen-street, Lincoln's-inn-fields, in the Parish of St. Giles-in-the-Fields; and published by the said CHARLES WYMAN, at the Office of THE BUILDER, York-street, in the Parish of St. Paul, Covent Garden, all in the County of Middlesex. ADVERTISEMENTS.

ROYAL ACADEMY of ARTS, Trafalgar-square.—NOTICE to ARTISTS.—All works of Painting, Sculpture, Architecture, or Engraving, intended for the ensuing EXHIBITION at the ROYAL ACADEMY, must be sent in on MONDAY, the 9th, or TUESDAY, the 10th of APRIL next, after which time no work can possibly be received, nor can any works be received which have already been publicly exhibited.

FRAMES.—All pictures and drawings must be in cut frames. All paintings under glass, and drawings with wide margins are inadmissible. Excessive breadth in frames as well as projecting mouldings may prevent pictures obtaining the situation they otherwise merit. The other regulations necessary to be observed may be obtained at the Royal Academy.

JOHN PRESCOTT KNIGHT, R.A. Sec.

Every possible care will be taken of works sent for exhibition, but the Royal Academy will not hold itself accountable in any case of injury or loss, nor can it undertake to pay the carriage of any package. The prices of works to be disposed of may be communicated to the Secretary.

ART-UNION of LONDON. — By Royal Charter. — Prizeholders' select for themselves from the Public Exhibitions. Every Subscriber of One Guinea will have, besides the chance of a Prize, an Impression of a Plate of "A WATER PARTY," by J. T. WILLMORE, A.R.A. after J. M. CHALON, R.A. and a Quarto Volume of Thirty Illustrations of Byron's 'Childe Harold." The prints are ready for delivery, and the volume may be seen at the Office.—Subscription closes 31st inst. GEORGE GODWIN, } Honorary
444, West Strand. LEWIS POCOCK, } Secretaries.

INSTITUTION of BUILDERS' FOREMEN and CLERKS of WORKS.—NOTICE to MEMBERS.—In consequence of WEDNESDAY, the 31st day of MARCH being appointed for a general fast, the ordinary Meeting of this Institution is postponed until the FIRST WEDNESDAY in APRIL next.
W. ALLARD, Secretary.

DEPARTMENT of SCIENCE and ART. Lectures will be delivered during the Spring Session as follows:—

AT THE MUSEUM OF PRACTICAL GEOLOGY, JERMYN-STREET.

On ANIMAL FORM, by Thomas Huxley, Esq. F.R.S. A course of Six Lectures, on FRIDAYS, at FOUR p.m. commencing the 9th of MARCH.

On the HUMAN FORM, by John Marshall, Esq. F.R.C.S. A course of Twelve Lectures, on FRIDAYS, at FOUR p.m. commencing the 27th of APRIL.

On FORM and COLOUR, by John Lindley, Esq. F.R.S. A course of Five Lectures, on WEDNESDAYS, commencing the 9th of JUNE.

AT MARLBOROUGH HOUSE.

On SURFACE DECORATION, by O. Hudson, Esq. A course of Five Lectures, on TUESDAYS, commencing 20th of MARCH

On the HISTORY of ORNAMENTAL ART, by R. N. Wornum, Esq. A course of Twelve Lectures, on MONDAYS, at Half-past EIGHT, p.m. and TUESDAYS, at FOUR p.m. commencing the 2nd and 3rd of APRIL.

On WOOD ENGRAVING, by John Thompson, Esq. A course of Three Lectures, on WEDNESDAYS, commencing the 2nd of MAY.

For Tickets apply at Marlborough House, Pall Mall.

BOROUGH of MIDDLESBROUGH.—SURVEYOR WANTED.—The Town Council of Middlesbrough are desirous to ENGAGE an active and competent person as BOROUGH SURVEYOR. He must be sufficiently acquainted with engineering to be able to survey, plan, and level, and carry out sewerage and drainage works. Population about 11,000. Salary, 150l. per annum. The person appointed will be required to devote his whole time to the office. Further particulars, with respect to the duties to be performed, may be had on application to the undersigned, and applications in the hand-writing of the party, and with testimonials of his character and ability, and a statement of his age, and previous and present occupation, must be at my Office not later than TWELVE o'clock at noon, on TUESDAY, the 20th MARCH next. By order,
JOHN S. PEACOCK, Town Clerk.
Middlesbrough, February 23rd, 1855.

COMPETITIONS.

SOHAM BURIAL BOARD.—DESIGNS for NEW BURIAL-GROUND, CHAPELS, and ENTRANCE-LODGE.—PREMIUM of 10*l.*—The Burial Board for the parish of Soham, in the county of Cambridge, hereby offer a Premium of 10*l.* to the architect or other person whose design for the above chapels and entrance-lodge shall be selected for adoption. Two chapels will be required, one for the use of the members of the Church of England, the other for all other denominations. The cost of the two chapels and entrance-lodge not to exceed in the whole 950*l.* The parish of Soham contains upwards of 4,500 inhabitants. The design, with an estimate of the expense, accompanied by working drawings and specifications complete, to be sent to me, on or before WEDNESDAY, the 11th day of APRIL next, at TEN o'clock in the forenoon, when the examination will take place.—The Board does not pledge itself to employ the architect whose design shall be accepted.—By order,
THOMAS HUSTWICK, Clerk to the said Burial Board.
Soham, March 14, 1855.

PREMIUMS for DESIGNS.—The Woolwich Burial Board offers a PREMIUM of TWENTY GUINEAS for DESIGNS and ESTIMATES for the necessary CHAPELS, LODGE, &c. and the laying out, draining, and planting the intended burial-ground at Woolwich, which sum will be increased to THIRTY GUINEAS if the approved designs be accompanied by detailed working drawings and specifications sufficiently comprehensive to enable the Board at once to enter into contracts for the execution of the works. Designs to be sent in to Mr. HENRY BLAND, Clerk to the Woolwich Burial Board, on or before THURSDAY, the 29th day of MARCH inst. Any person desirous of competing for the above will be furnished with a plan of the ground and other particulars upon application to the Clerk to the Burial Board, at the above address, on and after MONDAY, the 19th inst.

CONTRACTS.

TO BUILDERS AND OTHERS.

SEALED TENDERS, in one specific sum, will be received at the Ordnance Office, Pall-mall, London, on or before the 20th MARCH, 1855, for the following SERVICES at Bull Point, in the parish of Saint Budeaux, near Devonport, viz.:—

1.—Building Cottages for a Foreman and sixteen Labourers.
2.—Building a Cook-house and Wash-house for the Crews of the two Powder Vessels, with Privy and Urinal.
3.—Building an Office for the Ordnance Storekeeper.
4.—Building a Civil Watch-house and a Shed for Waggons.
5.—Building a Warder's Lodge and a Shoe-house.
6.—Building an Engine-house.
7.—Building a Boat-house.
8.—Removing the present wooden Filling and Examining-house at Keyham to Bull Point.

Detailed working drawings of above eight services, with addenda thereto, and every requisite information may be obtained at the Royal Engineer Office, Bull Point, daily (Sundays excepted), between the hours of TEN and FOUR o'clock, from THURSDAY, the 1st, to FRIDAY, 16th of MARCH, 1855, both days inclusive.
Royal Engineer Office, Devonport, 23rd February, 1855.

TO BUILDERS AND CONTRACTORS.

MILITARY DEPOT for the County of DENBIGH, at Wrexham. — Any person willing to CONTRACT for BUILDING the new MILITARY DEPOT, for the custody of the stores, arms, and accoutrements of the Royal Denbighshire Rifles, and for ERECTING a HOSPITAL, with QUARTERS for the Sergeant-Major and Six Sergeants of the Permanent Staff, together with all necessary Outbuildings, and for forming the PARADE GROUND, may see the plans and specifications, after the 9th of MARCH next, upon application to Mr. WHITTAKER, at the Turf Tavern, near the Railway Station at Wrexham, or at my Office in Oswestry. Sealed Tenders to be sent, addressed to me, at Gwerasylit-hill, on or before the 18th day of MARCH, endorsed "Tenders for the Military Depôt at Wrexham." The Contractor will be required to enter into security, with sufficient sureties, for the due completion of the works. The lowest Tender may not be accepted, without having due regard to the eligibility of the parties.—Any further information may be obtained at my Offices at Oswestry, and Gwerasylit-hill, near Wrexham. THOMAS PENSON, Architect.
Oswestry, February 21, 1855.

EXTENSION OF TIME.

BURSLEM LOCAL BOARD of HEALTH. NEW TOWN HALL.—CONTRACT for GAS FITTINGS.—The Local Board of Health are prepared to receive TENDERS for the supply and fixing of the CHANDELIERS, PENDANTS, BRACKETS, and the necessary GAS FITTINGS required for the lighting of the New Town-hall. Drawings and specifications may be seen, and further particulars obtained, on application to C. T. ROBINSON, Esq. Architect, 35, Upper-parade, Leamington; or to Mr. RALPH HALES, Cobridge, Surveyor to the Local Board. Sealed Tenders must be sent to me on or before TUESDAY, the 3rd day of APRIL next. By order,
JOSEPH LOWNDES, Clerk.
Public Offices, Burslem, February 10, 1855.

NEW TOWN-HALL BUILDINGS, PRESTON.—To BUILDERS.—Masons, Bricklayers, Plasterers, Slaters, Plumbers and Glaziers, Carpenters, Joiners, Smiths, and Painters, desirous of CONTRACTING for all or any of the works required to be done in the ERECTION of the above BUILDINGS, upon the site of part of the present building, are hereby informed that the plans and specifications may be seen at the offices of the Architect, from MONDAY, the 9th, to SATURDAY, the 14th of APRIL next, both inclusive, and in the Council-chamber, Town-hall, Preston, from MONDAY, the 16th, to SATURDAY, the 21st of APRIL next, both inclusive. Tenders, endorsed "Tender for Works," must be sent to me on or before FOUR o'clock on TUESDAY, the 24th of APRIL next. Bills of quantities, and any other information may be had at the Offices of the Architect, Mr. WILLIAM HILL, 53, Albion-street, Leeds. No allowance will be made for estimates, and the lowest Tender will not be necessarily accepted.
ROBERT ASCROFT, Town clerk.

CONTRACTS.

METROPOLITAN COMMISSION of SEWERS.—To BUILDERS, CONTRACTORS, and OTHERS. The Metropolitan Commissioners of Sewers hereby give Notice, that they will meet at the Court-house, No. 1, Greek-street, Soho-square, on TUESDAY, the 20th day of MARCH inst. at ELEVEN o'clock a.m. precisely, to open TENDERS for the SUPPLY of MATERIALS, and the execution of the day jobbing and measured works of the said Commission within the limits of the undermentioned districts and divisions, viz.:—

1. Fulham and Hammersmith, Counters Creek and Ranelagh districts, in one Tender.
2. Eastern and Western Divisions of the Westminster Sewers, the Regent street and Regent's-park District, and the Holborn Division, in one Tender.
3. Tower Hamlets and Poplar, and Blackwall Districts, and Finsbury Division, in one Tender.
4. Greenwich and Rotherhithe Districts, in one Tender.
5. Surrey and Kent and Wandle Districts, and the Districts west of Wandle, in one Tender.

The Tenders are to be upon the basis of schedules of prices, and the contracts are to be for one year from the date of the contract, and bonds subject to determination in the manner stated in the conditions. Parties wishing to submit Tenders may, on payment of 10*s.* 6*d.* obtain printed forms, with general conditions, particulars, descriptions, and schedules, on application at No. 1, Greek-street, Soho-square, between the hours of NINE a.m. and FOUR p.m. on and after TUESDAY, the 13th day of MARCH instant. Each Tender is to include neither more nor less than the number of districts or divisions as classified as above, and to be inscribed, "Tender for the Works in the ——" (the names of the districts or divisions to which the Tender is to apply being inserted). No Tender will be received after ELEVEN o'clock a.m. precisely, on the said 20th day of MARCH, and any Tender which is not upon the printed form and schedules of the Commissioners, and duly signed by the party or parties tendering, will be rejected. The parties whose Tender shall be accepted will be required to enter into bonds with two responsible sureties, to be bound jointly and severally in the sum of 3 000*l.* for the due performance of their contracts respectively. The Commissioners do not bind themselves to accept the lowest or any Tender.—By the Court,
G. H. WOOLRYCH, Secretary.
1, Greek-street, Soho-square, March 9, 1855.

PONTYPRIDD GASLIGHT and COKE COMPANY.—To IRONFOUNDERS and GASHOLDER-MAKERS.—The Directors of this Company are prepared to receive TENDERS for a CAST-IRON TANK, 63 feet in diameter by 16 feet deep, with columns, girders, &c. and a GASHOLDER, to work in the same, the whole to be erected and fixed complete, at the Company's Works, Pontypridd, Glamorganshire. Plans and specifications with conditions of contract, and forms of Tenders obtained, after the 13th instant, upon application to Mr. HENRY BOWEN, Engineer Gas Works, Cardiff. Sealed Tenders addressed to the Chairman of the Directors, to be forwarded, under cover, to MONTAGUE GROVER, Esq. Solicitor, Cardiff, on or before the 4th day of April next, endorsed "Tender for Tank," or "Gasholder," as the case may be.—The Directors do not bind themselves to accept the lowest or any Tender.
Cardiff, March 8, 1855.

TO BUILDERS.

PARTIES desirous of TENDERING for the whole of the works required to be done in PULLING DOWN and RE-BUILDING a DWELLING-HOUSE, with front shop, work-shops, and offices, on the Cornhill, Bridgewater, may see the plans and specifications, and obtain every requisite information, at the Offices of Mr. DOWN, Architect, Bridgewater. Sealed Tenders are to be delivered on SATURDAY, the 31st of MARCH, but the lowest Tender will not necessarily be accepted.

TO BUILDERS.

PARTIES desirous of TENDERING for a CHAPEL, to be built at Chepstow, may see the plans and specifications at my Office; or at Mr. JAMES COLES, Chepstow. Tenders to be delivered to the Rev. J. ALDIS, Chepstow, on or before the 31st inst. The lowest or any Tender will not necessarily be accepted. JAMES WILSON, F.S.A. Architect.
1, Belmont, Bath, March 14, 1855.

TO BUILDERS.

SCHOOL-HOUSE and TEACHERS' RESIDENCE, in the Birchills, Walsall.—PROPOSALS for the ERECTION of the above will be received by the Rev. CHARLES DIXON, the Parsonage, St. Peter's, Walsall, where the plan and specification may be seen, on any day before the 29th MARCH. The committee do not bind themselves to accept the lowest or any Tender.

TO BUILDERS.

PERSONS desirous of CONTRACTING for the REBUILDING of the PARISH CHURCH of ABERPORTH, about six miles from Cardigan, are informed that the drawings and specifications may be seen at the Office of THOMAS MORGAN, Esq. Solicitor, Cardigan, on and after the 19th inst.; or at the Office of Mr. R. J. WITHERS, 6, John-street, Adelphi, London. The Tenders to be delivered at the Office of THOMAS MORGAN, Esq. Cardigan, on MONDAY, the 26th inst. endorsed, "Tender for Rebuilding Aberporth Church." The committee do not bind themselves to accept the lowest Tender.
Aberporth, Cardiganshire, March 7, 1855.

DONCASTER CHURCH.—To BUILDERS and OTHERS.—Such Builders or other persons as may be willing to TENDER for the ROOFING PITCHING, &c. of the above-named Church, are requested to send their names to HENRY WHITAKER, Esq. Doncaster, for the Architect, GEORGE GILBERT SCOTT, Esq. 20, Spring-gardens, London, from whom orders may be procured to see the new plans and specifications, and information obtained as to the conditions of the competition and the time for receiving the Tenders. Proper security will be required, and the Committee do not pledge themselves to accept the lowest Tender.
R. BAXTER, } Hon Secs.
Doncaster 12th March, 1855. H. WHITAKER, }

[*For remainder of Contracts see next page.*

CONTRACTS.

WEST COWES LOCAL BOARD of HEALTH.—To IRONFOUNDERS.—The Local Board are ready to receive TENDERS from parties willing to undertake the following Contract.

CONTRACT No. 3.—For delivering at Cowes the yards of Cast-Iron Socket-Pipes, 12 inches in diameter in the clear, weighing not less than 1cwt. 3qrs. per yard, in lengths of 9 feet each; the whole to be delivered by the 1st day of MAY, 1856.

Forms of Tender and other particulars may be had on application at my office. The Tenders to be delivered by the 27th day of MARCH instant.

HENRY JAMES DAMANT, Clerk to the Board.

Cowes, March 17, 1855.

BOROUGH of BIRMINGHAM.—"THE BIRMINGHAM IMPROVEMENT ACT, 1851."—BIRMINGHAM SEWERS.—CONTRACT No. 33.—To CONTRACTORS for PUBLIC WORKS.—The Public Works Committee of the Council of the said Borough hereby give Notice, that on MONDAY, the 26th day of MARCH instant, they will meet at the Committee-room, Borough Surveyor's Office, to receive and open sealed Tenders from persons willing to CONTRACT with them for the CONSTRUCTION of the following WORKS, viz.: MAIN BRICK and PIPE SEWERS, 19,365 feet in length, in the undermentioned Streets and Places, viz. J. PIGOTT SMITH, Borough Surveyor.

Borough Surveyor's Offices, Moor-street, March 13th, 1855.

SOUTHPORT WATERWORKS.—CONTRACTS for ENGINE-HOUSE, BOILER-HOUSE, COOLING-POND, SERVICE RESERVOIR, &c.—The Directors of the Southport Waterworks Company are ready to receive TENDERS for the CONSTRUCTION of an ENGINE HOUSE for the waterworks steam engines, BOILER-HOUSE for three boilers, COOLING-POND, and SERVICE RESERVOIR, BRICK, STONE, WALLING, &c. Plans and specifications, and forms of Tender obtained, on application to THOMAS HAWKSLEY, Esq., of No. 1, Great George-street, Westminster, London, the engineer to the company; or at the Office of Mr. WM. HARPER, 19, Silver-street, Bury, Lancashire. The several terms required must be rendered in sealed envelopes, and with the necessary Deposit accepted, and delivered to Mr. WILLIAM HARPER, No. 17, Silver-street, Bury, on or before WEDNESDAY, the 14th day of MARCH next, by order,

WM. HARPER, Clerk to the Company.

Bury, Lancashire, Feb. 28, 1855.

THE PHŒNIX GASLIGHT and COKE COMPANY are ready to receive TENDERS for TAKING AWAY all the SMALL COKE or BREEZE from their three Stations. The quantities will be about 3,000 tons each from Bankside and Vauxhall, and 1,500 chaldrons from Greenwich. Tenders for separate parcels of less than 500 tons, or for delivery in smaller quantities than 50 tons, will not be accepted. Two contracts will be entered into, each for one year. The contractor will make a deposit of £100 as a security for the due performance of his contract. Tenders to be delivered at the Company's Office, Horsleydown, on or before the 20th day of March, 1855. Two contractors will be required to enter into bond with sufficient sureties, each in the sum of £1,000, for the due performance of the contract. Tenders to be marked with the words "Breeze Tender," on the cover, and to be delivered at their Office before TWELVE o'clock on TUESDAY, 20th instant.

March 14, 1855.

CONTRACTS.

TO BUILDERS, who may be desirous of TENDERING for the ERECTION of a Pair of VILLAS, on the land (late Prescot and Collins's Farm, Hare-stock Hill, for S. S. ALPOND, Esq. may view the plans at my office, from MONDAY next, until the 30th instant, when the Tenders are to be delivered. Copies of the quantities and specification with condition, will be furnished on payment of two guineas. The highest Tender will not necessarily be accepted.—R. H. MOORE, Architect, 4, Queen's-terrace, Albert-road, Regent's-park.

TO BUILDERS AND OTHERS.

NOTICE is hereby given, that PLANS and SPECIFICATIONS for BUILDING TWO RESIDENCES, in the parish of Caterham, near Croydon, in the county of Surrey, will lie at the Office of Mr. G. H. DREW, No. 28, Parliament-street, Westminster, from MONDAY the 26th day of MARCH instant, till THURSDAY, the 29th day of MARCH instant. All parties willing to CONTRACT for Building the said Houses, and executing the Works connected therewith, are invited to send in sealed Tenders, directed to Mr. G. H. DREW, 28, Parliament-street, on or before THURSDAY, the 12th day of APRIL next. In the Tenders the amount for each house is to be given separately. The advertisers do not bind themselves to accept the lowest or any Tender.

LIME TENDERS.—The Phœnix Gaslight and Coke Company are ready to receive TENDERS for the supply of WHITE FLARE BURNT LIME, for their stations at Bankside, Vauxhall and Greenwich, until Ladyday in next year. The quantity will be about 15,000 tons. The lime to be fresh burnt from the 1st of January, or of the current year, and to be delivered on the stations as quantities as ordered, in no exceeding two yards at a time; or in barge loads of sixty or eighty yards, divided between two stations. Each load of white flare burnt, parties may tender to supply common chalk lime, only taking care to so designate it in their tenders. Payment to be in cash, quarterly, or in coke, at the option of the company on the commencement of each quarter; or parties tendering can offer for payment in cash only in the present year. The Tender to state the lowest price per yard for lime in carts and also separate price if delivered by barge, and also the price for coke to be taken in exchange. The Tender to be marked with the words "Lime Tender," on the cover, and to be delivered at the Company's offices, at Bankside, before TWELVE o'clock on TUESDAY, the 20th inst.

March 14th, 1855.

TO ARCHITECTS.

NEW SENATE-HOUSE for the CITY of HAMBURG.—The Commissioners appointed by the Senate of Hamburg for erecting the new Senate-house, hereby give notice that the plans selected from the designs sent in for competition the following three, to which they have awarded the premiums in the following order:—

"Gott mit uns!" designed by George Gilbert Scott, of London.

"Passe que dois Adrienne que pourra," designed by A. Meuron, of Hamburg.

"Was schad versuchen," designed by Ludwig Franz Carl Bohnstedt, Member of the Imperial Academy of Arts in St. Petersburg.

The Commission requests all other competitors to reclaim their designs as early as possible, by sending their receipts to the Syndicats Cancley in Hamburg, between the hours of ONE and FOUR in the afternoon.

THE COMMISSION FOR THE ERECTION OF THE NEW SENATE HOUSE

Hamburg, February 24, 1855.

BUILDERS and PERSONS desirous of CONTRACTING for the NEW CHURCH at Tidebrook, in the parish of Wadhurst, in the county of Sussex, may see the specification, and all particulars be obtained at J. NEWINGTON'S, Esq.'s, Tunbridge Wells; or, on and after the 20th of MARCH. Tenders to be sent in before the 30th of APRIL, to the Rev. THOMAS HENRY RUSHFORTH, Esq. 1, Trinity-place, Charing-cross. The committee do not bind themselves to accept the lowest Tender.

TO BUILDERS.

PERSONS desirous of submitting TENDERS for the ERECTION of a NEW VICARAGE HOUSE and OUTBUILDINGS, at High Ercall, near Wellington, Salop, may inspect the plans, &c. at the Vicarage, on and after the 26th day of MARCH, at the Bull's Head Hotel, Wellington, and at the offices of the Architects, Messrs. WEHNERT and SHROWN, 32, Charles-cross, London. Sealed Tenders to be delivered at the Vicarage, High Ercall, on or before the 11th day of APRIL next. The lowest or any Tender will not necessarily be accepted.

SOUTHPORT WATERWORKS.—TENDERS for ENGINE-HOUSE, BOILER-HOUSE, COOLING-POND, SERVICE RESERVOIR, &c.—Notice is hereby given, that PRINTED SCHEDULES of the quantities of the various Works will be furnished, among with the specifications, on and after THURSDAY, the 15th of MARCH instant; and the time for receiving Tenders is extended until the 31st day of MARCH instant—By order,

WM. HARPER, Clerk to the Company.

Bury, Lancashire, March 8, 1855.

HEREFORD IMPROVEMENT.—To CONTRACTORS, IRON-FOUNDERS, SANITARY PIPE-MAKERS, &c.—The Committee of the Town Council acting under the Hereford Improvement Act, hereby give Notice, that they will receive at the Guildhall, Hereford, on the 2nd day of APRIL, 1855, at HALF PAST TWO o'clock, in the presence of the Contractors from parties who may be willing to become Tenderers for the following WORKS, viz.:

CONTRACT No. 1.—For manufacturing and supplying at Hereford, certain cast-iron branch and socket pipes, bends, junctions, taders, covering-plates, and other special castings, and gully-grates, safety gratings and flaps, ventilating-grates, cast-iron culvert, cast-iron columns for cattle-sheds, cast-iron railing, &c. &c.

CONTRACT No. 2. For manufacturing and supplying glazed earthenware socket and spigot pipes, gullies, syphons, traps, &c. &c.

CONTRACT No. 3 includes the construction of a reservoir, filterbeds, tanks, pools, well-holes, basins, and building water-pipes, culverts, retaining-walls, wash-outs, and other works connected with the water-supply; also the construction of certain brick sewers, side entrances, vertical shafts, the laying and jointing of pipe drains, and other works connected with the sewerage, with the fixation and metalling of the cattle market, building boundary-wall round the same, constructing roads, sheep and cattle-pens, gates, fencing, and other works connected with the cattle-market.

CONTRACT No. 4.—For supplying and erecting a corrugated galvanized iron roof over certain sheds, with other works connected therewith.

The Committee will require proper sureties for the fulfilment of the respective contracts. Plans, sections, and specifications of the above works, together with the forms of Tender, may be inspected at the Hereford Improvement Office, Widemarsh-street, on and after the 1st day of MARCH instant. Any further particulars may be had from Mr. T. CURLEY, C.E., Hereford. The Committee do not bind themselves to accept the lowest or any Tender.

RICHARD JOHNSON, Town-clerk.

Hereford, March 8th, 1855.

EAST and WEST-INDIA DOCK COMPANY.—TENDERS for STONE for ROADS.—The East and West-India Dock Company are ready to receive TENDERS for 500 YARDS of BROKEN GUERNSEY GRANITE, and 750 YARDS of BROKEN FLINTS, either together or for separate parcels, as according to a specification and particulars which may be had at the Engineer's Office, Western Docks.—Tenders, addressed to the Secretary, to be delivered at the Dock House, Billiter-square, on or before the 20th MARCH, 1855.

GEORGE COLLIN, Secretary.

East and West-India Dock House, Billiter-square, March 8th, 1855.

TO BUILDERS.

PERSONS desirous of TENDERING for the ERECTION of TEN HOUSES at Poplar, may see the plans and specification at the offices of F. HAYMAN FOWLER, Esq. Architect, 4, Bedford-row, Temple, from MONDAY, the 19th, to SATURDAY, the 24th inst., on which latter day the Tenders are to be delivered by TWELVE o'clock. The lowest or any Tender will not necessarily be accepted.

TUPPER and CARR, Contractors and Manufacturers of all sorts of IRON ROOFING.

PLAIN, CORRUGATED, PAINTED, or GALVANIZED.

Estimates and Drawings furnished on application.

Experienced Workmen sent to all parts of the Country.

3, MANSION-HOUSE PLACE, and 8, BERKELEY-STREET, LONDON; BERKELEY-STREET, BIRMINGHAM.

TUPPER and CARR'S (Craufurd's) PATENT GALVANIZED IRON

For Roofs, Flats, Cisterns, Gas Tubing, Gutters, Pipes, Feeding, &c.

To be obtained only at

TUPPER and CARR'S WAREHOUSES REGENT'S CANAL DOCK, LIMEHOUSE, LONDON; or BERKELEY-STREET, BIRMINGHAM.

Sheets, Bars, Rods, Hoops, Nails, Rivets, Screws, Wire, and Manufactured Articles, Pails, Coal-scoops, Buckets, Pumps, &c. always in Stock.

N.B. An allowance to the trade.

Address all letters to TUPPER and CARR, 3, MANSION-HOUSE PLACE, CITY, LONDON.

SKAIFE'S GALVANIZING WORKS, Commercial road, Limehouse, London

Skaife's process is the most effectual preventive against rust, and is extensively used for all purposes where Iron not liable to rust is required.

Patent Galvanized Iron supplied in every form.

Sheets plain and corrugated.—Roofs fixed complete.

J. Skaife is also agent for Messrs. Rogers's Patent Galvanized Tinned Iron, Plumpe Zink, and Pipes.

An Allowance to the Trade.

UNDER PATRONAGE of the ENGLISH and FRENCH GOVERNMENTS.

Portable Galvanized or Painted Corrugated Iron Dwellings, Barracks, Hospitals, Stables, Warehouses, Theatres, Billiard and Concert Rooms, &c.

IRON ROOFS,

Patent Corrugated, Galvanized and Painted, Wrought-iron, principal, Glass and Slated Roofs, to any span.

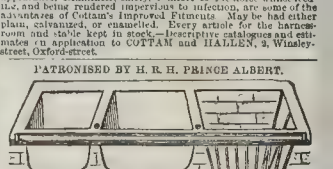
Wrought and Cast-Iron Bridges, Girders, Fire-proof Floorings Shutters, Doors, &c.

Engineers' and Builders' Castings of all kinds manufactured by JOHN WALKER,

Builder, Contractor, and Ironfounder, Mill-wall, Poplar.

Offices: Arthur-street West, London-bridge, where experienced draughtsmen are kept to furnish designs and estimates, which may be obtained on application.

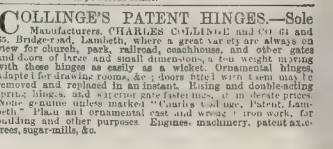
N.B. Galvanized and painted Sheet-Iron, both plain and corrugated, supplied at the lowest possible prices, and a considerable allowance made to the trade.



JACKSON and COOK, Ironfounders and Manufacturers of CORRUGATED and GALVANIZED IRON ROOFS and BUILDINGS, beg to call the attention of Architects, Builders, and others, requiring roofing, to the superiority of iron as manufactured by them, for that purpose, in point of neatness, cleanliness, durability, cheapness of construction, and being fire-proof. Drawings and estimates furnished.

Island Foundry and Ironworks, Millwall, London.

Offices: 12, Fenchurch-street, City.



SAMUEL HEMMING'S PATENT much approved PORTABLE BUILDING and ROOFING MANUFACTORY, REMOVED from LIVERPOOL to BOW, near London, close to the Bow Railway Station.—A large variety of Buildings always on view, churches, chapels, shooting boxes, lodges, houses, ornamental villas, dwelling-houses, farm buildings, and for roof stores. Also, railway stations, trucks, and carriages made to any plan on the shortest notice.

COTTAM'S NEW PATENT for STABLE REQUISITES.

COTTAM and HALLEN, of Winsley-street, are the ORIGINAL INVENTORS of this arrangement of MANGER, RACK, and WATER TROUGH as ONE FIXTURE; they are universally approved of, and obtained the Great Exhibition Prize Medal. The New Patent embodies all the improvements which, from practice and experience, have been found desirable. No well-managed stable should be without these fittings. Economy, durability, appearance, cleanliness, safety, comfort to the horse whilst feeding, and being rendered impervious to infection, are some of the advantages of Cottam's improved Fixtures. May be had either plain, galvanized, or enamelled. Every article for the harness-room and table kept in stock.—Descriptive catalogues and estimates on application to COTTAM and HALLEN, 3, Winsley-street, Oxford-street.

PATRONISED BY H. R. H. PRINCE ALBERT.

S. HOOD and CO.'S REGISTERED STABLE-FITTINGS, with FRONT REVOLVING ROLLER, plain or enamelled.

Castings Warehouse, 81, Upper Thames-street.

CAST-IRON PIPES, IRON-WORK FOR OVENS, &c.

RAIN PIPES &c. — F. A. TIDDEMAN and CO. St. Ann's Wharf, Earl-street, City, near Blackfriars-bridge, keep a large stock of Rain Pipes, Heads, Shoes, Elbows, &c. half-round and O-G Gutters, Socket Pipes for Water or Gas, Hinge Pipes, Hot Water Pipes and all sanitary ones, Sash Weights, and other castings, Iron work for Bakers' Ovens of every description, fitted complete, to be had in sets or in parts.—Prices equal to all competitors, and contracts taken to any extent. Goods landed. A powerful crane.

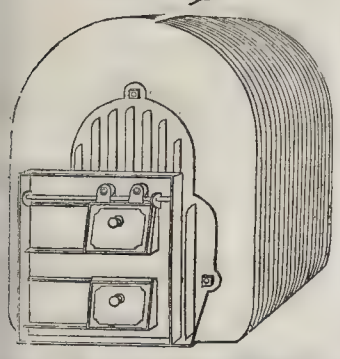
COLLINGE'S PATENT HINGES.—Sole Manufacturers, CHARLES COLLINGE and CO. 61 and 65, Bridge-road, Lambeth, where a great variety are always on view for church, park, railroad, coachhouse, and other gates and doors of large and small dimensions, on which the weight moving with these hinges as easily as a wicket. Ornamental hinges, adapted for drawing rooms, &c.; doors fitted with them may be removed and replaced in a moment. Raising and double-acting spring hinges, and supreme gate fastenings, of moderate prices. None genuine unless marked "Charles Collinge, Patent, Lambeth." Plain and ornamental cast and wrought iron work, for building and other purposes. Engines, machinery, patent axletrees, sugar-mills, &c.

ZINC ROOFING, INCLUDING TIMBER OR IRON FRAMEWORK,

IS AS

CHEAP AS SLATES OR GALVANIZED IRON, LIGHTER, AND MORE DURABLE.

Certificates, and Models of various descriptions, may be seen, and estimates obtained on application to



THE SURVEYOR OF THE VIEILLE MONTAGNE ZINC MINING COMPANY, 12, MANCHESTER BUILDINGS, WESTMINSTER.

ROOFS CONSTRUCTED UNDER HIS SUPERINTENDENCE GUARANTEED TO REQUIRE NO REPAIRS FOR AT LEAST TEN YEARS.

THE OLD METAL BEING ALWAYS RETAKEN AT HALF-PRICE, RENDERS IT ADVANTAGEOUS FOR ALL TEMPORARY BUILDINGS.

Many roofs covered with zinc thirty-five years ago have never required repairs.

Gill Stove.

for Firing underground

STUART AND SMITH'S

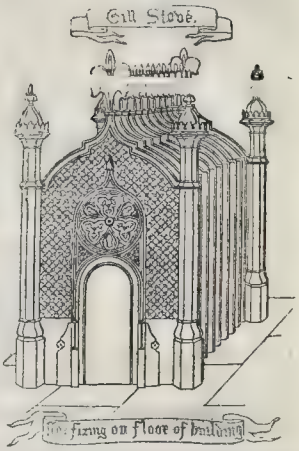
PATENT GILL STOVE,

FOR

HEATING CHURCHES AND OTHER PUBLIC AND PRIVATE BUILDINGS.

The constant failures, and enormous expense, consequent upon the endless variety of experiments to warm buildings has left the public in doubt as to whether there exists any certain, economical, and safe mode of effecting that object or not.

STUART AND SMITH,



ROSCOE-PLACE, SHEFFIELD,

confidently assert, that the Air-Warmer they recommend, possesses the desired qualifications, and respectfully request Gentlemen interested in the question, to ascertain the fact from the actual working of the invention.

It has been fixed in the following, besides a great many other private and public buildings:—St. Stephen's, Longsight, Manchester; Grassendale Church, Aigburth, Liverpool; St. Ann's, Aigburth, Liverpool; North Wootton, near Lynn, Norfolk; St. Paul's, Alnwick, Northumberland; Bettesanger Church, Sandwich, Kent; St. Mary's, Pitsmoor, and Grimesthorpe, Sheffield; County Lunatic Asylum, Derby, &c. &c. &c.

Prospectuses, and every information, sent on application.

Gill Stove.

for Firing on Floor of building

FLAVEL'S PRIZE KITCHENER.

These Ranges are strongly recommended for their simplicity of construction and their economy and cleanliness in use.

The top forms a Hot-plate, and the open fire removes many of the objections which are felt to close Ranges.

They are made in all sizes, from 3 feet to 18 feet in width, suitable for large or small establishments.

They are admirably adapted for the Cure of Smoky Chimneys.

SOLE AGENTS:

BENHAM AND SONS,

19, WIGMORE-STREET, LONDON;

and at the Crystal Palace, Sydenham.

STEVENS AND SON,

ENGINEERS,

IRON AND BRASS FOUNDERS AND MANUFACTURERS;

CONTRACTORS

FOR THE

ERECTION OR ALTERATION OF GAS-WORKS FROM TWENTY LIGHTS UPWARDS,

With Buildings, Mains, Meters, Service-Pipes, Lamp-Posts, Lamps, and Gasfittings

WATERWORKS FOR THE SUPPLY OF TOWNS,

WITH BUILDINGS, STEAM-ENGINES, PUMPS, MAINS, SERVICES, &c.

Gas Stoves for Heating Churches, Chapels, Lecture Halls, and Public Buildings of all kinds; these have been recently fixed at New College, Oxford; St. George's Catholic Cathedral, Southwark; and numerous churches, Chapels, &c.

Gas Cooking Stoves and Ranges on the most improved principles.

GAS-FITTING IN ALL ITS BRANCHES.

GAS CHANDELIERS OF ALL SIZES, IN BRASS OR IRON, FROM TWO TO TWO HUNDRED LIGHTS.

DEVICES FOR GAS ILLUMINATION.

IMPROVED REGISTERING TURNSTILES FOR TOLL-BRIDGES, EXHIBITIONS, PUBLIC GARDENS, BATHS AND WASHHOUSES, &c.

These Turnstiles have been selected for the Entrances of the Great Exhibition, New York.

PATENTEES OF THE SEMAPHORE RAILWAY SIGNAL.

Signals for communication between Guard and Engine Driver. Railway Stores and Lamps of every description

DARLINGTON WORKS, 16 to 19, SOUTHWARK-BRIDGE ROAD, LONDON.

ROYAL POLYTECHNIC GAS FIRE. BACHHOFFNER and DEFRIES'S PATENT.—The public are respectfully informed that arrangements have now been made for the supply of this unique and beautiful mode of warming private houses, shops, public buildings, &c. Smoke, dust, ashes, and accidents from fire are effectually prevented by its use, while it presents all the comfort and appearance of an open coal fire, securing, at the same time, perfect ventilation. To be seen in action at DEFRIES'S Office, 245, Regent street, London.

THE PATENT PRIZE KITCHENER, with Boiler to supply Bath, Scullery, Hot and Steam Closet, Manufactured, with all its recent improvements, by THOMAS RADCLYFFE, Leamington, Warwickshire, of whom plans, prices, and testimonials may be had on application. It is made from three feet to twenty, all marked by one small fire. A great saving in fuel is effected by having this kitchener, and it effectually cures smoky chimneys, and is the best cooking range extant.

FIRST PRIZE KITCHEN RANGE.—The only prize ever competed for, the prize of public approbation,—having been obtained by BROWN and GREEN'S celebrated KITCHEN RANGE, which is pre-eminently the best, most perfect, economical, and complete apparatus for all cooking operations. It is warranted a certain cure for a smoky chimney.—Wholesale agents, R. W. KENNARD and Co. 67, Upper Thames-street, London. Manufactory, Luton, Beds.

HEATING by HOT WATER.—J. JONES, Iron Merchant, has always a great variety of CONICAL and SADDLE BOILERS in STOCK; also fire and furnace bars, ornamental and plain supply cisterns, double doors and frames, furnace-grates, wood-doors for the same, hot-water pipes, elbows, tees, syphons, throttle valves, stop-cocks, flange and socket elbows, &c.; also, trough-pipes. Drawings and prices of the above, on application to J. JONES, Iron-bridge-wharf No. 6, Bankside, London, near the Southwark-iron-bridge.

THE SMOKE-CONSUMING STOVE, invented by Dr. ARNOTT, and explained by him at the Society of Arts, on WEDNESDAY, MAY 10, insures perfect combustion, economises fuel, requires much less attention than the register stoves in general use, and produces by the use of Dr. Arnott's improved Circular Valve, a perfect system of Ventilation.—Manufactured by D. and E. BAILEY, 373, Holborn.

HEATING by HOT WATER.—JOHN WEEKS and Co. King's road, Chelsea, solicit the attention of architects, &c. &c. to their superior APPARATUS. At Messrs. Weeks' establishment, an apparatus with one boiler can be seen daily in full operation, heating buildings measuring 300 feet in length, at the small expense per day in fuel and labour of 5s. 6d. This achievement in heating by hot water is unprecedented.

UNIVERSAL SMOKE-CONSUMING COMPANY; Offices, 4, Furnival's-inn, London.—No Smoke, more Steam, and less Fuel. Reference—Messrs. Thurston and Co. Billiard-table Makers, 14, Catherine-street, Strand; Mr. J. T. Hunt, Bone-mills, Lambeth-wharf, Messrs. Fields, Wax-candle Manufacturers, Lambeth; and Messrs. Rose and Co. Great Guildford-street, Southwark, where Wirth's patent apparatus is at work.

SYLVESTER'S HOT WATER STOVES, for Warming Halls, Staircases, Galleries, Warehouses, Stores, Hotels, and Offices, require no Flue, create no Dust, and are safe from all risk of fire

Any number of these Stoves may be heated from one Boiler, and may be used equally well with Steam or Hot Water

SYLVESTER'S IMPROVED AIR WARMER

is the most powerful, salubrious, and economical Apparatus yet invented for Heating Churches, Chapels, Schools and Public Rooms, by means of Hot Air.

Prospectuses and Estimates may be obtained on application to

SYLVESTER and CO. Engineers, and Manufacturers of Heating Apparatus, 86, Great Russell-street, Bloomsbury.

WARMING and VENTILATING.—COTTAM and HALLEN, 2, Winsley-street, Oxford-street, having had thirty years' experience, and having warmed by the circulation of hot water upwards of 4 000 buildings, consisting of churches, prisons, lunatic asylums, halls, and staircases, galleries, conservatories, forcing houses, &c. can with confidence recommend their system, which, by the various improvements they have made, has perfected the construction and economised the expense. Greenhouses, conservatories, verandahs constructed entirely of iron or wood, and of iron and wood combined. Estimates upon application. COTTAM and HALLEN, Engineers and Ironfounders, 2, Winsley-street, Oxford-street.

DR. ARNOTT'S SMOKE-CONSUMING FIRE-GRATE is manufactured by F. EDWARDS, SON, and Co. 42 Polan-street, Oxford-street, where one may be seen in daily use. The advantages of this grate consist in the smoke being perfectly consumed, no chimney sweeping being required, and a saving of from 40 to 50 per cent. being effected in the cost of fuel.—Prospectuses, with testimonials, sent on application.

STEPHENSON and PEILL, 61, Gracechurch-street, London, and 17, New Park-street, Southwark, Manufacturers of COPPER CYLINDRICAL and CONICAL IRON BOILERS, and Conservatory and Hot-house Builders, either in wood or iron, respectfully call the attention of the nobility, gentry, and nurserymen to their simple yet effectual mode of warming horticultural and other buildings by Hot Water. From the extensive works they have executed, references of the highest respectability can be given, and full particulars furnished on application.

A PRIZE MEDAL for SUPERIOR LOCKS was awarded to J. H. BOOBBYER at the Great Exhibition of 1851, who invites the attention of Builders, &c to his Stock of Ironmongery, Brass Foundry, Nails wrought and cut), Copper and Zinc; Patent Locks of all descriptions; China, Glass, and Wood Furnitures of all kinds, with Patent Shifting Spindles; Dr. Arnott's Ventilator, 4s.; and the new registered Venetian Ventilator, much admired, &c. 6s. 6d. each.

J. H. BOOBBYER (late STURCH and BOOBBYER), established nearly 300 years, for the supply of Goods from the best Manufactories, at the lowest prices.

14, Stanhope-street, Clare-market, London.

TUCKER and REEVE'S LOCKS afford absolute security at a moderate price.

"The novel and evidently effective principle of security on which these locks are constructed, places them at once in the foremost rank of such inventions; in the present state of the art, picking them would seem to be impracticable." *Standard.*

Depôt: 181, FLEET-STREET; where also may be had PRICE'S FIREPROOF SAFES, &c.

COPYING PRESSES, CASH AND DEED BOXES.

Lists and Prospectuses free.

HOBBS'S PATENT AMERICAN and ENGLISH LOCKS.

Messrs. HOBBS, ASHLEY, and CO. are now manufacturing their celebrated American and English Locks, on the premises, 97, Cheapside, and 33, Lawrence-lane, London; where, by the introduction of their patent steam machinery, they are enabled to guarantee superior workmanship, combined with greater security, at a moderate price, than in any locks produced either in town or country.

EVERY LOCK being MADE and FINISHED at the MANUFACTORY, is warranted, and bears their OWN STAMP, without which none are genuine.

These Locks can be procured by order through any respectable Ironmonger in the United Kingdom; or at the Warehouse, as above, Wholesale and Retail.

PATENT FIRE and BURGLAR-PROOF SAFES (MILNER'S PATENT), fitted with HOBBS'S PATENT POWDER-PROOF LOCKS, form the Strongest Safeguards against Fire and Robbery; they are made of various dimensions, adapted for the security of Money, Plate, and Important Documents, Parish Registers, &c. Lists of prices and dimensions can be had on application to HOBBS, ASHLEY, and CO.—Wholesale and Retail Warehouses, 97, Cheapside, and 33, Lawrence-lane, London.

FIRE-PROOF CONSTRUCTION.—FOX and BARRETT'S PATENT.

This improved system of fire-proof construction has been most extensively adopted, and its application has been extended to nearly EVERY DESCRIPTION OF BUILDING, whether public or private.

The system combines ECONOMY, with great simplicity of construction, perfect security from fire, increased durability, and many other important advantages.

The floors and roofs are formed by a combination of joists of wrought or rolled iron with concrete; so constructed that each floor becomes in effect a beam of artificial stone, with ribs of iron; the structure possessing great strength and rigidity, and forming a fire-proof foundation adapted to receive a finished surface, either of the ordinary flooring-boards, or of cement, asphalte, tiles, slate, or other material.

Some of the largest and most important buildings in the kingdom are now in course of erection upon this principle, which is recommended to the notice of all who are interested in building, both as superseding the necessity for cast-iron girders and brick arches, and as bringing the great desideratum of fire-proof construction, even for ordinary dwelling-houses and domestic buildings, within the reach of every one.

Further information may be obtained of the Proprietor of the patent,—Mr. BARRETT, 19, York-buildings, Adelphi.

DESTRUCTION of WAREHOUSES at MANCHESTER, by FIRE.—Messrs. Rylands and Sons' Books, Papers, and Bank-notes preserved in one of CHUBB'S SAFES, after fourteen hours' exposure to intense heat.

COPY OF MESSRS. RYLANDS AND SONS' TESTIMONIAL

"24, High-street, Manchester, March 6th, 1854.

"Messrs. Chubb and Son.

"GENTLEMEN,—We have great pleasure in communicating to you, that the large 'Patent Fire-proof Safe' that we purchased from you 12 years ago, for our late offices in New Hall-street, has been the means of preserving our books, cash, notes, &c., enclosed therein, on the evening of the 1st of March, when our entire premises were destroyed by fire. The safe, after being subject to fourteen hours' intense heat, was unlocked on the morning of the 3rd of March; the locks all answered to their respective keys, and all the inside the contents received (water excepted) was that only some of the looks were slightly singed at the edge.

"You are at liberty to make what use of this communication you may think proper.

"We are, Gentlemen, yours respectfully,

"RYLANDS and SONS."

CHUBB'S LOCKS, with all the recent improvements; Cash, Deed, and Paper Boxes, of all sizes; Fireproof Safes and Chests; Iron Doors and Frames for Strong Rooms; all fitted with the Detector Lock. Complete illustrated lists, with prices and sizes, will be sent on application.

CHUBB and SON, 57, St. Paul's Churchyard, London; 28, Lord-street, Liverpool; 16, Market-street, Manchester; and Hornsey-fields, Wolverhampton.

TO IRONMONGERS, BUILDERS, &c

PATENT WROUGHT-IRON WELDED TUBE for GAS; galvanised ditto for water; high-pressure cocks, &c. Manufacturers of Dr. Arnott's improved ventilators.—HULETT and CO. 35, High Holborn.

NEW PATENT MACHINE for MORTISING and TENONING HARD or SOFT WOOD, and BORING WOOD or IRON.—Hodgson and Couch Builders, Joiners, Cabinetmakers, and others, doing similar work, are invited to call at the Patentees, POWIS, JAMES, and Co Wholesale Builders and Cabinet Makers, Ironmongery Establishment, 26, Watling-street, City, and see in action this very simple, powerful, and expeditious machine, which is the only one yet brought out, for performing these three separate kinds of work by one machine; and as it is self-feeding, it does not require any skill or care in using like the older inventions introduced. It can either be worked by a boy, or made to go by steam power.

P.S. Steam Engines and Machinery contracted for.

MACHINERY. — SAWING, PLANING, MOULDING, and WOOD CUTTING MACHINES.—To Timber Merchants, Contractors, and Others.—SAMUEL WORSSAM and CO., of Hortensia-place, King's-road, Chelsea, invite the attention of Timber Merchants and others to their new inventions and improvements in all kinds of machinery used in Sawing, Planing, Moulding, and Wood Cutting. S. WORSSAM and CO. are able to execute orders with cheapness and despatch; they solicit an inspection of their machines constantly on hand and in progress; and they can refer to parties of the highest position and respectability, as to the goodness and efficiency of their machines. Estimates made for Exportation, or otherwise.—Drawings and prices on application.

February 10th, 1855

SAW-BENCH for SALE.—A new SAW-BENCH, with PATENT FENCE. Price 12l. Inquire of H. M'COLLEY, Manor Iron Works, Manor-street, Chelsea.

NAILS and IRONMONGERY, from BIRMINGHAM direct.

Builders, Contractors, and Others, supplied with Nails, Iron, and Ironmongery of every description, at the

IRON FOUNDRY, HARROW-STREET, LANT-STREET, SOUTHWARK.

W. R. BARTLETT, manufacturer of Girders, Columns, Cantilevers, Newel and Railing Bars, Panels, Iron Coping, Hot Plates, Tank Plates, Area Gratings, Sash Weights, Fly and other Wheels, Riggers, Pinions, Engine and Lathe Castings, Forge Backs, Furnace Bars, Kilns, Pans, and other castings, to patterns or drawings.

EARTH WAGGONS and DOBBIN CARTS. For SALE, by PRIVATE CONTRACT, thirty-two earth waggons, nearly new, and six dobbin carts, in good working condition, now lying at the Great Northern Railway Station, Denmark-road, Camden-town. Apply to Mr. MEREWETHER, Mr. Buck's, Cleveland-street, Doncaster.]

BUILDERS, Contractors, Carpenters, and others are invited to inspect the stock of NAILS, TOOLS, BRASS, AND GENERAL IRONMONGERY at PEEL and STEDALL'S,

Nos. 5 and 6, BROAD-STREET, BLOOMSBURY.

The prices will be found the lowest, and the stock one of the largest in the trade. A price list sent on application.

TO BELL-HANGERS, GAS-FITTERS, IRONMONGERS, &c. &c.—The Trade supplied on the best terms with House Bells, Gong, Tube, and Copper Wire. Gas Pendants, Brackets, and Joints of all descriptions for Gas-fitting, in Brass and Iron; Tin, Composition, Iron and Brass Tubing, Gorges-poles, Rings and Lacquered Case Tube for Picture Rods, Desk Rails, &c. &c.

Superior Rolled Brass for Engravers, Castings in Fine and Common Brass, Gun Metal, &c. at

RICHARD EVERED'S, Brass and Bell Foundry and Metal Warehouses, Nos. 10 11, and 12, Charles-street, Long-acre, London.

TO IRONMONGERS AND THE TRADE GENERALLY.

D. HULETT and CO. Manufacturers of GAS CHANDELIERS, HALL LANTERNS, GLASS LUSTRES, &c. &c. A large assortment of the newest designs always on show—every article marked in plain figures. Patentees and manufacturers of the Mercurial Gas Regulator. Complete pattern-book and price list, 10s.—33 and 36, High Holborn.

TO ENGINEERS, &c.

WANTED, a STEAM-ENGINE, 25-horse to 30-horse power, to work an incline.—Address (free), giving full description and price, and stating where it may be seen, to Mr. W. SWANSBOROUGH, "Pantdrainog Slate Quarry," Bethesda, near Bangor.

REDUCED PRICES.—EDWARD SIMMS late William Cleaver), of Wilton-road, Pimlico Basin, beg to acquaint Builders and the Trade that he has now on hand, at his Manufactory (the first of its kind ever established), a very large Assortment of Dry and Well-seasoned OAK and DEAL PREPARED FLOORING BOARDS and MATCH BOARDING of all sorts, from ¼ inch to 1¼ inch thick, planed to a parallel width and thickness, and at greatly Reduced Prices. Also, Timber, Deals, Oak Planks, Scantlings, Sash Sills, Mouldings prepared by Machinery, Laths, &c.—Apply at E. SIMMS'S (late W. Cleave's) Flooring Manufactory, Wilton-road, Pimlico Basin.

FURTHER REDUCTION of PRICES.—SAMUEL PUTNEY respectfully solicits the attention of manufacturers and others to the greatly reduced prices of PINE, SPRUCE and YELLOW DEALS, MAHOGANY, &c. &c.:—

Pine Planks, 12 ft. 3 in. by 11 in.	from 4s. 6d.	each.
Spruce Deals	„ 3d.	per foot.
Yellow ditto	„ 4½d.	„
Six-feet Pipe-staves	„ 2s. 0d.	each.
Spanish Mahogany	„ 8d.	per foot.
Honduras ditto	„ 6d.	„
Wainscot	„ 8d.	„

Prepared Flooring, Veneers, &c. at equally low prices.

Borough-road, Southwark, and Elm-street, Gray's-inn-lane.

TO BUILDERS AND OTHERS.

AT the LOWEST PRICES.—TIMBER, DEALS, MAHOGANY, and WAINSCOT. A large assortment of seasoned prepared FLOORING and MATCH BOARDING of all descriptions. Also an extensive stock of Dry White, Yellow, and Pitch Pine Stuff, Plating, Battens, Pantile Laths, Oak Plank, Sash Sills, &c. Timber of all kinds, Planks, Deals, and Battens, fetched from the Docks, sawn by patent machinery on the best terms and delivered at the shortest notice.—THOMAS JACKSON, Sawing and Planing Mills, Commercial-road, Pimlico, London.

IMPROVEMENT in WOOD MOULDINGS. J. SIMMONS'S improved WOOD MOULDINGS are acknowledged by all who have tried them to be the best ever produced by machinery. J. S. returning thanks for his friends and customers for the liberal patronage already bestowed upon him, begs to recall their attention to his Factory of Mouldings now on hand, feeling assured that one trial will insure a continuance of their favours. Price lists can be obtained on personal application, or by letter, enclosing a stamp to cover the cost of postage.—Steam Works, 20, North Wharf-road, Paddington.

N.B. Builders supplied with all kinds of Marble and Stone Chimney-pieces, at prices lower than any house in London.

ACORN TIMBER WHARF, Canal-bridge, Old Kent-road. RICHARD MAY'S extensive Drying Warehouses and Waterside Premises, with the improved machinery for dressing all kinds of wood, enable him to keep one of the largest stocks in London, of

PLANKS, DEALS, BATTENS,

DRY PREPARED FLOORING BOARDS, AND MATCH-BOARDING,

FOREIGN FIR TIMBER OF ALL KINDS.

English Oak, Elm, Ash, Laths, Mouldings, Sash Sills, always on sale at the lowest prices for cash.—A monthly Price Current forwarded on application.

ALFRED ROSLING begs to inform his Customers and the Building Trade generally, that he is enabled to allow a discount of 15 per cent. upon his list prices for Mouldings.—A large stock of dry flooring at low prices.—Southwark-bridge Wharf, Bankside.

TIMBER and DEAL YARD.—A large CONSIGNMENT of PREPARED FLOONS (dry) DEALS, BATTENS, &c. for SALE on COMMISSION, at very low prices for cash. Timber Deals, &c. received for Sale on Commission.—THOMPSON and HOLMES, Wood and Stone Brokers, at the Marble Wharf, Thames-bank, Pimlico, adjoining Vauxhall-bridge.

TO BUILDERS.—An old-established BUSINESS in the above line, neighbourhood of Pimlico, TO BE DISPOSED OF; has a good and safe connexion, and will be sold for about 20l.—For particulars apply to Messrs. BENNETT and KELLY, Builders' Auctioneers and Surveyors, Lower Belgrave-place, Pimlico.

TO PLUMBERS, PAINTERS and GLAZIERS, &c. An OLD-ESTABLISHED BUSINESS in the above line, situate in a leading thoroughfare, where a good jobbing trade is done, TO BE DISPOSED OF. Satisfactory reasons for the disposal, &c. will be given, by applying to G. R. 8 No. 18, Upper Thames-street, City.

TO BE SOLD, TWO excellent Ten-roomed CARCASSES, situate in Cleveland-mall, Downham-road, Islington Green, for Serpentine views. Ground-rents very low. Price 130l. each.—Apply to W. LANDRETH, on the Premises, or at 6, Coombe-street, Remington street, City-road.

SAW-MILL, with Engine and Gearing, TO BE SOLD for less than half its value.—For particulars apply to DUNN and CO. 18, Great George-street, Westminster; and at their Works, Manchester; Mr. THOS. WRIGHT, 9, George-yard, Lombard-street, London, and Mr. THOS. MOLE, Engineer, Birmingham

STUDIOS, CHAMBERS, &c. admirably adapted to artists or professional gentlemen, equally fit for private residence.—Apply, No. 30, Charles-street, Berkeley-square

WHITE OXIDE OF ZINC AND ZINC PAINT.
(LANGSTON SCOTT'S PATENT.)

CROWLEY, WHITE, AND CROWLEY, *Sole Manufacturers.*

This healthful substitute for White Lead, of unrivalled colour and texture, may be obtained from most of the principal Paint Grinders, Oil and Colourmen, and Ship Chandlers in the United Kingdom, or direct from the Works, Grand Surrey Docks (Wholesale under Brand), either in the dry state or ground in Oil.

Zinc Paint, being unchangeable in colour, stands pre-eminent for the highest purposes of Art; and from its perfectly pure and innoxious qualities, is peculiarly applicable to first-class Decorations and House Painting. For Iron it possesses great affinity, and hence its preservative properties for that Metal, whether employed for Marine or other purposes. It is now ground in Colours, and may be successfully employed on Stucco, or any other outside work for which White Lead is used; it sets harder, is consequently more durable, economical in first cost, and covers equal to any known pigment.

Messrs. MORANT and BOYD, 91, New Bond-street, who have lately used Zinc Paint to a great extent at Cliefden (the Duke of Sutherland's), and other mansions, have specimens, and will give any information respecting it.

PRICE LIST AND TESTIMONIALS FORWARDED IN ANSWER TO LETTERS ADDRESSED TO

MESSRS. CROWLEY, WHITE, AND CROWLEY, 39, KING WILLIAM-STREET, CITY, LONDON.

HUBBUCK'S PATENT WHITE ZINC PAINT,
The Permanent White of the Ancient Artist.

HUBBUCK and SON, the Original Manufacturers of White Zinc Paint on a large scale in this country, are enabled, by a process, which is patented, to supply their Pure White Zinc Paint at the price of White Lead. Those direful maladies, paralysis and painters' colic, will be entirely avoided. It is entirely free from any poisonous or pernicious property. Neither exposure to heat, nor tropical climates act upon it. The Powdered White Zinc may be had for grinding in Oil; also for Plaster Decorations and where it is used with Size, Varnish, &c. To be had of the Wholesale Paint-dealers in Original Packages, each cask stamped—HUBBUCK -LONDON—PATENT. And if not so marked, the quality is not guaranteed. Full particulars may be had of THOMAS HUBBUCK and SON, the Original Wholesale Manufacturers in this country. Paint and Varnish Works, Upper East Smithfield, opposite the London Docks.

THE VIEILLE MONTAGNE ZINC MINING COMPANY'S PURE PATENT WHITE ZINC PAINT is unequalled for permanency of colour, hardness, and brilliancy of surface; it is unaffected by sulphurous or any other vapours or emanations. Being completely innoxious and free from the pernicious effects of white lead, it may be employed in all apartments whilst in use without any inconvenience to the inmates.

The greatest caution is recommended to avoid any spurious compounds that might be sold at cheap rates as Pure Oxide of Zinc. If any adulteration has taken place in the oxide, either in consequence of impurity in the material primarily made use of to produce it, an imperfect mode of production, or by mixing with the oxide certain substances calculated to give it increase of weight, it then produces a very inferior instead of a very superior paint, and the economy realised by the purchasers of such oxides becomes a very expensive result to the owner of the premises painted with them.

The VIEILLE MONTAGNE'S ZINC OXIDES, dry or ground in oil, are sold with the VM mark—in Hull by Messrs. BLUNDELL, SPENCE, and CO.; when ground and dry, by Messrs. T. R MORLEY and CO. and by the Company's Grinding Agents in London, Messrs. CHARLES DE VAUX and CO., Wholesale Agents, 63, King William-street City; FREDERICK BRABY, Wholesale and Retail Agent, 8, Tottenham-court, New-road. In Manchester and Liverpool, by R. CLAY, 8, Mercery-street, who is the acknowledged Painter to the Company for Zinc Paints, and undertakes painting ships, warehouses, dwelling-houses, &c. In Leith, by Messrs R. ANDERSON and CO. Timber-bush. Dry OXIDES and PAINTS, in kegs of 14, 21, and 28 lbs and upwards, to be had of the Company's Agents in Birmingham, Newcastle, Glasgow, Bristol, Plymouth, Portsmouth, Norwich, Ipswich, Poole, and the Isles of Jersey, Guernsey, Man, and Wight; also in Dublin, Cork, and Belfast.

The Company also employ an acknowledged Painter in London, who will undertake any description of painting with Zinc Paint by contract.

For further particulars, apply to the Company's General Agency in London, 12, Manchester-buildings, Westminster.

SOUTHAM BLUE LIAS LIME WORKS. SOLDHAM and TATHAM have the pleasure of announcing to Engineers, Architects, Builders, and Contractors, that they have erected extensive works near Southam, for the manufacture and grinding of BLUE LIAS LIME, the value of which is now so universally admitted, especially for hydraulic purposes, concrete, &c. &c.; and they most respectfully solicit orders.

O. and T. can deliver by their own boats, or by rail to any part of the kingdom.

Office, Warwick.

SOUTHAM CEMENT WORKS.—OLDHAM and TATHAM respectfully request a trial of their PORTLAND, ROMAN, and LIAS CEMENTS, which they do not hesitate to pronounce as good as any now in the market. Their unvarying cementitious properties will ensure regularity in colour and quality.

Office, Warwick.

6, South Wharf, Paddington.

PORTLAND CEMENT.—CHARLES RICHARDSON has the greatest confidence in introducing to the Trade the above superior CEMENT, being of uniform colour and quality, a desideratum never before attained in Portland Cements. It possesses extraordinary cementitious qualities, resists the action of frost and heat, and is more durable than any other Cement; does not vegetate, turn green, or crack; combined with which, its eminent hydraulic properties stamp it at once as the first Cement of the day for work where all the above qualities are requisite. It is manufactured on the only principle Portland Cement can be, and contrary to the statements put forth by those who have hitherto had the monopoly.—Manufactured by R. GREAVES, Esq. at his Works, near the River Avon, and sent to all parts of the kingdom per boat or rail, at a reduced price to the trade.

PORTLAND CEMENT.—FULLWOOD THOMPSON and CO. beg to request the attention of Contractors, Merchants, and others, to the quality of their Roman, Portland, and Bath Cement, which they are manufacturing at their works, situate on the Bristol and Exeter Railway, two miles north of Bridgewater, and adjoining the Dunball Wharf, on the river Parrett.

These Cements are, they believe, the best for any purpose now in the market; they will set under water in a few minutes, and are insensible to extremes of heat or cold. The material used is such as will produce a certain and unvarying cementitious power, and a consequent regularity, the want of which is so obvious in Cements manufactured in the ordinary method.

FULLWOOD THOMPSON and CO. will be happy to forward prices by post on application, and send other desirable terms to large purchasers and exporters.

Dated St. Mary-street, Bridgewater, July 26th, 1854.

PORTLAND CEMENT.—ASPDIN'S PATENT.

Messrs. ASPDIN, ORD, and CO. have much pleasure in informing consumers of this valuable Cement, that they have, by means of a recent discovery (patented by Mr. ASPDIN) much improved the quality of this Cement without any increase in price.

Engineers and architects are recommended to specify "Aspdin's Patent," as there are numerous imitations sold as Portland Cements resembling it only in colour.

ASPDIN, ORD, and CO. beg to call attention to their SECOND QUALITY, which is equal, if not superior, to most of the Cements sold as Portland, and is considerably cheaper.

A report of experiments made to prove the extraordinary strength of their Patent Portland Cement, may be had at their Office New Wharf, Abingdon-street, Westminster; at their Works, Gateshead-on-Tyne; at Messrs. Rosher's Wharfs, Holland-street, Blackfriars, Kingsland Basin, and Limehouse; or from their Agent, Mr. HENRY ROBINSON, 31, King-street, Liverpool.

PORTLAND CEMENT WORKS, NORTHFLEET, KENT.—Messrs. ROBINS and CO. with much pleasure announce to their Friends and the Public, that they have completed the enlargement of their works, in order to meet the great increasing demand for their Cement; and are now prepared to supply any quantity of the very best PORTLAND CEMENT, manufactured by them for all the purposes Cement is applicable.—Orders received at Great Scotland-yard, and at the Works.

PORTLAND CEMENT.—JAMES WESTON having enlarged that portion of his CEMENT WORKS on Mill-wall, Poplar, for Manufacturing the above CEMENT, begs to inform the Trade in general that they can be supplied with any quantity they may require, either at his Works, St. Andrew's Wharf, Earl street, Blackfriars, or Middle Wharf, Scotland yard, Westminster. Manufacturer of Roman, Lias, and Mastic Cements, English and French Plaster, &c.

PORTLAND CEMENT WORKS, NORTHFLEET, Kent.—KNIGHT, BEVAN, and STURGE, Manufacturers only of first-class quality, for the home and foreign trade. Portland cement is manufactured at these works with especial reference to its destination, whether for stuccoing, brickwork, blocks for breakwaters, tidal work, or otherwise.—London Wharf, Bell-edere-road, Lambeth.

KEENE'S and PARIAN CEMENTS and FRENCH PLASTER, for internal uses. These well-known hard Stuccoes dry quickly, and can be painted upon within a few days. Made and sold by JOHN BAZLEY WHITE and BROTHERS, Millbank-street, Westminster.

PARIAN CEMENT, for Internal Use, to be painted in a few hours, and papered within a couple of days. FRANCIS, BROTHERS, Manufacturers of Roman, Parian (under patent), and all other Cements in use for building purposes, Nine Elms, London.

GEO. & THOS. FARLE, CEMENT MANUFACTURERS, HULL.—Light and Dark, equal to any made. Manufacturers also, and Dealers in, Plaster, Paris White, Mastic, Hair, Lias Lime, Laths, Slates, and Slate Slabs, Fire-bricks, Grindstones, Cement Chimney-tops, ditto Vases, Ridging, &c. Paints, Stucco, &c. Marble Merchants and Importers of Pozzolano.

ARTIFICIAL HYDRAULIC or PORTLAND CEMENT combines the valuable qualities of the natural Cements with the additional advantage that it greatly excels them in its cementitious properties; that it is not affected by frost, and does not vegetate in damp situations. Account of COMPARATIVE EXPERIMENTS on the strength of this and other Cements (read at the Institute of Civil Engineers), to be obtained from the Makers, JOHN BAZLEY WHITE and BROTHERS Millbank-street Westminster, who prepare one quality only of Portland Cement.

ATKINSON'S CEMENT, so long known and esteemed in London for plastering purposes, is a quick-setting Cement, that requires no colouring. Sold exclusively by JOHN BAZLEY WHITE and BROTHERS, Millbank-street, Westminster; and Seel-street, Liverpool.

CEMENT.—ROMAN and PORTLAND CEMENTS, and PLASTER of PARIS, manufactured by C. J. HILTON, can be had in any quantity, wholesale and retail, at his wharf, 6, Upper Thames-street, London; and also at the manufactory, Faversham, Kent.—N.B. These Cements supplied for shipment, on advantageous terms.

BUILDERS, IRONFOUNDERS, and OTHERS.—The Subscriber is in possession of several PATENTABLE WATER CEMENTS and COMPOUNDS (Frost, Fire, and Waterproof), adapted to every branch of plain and ornamental art, cheap in material and working. No engines, presses, or kilns required. Also, a Loom, wherein duplicate casts of metal can be taken out without destroying the moulds, and a Material for Cores of Pipes, Cylinders &c with many advantages over any in present use. The undersigned will treat with any capitalist for carrying out the above on easy terms.—Information personally, or address to THOS. HODGSON, 101, Drummond-street, Euston-square.

GREAVES'S BLUE LIAS LIME.—The superior manner in which the above is ground renders it choice with Architects and Contractors, of the above, is its best recommendation.

Gibbs, Canning, and Co.'s Blue Vitrified Bricks, Pipes, Junctions, Bends, and Fire Goods.

ROMAN, PORTLAND, PARIAN, ANSTON, and LIAS CEMENTS of the best quality.

SECONDS, PAVIORS', STOCKS, and other BRICKS.

CHARLES RICHARDSON, 6, South Wharf, Paddington.

MAW'S ENCAUSTIC TILE PAVEMENTS—a highly durable and decorative substitute for ordinary flooring and their perishable oil-cloth coverings; for entrance-halls, passages, verandahs, conservatories, &c.

MAW and CO send, free of expense, their pattern and price book, with designs, to any given spaces (and estimates), free of expense.

BENTHALL WORKS, BROSELEY, SALOP

PEAKE'S TERRO-METALLIC TILES, PIPES, &c.—Notice is hereby most respectfully given, that the LONDON DEPOT for this WARE is REMOVED to No. 21, WHARF, Macclesfield-street North, City-road Basin. Secondly, that the trade term, "TERRO-METALLIC," is the exclusive right of the Proprietor; and, thirdly, that the "REPORTS OF THE JURIES," page 881, of the Great Exhibition, rank the Manufactories known so long as "The Tileries," Tunstall, Staffordshire, as the first of the kind in the world.

SCAGLIOLA done on an improved principle.—I refer to the Gothic Arch done by D. DOLON, in the Great Exhibition in Hyde-park, 1851, which gained the only Prize Medal awarded for the manufacture of the above work in the British department.—Specimens are to be seen at 192, Drury-lane, two doors from Holborn. "The Tileries," Tunstall, Staffordshire, as the first of the kind in the world. Royal Coats of Arms.

BRICKS.—Best Kent Grey Stocks, delivered alongside in the River; also Patent Perforated and Solid White Suffolk and Red Facings.—Apply to W. ALLAWAY, 4, Catherine court, Tower-hill.

GREAT NORTHERN WHARF, York-road, King's-cross.—WHITE BRICK and TILE DEPOT.—L. B. PEARSE and CO. Brick, Tile, Lime, and Cement Merchants. Builders, contractors, and others supplied with every description of building material at the lowest market prices.

BRICKS.—Malm Cutters, Yellow and Pale Seconds, Paviors, and Pickings, of good and sound quality, constantly on sale at H. DODD'S Brickfields, which are only a quarter of an hour's walk from the City. H. D. earnestly requests purchasers to favour him with a visit, in order to inspect his stock, and to judge for themselves.

Malm Place, half-washed Stocks, and Place Bricks, also on sale. These bricks are sound, well burnt, and unusually free from defects; a very large proportion of the stock being suitable for external facing.

Apply to HENRY DODD and CO. at the Counting-house, Hoxton Brickfields, Grange-walk, near the Rosemary Branch, Hoxton.

N.B. Light-coloured Pit Sand of approved quality constantly on sale upon reasonable terms. This Sand, from its not containing any saline matter, is acknowledged to be preferable to river sand.

MILLS and PRICE, Brick and Stone Merchants and Agents, very respectfully announce, that their business, hitherto conducted at 37, Newington-crescent, Newington-butts, will, from MONDAY, the 11th inst. be carried on at 2, ADELAIDE-PLACE, LONDON-BRIDGE.—Dec. 8, 1854.

BRICK-MAKING EXTRAORDINARY!! BY OATES AND INGRAM'S PATENT MACHINE.

TO CAPITALISTS AND BRICKMAKERS.

Messrs. OATES and INGRAM beg to announce that the above powerful and effective machine may be seen (by order only) in daily operation at the works of the Vaughton's Hole Brick Company, near Birmingham.

The great advantages possessed by this machine over all others are, no tempering is required.

The bricks are produced at the rate of twenty-five per minute, smooth on the surface, being pressed in moulds, and sufficiently dense to be backed up in ranks before leaving the machine, which is entirely self acting, consequently requires only the labour of feeding and carrying off.

Applications, either to view the machine, or for the purchase of the patent right for counties or for royalties, to be addressed, T. WELLS INGRAM, Engineer, Birmingham; or to J. P. OATES, Inventor and Patentee, Lichfield.

WHITE SUFFOLK and RED FACING BRICKS

COWLEY, KENT, and ESSEX BRICKS.

Also Yellow and Pale Malm Seconds, Cutters, Paviors, Shippers, &c.

KENTISH RAG-STONE of the FINEST QUALITY.

MILLS and PRICE (successors to Mr. Benjamin Gough), 2, ADELAIDE-PLACE, LONDON-BRIDGE.

500,000 KILN-MADE BRICKS.—FOR SALE, by private contract, the whole or a less number of Bricks. For price apply to Mr. CHANDLER, at the Worth Brick Fields, Turner's-hill, near Crawley, Sussex.

O. M'CARTHY, CARMAN, and SAND and CEMENT MERCHANT, Whitefriars Wharf, Whitefriars Fleet-street, City. Sand, from above or below bridge, delivered by the yard or per barge. Ballast screened or unscreened, by the yard or per barge. Stocks, lime, and old bricks. Dry rubbish delivered per barge, in any quantity, alongside the Thames.

BRICK MOULDS (improved), STEEL-FACE STOCKS and PLATES, with regulating screw pegs, used three seasons by the leading brickmakers, bowls, hoes, cuckholds, pug mills, &c. Numerous references where in use. J. LEACH, Manufacturer, 26, Critchill place, New North-road, Hoxton. N.B. A variety of sizes kept on hand.

BRICK-EARTH TO BE LET, Malm and Stock, of very superior quality. Royalty low, with excellent dry stack-ground for four stools, near Windsor, contiguous to the Great Western Railway (a siding will be provided).—Apply to Mr. G CARTLAND, Eton, Bucks.

TO BUILDERS, BRICKLAYERS, BRICKMAKERS, STATUARIES, &c.—TO BE LET on LEASE, for 99 years, a FIELD of about Eight Acres, with frontage of 400 feet, on Plumstead Common, immediately adjoining the proposed Woolwich Cemetery. Excellent brick-earth and good water. For particulars apply to JOHN WILSHIRE, Cage Farm Plumstead.

LADDERS, BARROWS, &c. for SALE or HIRE GEORGE ELL, 3, Tottenham court, New-road, opposite the Hampstead-road, and corner of Pratd-street, Paddington, has now on hand at all times, a large stock of LADDERS, EXCAVATORS', BRICKMAKERS', and other BARROWS, PAINTERS' TRESTLES, MACHINES, STEPS, &c. Price lists can be had on application, at 3, Tottenham-court.

ARTESIAN WELLS, Boring for Water, Sinking Shafts, &c.—The nobility, gentry, water-companies, towns, baths, brewers, and manufacturers of every description, may be supplied with any quantity, by DAVID GREENLEY, Civil Engineer and Patentee of Boring Tools, 10, Cumming-street, Pentonville. Pumps and machinery for raising water from deep wells, boring-tools, and well-pipes for exportation. Men and tools supplied to bore for railroads, minerals, &c.

WHITE OXIDE of ZINC.—Addington-Wharf, Camberwell.—This article in its pure state, can be obtained at the Patent Oxide of Zinc Works, Addington-Wharf, Camberwell, where it is manufactured.

THE PERMANENT WAY COMPANY, 26, Great George-street, Westminster, beg to call the attention of Civil Engineers, Contractors, and others interested in the construction of railways to the present low price of iron, by which a saving may be effected of nearly 300l. per mile, single line, in the adoption of Mr. W. H. BARLOW'S Patent Wrought-iron Permanent Way over that of the ordinary road.—Every information can be obtained on application to

WILLIAM HOWDEN Secretary

WINDOW BLINDS.—TYLOR & PACE, Window Blind Manufacturers, 104, New Bond-street, and 3, Queen-street, Cheapside, London, submit the following PRICES of WINDOW BLINDS, which they can recommend as being made in the best manner.—Venetian blinds, per square foot, 6d.; best holland blinds, on rollers, 6d.; best ditto, on spring rollers, 9d.; gauze wire blinds, in mahogany frames, 2s.; perforated zinc blinds, in ditto, 2s. 6d.; cheaper blinds of striped cloth, 2s. Transparent blinds in great variety. Engravings, with prices and discounts to builders and the trade, forwarded on application, post free.

YORK STONE supplied direct from the Quarries.—NOWELL and ROBSON respectfully invite the attention of Architects, Surveyors, Contractors, Builders, &c. to their excellent STOCK of STONE, combining good colour with durability. Samples may be seen at Kensington Basin and the Great Northern Railway Depôt, King's-cross.—Prices will be sent, and country orders promptly attended to, and delivered at all the Stations on the principal lines of railway, by addressing NOWELL and ROBSON, Quarries, Idle, near Leeds. Purchasers will find the stone of first-rate qualities, and the prices very reasonable.

PAPIER MACHE AND CARTON PIERRE ENRICHMENTS MANUFACTORY,

49 & 50, RATHBONE-PLACE.

GEORGE JACKSON AND SONS

Beg the attention of Architects, Builders, Decorators, and others, to their large assortment of ENRICHMENTS in every style, executed in the highest class of art. Enrichments for ceilings of every period, elaborate or simple, Gothic, Elizabethan, pedentative or flat, Louis XIV in much variety, and to any degree of cost; Italian and Greek, Renaissance, and many mod.fied characters, executed for the first houses, and from designs of architects of the highest eminence; wall dressings, rich panels of every period, rich Elizabethan and Gothic Dados, in many designs. Door-cape, mouldings, and dressings.

A large assortment of Gothic Bosses to many varied intersections of all sizes, tracery and panel headings for church works, organ dressings, of most periods, and faithfully executed to the fra is of each. The general decorations of Drawing and Dining Rooms, Libraries, &c. of very considerable extent, as furniture, glass frames, tables, window cornices, screens, candelabra, and the whole range of accompaniments to reception rooms of the first class, as well as more subdued.

The facilities and repeated enlargement of means enable GEORGE JACKSON and SONS to announce the execution of works of the above descriptions in these advantageous materials at a cost considerably below any known method, while for quality, relief, and finish, they flatter themselves they stand unrivalled.

DESIGNS MADE FOR ANY WORKS.

WATERLOW and SONS, MANUFACTURING AND EXPORT STATIONERS,

65 to 68, LONDON-WALL, AND 49, PARLIAMENT-STREET, LONDON.

MILL AGENTS FOR WHATMAN'S DRAWING PAPERS.

In 4to. with numerous Plates and Woodcuts, price 32s.

A TREATISE on the SCREW PROPELLER with various suggestions of improvement.
By JOHN BOURNE, C.E.
A New Edition, thoroughly revised.
London: LONGMAN, BROWN, GREEN, and LONGMANS.

In 8vo. price One shilling,

NOTES and QUERIES on the PUBLIC HEALTH ACT, 1848: with Suggestions for a New Bill.
By S. C. GANT, C.E. Merthyr Tydvil.
London: LONGMAN and CO.; and C. KNIGHT and CO.; and, by order, of all Booksellers.

RUDGE'S MINER'S GUIDE IMPROVED.
New Edition, corrected and enlarged, 8vo. with Portrait, 12s.

THE PRACTICAL MINER'S GUIDE; comprising a Set of Trigonometrical Tables adapted to all the purposes of Oblique or Diagonal, Vertical, Horizontal, and Traverse Dialling; with their application to the Dial, Exercise of Drifts, Lodes, Slides, Levelling, Inaccessible Distances, Heights, &c. &c. &c.
By J. BUDGE.
London: LONGMAN, BROWN, GREEN, and LONGMANS.

In fcp. 8vo. with Four Plates price 6s.

A GUIDE to GEOLOGY.
By JOHN PHILLIPS, F.R.S. F.G.S.
Deputy Reader in Geology in the University of Oxford, &c.
New Edition, corrected to the present time.
London: LONGMAN, BROWN, GREEN, and LONGMANS.

In 8vo. with woodcuts, price 60s.; or half-bound in russia, 65s.

BRANDE'S DICTIONARY of SCIENCE, LITERATURE, and ART. Second Edition, corrected; with a Supplement, which may be had separately, price 3s. 6d.
London: LONGMAN, BROWN, GREEN, and LONGMANS.

The Fourth Edition, in 8vo. price 10s. 6d.

A PRACTICAL TREATISE on BREWING, based on Chemical and Economical Principles: with Formulæ for Public Brewers, and Instructions for Private Families.
By W. BLACK, Practical Brewer.
London: LONGMAN, BROWN, GREEN, and LONGMANS.

New Edition, in 4to. with Thirty-three Plates and 349 Woodcuts, 37s.

A TREATISE on the STEAM-ENGINE, in its Application to Mines, Mills, Steam Navigation, and Railways.
By the ARTISAN CLUB.
Edited by JOHN BOURNE, C.E.
"The great merit of the present work is the vast quantity of information which it affords as to details of construction. In this respect it seems unrivalled. . . . It contains a vast store of invaluable facts."—*Civil Engineer and Architect's Journal.*
London: LONGMAN, BROWN, GREEN, and LONGMANS.

Just published, in 2 vols. post 8vo. price 14s.

AN ART-STUDENT in MUNICH.
By ANNA MARY HOWITT.
"A lively, glowing, and individual picture of foreign scenery and manners. . . . No book, perhaps, has been published fuller of written pictures than this since the 'Letters from the Baltic.'"—*Athenæum.*
London: LONGMAN, BROWN, GREEN, and LONGMANS.

In one volume, post 8vo. with Electro types and numerous Engravings on Wood, price 10s. 6d.

ELEMENTS of ELECTRO-METALLURGY.
By ALFRED SMEE, F.R.S. Surgeon to the Bank of England.
Third Edition, corrected, and considerably enlarged.
London: LONGMAN, BROWN, GREEN, and LONGMANS.

In Two Volumes, 8vo. with nearly 1,600 Woodcuts, price 60s.

DR. URE'S DICTIONARY of ARTS, MANUFACTURES, and MINES; Containing a clear Exposition of their Principles and Practice. The Fourth Edition, much enlarged and corrected throughout.
"These volumes of Dr. Ure's consist chiefly of original and exact treatises, written with so much accuracy and care that they may be universally resorted to as authoritative,—as indeed the former editions have been,—as well by artists and manufacturers as by British and foreign scientific writers. The author has throughout the entire work kept most seriously before his mind the one object of promoting the best and most economical development of the arts and manufactures, and has produced a work which altogether surpasses every other of its kind with which we are acquainted."—*Mechanics' Magazine.*
London: LONGMAN, BROWN, GREEN, and LONGMANS.

THE QUARTERLY REVIEW.—ADVERTISEMENTS for the forthcoming Number must be forwarded to the Publisher by the 28th, and BILLS for insertion by the 31st instant.
JOHN MURRAY, Albemarle-street

On the 28th will be published, in demy 8vo. price 1s. 6d. in paper cover, or 2s. 6d. cloth gilt and lettered,

A POPULAR ACCOUNT of the STYLES of ARCHITECTURE; their Rise, Progress, and Present Condition: being the Essay for which the Royal Institute of British Architects awarded the "Institute Medal" for 1854.
By EDWARD L. TARBUCK, Architect.
Author of Articles contributed to "The Builder," on "The Present Condition of the Profession of Architecture," &c.
London: J. HAGGER, 67, Paternoster-row.

THE BUILDER'S PRACTICAL DIRECTOR, now publishing, in Parts, at 1s. each, containing Designs for Cottages. The Work will shortly contain Designs for Shop-fronts, also a Model Cottage, adapted for mechanics, with full Specification, Descriptive Essay, and Estimates.
By EDWARD L. TARBUCK, Architect and Surveyor.
The CAUSES and REMEDIES of SMOKY CHIMNEYS (illustrated), by the same Author, will shortly appear.
Parts I. to IX. are now ready.
London: J. HAGGER, 67, Paternoster-row.

MUDIE'S SELECT LIBRARY.—All the Best New Works may be had in succession from this extensive Library by every Subscriber of One Guinea per Annum, and by all First-class Country Subscribers of Two Guineas and upwards. The preference is given to Works of History, Biography, Religion, Philosophy, Travel, and Adventure. The BEST works of Fiction are also freely added. The Surplus Copies are offered for Sale at greatly reduced prices as soon as the first demand has subsided. Lists of the principal New Works and New Editions at present in circulation, with the terms of subscription and other particulars, may be obtained on application.
CHARLES EDWARD MUDIE, 510, New Oxford-street,
London; and 76, Cross-street, Manchester.

Now ready, gratis, and postage free.

A LIST of SURPLUS COPIES of RECENT WORKS withdrawn from MUDIE'S SELECT LIBRARY, and offered at greatly reduced prices for cash.
CHARLES EDWARD MUDIE, 510, New Oxford-street,
London; and 76, Cross-street, Manchester.

THE ART-UNION OF LONDON.
Preparing for immediate Publication, beautifully printed, on Fine Paper, in Quarto

CHILDE HAROLD'S PILGRIMAGE.
By LORD BYRON.
*** This Edition has been undertaken with the concurrence of the Council of the Art Union of London, expressly for the use and benefit of those Members who may desire to bind up with the Text of Lord Byron's Poem, the set of Illustrations which are about to be issued to the Subscribers of 1855.
Early application should be made for this Edition, as only a limited number will be printed, regulated by the Orders received by the Booksellers previous to the 31st March, 1855, on which day the Subscription List of the Art Union of London closes.
Price to Subscribers of the Art-Union of London, 10s. 6d.—Non-Subscribers, 14s.
JOHN MURRAY, Albemarle-street.

THE FREEMASONS' MONTHLY MAGAZINE. Price 1s. A Specimen Number will be sent on receipt of six postage-stamps (the cost of postage). No. III. for March, just published.
GEO. ROUTLEDGE and CO. Farringdon-street; and R. SPENCER 314, High Holborn.

Just published.

THE PUBLIC HEALTH BILL of 1855, and the "EDINBURGH REVIEW" on PRIVATE BILL LEGISLATION; an examination of the principles involved in the new project for private legislation. Price One Shilling, or, by post, One Shilling and Sixpence.
JAMES BIGG and SON, 5, Parliament-street, Westminster.
A copy will be forwarded to any part of the kingdom upon the receipt of eighteen postage stamps

Just published, price One Shilling,

NOTES on SPONTANEOUS COMBUSTION: an Appendix to "Notes on the Causes of Fires in Buildings."
By WYATT PAPWORTH, Architect.
C. and E. LAYTON, 150, Fleet-street.

VAN LERIUS'S GREAT ORIGINAL WORK.—ADAM AND EVE.—At 57, Pall Mall Daily, TEN till SIX: One shilling. Will be on view from MONDAY next, 19th MARCH 1855.

ARCHITECTURAL DRAWINGS WANTED.—Any Person having some first-rate ARCHITECTURAL WATER-COLOUR DRAWINGS TO DISPOSE OF, on moderate terms, may hear of a purchaser, by applying to W. R. 24, Guildford street, Russell-square.

Now Ready, price 28s.

HINTS on VILLAGE ARCHITECTURE; being a Selection of Designs for Schools, Cottages, and Parsonage Houses, adapted for Rural Districts, with Plans, Elevations, and Estimates. Dedicated by permission to Thomas Poynder, esq.
By HENRY WEAVER, Architect and Estate Agent.
Also by the same Author, a third edition, price 15s. of
HINTS on COTTAGE ARCHITECTURE; being a Selection of Designs for Labourers' Cottages, singly, in pairs, and in groups, with Plans, Elevations, and Estimates. Corrected to the present prices. Dedicated by express permission to the Most Noble the Marquess of Lansdowne, K.G.
London: HENRY POPE, 22, Budge-row, Cannon-street; and Sold by RIDGWAY; SIMPKIN and MARSHALL; and all Booksellers.

ARCHITECTURE, CIVIL ENGINEERING, and SURVEYING CLASSES Established by Messrs. HYDE, SMITH and LEWIS, Architects, Civil Engineers, Surveyors, &c. For Preparing Gentlemen for Architects, Builders, Engineers Surveyors, Draughtsmen, Measurers, &c. and for giving EVENING INSTRUCTION in Architectural and Civil Engineering, Drawing, and Colouring. Making Finished and Working Drawings, Preparing Specifications, Taking out Quantities, Estimating, &c. &c.—Terms One Guinea per Quarter, which includes Drawing Materials, Instruments, Colours, Paper, Drawing Boards, T Squares, Squares, &c. Prospectuses and full particulars may be had at the Offices, 24, Guildford-street, Russell-square.

TO ARCHITECTS.
COMPETITION and other DRAWINGS.—Mr. THOMAS S. BOYS, Member of the New Society of Painters in Water Colours, and author of "The Picturesque Architecture of Paris, Ghent, Rouen," &c. and of "London as it is," offers his services in Tinting Backgrounds, Landscapes, Perspective Views, Interiors, &c. From the long experience he has had in such subjects, he is fully aware of the points essentially necessary to be attended to. Drawings and designs lithographed in a superior manner.—Address, Mr. BOYS, 32, Albany-street, Regent's-park.

BUILDING ACCOUNTS, Measurements, Dilapidation Surveys, Quantities, Land Surveys, &c.—Architects, Builders, or Employers, in town or any part of the country, requiring a practical and experienced SURVEYOR, would find prompt attention to Drawings and designs lithographed in a superior manner.—Address, Mr. A. ANDERSON, Offices, 62, St. Martin's-lane, and Acton-hill

MATHEMATICAL DRAWING INSTRUMENTS.—JOHN ARCHBUTT, 59, Westminster-Bridge-road, Lambeth (near Astley's Theatre), begs to call attention to his Stock of Instruments manufactured by superior workmen. The prices will be found considerably lower than ever charged for articles of similar quality and workmanship. Rules, scales, tapes, &c. at equally low prices. An illustrated price-list will be immediately forwarded, free, on application.

DRAWING, CARTRIDGE, TRACING, and MOUNTED PAPERS, TRACING LINEN, CONTINUOUS CARTRIDGE, &c. &c. for the use of Architects, Engineers, Surveyors, and others, are sold by EDWARD STANFORD, Mapseller and Stationer, 5, Charing-cross.—A book of samples and prices may be obtained on application, or per post for six stamps.

SWISS DRAWING INSTRUMENTS, equal in quality to the very best London made instruments, and considerably cheaper. Apply to Mr. S. BARLOW, 3, Thavies-inn, Holborn (between 1 and 3 p.m.); or to Mr. H. B. BARLOW, Office for Patents, Ducie-place, Exchange, Manchester.

TO ARCHITECTS.—EXHIBITION and COMPETITION DRAWINGS COLOURED or TINTED, and Lithography in its various branches executed by Mr. T. J. RAWLINS, 32, University-street, University College, London.

PRIZE ESSAY.—The Council of the Amalgamated Society of Operative Engineers, &c. hereby offer a Prize of £50 for the best Essay on the "Value of Buildings, Land, the surplus Funds of their Society in Associated or other Productive Objects."
The Society has now in hand a balance of about 30,000l. and might be disposed to employ one-third of that sum in any well-digested plan which meets its approval. In addition to giving a plan of investing the funds, the Essay will be required to show the manner in which it can be safely done, the Society not being enrolled.
The Essay must not exceed forty pages of crown octavo, bourgeois type. It must be delivered free at the Society's Offices, 338, Blackfriars-road, London, addressed to Mr. WM. ALLAN, Secretary, on or before the 26th of APRIL, 1855, properly sealed, and the word "Essay" written outside.
The successful Essay must place a private mark upon it, but one by which he cannot be identified, and the Essay must be accompanied by a note, also properly sealed, containing the same private mark, with the name and address of the author. The note will not be opened until after the Essays are adjudicated upon.
Disinterested adjudicators will be appointed.
By order,
W. ALLAN, Gen. Sec.
London, 13th March, 1855.

MORNING and EVENING CLASSES, for the Study of Architectural, Civil Engineering, and Mechanical Drawing, Measuring and Valuing Buildings, Land, &c. every day and evening except Saturday. A class for a course of Architectural Colouring of fifteen lessons of two hours each, twice a week, will commence on MONDAY, MARCH 26th. Terms of which, and for prospectuses of classes, apply at the Architects', Builders', Civil Engineers', and Mechanists' Drawing Establishment, 15, Old-street, City-road. The New Quarter commences on MONDAY, MARCH 26th instant.
T. J. HILL, Architect, Conductor of the Classes.

TO BUILDERS AND HOUSE DECORATORS.
THE LARGEST STOCK of Upholsterers' Cloths, Raines, and Druggets, in every width, colour, and quality, is kept at HILL and SONS, 93 and 99, St. Martin's-lane, Charing-cross. Patterns forwarded upon application.

The Builder.

SATURDAY, MARCH 17, 1855.

WE have fallen somewhat behind in our report of papers read at the Royal Institute of British Architects, and must endeavour to supply the omission. Let us first say that the Queen has, by a letter from the Hon. Col. Phipps to Earl de Grey, approved and sanctioned the award of her Majesty's gold medal to M. Hittorff, architect, of Paris. Further, that a deputation from the Institute, consisting of Mr. B. Ferrey, vice-president; Messrs. J. J. Scoles and C. C. Nelson, honorary secretaries; and Mr. W. L. Donaldson, honorary solicitor, had an interview on the 10th instant with Sir Benjamin Hall, the President of the General Board of Health, on his proposed Health Bill. The chief points the Institute are endeavouring to get altered are, that surveyors and inspectors should be duly qualified, and should be incapable to perform works within their own districts; and if the building clauses are struck out, as Sir B. Hall in the House of Commons said he proposed to do, that the local boards should not be able to frame similar by-laws without there being a sufficient controlling party, such as the Board of Works, to sanction them. There are other points which they intend urging in committee referring to their professional duties.

On the 5th, Mr. C. C. Nelson gave a general account of Salzenberg's illustrated work on the "Early Christian Monuments of Constantinople, from the Fifth to the Twelfth Century."

The earliest remains of Christian buildings in Constantinople, if any of them exist, date from the first half of the fourth century, when, according to Du Cange, not less than 430 religious edifices, churches, chapels, and monasteries were raised in the city and its suburbs under the auspices of Constantine; but the difficulty of access to the mosques into which the Christian churches had been converted presented insurmountable obstacles to any satisfactory investigation, especially of Sta. Sophia, till the repairs in the years 1847-1848 afforded a favourable opportunity, and the King of Prussia despatched Salzenberg to the spot. Aided by Fossati, the architect employed, he was enabled to prosecute his researches, and take full and accurate measurement of that building and its details, as well as to collect other materials for the work in question, which forms a valuable supplement to the collection of views published by Fossati from drawings made on the same occasion.*

Following Mr. Nelson,—the largest portion of the work is devoted to Sta. Sophia; but various other buildings are also illustrated and described.

Though the buildings of Diocletian and Maxentius exhibit much skill in the construction of large vaultings, they show the extent to which art had declined at Rome and in the provinces. The hasty and probably slight construction, the numerous earthquakes, and human violence, have prevented any of those subsequently erected by Constantine in his new capital from enduring as examples to the present time. But the remains of Justinian's buildings bear evidences of the influence of the late Roman art during the first period of the Byzantine school. In them the Roman Corinthian and Composite orders are imitated, though with many deviations. The leafage is treated in an Hellenic rather than in a Roman manner—the tradition of older works previously introduced from Greece and Asia Minor. This peculiar acanthus-like treatment of the leaf ornament continues in works of the Byzantine school to the latest period, and something very similar may be observed in mediæval buildings of the west of Europe. Though the columns present an imitation of the attic base, deep and heavy members are introduced at each end of the shaft in place of the classic apophyge. Alterations in the proportions of the entablature and its divisions, the omission of the corona in the cornice, the overcharging the entablature with egg and bead enrichment and flutings—arches springing at once from columns, or the architrave curved to form an archivolt to the arches between them—these and many other licenses to be seen in the buildings of the late Roman school may be observed in those of the early Byzantine.

The first church dedicated to Sta. Sophia by Constantine, or his son Constantius (326-360), which appears to have been a Basilica after the Roman type, with a wooden roof, was destroyed by fire during a revolt A.D. 532. Justinian entrusted the erection of the new edifice to Anthemius of Tralles. It was commenced within forty days after the fire, and having been completed in less than six years was dedicated on the 26th December, 537. Security from fire was a condition strictly enjoined on the architect, which the vaulted construction has fully ensured to the present day, notwithstanding the numerous conflagrations that have occurred in the city.

Several remarkable deviations from the arrangement of plan observed in the earlier churches result from the particular kind of vaulted covering adopted, which consists of a cupola vault, supported over a quadrangular space by four equal semicircular arches or barrel vaults, corresponding with the sides of the square. The transition from the square to the circular form at the foot of the cupola is effected by means of gussets or pendentives, filling up the angles between the semicircular arches. The interior thus derives an imposing effect from the boldness of the vaulting, though the show of colour and of precious materials has been preferred by the Oriental Christians to correctness of form and execution in the sculptured enrichment. Columns of rare marble taken from ancient buildings, walls lined with many-coloured marbles, and vaults covered with golden mosaic—produce an interior to rival the painted walls and gilded ceilings of later basilicas. The walls and vaults are of brick. The external elevations are plain and exhibit the naked constructive forms, which divide the larger masses into portions, again subdivided and terminated by simple horizontal members. The external covering of the roof rests immediately on the vaulting.

Twenty-two years after the dedication, a violent earthquake having destroyed the eastern part of the cupola, Justinian caused it to be raised 25 feet; the counterforts were strengthened, and the interior was renovated. Since that time, notwithstanding the numerous earthquakes which have taken place at Constantinople in the course of thirteen centuries, the bold system of construction employed at Sta. Sophia has lasted well, and but few extensive repairs are on record.

After the fall of Constantinople, A.D. 1453, Mahomed II. destroyed the arrangements adapted to Christian worship, and dedicated Sta. Sophia to the service of Islamism. The effects of this change are, however, less visible in the interior than on the exterior of the building; the form of Mahomedan worship being simple, and consisting chiefly in the repetition of daily prayer. The mihrab, a niche indicating the direction of Mecca and containing the Koran; the minber, a raised stand from which the prayer for the Sultan is repeated on Fridays; the mahfil, a platform of moderate height from which the Koran is read; lamps for illumination during the *fête* of the Beiram; and a carpet spread over the pavement, constitute the requirements of a Dschami or place of meeting of the faithful to which at Sta. Sophia the Makssure, an enclosed elevated seat for the Sultan, has been added on the north of the space formerly appropriated to the clergy.*

The building had been much neglected of late years, till the present Sultan entrusted the work of restoration to Fossati, who not only carried out substantial repairs and removed many of the useless buttresses, but also effected a partial restoration of the ancient splendour of the interior: the marble work was cleaned and repolished, the golden mosaic vaulting freed from coats of whitewash, deficiencies supplied with gold leaf and ornament in oil colour, and only the personal representations on them forbidden by the Koran were again concealed to preserve them for future generations. The external face of the walls after the repair was stuccoed and painted with alternate bright yellow and reddish bands, to represent layers of stone in the style of Late Byzantine and Arabian architecture.

Sta. Sophia is situated near the Palace of the Seraglio, at the eastern extremity of the present town, where the original Byzantium stood. The apse of the church does not exactly face the east, but, as in most churches in Constantinople, it is turned somewhat towards the south-east, the direction of Jerusalem. The external main walls of the church enclose a space which is nearly square—the length inside, exclusive of the eastern apse, being 241 and the breadth 224 feet.† In the middle, four strong semicircular arches, supported on piers at the angles of a square space, carry the cupola. Between the four main arches in the centre pendentive vaults are introduced, which meet in a circle 100 feet in diameter. This circle forms a gallery at the springing of the great cupola, which there measures 104 feet across between the ribs, and rises at the crown to the height internally of 179 feet from the pavement.

The reader described the building at length: we must content ourselves with fewer particulars.

The materials used in the construction of the building are brick and a kind of peperino freestone, the latter where great pressure occurs, as in the four main piers of the cupola and the adjoining piers, and in those carrying the arched ribs in the side halls. A course of stone 2 feet high is laid about 4 feet above the pavement all round the building. The original external walls and vaultings are of brick: the later additions show alternate layers of brick and quarry stone. The Turkish counterforts are of wrought stone.

The main inclosing walls are about 70 feet high, and are 3 feet 6 inches thick on the north and south, 4 feet 6 inches on the east, and 5 feet on the west, between the nave and the narthex. The principal cupola appears at first sight to rest upon four arches, each 100 feet wide, but in fact only those on the east and west have that span, and on the north and south the real supporting arches are diminished in width to 72 feet, and only three-fourths of the circumference of these last arches has radiating joints, the parts next the springing being laid horizontally. The buttresses attached to the main piers on the north and south were at first only carried up to the spring of the great arches, and were concealed beneath the roofs over the side galleries, but after the fall of the dome they

* Aya Sofia, as lately restored by order of H. M. the Sultan Abdul-Medjid. Folio, London: 1852.

* Numerous authors, ancient and modern, have occupied themselves with the history and description of Sta. Sophia. Among the early Byzantine writers, Procopius, Paulus Silentiarius, and Agathias, contemporaries of Justinian, are alone deserving of confidence: the late Greek authors abound in fabulous narratives. Gyllius and Grelot visited the church in the seventeenth century, and Du Cange affords much valuable information in the Third Book of his Description of Constantinople.

† All the dimensions are given in Prussian feet, 100 of which are equal to 103 English, or 1 foot is equal to 1·03 English.

were raised by command of Justinian, so that they now are within 18 feet of the basis of the cupola, and form vast projecting masses, necessary perhaps for the stability, but certainly injurious to the external appearance of the building.

The cupola of St. Peter's at Rome is not seen with effect till the spectator is beneath it, and its supports equal half the space left free. From the central entrance-door of Sta. Sophia, the eye embraces at a glance the greater part of the interior, with the aërial cupola, the supports of which amount to barely one-tenth of the unencumbered space.

Of the three kinds of interior decoration employed, sculpture, marble linings, and glass mosaic painting (oil painting was not used, unless gilding the ornaments in relief be considered such), the first holds only a subordinate place, and is obviously not a main element of Byzantine art; but the marble decoration is in unison with the Oriental taste for show and glittering colours, which was gratified by the display of rare and precious materials, taken from ancient temples throughout the empire. All the walls of the interior of the church and narthex are lined, from the pavement to the vaulting, with slabs and bands of variously coloured marbles. In the church the mass is divided horizontally by two cornices of white marble, simple in profile and enriched with leaf ornaments, and a cornice is carried round the foot of the cupola. All the bands, as well as the panels, are surrounded by narrow borders of white marble, charged with fret work. The larger panels have wider borders of the same material, carved with ribbons and rosettes between frets and beads: by this means a marked division of the various marbles is obtained. Single friezes and panels are further ornamented by mosaic work, like the Florentine, representing leafage and tendrils, flowers, fruits, and animals. The arches and spandrils over the columns between the great piers in the nave are covered with relief ornament in white marble: on the upper floor these parts contain mosaic work of coloured marble. The ornament, which has a peculiar stencilled character, was once gilt, and the remains of deep red colour are seen in the sinkings. The walls of the bema are of the richest description, being almost entirely covered with slabs of marble mosaic: they formed with the barrel vault over them the arcus triumphalis, under which stood the gorgeous ciborium and the holy table. The walls of the adjoining apse, which contained the patriarchal chair and the seats of the priests, are less ornamented.

In obedience to the command that combustible materials should be avoided, the window openings are filled with bars of marble or stone, and the leaves of the doors were of bronze, or of wood covered with it. The larger window openings are subdivided by piers or columns with narrow architraves or transoms fixed midway in the height. Perforated slabs, 4 inches thick, form the window bars, which are about $3\frac{1}{2}$ inches wide, and are splayed inwardly. The panes of glass * (originally cast singly), vary in height from 9 inches to 10 inches by 7 inches to 8 inches in width. The door dressings are of marble, with the exception of those belonging to the royal door which are of bronze. Of the bronze door leaves, those at the south end of the narthex are alone deserving of special notice. They are apparently formed of Hellenic work of the best kind taken from some ancient temple, with Byzantine additions to adapt them to the opening. The plates of bronze, $\frac{1}{8}$ inch to $\frac{1}{4}$ inch thick in the old part, $\frac{3}{8}$ to $\frac{1}{2}$ inch in the later, are fixed on leaves of wood 4 to 5 inches in thickness.

According to Paulus Silentiarius, the ambo was placed centrally between the main eastern piers, but advanced somewhat westward, and beneath it the singers stood behind a barrier. Behind the ambo, the solea, appropriated to the inferior clergy, occupied the whole of the space under the eastern half cupola, which was separated from the rest of the nave by a low divisional wall.

Mr. Nelson, after alluding to the discrepancies existing in different accounts as to the dimensions and other particulars of the dome or cupola of Sta. Sophia, expressed a hope that another evening might be devoted to domes, as much more might be said upon the subject generally; and he hoped, in reference to Sta. Sophia, they might have the benefit of Mr. Petit's researches on the question of Byzantine architecture, and its applicability in the present time. Mr. Garbett's work might also be consulted on the subject, as the author traced the change from the Roman style of cross-vaulting to that used at Sta. Sophia, and compared the cross or groined with the domical, and pointed out the merits and defects of each in a very clear manner. It would be interesting to consider the different modes of lighting domes; the ancient western example, the Pantheon, was lighted from the centre; the eastern ones from the sides; and the modern domes of Europe from the centre. He also showed how domes had been progressively heightened, from the proportions found in the Pantheon to those of the most recent building.

The internal decorations of Sta. Sophia, the magnificent clothing and completion of the carcase, were left in the hands of Mr. Digby Wyatt, and were treated of by him at a meeting held on the 19th. We shall give the substance of his address next week.

* It is doubtful whether the glass panes in the windows belonged originally to the building.

THE WEATHER-COCKS AND VANES OF THE LONDON CHURCHES.

SUCCESS and excellence in art depends in a great measure on attention to details. Some of our greatest painters, whose style became eventually remarkable for breadth and vigour, at the outset of their career were almost to a painful extent careful of the most minute details. The early drawings of Turner, the landscape painter, are curious examples of patient finish.

In architecture, attention to the hundreds of details which form the grand whole, is of great importance. Even without this remark, we think that the termination of "the heaven-directed spire" will be acknowledged by most as a matter worth considerable attention. On it depends whether or not the eye, after passing pleasantly over the bold masses of a building, the chaste and beautiful decorations, the pinnacles, turrets, and other portions, shall by the lofty spire convey the eye (pleasing it as distant music does the ear) to the clear sky.

Vanes were used in very early times; but there is little information on the subject to be found. In the indexes to the long range of volumes of the "Gentleman's Magazine," that most venerable of periodicals, which is still strong and hearty in its old age, we find, although almost every phase of antiquity is considered, there is little mention made of vanes or weather-cocks. A correspondent gives it as his opinion, that they were introduced during the time of the great French war, as a sort of emblem of the changeable opinions and movements of that people! Another correspondent replies, that the church weather-cocks are of more antiquity; and this is all we can find on the subject by an examination of the indexes of the publication alluded to. The "Archæologia" is in like manner scanty of information: all that we find there is the remark, that the cock is frequently introduced in the ornamental part of mediæval architecture as an emblem of watchfulness.

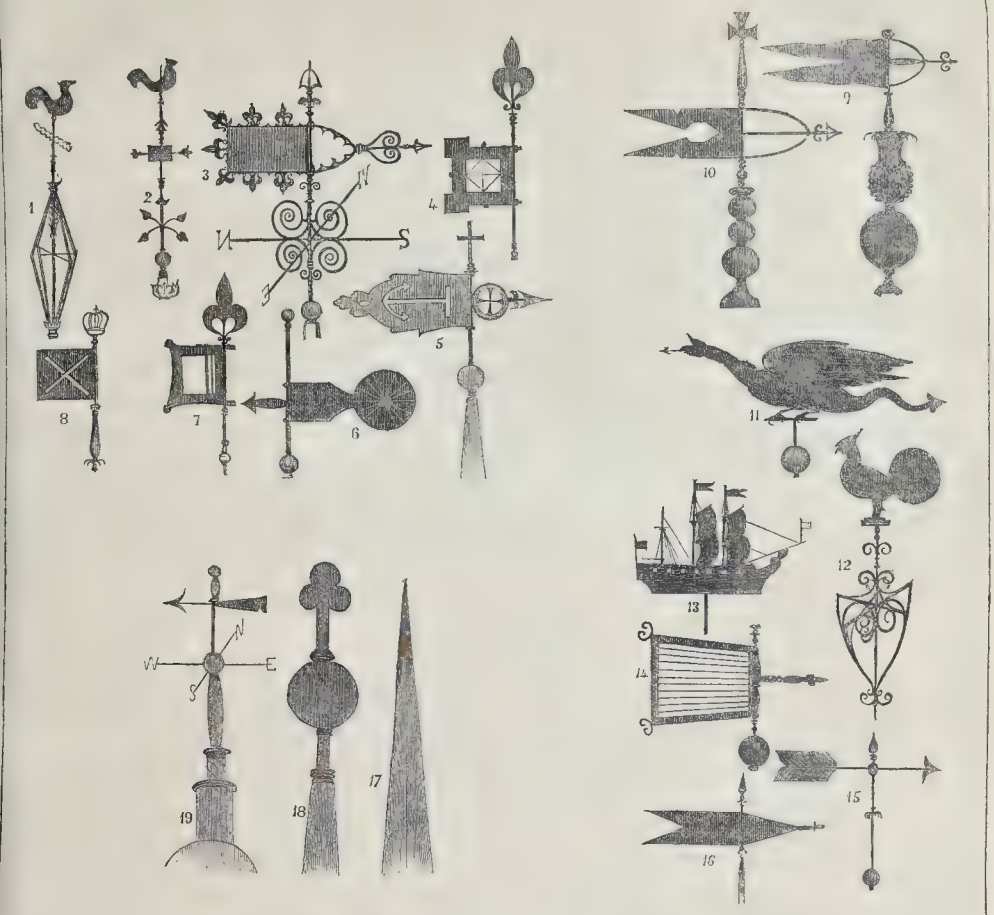
The Temple of the Winds at Athens had a vane. Chaucer (as quoted in the Oxford "Glossary") writes:—

> "O sterne people, vnsad and vntrue,
> Are vndiscrete, and changing as a *fane*."

Shakspeare only speaks of the *weathercock* twice in the whole of his plays; of the *vane* twice, and the *vane and weathercock* once. Evelyn, when journeying in Kent, says that the weathercocks were very numerous, and placed not only on the churches, but also on the farm-houses, barns, stacks of corn and hay, and on the large trees. He found sometimes on one tree several weathercocks, which he supposed had been placed there by the rustics at times of festivals and rejoicings.

It may be noticed, that at the period alluded to by Evelyn, when barometers for denoting the changes were not to be met with as now in every farm-house, the weathercock would be of considerable importance in agricultural districts; and it is probable that in out-of-the-way places there would be so little skill used in their manufacture, that a number might be necessary in order that a majority should inform the rustics *which way the wind blew*. Having stated this much respecting the origin of weathercocks, we leave the subject open to the ingenious remarks of our readers.

Many as are now the forms of the vanes on English churches, it would seem that an effigy of the wakeful chanticleer was the first pattern. We still meet with him on the old churches, barns, stacks, &c. in Kent, Somersetshire, and several other counties, and the village maypoles in parts of Gloucestershire, are still surmounted by the original weathercock. Since then the ingenuity of man has invented many devices for the purpose of showing the direction of the wind—arrows, greyhounds, horses, sportsmen, and other devices too numerous to mention. The London churches display a considerable variety, some by no means remarkable for their beauty (17, 18, and 19). No. 3, on the south transept of Westminster Abbey, is a good example, probably about the date of Henry VII. Nos. 8, 9, 10, may be taken as samples of the vanes on many of Sir Christopher Wren's churches. They are useful, plain, and commonplace. There are, however, several exceptions, for instance, the dragon on Bow (11), the gridiron on St. Stephen's, Wallbrook (14), emblematical of the martyrdom of that saint, &c. The portly-looking cock near the Guildhall (12), richly gilt, is a comfortable looking specimen, for the execution of which the artist had no doubt in his day the admiration of the ward. On the Church of St. Clement's Danes, the weathercock is ornamented with an anchor, the instrument of St. Clement's martyrdom. St. Clement is the patron of *blacksmiths*. "His quality," says Hone, "in this respect is not noticed by Brand, or other observers of our ancient customs, nor do they mention any observance by that trade in commemoration of his festival. But the following communication" (which we condense), "will show the estimation wherein he is held among the 'cunning workers in iron.'"



The secretary of the Benevolent Institution of Smiths jogs Mr. Hone's memory, and hopes he will not forget St. Clement's-day (Nov. 23), in the "Everyday Book." "When I was a child," says the secretary, "an old man went about in the trade, reciting the following ode on smithery, which I believe is very old." This ode would seem to be dated 1610. It begins—

> "By reading old authors you will find,
> The smithes have been a trade time out of mind;
> And it's believed they may be bold to say,
> There's not the like of them now at this day:
> For was it not for smiths, what would we do?
> We soon should lose our lives and money too."

The poet proceeds at some length to sound the praises of the smiths. Old Clem. then recites the following speech:—"I am the real St. Clement, the first founder of brass, iron, and steel from the ore. I have been to Mount Etna, where the god Vulcan first built his forge, and forged the armour and thunderbolts for the god Jupiter. I have been through the deserts of Arabia—through Asia, Africa, and America—through the city of Pongrove—through the town of Tipnings, and all the northern parts of Scotland. I arrived in London on the 23rd of November, and came down to his Majesty's dockyard at Woolwich to see how the gentlemen Vulcans come on there. I found them all hard at work, and wish to leave them well on the 24th."

Clement was a follower of the apostle Paul.

THE WEATHER-COCKS AND VANES OF THE LONDON CHURCHES.

It is said that he suffered martyrdom, and an anchor has been assigned to him as an emblem of distinction because, it is alleged, that he was thrown into the sea with an anchor round his neck.

It was curious to note, when making these slight sketches, how many eyes were directed by our own to the weather-cocks. Many of these persons seemed so struck with astonishment that a stranger would imagine they had seen them for the first time, and yet most of them had passed and repassed for years, and would have noted in an instant if one of the vanes should have been blown down by a storm; but the eye becomes so accustomed to things of daily sight, that they are seemingly unnoticed, and still day after day the taste becomes debased or raised by all that is reflected through the eye to the mind.

FOOD AND ITS ADULTERATIONS.

THE SCIENCE OF SHAM.

Having within the last few years made some little progress in clearing away that *outward* filth which stands so much in the way of our projected Life *Assurance* Association, in which life for a century is to be the perennial profit, and health for a century the accordant bonus, in return for perennial cleanliness and good arrangement as the sanitary premium, it cheers us to see a prospect of progress also towards the realization of that *inward* cleanliness which must constitute an essential portion of the requisite *premium*, and ought to be specially seen to by proper authorities. Meantime, there are able sanitary labourers busily at work in preliminary inquiries, which will not a little hasten the happy era of health and long life. Of these labourers, amongst the most important is the Analytical Sanitary Commission of the *Lancet*, a commission which has advanced nothing in the way of assertion as to food-adulteration without special verification by microscopical and chemical science, and which, therefore, stands apart from almost all previous testifiers to the extent and prevalence of such adulteration, much of what had been previously written on this subject having been collected from hearsay evidence merely, and some of it based on mere suspicion, so that the subject as a whole was somewhat distorted, and occasionally exaggerated in certain points, and hence discredited, whilst in others little or no conception existed as to the extent and universality of malpractices affecting substances held till recently to be beyond the power of analysis, although from their vegetable nature or origin comprising an extensive and important portion of our daily food and drink.* The very difficulty of detection thus admitted on the one hand, and understood on the other, has till now afforded a tempting field for rascality, on which dishonest *manufacturers* and tradesmen but too eagerly entered, and from which they have already reaped but too much gain. Imagining themselves perfectly safe in such malpractices, they have not even rested satisfied merely to pass off adulterated articles as genuine, but not seldom have even had the consummate impudence to extol their spurious compounds as something of a most superior and ultra genuine description. Often, too, they have not only most unscrupulously adulterated their goods with immense proportions of spurious ingredients, but have even grossly adulterated these various ingredients, whether sold in deceitful combination or in a separate form, thus too, accordingly, often cheating the smaller fry of cheaters themselves.

Such being the state of matters until recently, the astonishment and confusion of these knavish manufacturers and traders may be conceived when they became aware, as many of them now are for the first time, that what che-

* "Food and its Adulterations; comprising the Reports of the Analytical Sanitary Commission of the *Lancet*, for the Years 1851 to 1854, inclusive." By A. H. Hassall, M.D. Longman and Co. London. 1855.

mistry had failed to do in the exposure of their hidden tricks, that important instrument,—the microscope, had proved itself to be perfectly capable of doing! This is the unexpected *eye-witness*, to whose penetrating investigations we are likely to be now indebted for the total overturn of a hideous and abominable system of imposture. Every different vegetable substance (and mineral as well indeed) has its own peculiarities of appearance, which completely distinguish it from all spurious accompaniments, such as those which so commonly exist in many necessaries and luxuries, including coffee, cocoa, tea, sugar, flour, arrow-root, tapioca, sago, spices, &c. And where the microscope may fail, there analytical chemistry steps in, and these two witnesses go hand in hand in unmasking that knavery which not only plunders the ill-filled pockets of the poor, but fills their stomachs with filth and rubbish, nay, not seldom with positive and deadly poison; and even where that is not the case, imposes on all articles which, while they ought to nourish, do but emaciate, and so, as well as otherwise, in many ways undermine the health of the rich as well as the poor.

It is by a steady and continued exposure of this villanous system that we hope ere long to see established a true *Exetse*, if it may still be so called, which will maintain an efficient and constant supervision and inspection of every article in use for food or drink, for luxury or for medicine; with power to bring within the fangs of the law every evil-doer who robs the people either of money or of health by the manufacture or the sale of adulterated articles coming under any one of these four heads, if not indeed of any kind of article whatever, whether for internal use, or for mere external; for adulteration prevails to an enormous and most shameful extent in many other branches of trade besides those connected with the food, drink, or drugs of the people; witness the building trades themselves, and their spurious cements, paints and oils, &c.—their white leads made up with plaster of Paris, and their plaster of Paris with something still cheaper. It would be well, however, were white lead and plaster of Paris confined to the building trades: perhaps indeed confectioners, in erecting their elegant brides' and other ornamental cakes and confections, may rank themselves amongst the building trades, since they include amongst their usual building materials, not only plaster of Paris and white lead, but lime and clay, chrome lead, and numerous other *paints* of lead, copper, mercury, and arsenic, wherewith to attract the eye, and repel the stomach of the young and unwary.

Adulterations and poisonous impregnations are not the only evils connected with the food, &c. of the people which demand correction. The same authorities to whom the supervision of these ought to be committed, must, of course, be empowered to punish those who sell, or who manufacture for sale, unwholesome articles, even though genuine so far as regards adulteration. Nor do we restrict our meaning here merely to such substances as tainted meat, rotten hams, eggs, &c. stinking fish, &c. There are abominations of this kind which neither smell nor eyesight can reveal to the purchaser or consumer. Thus almost every specimen of raw or brown sugar examined by the Analytical commission to whom we have referred, was defiled by microscopic insects of loathsome form and aspect! In many specimens, the article under examination was infested with myriads of vermin, and it is actually believed that "the grocers' itch," got by "handling" sugars is produced by these insects, which, in fact, are closely analagous to microscopic insects which produce other kinds of itch. Flour is another article of great and universal consumption sometimes infested with a similar "mite" or *acarus*, though not to so appalling an extent as sugar seems to be; but flour has been suspected, when very old, to be the actual cause of deadly diseases attributed to epidemical, atmospheric, or other causes.

Though not usually subject to objections so disgusting as that of brown sugar, which is so often partaken of, either in a raw state, or without heat sufficient to kill the *acarus sacchari*, which survives even a pretty smart or scalding heat, bread is a substance exceedingly obnoxious to various most grievous, unprincipled, and objectionable tamperings. Thus bad flour is made to appear good, and dingy flour white, by an admixture of alum, which also enables the bread to absorb much water, and is hence extensively used by bakers and millers; and so deleterious is this admixture, that Liebig was lately induced to offer a sort of compromise by recommending the use of rice instead, which, it appears, absorbs or enables the bread to absorb still more moisture, and so still certainly to cheat the public in the weight of the staff of life—which is not *water*, essential as that "element" is—but at all events, thus to withdraw the positively deleterious alum. Potatoes are also much used to adulterate and cheapen bread.

Cocoa is another important article, possessing in its genuine state very nutritive qualities, and even esteemed by some medical men as an effective substitute for cod-liver oil in cases of consumptive disease, but which is vilely, or at least unscrupulously adulterated. This seems to be particularly the case with the numerous "homœopathic cocoas," a cognomen which would appear to have been satirically applied by the manufacturers in order to indicate that the article contained but a homœopathic or minute dose of the real cocoa in combination with the potato starch, mitey brown sugar, red ochre, &c. of which it is mainly composed.

As for coffee, it is notoriously still in many cases half chicory, which chicory is itself in as many instances made up of "roasted wheat and rye flours, burnt beans and acorns (pigs' food), burnt sugar, saw dust (!), mahogany sawdust (!!), carrot, or mangel wurzel!" and is nicely tinted with "ferruginous earths," or "black jack!"

Tea is in more senses than one often a *sloe* poison, elegantly painted of a lovely green, black, or blue by help of such innocent *blooms* as those made up of indigo and prussian blue, black lead, Chinese yellow, French chalk, or China clay.

Amongst the many (amusing were they not melancholy) instances of audacious knavery, by aid of which, with a due quantum of impudent effrontery, the cheapest or most rubbishy articles are palmed off on the rich invalid or other *bleedable* and believing customer, is one in which the changes have of late been pretty loudly rung on the taking titles "Revalenta," "Ervalenta," "Everlanta," "Relaventa," &c. a most invaluable and "astonishing," "health-restoring food," or farina, derived "from the root of an African plant somewhat similar to our honeysuckle." Each of the honest people who advertised this precious article declared all the others of course to be spurious,—to be made of mere beans and barley-flour,—or of some other similar common and contemptible ingredients. The principal firm, whom we shall call the *Do* Farina Company, *which* consists, it seems, of one German Jew, took the wind out of the sails of another of the tribe in a very clever way. This worthy colleague, if we may so call him, seeing that both were in league against the public pocket, though not in Co. had very knowingly procured an imposing chemical testimonial from a celebrated "analytical chemist," to the effect that his was the real genuine article. Messrs. Do Farina and Co. by dint of a double fee probably, and prepared specimens, *did* the poor chemist out of a similar genuine testimonial, and then exposed this, his own testifier, as a pecuniary humbug, thus completely neutralizing the credit which his opponent had derived from him. This chemical testificate system is very properly reprobated by the analytical commission, and in the present instance well it might be, for the microscope revealed to them the fact that the precious farina, sold "in canisters of not less than 5 lbs. each, price 22s." was no other than a mixture of bean or lentil meal and barley-flour, worth "about 2d. per pound!" It was to be supped with a syrup titled "Melasse," and which turns out to be nothing more or less than mere molasses, more commonly called treacle! Yet still the invalid and innocent public suck away confidingly at the African "honeysuckle" root, at the reduced price of 2s. 9d. per pound, and well lubricated with "Melasse" in "7s. bottles, carefully packed," and worth at least 3d. to 4d. per pound weight.

For the many thorough and salutary exposures of imposture thus effected, the public are deeply indebted to Mr. Wakley and Dr. Hassall in particular, and to the Analytical Sanitary Commission in general, of which they were the prime movers. Dr. Hassall states that the inquiry thus originated:—In 1850 he came to reside in London, and not many months had elapsed ere he saw that something was radically wrong with most of the articles of consumption commonly sold in the metropolis,—a distinguished compliment assuredly to sharp-set Cockney commerce,—and he was led to make certain microscopical and other investigations, the result of which he communicated to the Botanical Society, and which attracted some public attention; after which, Mr. Wakley communicated with the author, and had the moral courage to propose a thorough analytical investigation, and publication of the results, under the auspices of a commission to be appointed for the purpose. This investigation is still going on, and the present elaborate and important volume constitutes merely the first fruits. It is illustrated with numerous engravings of microscopic objects, many of which are of special interest, apart altogether from their bearing on the subject of adulteration.

RUINOUS BUILDINGS UNDER METROPOLITAN BUILDINGS ACT.

COSTS OF HOARDING.

A FEW weeks ago, Mr. John Day, the vestry clerk and assistant overseer of St. George's, Southwark, summoned the owner of some dilapidated houses in Mint-street, to recover the value of a hoarding erected in front of them by the parish authorities, under the Buildings Act.

Mr. Day stated that the houses in question were in such a dilapidated state, that they were really dangerous to the public passing them. A survey was made, and the houses were condemned by the district surveyor. The parish authorities, according to their sense of duty, erected a hoarding in front of them, and gave the owner notice to pull down within fourteen days. The houses were pulled down within that time, and the parish authorities removed their hoarding, which cost 12*l*. It was sold for 3*l*. and then they sought to recover the balance from the defendant.

Mr. Allen, for the defendant, contended that his client was not liable. The Act of Parliament, 41st, 42nd, and 43rd sections, clearly defines the liability. The parish authorities for the protection of the public placed up the hoarding, and sent a notice to his client to pull down within the fourteen days. He did so, and consequently had nothing to do with the expense of the hoarding. He (Mr. Allen) stated that a year or two ago he was engaged in a similar case for the parish of St. Anne, Soho, when Mr. Hardwicke gave his judgment against the parish, inasmuch as the owner of the property had pulled down within the fourteen days.

Mr. Combe, the sitting magistrate at Southwark Police-office, said he had communicated with Mr. Hardwicke on the subject, and after mature consideration he was of the same opinion. Had not the defendant pulled down the houses after receiving fourteen days' notice of condemnation, then the parish authorities could have pulled them down, sold the material, and reimbursed themselves for the expense of the hoarding out of the proceeds. The parish authorities certainly were, in a moral point of view, rather imposed upon, as it might seem proper that the owner should pay the expense of the hoarding erected around his own property, but that was their duty as protection to the public. Had the houses fallen, the blame would have rested on them, and they were bound to protect the public.

Mr. Day considered that the parish authorities were entitled to be reimbursed the sum they were actually out of pocket. The Act of Parliament never contemplated that the parish rates were to be expended in protecting ruined property, which was well known to the owners to be in such a state, instead of going to the support of the poor. He (Mr. Day) cited the different clauses in the Act, in order to show that he was entitled to the sum demanded.

Mr. Combe said the Act of Parliament was perfectly clear on the subject. The defendant had complied with it, and had nothing whatever to do with the expense of the hoarding. He must, therefore, dismiss the summons. At the same time, he must say that Mr. Day had acted very properly in bringing such a case before him, and had conducted it in an able manner.

It is difficult to believe that the views of those who framed the Act coincided with that taken by the magistrate, however the wording of the

A may justify the decision. Section 40 makes it t' duty of the overseers, on receiving copy of e district-surveyor's certificate of condemna-on from the official referees, to shore up the uilding or put up a proper hoard for the safety f all passengers, and to give the owner notice to repair or pull down within fourteen days. If within the fourteen days the repair or demolition be not begun, they are "authorized and required" to cause such repair or demolition to be performed. Section 41 authorizes them, "with regard to any such such ruinous building *so pulled down*," to sell the materials, and to reimburse themselves for putting up the hoard, pulling down the building, and all other expenses; and section 42 enables them, "if the moneys arising from such sale be insufficient," to levy the amount deficient under the warrant of magistrates by distress and sale of owner's goods. The Act makes no provision beyond this for the recovery of expenses where no materials have been taken down and sold; and as, in the case above reported, the owner himself took down the building within the fourteen days, the magistrates decided that the overseers could not recover for the erection of the hoard. The correctness of this decision seems to us very doubtful. It could not have been intended that, because *all* the expenses were not borne by the overseers, *none* should be recoverable. It might be that the surveyor's certificate simply directed the shoring up of a building, and the insertion of iron ties; and that the fourteen days having expired, this had been done by the overseers. There would be no pulling down and no sale of the materials. Would Mr. Combe consider that in such a case the outlay could not then be recovered?

The parishes should get counsel's opinion on the point.*

ON THE SEWAGE QUESTION.

A VERY interesting and important paper was read at the Society of Arts on 7th instant by Mr. J. B. Lawes, on the Sewage of London, and was followed by an equally important discussion by various gentlemen well acquainted with the subject, although differing very much in opinion on it.

In the outset Mr. Lawes remarked that whoever undertakes to bring forward plans for the economical disposal of the sewage of the metropolis, is at once met by the difficulty arising from the enormous bulk of the material with which he has to deal. It is estimated that between one and two hundred million tons of fluid pass through the sewers annually; and it is said, that solid matter amounting to nearly 200,000 tons, is suspended or dissolved in this liquid. Those who advocate the employment of the sewage by irrigation, must therefore seek for an extensive tract of land at no great distance from London on which to deposit this fluid; whilst those who propose to separate from it a solid manure, must produce a substance of sufficient productive value to bear the cost of carriage to all parts of great Britain. Of late years much money has been uselessly expended in patents and inventions for converting the sewage into a portable manure, which might have been saved by a better knowledge of the true principles of manuring, and the wants of agriculture. The question farmers are beginning to ask is, *not* what is the price *per ton*, of this or that manure? But, in what manure can I most cheaply bring upon my land certain constituents which I require? The inability to answer this question satisfactorily has hitherto brought all the producers of sewage manure to a stand-still. Those who in future propose to deal in this manner with sewage, should consider well this question. The success or failure of their inventions will infallibly depend upon the answer they can give.

It should never be forgotten that it is the cost of carriage which regulates in a great measure the distribution of manures, and assigns to each a limit of area, beyond which it cannot profitably be employed. True economy in manuring consists in adding those substances to the land of which the supplies of the soil and atmosphere will be deficient.

Farm-yard manure is estimated to contain about ½ lb. per cent. of ammonia; or about 11 lbs. in a ton. It would therefore require about 17 tons of farm-yard manure to supply to the land the amount of ammonia used in an experiment to which Mr. Lawes adverted. Now, he continued, my farm is situated twenty-five miles from London, and being inconveniently situated for conveyance by railway or canal, the cost of carriage from London upon one ton of manure is fifteen shillings. Therefore, if I were to bring my 180 lbs. of ammonia from London in the form of dung, the carriage alone would amount to 12*l.* 15s. I could obtain the same amount of ammonia in half a ton of guano, or in 7 cwt. of sulphate of ammonia, at the cost of one half of the carriage alone of the dung. This example clearly shows, that it would be cheaper for me to give 10*l.* per ton for guano, or 1*l.* per ton for sulphate of ammonia, than to have the dung as a gift. In the case of the guano and the salts of ammonia, pounds weight only of manure are brought upon the farm to produce tons of growth; in the other you bring tons to produce pounds. Whilst I consider ammonia by far the most important and valuable constituent in an artificial manure, phosphoric acid is certainly the second in this respect. All my experiments lead to this conclusion; and it is, moreover, fully confirmed by the composition of all those manures in the market which have the most extended sale, and which are the most highly prized by the farmer.

Mr. Lawes then entered into a series of very elaborate statistical details on the subject of the actual nature and quantities of the several ingredients contained in the London sewage. The amount of the most important ingredients in course of one year, entirely freed from water, he estimated at 51,286¾ tons. Of this, he continued, about one-fifth is mineral matter; and the *nitrogen* it contains amounts to about one-sixth of the whole, namely, 8,859¾ tons, which is equal to 10,758¼ tons of ammonia. Now little more than half a cwt. of ammonia is the usual artificial dressing for an acre of cereal grain, and it might be calculated to yield an increase of crop of ten to twelve bushels of wheat, or these 10,758¼ tons of ammonia would afford a produce of about 600,000 quarters, if it could be conveniently applied for such a purpose. The intrinsic value of the sewage of London considered in this merely chemical point of view is therefore enormous. Indeed, according to the above supposition, it would return to the metropolis nearly one-third of the wheat consumed by its population. If, however, it were thus devoted exclusively to the growth of corn, it would, at the rate above mentioned, extend over more than 400,000 acres of land. But this ammonia in the sewage of London is unfortunately distributed through an enormous bulk of water, and Mr. Wicksteed has shown us how immense would be the cost of distributing this material over any enormous area of land in the liquid form.

This leads me to a consideration of Mr. Wicksteed's alternative of a solid manure. Mr. Wicksteed's method consists in adding a certain quantity of lime to the sewage, by which the insoluble and suspended matters, and also some small portion of those in solution, are carried down in the form of a liquid mud. This mud, after proper subsidence, is removed into a centrifugal machine, by the rapid revolution of which a certain portion of the remaining water is thrown off. The manure is afterwards further dried by exposure to a current of air in sheds. The value of this solid product Mr. Wicksteed estimates at from 2*l.* to 2*l.* 13s. per ton. He does not, however, give any analysis of it.

But we are not left to conjecture merely, as to the composition of a sedimentary sewage manure, such as that which would be the result of Mr. Wicksteed's process. Professor Way, in his valuable paper upon the composition of sewage, published in the Journal of the Royal Agricultural Society of England, has given us three analyses of manures made by adding charcoal and lime to sewage water, and in none of these does the ammonia amount to 2 per cent. whilst the average amount of phosphate of lime is less than 5 per cent. equal to about half that quantity of phosphoric acid.

Before purchasing any manufactured manure, I should sit down to calculate at what price I could purchase the constituents it contained? I find 1¾ cwt. Peruvian guano would supply all the nitrogen or ammonia, and the phosphoric acid of such a sewage manure; three or four cwts. of rotted straw would supply all its organic matter; and the residue I could obtain from the chalk and sand pits. Thus, for about 25s. I could bring upon my land the constituents of a ton of this manure, and for 30s. less money. Again, to supply the amount of ammonia put upon the experimental plot already adverted to, in 1854, I should require nearly seven tons of the sewage manure, at a cost, including carriage, of about 19*l.* I could obtain the same amount in seven cwt. of sulphate of ammonia, at a cost of 5*l.* Such, then, is the nature of the facts which lead me to the conclusion, that a *sedimentary sewage manure* cannot be profitably made by Mr. Wicksteed's process, or, I may add, by any known process.

There can be little doubt, that if the sewage of London is to be turned to some useful purpose, it must be applied in the liquid form in such quantities as to yield the greatest possible growth that land and season are capable of. *Grass* is the most suitable crop for the application of liquid sewage. But that its use, even for this purpose, should be attended with advantage, it must be employed in the most liberal quantities, that the capabilities of land and season will admit of; and, in this way, it is not impossible that in the neighbourhood of a large city a rental of 20*l.* to 30*l.* per acre might be obtained. Experience alone can decide what is the minimum area of land which would yield the maximum produce and rental from the sewage of London, but there can be little doubt that it would require many thousand tons of sewage per acre to yield the rental I have supposed. I may mention, however, that if 10,000 tons of sewage were annually applied to each acre, it would take about 20,000 acres to absorb the whole sewage of London, upon the estimate of 50 gallons per head per day.

In conclusion, Mr. Lawes remarked, that there would surely be no great difficulty in appropriating a few thousand acres at no great distance from the Thames to the purpose in question. And grass being the produce grown, so milk and cream should be the chief products obtained in return. Irrigated grass appears to supply food peculiarly adapted for the production of milk; and there are certainly few articles with which the inhabitants of the metropolis are so inadequately supplied. Whilst, therefore, they must be justly charged for the removal of the sewage on sanitary grounds, they might surely demand, that the cost should be lessened by a proper application of the sewage: and it appears to me, that a liberal distribution of it on grass is the most promising means of attaining this result.

The discussion was opened by Mr. Foster, the secretary, reading a communication from Mr. Wicksteed, in which it was stated that in a few weeks the works at Leicester would be completed, when quantities of manure sufficiently large to enable practical agriculturists to give practical opinions would be prepared, and which he should consider in a commercial point of view the best test of the value of the manure to be thus supplied.

Mr. Sidney said that on most points the experiments in irrigation with sewage manure in Lombardy were very far from bearing out the views of Mr. Mechi and Mr. E. Chadwick, and of these views he proceeded to speak, and was followed by Mr. Chadwick, who defended his own well-known opinions, and minutely criticised those of Mr. Lawes. He was followed by Mr. A. Morse and by Mr. Mechi, who briefly addressed himself to the subject in question in accordance with his also well-known views. Mr. F. O. Ward gave an elaborate sketch of his

* Touching "Ruinous Buildings," we may add as a note the following from a correspondent:—"A ruinous building in Clerkenwell, formally condemned by the district surveyor, of which a certificate of condemnation was duly forwarded from the office of Metropolitan Buildings to the overseers, has been suffered by the overseers to remain in a dangerous condition for two years and upwards, threatening the lives of the inhabitants, and a source of great loss and detriment to the adjoining property. Surely, sir, there must be some remedy in the form of a mandamus, compelling the overseers to act as 'authorised and required' by the Act of Parliament. It is highly necessary that parishes should know the responsibilities that attach to them, and that they should take the requisite steps to be able to act on all occasions as 'authorized and required.'—AN INQUIRER."

own ideas, in which the separation of manure proper from rain-fall, &c. formed a special element. Bramah's great invention of the water-closet, he remarked, had originated the modern problem of the disposal of sewage manure, since it gave rise to a new requirement, that of an outfall for soil-water, to which purpose the rain-sewers came gradually and illegally to be turned:—

"The surreptitious pollution of the rain-channels, originally connived at as insignificant, had come at last to be recognised as a system. The recent introduction of a cheap form of water-closet for the use of the working-classes, had given to this system such a sudden and rapid extension, that attention had at length been called to the monstrous proportions of the evil; which, plainly stated, was the annual discharge of many thousands of tons of putrifying matter into the rain sewers, the brooks, and the river. Every step that we had made in this false direction must (in his opinion) be retraced. The dispollution of the river, the brooks, the rain sewers, constituted a chain of operations, the links of which were bound together by the logic of an irresistible necessity. This necessity might seem hard, but it was absolute. You could not divert into tunnels, nor master with pumps, half-a-dozen rain-swollen brooks: their flood-waters must rush into the Thames, and must carry thither whatever pollution you had turned into their channels. Dispollute the Ranelagh, the Fleet, and the other brook-sewers of London, and your main difficulties at once disappear; the purification of the river, and the utilisation of the sewage become comparatively easy matters."

The chairman, Colonel Chaloner, in conclusion said that "what was most satisfactory to his mind was, that no two opinions seemed entirely to agree, because, so long as the scientific men whom they had heard that night differed in opinion, it would be the interest of every man of common sense, and with brains in his head, to work out the subject for himself: at the same time, he hoped in the end they would come to something like a definite result." We are much afraid that we must not yet calculate on deriving pecuniary advantage from the sewage of London.

ARCHITECTURAL AND BUILDING MATTERS IN VICTORIA.

BUILDING has been very dull, little being done anywhere, but is beginning to brighten. Several large public buildings have been or are about to be commenced, viz. in Geelong, the Exchange (the cost of which will be 20,000*l.*), the town-hall (40,000*l.*), the court-house, post-office, and telegraph station. In Melbourne, no public building of any importance is on the *tapis*, with the exception of the Exhibition Building. This arose as follows. It being intended to send specimens of colonial manufactures and natural productions to the Paris Exhibition in 1855, it was deemed advisable to hold a preliminary exhibition in Melbourne previous to the transmission of the articles to France. Soon after the first announcement, applications for space became so numerous that the commissioners decided on erecting a special building for the purpose. They were met in the most liberal manner by the Government, who provided ground, and pay half the cost of erection, on the condition that the building is to become their property for the purpose of Government offices at the close of the exhibition.

In accordance with this arrangement, the building is more substantially built than usual. It is of wood, two stories (about 40 feet) high. It has a gallery all round internally, and is covered partly with a semicircular glass roof, on the ridge and furrow principle. It is altogether a very creditable production; and as it stands on almost the highest ground in Melbourne, it is visible for miles around.

Next comes, perhaps, the greatest work yet accomplished in Victoria—the Melbourne and Hobson's Bay Railway, opened September the 12th. This, the first line in the colonies, is about 4 miles long. The entire distance is nearly level, and where gradients have occurred (these very slight), it has been surmounted by the construction of the road-way, which is raised about 4 feet; the embankment composed principally of sea sand, with a double line of rails laid in the usual manner on longitudinal sleepers, no transverse sleepers being used. It is the usual narrow gauge. The premises, &c. consist of (commencing at Sandridge), a jetty 1,000 feet into the bay, a large locomotive department, and the usual station buildings, all finished. There is no particular engineering work until close to the Melbourne station, where the line crosses the river Yarra, on a viaduct about 500 feet long, built of timber, on the American lattice principle. The line here takes rather a sharp curve to the station in Flinders-street (close to the Princes-bridge), a rather handsome wooden structure. Here very extensive goods' sheds, &c. are in course of erection.

At present the company have but one locomotive and four carriages, all of colonial manufacture; but both engines and carriages are daily expected from England.

The line was opened by the governor, Sir C. Hotham, on September 12th, since when trains have been running regularly every half-hour. As yet the company charge but one fare, viz.—1s. 6d. each way. They have only first-class carriages.

At the top of William-street, Melbourne, is just finished the Electric Telegraph Station, built of brick, with stucco quoins, &c. in imitation of freestone. It has a tower and electric time-ball, which falls at one o'clock.

The telegraph itself extends from the wharfs and Custom-house; thence up William-street to station; thence to the Government-office, and from thence across to the flagstaff, a distance of about one mile. It is a single wire, on posts about 16 feet high.

Numerous handsome blue-stone stores and warehouses are springing up in Melbourne. Most of the principal streets are paved. On the right-hand side of Collins-street, nearly every shop has a handsome plate-glass window. Gas, too, is beginning to be used, made from oil by the consumers themselves. All these many and great improvements are the work of a short twelve months. There is no other country (except, perhaps, California) where so much enterprise is united to so much capital; consequently, no place but Melbourne could make such rapid strides: the only parallel is the city of San Francisco; and there the improvements, though equally rapid, are less substantial.

In Geelong, the principal work already in course of erection, is the St. Mary's Roman Catholic Church. This is a very fine structure; though of a most medley style of Gothic. The basements are very fine *blue-stone*; the rest above the ground line of freestone. The estimated cost is 112,000*l.*! Messrs. Cowden and Ross, architects.

The Geelong and Melbourne Railway Company are getting on very well, and quickly: the line is 46 miles long, and already 38 miles of it are under way by different contractors. Part of the permanent terminus, too, is erected, and in occupation for the engineer's and secretary's offices, board-rooms, &c.

At the corner of Mercer-street and Brougham-place, in Geelong, is the Terminus Hotel, just opened (Messrs. Snell and Kaweran, architects). It is of brick, three stories high, and contains forty-six bed-rooms, and eighteen other rooms, including ball-room, 96 feet by 23 feet. It is sumptuously furnished, and fitted up on the principle of the great New York hotels. The decorations and fittings from the designs and under the superintendence of F. T. Honey.

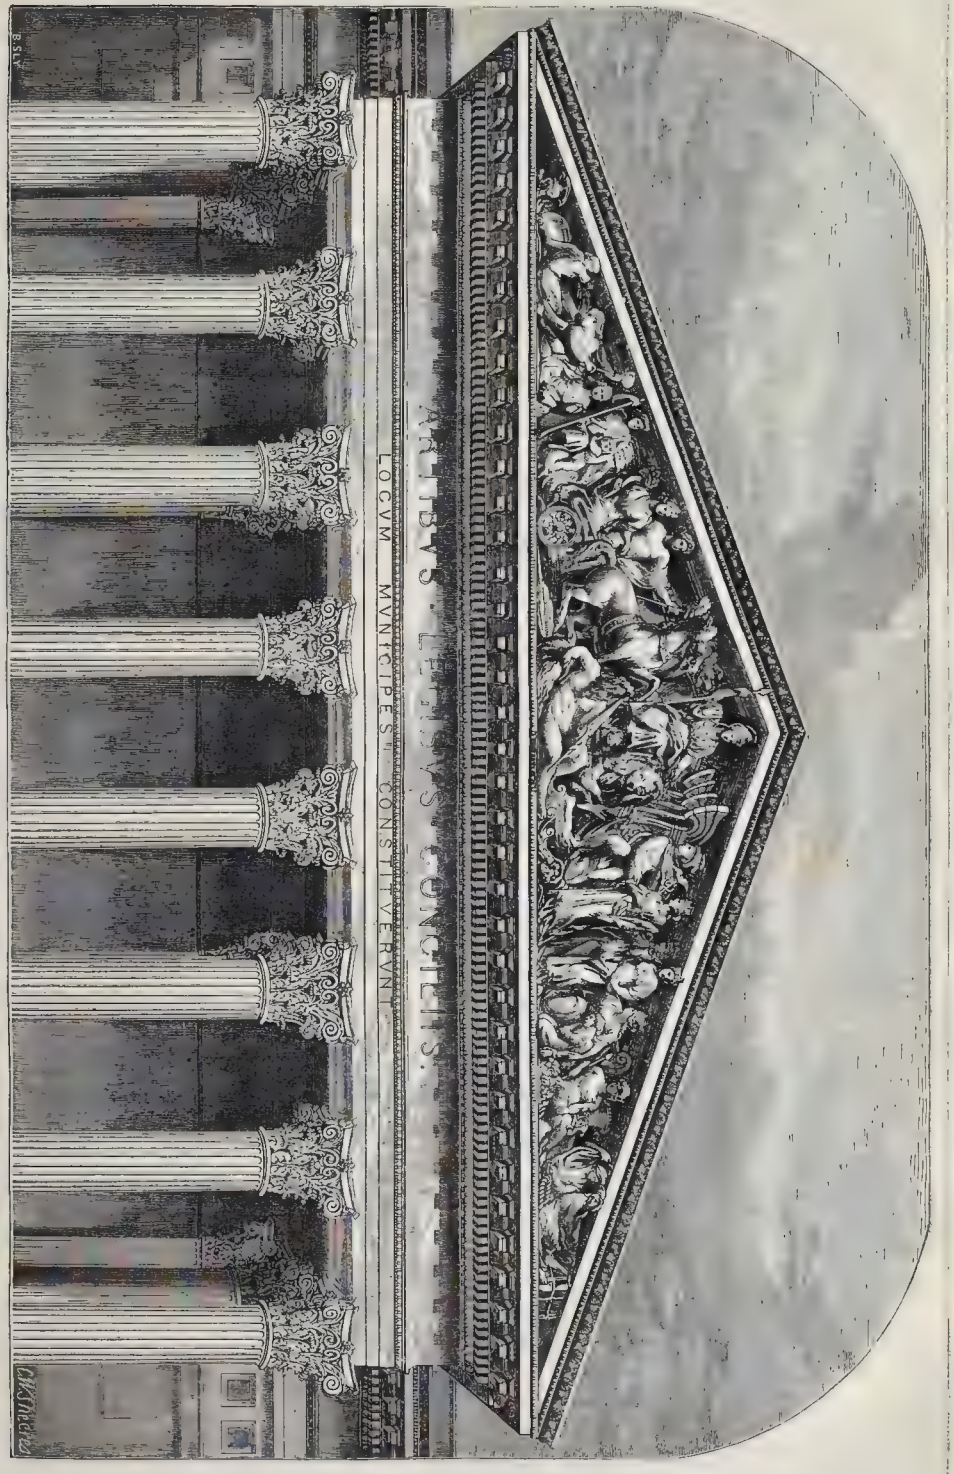
At the gold field of Balarrat, there is a move in the right direction. Storekeepers and diggers, as they "pile dust" (Anglicè—"make money"), have come to the conclusion that a weather-tight brick or wooden house is preferable to a *tent*; and hence many buildings are erecting at Balarrat, Boningong, and Meredith. Messrs. Snell and Kaweran have built at Balarrat a stone building for a branch bank of Australia; at Boningong a large hotel; and at Meredith they were the architects for "Watson's Hotel," (with the exception of the Exhibition building at Melbourne), the largest wooden building in the colony: it is three stories high, and contains twenty-nine bed-rooms, and eleven other rooms, forty stables and outhouses, and is built entirely of wood except being roofed with corrugated iron.

Such is, up to the present time, a slight account of the building works going on in this colony. The markets are dull generally, but building materials command a ready sale. The labour market is overstocked; wages as follow:—Carpenters, joiners, bricklayers, masons, plasterers, and painters, getting from 20s. to 35s. per day. Quarries of excellent granite just opened, about six miles from Geelong.

F. T. HONEY,
Member of Geelong Architectural Association.

VALUE OF LAND IN LONDON.

A CORRESPONDENT, "C. S." is very much afraid lest the public should be misled by the statements we gave recently under this head, and assumes that the information was furnished "by a party for other objects than to inform and benefit the public." He says,—"If peculiar circumstances did not exist where such reported heavy ground-rents have been given or offered for building sites, in the City, how can we account for the fact that the old South Sea House did not produce, by public competition, 56,000*l.*?—decidedly a first-rate situation, being accessible both from Old Broad-street and Threadneedle-street, readily connecting it with the business of the Bank of England, of the Royal-Exchange, the Stock-Exchange, Lloyd's, and even of the Docks, and comprising above half an acre (with trifling exception, of equal value), all freehold, and its substantial buildings well adapted for a large banking or mercantile establishment, and all landlord's fittings and fixtures included! Also that some very commanding and newly-erected freehold premises, at the corner of Threadneedle-street, opposite the Royal-Exchange, within the last three weeks did not realise 15,000*l.*!"



"C. S." may rest perfectly satisfied that no person with an ulterior motive had anything to do with the particulars given. They were collected by us simply for information sake, and, so far as we know, are substantially correct. Touching the published contradictions to which he refers, they do not affect the accuracy of the article in the least. As to the plot at the corner of Finch-lane, we merely mentioned the "report" that it had been let at a certain ground-rent, a report which appears to have been premature; while Messrs. Savory's land, as we stated last week, has been bought by those gentlemen exactly at the rate we estimated it at.

ST. GEORGE'S HALL.—THE SCULPTURE IN THE PEDIMENT.

THE sculpture in the pediment of St. George's Hall, at Liverpool, represented by the accompanying engraving, was designed by Professor Cockerell, and executed by Mr. Nichol. Although we have already described the intention of the group, it is desirable to repeat the particulars to prevent the necessity for reference.

Britannia armed, her lion by her side, and seated on a rock, forms the centre: she holds in her left hand the olive-branch, and in her right the spear. She hails the four quarters of the globe, presented to her by Mercury; the last of whom, Africa, inclines with the form of the pediment, and, with her negro children, acknowledges her obligations to the queen of freedom, who laboured so long and successfully for their emancipation: beyond are the vine and foreign productions. To the right of Britannia, Agriculture and the Arts, seated in a car, represent England and her productions; the husbandman and his plough, his wife with the distaff, and her child, express industry, manufacture, and domesticity: at the end are labourers at the anvil, the anchor, and the arms of mail, which she has not forgotten how to use. It is an admirable design and has been well carried out.

The same sculptor is executing four recumbent lions for the great pedestals outside. Their cost will be 200*l.* each.

THE PEDIMENT, ST. GEORGE'S HALL, LIVERPOOL.

PROVINCIAL NEWS.

Stamford.—The following were the tenders for re-pewing and restoring St. John's Church, Stamford:—Messrs. Richardson, 568*l.*; Mr. J. T. Jeffs, 639*l.*; Mr. Bradshaw, 625*l.*; Messrs. Chapman and Garnar (Leicester), 725*l.* Messrs. Richardson's tender was accepted by the committee.

Whitstable.—Tenders for erecting a new Independent chapel in High-street, Whitstable, have been opened. The amounts were as follows:—Messrs. Rook and Orpin, 1,161*l.*; G. Cozens, 1,056*l.*; J. Willson, 963*l.*; G. Crothall, 920*l.*; P. Ayres, 883*l.*; A. Baker, 855*l.*; J. Kelson, 844*l.* 19s. Mr. T. Marsh, the surveyor, had given the committee an estimate that the works might be done for 940*l.*

Oxford.—It is proposed to erect an epidemic hospital in the vicinity of this city. The Vice-Chancellor and the mayor have taken preliminary steps to that end.

Bursledon.—The erection of the new town-hall proceeds but slowly. The late frosts much retarded the work, and now a strike it appears has taken place amongst the men. Previously to Christmas the masons were paid 4s. 6d. per day: then they were reduced to 4s. 2d. but were last week raised to 4s. 4d. and they now refuse to work unless at the old price.

Worcester.—A branch main is being laid down here, under the direction of Mr. Purchas, the engineer of the waterworks, for the purpose of supplying the Oxford, Worcester, and Wolverhampton Railway Company with water from the river Severn.

Bodmin.—The London committee for the erection of a monument to the late Sir Walter Raleigh Gilbert, Bart. have unanimously decided that the monument shall be erected on the beacon, at Bodmin. The beacon contains 17½ acres, rises 515 feet above the sea, and can be seen from Fowey to Padstow.

Cardiff.—The new church in the thriving suburb of Canton, the nave of which only has as yet been opened, was consecrated on the 6th inst. The style is Early Decorated, and the edifice is intended to consist of a nave, with north and south aisles, under lean-to roofs extending eastward so as to embrace the tower, which will be situated between the nave and chancel, and will be surmounted by a spire. Further eastward, beyond the tower, will be the chancel, with a sacristy attached on the north side. The nave will be divided on either side from the aisles by an arcade of four bays, having a clerestory above lighted with circular foliated windows. There will be an entrance doorway in the western end, with a large five-light window with geometrical tracery above, also a doorway and porch to both the north and south aisles. The tower, chancel, and side aisles are to be erected as soon as funds can be obtained. The cost of the present erection is about 1,400*l.* towards which 1,300*l.* have been subscribed, leaving a deficiency of about 100*l.* The nave accommodates about 250 persons. The nave arcades are temporarily filled with brick. The west walls of the aisles have been erected, so that the western façade is tolerably complete. The four-light window has geometrical tracery in the head: the columns which support the outer arch mouldings are of polished serpentine from Cornwall. The clerestory consists of three circular foliated windows, with deeply splayed and moulded inner jambs and sills: they are glazed with green and white cathedral glass. The roof is of Memel timber stained: each rafter being a principal, it is boarded above, and covered with Bangor slates. The passages between the seats are paved with Herefordshire tiles. The open pews or benches have sloping backs. The walls of the church are faced with granite, brought as ballast to Cardiff. The freestone is Combedown Bath stone. The architects were Messrs. Prichard and Seddon, of Llandaff, and the builders, Messrs. James and Price, of Cardiff.

Bridgnorth.—The new cemetery in the vicinity of this town is progressing, and will probably be opened by midsummer. The two chapels have been erected. These and the lodge were nearly finished before the late frost set in. The contract for the lodge and chapels was 1,200*l.*; the cost of land, 400*l.*; the laying-out, road-making, building of the walls, planting, and incidental expenses, about 600*l.* more; total cost, 2,200*l.* There will be a further outlay of about 100*l.* for extending the walls, which at present enclose two sides only. The trees have been planted, and the walks laid out and gravelled, and already the ground is quietly resorted to, for wholesome reflection doubtless, by many of the inhabitants of Bridgnorth and its neighbourhood.

Liverpool.—The Greek residents, it is said, are about to erect a new church here.——The new Palatine Club-house in Bold-street is in progress. The building was designed by Mr. C. O. Parnell, of London. Mr. J. Jordan, clerk of works. The contractors are Messrs. Jones and Jump, of Liverpool: their estimate was 8,500*l.* The building is being erected by the trustees of the Palatine Club, and will be ready for use by September next. It is in a very unfinished state, the only portion which approaches completion, according to the local *Journal*, being the front elevation or façade. The elevation is Italian. Rising to about 9 feet high from the pavement is a rusticated base, extending from one end to the other. In the centre is the principal entrance doorway, which will be rather plain. Above the base, eight three-quarter projecting Doric columns "coupled" spring, surmounted by the entablature. Between the columns are three square windows. Above this entablature six Corinthian whole columns rise, surmounted by a pediment, which is quite plain. Between these columns are three circular-headed windows, the key-stones of the arches being ornamented, and tending to support the entablature, acting as a kind of bracket or truss. Another story has yet to be completed, which will only consist of three square windows and a cornice. The whole height of the elevation is 35 feet 5 inches, breadth 56 feet, length 88 feet 5 inches. The stone was brought from Box, near Bath, and the base part is of Stourton stone. In the interior a great quantity of cast-iron work is used.

Coventry.—The following were the tenders for removing old galleries and pews in Trinity Church, Coventry, and reseating same in wainscot. Old materials to be the property of the contractors.—Highams, Wolverhampton, 4,095*l.*; Rattee, Cambridge, 2,850*l.*; Young and Co. Oxford, 2,800*l.*; Broadbent, Leicester, 2,485*l.*; Kingham, Ipswich, 2,327*l.*; Pratt, Coventry, 2,250*l.*; Taylor, ditto, 2,247*l.*; Marriott, ditto, 2,230*l.*; Robinson and Son, ditto, 2,196*l.* 10s. 6½d.; Hall, Nottingham, 1,950*l.*; Ruddle, Peterborough, 1,767*l.*

Clitheroe.—A meeting of the directors of the Clitheroe Waterworks Company was held on Wednesday in week before last, for the purpose of contracting for the construction of a service reservoir, and the laying of the pipes. There were eighteen tenders in all: three of them were made by resident contractors. There was a difference of upwards of 2,000*l.* between the highest and lowest tender. They were all rejected except four, which were very much alike, and which were retained for further consideration. The names are, Messrs. Webster and M'Guire, of Derby; Mr. William Knight, of Manchester, Mr. Robert Ibbotson, of Blackburn; and Mr. John Metcalf, of Bradford. The taker was to be declared in a few days. The works are required to be completed by 1st September. The contracts for the cast-iron pipes and earthenware pipes are progressing. The pipes are being coated, it is said, to prevent rust, and to keep the water pure.——A fire occurred in Whalley Church on Sunday before last. Although at one time serious apprehensions of its extending from the steeple, where it began, into the body of the church, were entertained, nothing but the steeple has suffered any injury. The fire originated in the higher part of an old flue, where an old beam had been built into it forty years ago and left unprotected.

Newark.—Among disasters attending the breaking up of the late frost, is the partial destruction of the new bridge over the Trent, at Kelham. It was erected only three years ago by the county, at a cost of nearly 3,000*l.* and was composed of wood, and supported by wrought-iron screw-piles and girders, with stone abutments. It is said to have always been considered a very weak structure, ill adapted to carry the heavy traffic passing over it, and withstand the rapid current of the river, which at that spot is very wide and deep. An immense sheet of ice, of many tons weight, floating rapidly down the Trent, came with great violence against the piles which support the end of the bridge next Kelham: four of the piles were instantly snapped asunder, and half of the bridge fell into the river. No person was at all injured, although several carts had only just crossed. It was feared the other portion of the bridge would fall, as the water was rising fast. It is hoped the county magistrates will cause a substantial bridge to be erected, and so abandon the "penny wise and pound foolish" system of doing things. The safety of the public would appear to demand it.

THE NATIONAL INSTITUTION, PORTLAND GALLERY.

The exhibition of the National Institution of Fine Arts is now open in the galleries opposite the Polytechnic Institution, Regent-street; but we are unable through pressure on our space to give more than a brief notice of it. It includes 527 works of art, and although wanting in paintings of the highest class, is a very interesting collection. It is to be regretted that the president, Mr. R. S. Lauder, has devoted himself almost exclusively to landscape painting on the present occasion, notwithstanding the beauty which some of his works present. Mr. J. E. Lauder has a picture of large size and considerable merit, from the life of Sir Tristram and "la beale Isonde," where "Sir Tramtris learned her to harp, and she began to have a great fancy unto Sir Tramtris." Mr. Underhill has made a great advance, witness his "Sport in the Highlands," (107), and Mr. W. Cave Thomas has distinguished himself in two heads the size of life (86), "A Russian Dealer of the Gostvinorder," and (359), "Dealing in the North." Miss Howitt has an elegant though fanciful picture, in two parts, from Shelley's "Sensitive Plant," full of sentiment; and Mr. Mclan has, what is, to our minds, the best picture he has yet exhibited,—(77), "The Battle of Stone Ferry." "A Coast Scene," by Charles Dukes (54), "Box Hill," by Stark (66), "Kilchurn Castle," by James Danby (104), "Orphans," by H. Barraud (116), "The Rendezvous," by J. D. Wingfield (125), "Shrimp Catchers," by T. S. Robins (142), "Autumn in the Highlands," by Sidney Percy (401), "The Haunt of Fallow Deer," by J. S. Raven (391), "Start of a Pleasure-boat," by W. Parrott (416), "The Matin Prayer," by Frank Wryburd, Mr. Provis's "Interiors," Mr. Duffield's "Fruit," and several others call for notice.

INSTITUTION OF CIVIL ENGINEERS.

COALS.

In the course of the paper read February 27th, "On Steam and Sailing Colliers, and the various modes of Ballasting, &c." by Mr. E. E. Allen, the extent of the coal trade, particularly that of London, was examined, and tables were given of the areas of the coal formations of the different countries of the world, and the annual production in 1852.

The annual produce of England was stated to be estimated at 35,000,000 tons, and the quantity exported, about 8 per cent. of the quantity raised.

The areas of the coal fields in the United Kingdom gave a grand total of nearly 8,000 square miles.

The coal imported into London during the last three years was shown by the following table:—

	Coastwise.	Railway and Canal, &c.	Totals.
1852	3,330,428	411,821	3,742,249
1853	3,373,256	653,729	4,026,985
Excess...	42,828	241,908	284,736
	= 1·28 per cent.	= 58 per cent.	= 7·60 per cent.
1853	3,373,256	653,729	4,026,985
1854	3,399,561	979,170	4,378,731
Excess..	26,305	325,441	351,746
	= ·78 per cent.	= 50 per cent.	= 8·73 per cent.

EDUCATION IN HIGHGATE CEMETERY.

Some years ago we used often to hear that "the schoolmaster was abroad," and I could not but think as I walked in Highgate Cemetery on Monday last, that he must indeed and literally have been abroad, or have been out of the way of forming an acquaintance with the letter-carvers of the tomb-sculptors' yards of the great metropolis. It is a pity that the "sculptors" who furnish the majority of these sad mementos of the dead do not attend some night-school for three months, that they might know a little of spelling, syntax, and punctuation. I do not think it necessary that they should be so profound as Dr. Johnson, but it is very desirable that they should be able to execute an order in such a manner as shall not offend the eye and vex the temper of the poor mourner who visits the narrow home of some dearly loved friend. Passing over the fact that the deviations from stereotyped ugliness and common-place absurdities, found by hundreds in all our cemeteries, are few indeed and far between, the eye has little relief in seeking for change from form to sentiment. The stock epitaphs are repeated *ad nauseam*, whilst vulgar conceits, and sickening and unmeaning flattery, join with bad spelling, false grammar, and wrong punctuation, to render the visit, instead of being one of melancholy pleasure, a painful and disgusting task. The loveliness of the situation is forgotten, the still repose is marred and broken by the obtrusive, staring vulgarities and the world-speaking blunders which meet the eye and offend the sense wherever it turns. Rest there is none, for nearly every slab has a trumpet tongue "to damn its carver's name or sense."

For example, I quote only the following from hundreds of instances that may be cited in Highgate Cemetery.

"Here *lies* the *two* children;" "she *dy'd* in the Lord;" "the remains of 2 children *is* interred;" "her remains *is intered*;" "*liveing*;" "of this *parrish*;" "who was *kiled*," &c. &c. On a slab in the sarcophagus belonging to a wealthy city merchant, is a very touching and beautiful inscription, marred by "*humble*" being engraved for "*humbly*."

Let these examples suffice; and I hope that by the medium of your journal, the attention of those in the proper quarter may be excited, and a change for the better in every way be effected, by a reform in the shops of these so-called *sculptors*.

A Walker among the Tombs.

COMPETITIONS.

KING'S LYNN.

We are informed that the competition for the chapels, &c. for the new burial ground of St. Margaret's parish has been decided in favour of Messrs. Aickin and Capes, of London. We have received complaints of the hasty manner in which the drawings were examined. The "Instructions" shewed a strange confusion of the functions of architect and builder.

INSUFFICIENT TIMBERS.

In any New Building Act a clause should be inserted giving the district surveyor direct control over these,—not now the case,—his powers extending only to walls and roofs and their materials.

In the case of a corner shop, a heavy quoin is supported by two strong posts composed of two deals I saw a case the other day, brick piers having been removed, and these two insufficient posts placed in their stead, to carry out some alteration. The posts had buckled with the weight: reply of builder to objection: "Amply sufficient, sir, for anything; could not see any buckling, might perhaps wind a little." It must be borne in mind that the surveyor has no power or authority to *interfere* in this case, any jobbing carpenter determining to the best of his judgment the scantling of timbers,—the smaller the scantling necessary the better for his pocket, if he has contracted for a certain amount.

Another defect in the Act is, that all parts of buildings, rear fronts as well as fronts, chimneys, in whatever position, ruinous workshops and outbuildings, in rear of premises, do *not* come within the scope and meaning of section 40, which apparently considers dangers to *passengers* only, does not take account of *inmates* or *adjoining owners* or *workmen* employed in various trades and callings. Notwithstanding all these remediable points, the Act has, on the whole, been a great public boon, if only considered as in the avoiding of the enormous mass of litigation that must have ensued from the conflicting interests of adjoining owners and properties, now so easily arranged by a reference to the surveyor and the official referees. An Observer.

BUILDERS' RESPONSIBILITIES.

ELLIS *v.* PETERS.

In this case the plaintiff was a builder and the defendant an ironmonger, at Peterborough, and the action was brought to recover compensation for injury which a building belonging to the plaintiff had sustained, in consequence, as he alleged, of the defendant's negligent and improper construction of a gutter of galvanized iron, which went round the outside of the roof. The building in question was a large one which the plaintiff had erected at Peterborough for the purpose of public lectures, balls, concerts, and meetings; and the project originally was that it should be built at the expense of a company to be formed by the inhabitants, with a capital of 2,500*l.* in 1*l.* shares; but this scheme failed, and the speculation became exclusively the plaintiff's. He employed the defendant to make the iron roof, and, when that was completed, to surround the building with a gutter of galvanized iron, to carry off the water. The building was opened in the summer of 1854, and not long afterwards the wet began to make its way through the walls, and eventually did considerable damage. No complaint, however, was made to the defendant until late in the year, when other disputes had arisen between the parties, and now the defence to this action was, that the injury had arisen not from any negligence on the part of the defendant in the manner of doing the work, but in consequence of the insufficient description of gutter which, for the sake of economy, the plaintiff had adopted. Several witnesses were examined on each side, and in the end the jury found a verdict for the defendant.

WAR APPLIANCES.

Considerable progress is being made with the camp at Aldershot. The site is about three miles from Farnham. The nearest station from London is Farnborough. We understand the contractors have undertaken to have 1,200 huts ready by the 1st of April, each at a cost of 100*l.* and capable of containing twenty-five men. A writer in the *Morning Herald* says:—"These huts are made of Canadian fir, just cut out from the balk, and are put together without any preparation or seasoning, and being exposed to the torrents of rain usual at this season, will become in a very short time perfectly saturated with wet. The consequences will be, that the action of the summer's sun will shrink, rend, and split the wood, so as to render them altogether unserviceable and untenable." There are now about 800 mechanics and labourers employed in erecting huts, draining, and road-making, and many more are advertised for. The permanent camp, to be built of brick, is to be three years in construction, and is to be formed on the other side of the range of hills before mentioned, facing the road along which the temporary quarters for the officers are being erected.——In the recent debate on the Ordnance estimates Sir Joseph Paxton found considerable fault with the course which had been adopted touching the works here. He said he found that not a single thing had been done towards that object, not even a tender sent out earlier than the 22nd January last. On that day advertisements came forth from the Ordnance Office at Portsmouth, calling for tenders for the erection of huts for 20,000 men: the tenders were to be sent in on the 31st of January, and the huts were to be completed on the 31st of March. Now, it struck him as a very extraordinary thing, that the Board of Ordnance had only given six weeks' notice for the erection of huts to contain 20,000 men: and on entering into some calculations as to the amount of labour to be employed in the erection of the huts, he found it would require 150 trains per day to take the required quantity of wood to the spot, reckoning from the time the tender was sent in to the period when the work was to be completed. That was to say, materials amounting to between 500 and 600 tons per day were to be fixed and placed in position within a period of six weeks. Again, these huts were to be formed principally of yellow Christiana deal. Now, if the hon. gentleman (Mr. Monsell) would inquire of any timber merchant in London, he would find there was not sufficient yellow Christiana deal in Great Britain to complete that number of huts. So that, quite independent of the extraordinary shortness of the period allowed for the erection of the huts, he defied the Government to procure them of the material specified.——The *Horatio* steam frigate is preparing, at Sheerness, to receive two of the monster mortar guns invented, and it would now appear already constructed, by Nasmyth. These guns are 10 feet 6 inches long, and in diameter at bore, 13 inches; muzzle, 31½ inches; base, 40 inches. The weight of each is about 23 tons. It is slung on Captain J. Roberts's plan, and will throw a solid spherical shot of 302·4lbs. with a charge of 30lbs. of powder.——The construction of the bomb-proof iron-cased floating mortar-vessels has been kept very quiet, but we now learn that they are of exactly the same construction as the broadside iron-cased batteries carrying sixteen Lancaster guns. The upper deck is so strengthened as to bear the weight of the heavy piece of ordnance with which it is armed. These mortar vessels, it is said, will throw bomb-shells a distance of four miles! With their guns, ammunition, and stores on board, the floating batteries will only draw 20 feet of water, so that the whole fleet of *forty* vessels can approach within a comparatively short distance of any of the marine Russian fortresses. Their cost has been enormous. A fleet of English and French line of battle ships and smaller craft will accompany them. The mortar batteries are each 70 feet in length, 23 feet in width, and 9 feet four inches in depth. Several of these mortar batteries will be attached to the fleet of forty floating batteries propelled by steam. Their construction in the hull is the same, and their decks are bomb-proof. That they are destined for the Black Sea as well as the Baltic, we are still hopeful, though no official hint has even yet appeared to that effect that we are aware of. The British fleet for the Baltic will consist, it appears, of no less than a hundred vessels, every one of them propelled by steam.—— Messrs. Losh, Wilson, and Bell, of the Walker iron works, Newcastle-on-Tyne, have entered into a contract with the Admiralty for the supply of between thirty and forty thousand bomb shells. They are to be of 10 inches diameter, and weigh about 63lbs. each.——A large fourgon, containing a printing press for the Crimea, has been embarked on board the *Empress* steamer at Lyons. On it was to be seen the inscription,—*Armée d'Orient, Imprimerie Impériale*. Two of the best compositors of the Imperial printing establishment of Paris accompany it. This is rather an unexpected step for our allies to take in advance of us.

A HAND-RAILWAY.

Some time ago I suggested a hand-railway, that could be arranged in working order, at the rate of six miles of railway in one hour, and over which deal timber could be passed at the rate of four miles of timber in one hour. This might have saved thousands of lives if in operation for a few hours between Balaklava and Inkermann; and as, with slight modifications, it would be useful for other purposes, I beg to explain how the timber might have been passed in the case alluded to. A common "office ruler" will give a good idea of the sort of thing to be used. Old musket barrels would have done, and they would have had the advantage of being ready. An experiment has been tried by passing timber over common iron bolts, which was done readily, so as to prove the correctness of the principle. The recurrence of such cases as that at Balaklava might be effectually guarded against by preparing small iron rollers to revolve in wooden handles, lined with iron: by this simple means you would have a portable hand-railway, over which not only timber but many other things might be passed. Each handle to the rollers should have an iron guard, or shield, to protect the hand of the person that held it, and guide the timber on its path: the handles should be held in the left hand of each person, and the timber slightly pushed with the right hand, and thus at least four miles of timber per hour might be passed any distance that the men available would extend over if standing in pairs, so as to hold the rollers 4½ feet apart. Barugh Almack.

THE GREAT BELL OF ST. PAUL'S.

I feel obliged, as I am sure do your readers generally, by the courtesy of the Messrs. Mears, in supplying the information contained in your last number, forming, as it does, a valuable contribution to our campanalogical statistics. The discrepancy which startled me proves to have proceeded not from an under-stating (to any important extent) of the weight, as surmised by me, but an over-stating of the diameter; and this, not in Mr. Dent's essay. The 9 feet, I find, is repeated in Mr. Timbs's "Curiosities of London." In that interesting volume, at page 39, are given the particulars of the Great Tom's history, removal from the "clochard" at Westminster, re-casting in 1716 (which it appears should be 1709), and all about the sentinel at Windsor, who did not go to sleep on his post, but was only rapt in a brown study, from hearing Tom (then at Westminster) strike thirteen. There is also the following paragraph, which explains the fulness of tone heard when the hours are struck:—

"The same hammer which strikes the hours has always been used to toll the bell on the occasion of a demise; but the sound produced on the latter occasions is not so loud as when the hours are struck, in consequence of the heavy clock-weight not being attached when the bell is tolled, and causing the hammer to strike with greater force than by manual strength."

St. Paul's Great Tom, then, measuring but 6 feet 9¼ inches in diameter, and weighing but 5 tons 4 cwt. while that for Sir Charles Barry's clock-tower is to be about 9 feet in diameter, and between 14 and 15 tons, the descendants of Dick Whittington and John Gilpin must confess that Westminster is again going to "bear the bell." J. W.

THE ART-UNION OF LONDON.

We would direct attention to the fact that the subscription lists of this important corporation will be closed on the 31st, with the hope that we may induce such of our readers as are interested in the progress of the fine arts and the welfare of artists to exert themselves in its favour while there is time. A strong effort is needed at this moment of general depression when individuals are less likely than usual to be purchasers. The works to be distributed to each subscriber, a fine print and a volume of engravings in illustration of Childe Harold (of which more hereafter), are now ready, and are worth much more than the whole amount of the subscription.

ROAD MAKING.

In a paper read to the Society for Promoting Public Improvements in the Town of Leeds, by Mr. J. P. Smith, surveyor of the borough of Birmingham, "On Macadamised Roads for the Streets of Towns," the lecturer said he had had under his management for many years 150 miles of street road, and the general superintendence of 180 miles of turnpike road, and the result of his experience was that he was confirmed in his opinion that broken stone, or Macadamised roads, if properly constructed and managed, are better adapted for the streets in large towns than any other description of road. It was essential that the foundation of a road should be of a firm material, well consolidated, and perfectly drained; if not, it became rough and uneven, and very soon required repairs. The next thing was to cover it with hard stones, impervious to water, broken to a proper size and laid out at a proper cross-section. The stones should then be dressed or bound with a coarse grit, which in dry weather should be watered and well raked. Under no circumstances should a road be permitted to be worn down, but it should be continually kept in repair. It was also very necessary that roads should be regularly swept and watered in dry weather, so as to prevent any accumulation of dust and dirt. The great objections which had been urged against Macadamised roads was the annoyance of dust and dirt which they were said to occasion, and many persons would prefer submitting to the deafening noise of the pavement. There would be no occasion of complaint, however, against dust and dirt if machine cleansing were adopted, and the expense would soon be saved in the diminished cost of repairs. In Birmingham there were about 150 miles of street and carriage road, and he understood about the same extent in Leeds. He had made an estimate of the probable cost for the present year, founded on the actual cost of the preceding year, and he believed that it would also apply to the borough of Leeds. It appeared from the estimate that the cost of maintaining the 150 miles of road would be about 34,000*l.* but the sum also included 11,600*l.* for lighting. Mr. Smith recommended that in making a road a substratum of ashes should first be laid down, and that should then be covered with the broken stone, which was called "ragstone," and which might be obtained in Birmingham for about 5s. 4d. per ton, or 6s. 8d. per ton broken, and then covered with the channel sweepings, and upon that might be laid a sprinkling of sand. In making Macadamised roads he would not have any large quantity to be commenced at one time, but the work should be done gradually, and the streets continually kept in repair. Macadamised roads were first commenced in Birmingham about seventeen years ago, and now he believed Mr. Smith stated that in the estimate to which he had referred was included the purchase of sixty-three horses, and also twenty sweeping-machines and 1,200 gallons of water, which in Birmingham they could purchase at 6d. per 1,000 gallons. The sweeping-machines and horses were never idle, but could be employed both in wet and dry weather. The average cost per yard per annum of maintaining a Macadamised road, including the watering and cleansing, he calculated at 8d. per yard; and, in Birmingham, paving would at least cost 15s. per yard, and would require to be renewed about every fifteen years.

THE LITERARY SOCIETY OF JERUSALEM.

Some of our readers may not have heard of this society. It was instituted by a few friends assembled in the City of Jerusalem, in November, 1849, who after some years residence in the Holy Land, were convinced that there are manners, literature, antiquities, &c. existing around them, which would highly interest the learned in Europe, especially those who attach themselves to biblical studies; and were of opinion, that instead of merely detailing these in correspondence to their friends, as anecdotes or descriptions, it would be better to concentrate such information in such a mode as would make it generally accessible. Weekly meetings were therefore appointed for reading original papers, and for the exhibition of curiosities. A few fundamental rules were laid down, from which other regulations have since been developed according to circumstances, and literary contributions, or specimens of natural curiosities, were solicited from European or American gentlemen residing within the Holy Land. These gentlemen were elected corresponding members.

Some collateral advantages are expected to arise from this association, such as affording intellectual recreation to European travellers to the country, the number of whom is on the increase, and the possibility of augmenting the number of European residents in Jerusalem, by which means more of the benefits of civilization will be diffused among the native inhabitants.

His Grace the Archbishop of Canterbury is patron; the vice-patrons are the Right Rev. the Anglican Bishop of Jerusalem, and the Right Hon. the Earl of Aberdeen: the president is Mr. Finn, H.B.M. consul for Jerusalem and Palestine.

In the opening address of the latter, for 1850, which has been printed at the American press, Beyroot, and again at Tenby, in England, he says:—

"Permit me to mention one subject more that may be properly brought within our province, viz. that of the fine arts,—architecture, painting, sculpture, and music; and these may be divided into three sections, or periods,—

1. Hebraic.

2. Grecian, under the Ptolemies and the Herod family.

3. Mohammedan, from the middle of our seventh century till the present day.

A question often arises in my own mind which, though easily answered by the coherence of Moslem fanaticism, or Maccabean righteous zeal, still dwells upon the thought with some degree of interest. What has become of all the Greek and Roman statues of fabulous divinities, and the busts of celebrated men, that have been set up in Palestine? And why are no mythological figures ever found upon ancient pottery? But it should be observed, that relics still survive of (it is believed) Hebrew architecture, with rich floral embellishment; not to mention Saracenic public works, sufficient to prove that gods of wood and stone, however perfected by genius, are not absolutely necessary to the development of fine taste, in a prosperous and happy nation. Music, too, and poetry have reached their highest extension within this city. Certainly no heathen idolatry has been ever found to institute such a costly and elaborate worship by means of music, as the Jerusalem Temple used to supply; and Hebrew poetic feeling was not limited to the writers of the inspired hymns and prophecies now in our possession, for David, Isaiah, and Jeremiah, did not invent, but use, under Divine inspiration, the rules of art already existing.

Have not all of us observed the costumes of the Bethlehem peasantry, both male and female, with simple masses of rich red and blue colour? How exactly they accord with the paintings of the old Italian masters. One might imagine that Correggio and Raffaelle drew and coloured from dresses of the groups, or individual persons, that we meet any day upon the road from Jerusalem to Bethlehem, persons whom we might address by name. This seems only to be accounted for on the supposition that coloured sketches were forwarded or carried to Italy, by monks or pilgrims, on their return to Europe."

England's Mineral Wealth.—On the authority of Mr. R. Hunt, the Government Keeper of Mineral Records, according to the *Mining Journal*, the following statement is regarded as a near approximation towards the annual value of our mineral wealth:—Coal, as raised at the pit's mouth, 11,000,000*l.*; iron, 10,000,000*l.*; copper, 1,500,000*l.*; lead, 1,000,000*l.*; tin, 400,000*l.*; silver, 210,000*l.*; zinc, 10,000*l.*; salt, clays, &c., 500,000*l.*; giving the enormous total of 24,620,000*l.* This is the value of the raw material. When the cost of labour employed in converting this mass of matter into articles of utility or objects of ornaments is added, it will be swelled a hundredfold.

Notices of Books.

Every Man his own Printer; or, Lithography made Easy. Waterlow and Sons, London-wall. 1851.

This is an Essay on Lithography in all its branches, showing more particularly, however, the advantages of "The Patent Autographic Press," a substitute for, or improvement on, Watt's Copying Machine, enabling all, but especially mercantile and other firms, draughtsmen, teachers, music-sellers, and others to multiply copies of writings, drawings, notations, diagrams, &c. *ad infinitum*. The patent, in fact, is just an adaptation of lithography to the copying machine essentially speaking, although copper-plates, as well as lithographic stones, and even types can be worked readily by means of the "Autographic Press," which seems to be a very useful invention, although hardly justifying such a title as "Every man his own Printer," for the whole tribe of *authors* may be said to be excluded from its use, unless they are satisfied to print their works in single pages, and in autographic or at least lithographic characters. The capability of using types is admittedly very restricted. We will venture to suggest an additional step towards enabling poor authors really to act as their own printers, however. Might not a press on the principle of the copying machine be made of sufficient size to enable a small sheet to be printed from, by means of gutta percha stereotypes, prepared from gutta percha matrices, stamped from types set in form, on the apparently very effective and simple plan exhibited at the Crystal Palace of 1851? If so, then it is evident that such a copying machine, or printing press, together with paper, an inking roller, and as many types as would merely enable the poor author to set up even a single small page of his proposed work would be sufficient to set him up as his own printer, so soon as he could accumulate as much gutta-percha, in the form of stereotypes, taken from each page of the types as he set them up, as would enable him to print off a sheet or volume, both types and matrix, so soon as each stereotype was got, being ready to assume the new form of the following page. Should any patent-eater or patent-hunter think of appropriating this suggestion, in the way that so many of the thousand-and-one suggestions of the *Builder* have already been, and yet will be appropriated, it is to be hoped he will at least do us the honour, which so few do us, of acknowledging the source of his second-hand inspiration, and of citing number and page, while he is about it, so as to save us the endless trouble of hunting through our own teeming columns for the registry of the actual birth of *his* (adopted) "invention."

Miscellanea.

Metropolitan Bridges and Roads.—On the motion of Mr. Jackson, the House of Commons has appointed a select committee to inquire into the state and condition of the several communications to and in the metropolis, including the bridges over the Thames and the approaches thereto; to report whether the communications and approaches are adequate to the present and increasing traffic to and in the metropolis; if not, the best mode of improving the same, and whether it will be desirable to have one or more bridges over the Thames, and where, and the best mode, out of local fund, of providing the cost of such bridges, and of improving the said communications and approaches, and throwing open to the public the toll-paying bridges.——In reply to Mr. Oliveira, who asked the First Commissioner of Works, whether it was the intention of her Majesty's Government, during the present session, to take any steps in reference to the report of the select committee of the last session on metropolitan bridges, Sir William Molesworth said, the Board of Works did not possess any funds with which to execute the works pointed out in the report of the committee on metropolitan bridges; nor was it the intention of the Government to apply to Parliament for a grant of public money for that purpose. But his hon. friend the President of the Board of Health intended to ask leave to introduce a measure for the better local government of the metropolis, which Bill would contain a clause which would enable local metropolitan boards to provide funds for carrying out public works of this nature.

THE IRON TRADE.—Reductions in wages are being quietly submitted to by the workmen in this trade, and prices are being "ruled by circumstances." At the death of the Czar Nicholas pigs rose, it is said, 3s. in Scotland. The ironmasters are now complaining of the combination of the coalmasters, *suo more*, to keep up prices. The Cleveland district iron is getting into all the Yorkshire and Derbyshire markets, and must soon, it is thought, still further reduce the value of the article. More failures in the trade are still talked of as probable. America is coming slowly into our markets again since prices fell, and the steel trade is becoming more active in consequence.

WARMING CHURCHES.—In the dark ages (rightly so called, because little is known about them), the daily services with its incense and lights, and the lamps burnt continually before shrines, were found sufficient to warm the interior of churches; but in these days of close-fitting, draught-excluding windows, more complete means of heating our places of worship are required, yet the necessity for this seems to be disregarded, by the absence of all provision for an adequate, or, indeed, any warming apparatus, in the majority of new churches; consequently the same plan is often resorted to which obtains in most churches erected in times long past, viz. the placing on the floor of the building stoves, each with an elbow of iron-piping passing through the tracery of a window. Now, this disfigurement would be altogether avoided were fireplaces and chimneys considered allowable features in the structure of a church: they might be rendered an adornment rather than otherwise. Taste is much, if not altogether, regulated—or, at least, is much influenced, by what we are accustomed to; and if the eye were rendered familiar with the appearance of two or more recesses in the walls of a church, lined and paved with encaustic tiles, containing moveable grates with brass guards as protection from fire, we should soon consider any church incomplete unless it were so furnished. Chimneys on the exterior somewhat resembling buttresses would scarcely be eyesores; indeed, they might, without dishonesty, serve two purposes, provided the architect sought not to conceal the chimney in the buttress, nor placed his chimney buttress where a buttress is not needed. If a smoke-consuming invention were used for the grate, the top of the chimney would not be much blackened: in towns a "gas-fire" might be advantageously used. The heating power, if thus placed in close connection with the cooling-surfaces of the walls and windows, would probably counteract in some measure the currents of cold air so continually complained of by those who sit near a window.—W. S. MEADE.

HOUSES FOR THE POOR.—In your journal of the 3rd inst. your Birmingham correspondent, in speaking of the sufferings of the bricklayers, labourers, &c. inquires, "When will they renounce the baneful influence of the pot-house and learn self-respect?" I, who know much of them from thirty years' experience, would answer this question, by saying that it will never take place until they are provided with decent and cleanly homes, and their children are reared in wholesome dwellings, and a young mechanic can take to his wife a virtuous young woman, without fear of her becoming a slattern or a drunkard, from the contamination which at present she is sure to be surrounded with in the courts and alleys the labouring man is forced to reside in. The wretched lodgings of the poor are the cause of more than half the misery now existing. It is of no use preaching religion, or making education cheap, or founding ragged schools, while the present state of things in this respect exists. Give to the poor man a cleanly and cheerful home at a price his means will bear, and then order and sobriety will ensue. If this cannot be brought about by private enterprise, let it be done by parochial boards, and the rental collected by parish authorities,—it would save the trouble of collecting poor-rates. If masses of lodging-houses fitted for the poor were built now, in twenty-five years an entire change would appear among the working population, and religion and education would be honoured and reverenced by those who are now known as the *unwashed*. Notwithstanding the blessings which baths and washhouses have conferred, the poor cannot be clean while they have the abodes you have so frequently illustrated and so fervently condemned. The thousand dens of iniquity you have pointed out ought to be broken up as speedily as masses of new dwellings could be erected. No class of society pay, in proportion to their incomes, such high rents as the poor,—I include all ranks of poor—clerk, mechanic, and labourer,—and none pay so much for warmth or for cooking of their food. Some persons may say that in doing this you strike at the root of self-independence. I deny this: you will, on the contrary, engender habits of order that will prompt ambition to more lucrative positions in society, and diminish the morbid feeling existing in favour of distant lands, which is carrying away the bone and sinew of the country.—A.

THE PARIS EXHIBITION OF INTERNATIONAL INDUSTRY AND ART.—The London commissioners of metropolitan sewers intend, at the request of the Board of Trade, to see what can be done by them in the way of sending sewage plans and models to the great Paris exhibition.——The Sunderland contingent has been exhibited at home before being despatched to its destination. It will constitute a highly respectable portion of the general display. There are numerous complete models of the chief manufacture of Sunderland, namely, shipping, among which we notice the *Empress Eugenie* herself: these are all suspended in glass cylinders, provided by Mr. Hartley, and, with a great, case have a novel and imposing appearance. Glass is separately illustrated by Messrs. Hartley's firm. Architecture takes its place in a series of perspective drawings of public works sent by Mr. Oliver. There are various choice specimens of ship carving, and of course of coal, as well as a large model of a coal-pit, with Davy lamps, &c.; besides a large quantity of miscellaneous articles.——A granite dial pedestal has been ordered, on account of the Prince of Wales, to be prepared by the Cheesewring Granite Company, whose granite quarries are on the property of the prince, as duke of Cornwall. This company, by the way, is sending immense blocks of their fine granite to the new Westminster-bridge works, where they may be seen on the contractor's wharfs.

SOUTHAMPTON DRAINAGE.—A report, by Mr. James Simpson, the president of the Institution of Civil Engineers, London, "On the intended Sewageometer, and the Sites suggested for erecting the same," has been published, by order of the local Board of Health. Several statistical tables and reports on the rain-fall are appended. The principal object of the "sewageometer," or iron air-tight tank, alluded to, seems to be to retain the sewage for a short period, and prevent it from flowing into the river about the time of high-water. It was proposed to form it above ground, but Mr. Simpson states that such a purpose would be better effected by reservoirs underground at the outfall. As to projected works for the application of the sewage to agricultural purposes, the reporter questions the propriety of expending capital for such a purpose, or at least with the idea that it would be remunerative for some years to come, and especially in any other than private hands.

REMEDY FOR DOWN-DRAUGHT.—In reply to your correspondent of the 24th ult. who asks for a remedy for down-draught, I beg to suggest that he should try the following, which I have found successful. It is simply to suspend a curtain in front of the fireplace down which the smoke comes, extending from the top of the opening to about *four inches from the ground*. Care should be taken that the curtain fits closely, so as to leave no opening at the top or sides. If the curtain extends to the ground it fails to answer the purpose. An old cloth and a couple of sticks to prop it up will enable anybody to try the experiment, and if it answers, a more permanent substitute may be found.—J. B. B.

RED BRICKS IN OLD BUILDINGS.—Your correspondent, "Red Rubber," in your journal of February 17, is right in his surmise as to where some of the red rubbers used in many of the old buildings in London were obtained. They are still manufactured at the Nonsuch Works, Ewell, Surrey; also the red fire-bricks, termed Nonsuch Fire-bricks, mentioned by him, which are used for copper smelting works, chemical works, gas works, and other purposes where a very intense heat is required. But your correspondent is wrong in his supposition that the same clay (a "marly loam with sand") was used in the manufacture of both kinds of bricks. The fire-brick at the above-named works is made from a vein of earth more resembling sand, from 9 to 12 inches in depth, deposited below a peculiar bed of red clay, whilst the red rubbers are manufactured from a lower stratum—a species of green loam, from 18 to 24 inches in depth, producing bricks of a rich deep red colour. A specimen of these may be seen in the archway recently erected, forming the entrance to the Necropolis Company's Station, in the Westminster-road; and they will be used in the new works at the Small-arm Factory, Enfield-lock. Your correspondent is quite right as to their not containing any chalk, or carbonate of lime.—J. EASTWOOD and SONS.

WREN.—At Puttock and Simpson's, Auctioneers, Piccadilly, next Tuesday, Lots 478, 479, will be sold, Letters and Signatures of Sir C. Wren, and following day Lot 545, "Sir C. Wren, Pen Sketches, with written explanations, of a proposed English Walhalla, two leaves, small folio, covered on both sides, *very interesting and rare*." This appears to me to have been the original design for the proposed monument of Charles I. intended for erection in the neighbourhood of Windsor Castle, for which the parliament voted 70,000*l.*; used for other purposes by Charles II. I believe mention is made of this in the "Parentalia."

CONSTANT READER.

A HOUSE OF BUTTONS.—The *Atlas's* Paris correspondent states that Clapisson, the musical celebrity, is building a chateau composed entirely of buttons! The walls, the ceiling, the doors, the exterior, the interior, are all ornamented with this novel element of architecture. Buttons of every description, from the very origin of their invention up to those of the present day, have been employed in the arabesques and ornamentation of the walls. Every country has been ransacked, and some curious specimens have been brought to light. Those dating from the lower Greek Empire are of the most curious manufacture.

RAILWAYS IN CANADA.—In the *Canadian Journal*, a repertory of industry, science, and art (published by Maclear and Co. Toronto, for the Canadian Institute), is a recent statistical article on railways in Canada, from which it appears that the number of railways now in course of construction in the province is 32, with 1,193 miles completed, and 2,022 more or less advanced, besides "a vast number of miles of road not yet commenced." The number of companies who have not as yet begun to lay down any length of way is 14. The number of companies whose charters have expired from "non user" is 10. The total number of charters granted is 56. Under railway influence the forests, at the head of the Androscoggin and Connecticut rivers, have been quadrupled in value in the last four years, and a similar result is found along the streams of Canada in the vicinity of the lines. Half a million feet of lumber was moved on the Grand Trunk Line in one week in July last, and in another year it is expected that the average per week will be a million feet.

BRISTOL FINE ART ACADEMY.—At a meeting on Monday before last of the artist members of the Bristol Academy for the promotion of the fine arts it was resolved that an exhibition, consisting exclusively of productions of local talent, should be opened early in May, at the Academy-rooms in St. Augustine's-parade.

TELEGRAPHIC PROGRESS.—TELEGRAPHING WITHOUT WIRES!—Among the most startling wonders of this wonder-working age, is the announcement that M. Bonelli, of Turin, has invented a new electric or magnetic telegraph, by which trains in motion on a railway are enabled to communicate with each other at all rates of velocity, and, at the same time, with the telegraphic stations on the line, while the latter are simultaneously able to communicate with the trains; and it is added, that M. Bonelli is in possession of a system of telegraphic communication by which wires are entirely dispensed with. The idea, however, is not new: we have repeatedly alluded to its possibility; but like multitudes of such ideas the suggestion drops into oblivion, and reappears after a while as a fresh novelty. Who was its real originator we do not know, but the nearest approximation to its practical realization we remember anything of was the mode by which a Dundee gentleman transmitted messages across rivers and straits without any intervening or subaqueous wire. Still wire was necessary, and a good long coil too, at either extremity of the space telegraphed through.

STYLE.—When, at last, Art, by means of imitation of Nature, of efforts to create a common language, and of clear and profound study of objects themselves, has acquired a clearer and clearer knowledge of the peculiarities of objects and their mode of being, oversees the classes of forms, and knows how to connect and imitate those that are distinct and characteristic, then will style reach the highest point it is capable of—the point where it may be placed on a par with the highest efforts of the human mind. Simple imitation springs from quiet existence and an agreeable subject. Manner seizes with facile capacity upon an appearance. Style rests upon the deepest foundations of knowledge, upon the essence of things, so far as we are able to recognise it in visible and comprehensible forms.—*Goethe.*

BAVARIAN BRICKS.—When, for the second time, I was last summer in Munich, none of the many fine brick buildings with which that city abounds appeared to me more worthy of admiration than the imposing structures recently erected, particularly "the Royal Library" and "the Wittelsbach Palace," which are built entirely of brick, "that common material which we are accustomed to consider somewhat beneath the dignity of architecture as a fine art" (p. 98, *ante*). I have visited many of the first cities on the continent, including Paris, Vienna, and Berlin, but, unfortunately for myself, have seen very little of my own country—or I will not deny that I might have seen much good and substantial brickwork; but I am afraid none so really beautiful as the Bavarian. Even now, all that I can say of the Munich bricks, is, that they are of a pretty colour—not red—and that they seem to be exquisitely put together, as my stay in that city was too short to permit of my making such inquiries as I could have wished to make. J. F.

THE SANITARY USES OF CHARCOAL.—At the Royal Institution in Albemarle-street, Dr. Stenhouse lately delivered a lecture on this subject, in which he urged the importance of charcoal as a destroyer of noxious or infectious effluvia. If all be true that is said as to the extraordinary *extent* of the disinfectant or detoxicant powers of charcoal, we think it is questionable whether the mere accommodation alleged to be afforded in its "pores" for immense quantities of gaseous or atmospheric combinations, is capable of explaining these powers, and would much incline, as we have before said, to attribute the combinations and destruction of noxious gases ascribed to it, to a power possessed by it of promoting the slow combustion of the gases, irrespective, in great measure, of mere porosity. Its action, as we observe, is now compared by Dr. Stenhouse himself to that of platinum in promoting the combination of hydrogen with oxygen, an action which is probably connected with electrical agency. The more porous the substance, however, the more points of action of course there will be; but the mere capacity of such pores for *holding* a certain quantity of the gases does not appear to be quite a satisfactory explanation *per se* of the alleged extent of the action. The respirator was one of the chief forms brought by the lecturer under notice. This, he said, he had purposely refrained from appropriating to himself by patent. Dr. Sutherland had desired to take with him 500 of these to Constantinople, but he is said to have been prevented doing so by official routine. The use of bandages or coverings holding charcoal over wounds, and so absorbing and destroying putrid effluvia escaping from the wounds, and infecting the atmosphere of the hospital, would, we think, be no less important and sanative than the use of the respirator itself. Charcoal, according to Dr. Stenhouse, destroys the efficacy of the manures which it deodorizes.

RAILWAY TRAIN SIGNAL: COMMUNICATION BETWEEN GUARD AND DRIVER.—A patent has been granted to Mr. J. G. Jones, of Islington, for a means of communication between the guard and driver. In the specification the patentee says:—"I cause to be extended over the tops or other convenient part of the carriages forming a train a flexible tube, one end of which terminates close to the engine-driver, the other end being wound round a drum or reel fixed in some convenient part of the break-van or carriage occupied by the guard; the arrangement being such that when it is required to detach one or more carriages between the break-van and the engine, all that is necessary is to wind upon the reel the superfluous length of tube caused by the removal of such carriage or carriages; and in like manner when more carriages are to be added the required length of tube can be unwound or let off from the reel, an arrangement which entirely dispenses with everything in the shape of couplings. The guard and engine-driver are therefore put in direct communication with each other by means of a continuous flexible tube, into each end of which there is placed a whistle, which can be removed at pleasure, and the tube employed as a speaking-tube." A recent accident near Crewe affords one of many warnings of the necessity of having some such means of communication as this of Mr. Jones, between the guard and driver, as well as between the passengers and guard, and a way for the guard to each carriage, that he may satisfy himself as to the urgency of the call made by the passengers.

STRIKES AT LIVERPOOL.—Some of the bricklayers and plasterers have struck work in consequence of disagreements with masters as to wages. The operative bricklayers state that by an understanding with their employers, wages for the summer half-year beginning 1st March, were to have been 5s.; those for the winter half-year being 4s. 6d. Seventeen out of the thirty-four employers have acceded to this arrangement; but the remainder have refused to give more than 4s. 8d., in consequence, as they state, of a numerous body of the operatives having worked for the dock-trustees all last year for 4s. 6d. while refusing to work for them at less than 5s. Meetings both of men and masters have been held, but the former complain that the latter have refused to confer with them on the subject. The operative plasterers employed by one master have struck, in consequence, as they allege, of his refusal to return to the standard wages this spring, namely 26s. a week, after having reduced them at the beginning of winter. A levy of 6d. a day to support this strike has been imposed on the Associated Operative Plasterers, and the bricklayers appeal to their 1,000 fellow-workmen to support those out on strike.

ADVERTISEMENTS.

FOREMAN.—WANTED a FOREMAN thoroughly qualified to superintend the construction of a Lock in a navigable river.—Address C. E. Castle and Lamb's Newspaper-office, Bull Head-court, Newgate-street.

PLAIN AND DECORATIVE UNITED SOCIETY OF PAPERHANGERS TO THE TRADE.—Established 1854. WANTED immediately, good and efficient WORKMEN to join the above Society. Parties with undoubted references as to capability, &c. may apply to the Secretary, any SATURDAY evening, between the hours of EIGHT and TEN, at Mr. DODSON'S, the Fox Tavern, Duke-street, New Oxford-street, Bloomsbury.—Books of rules may be obtained at the bar.

TO ARCHITECTURAL DRAUGHTSMEN.
WANTED, a first-rate ARCHITECTURAL DRAUGHTSMAN, who thoroughly understands perspective and making out working drawings. Specimens of ability and terms required, to be addressed to Messrs. LOCKWOOD and MAWSON, Bradford, Yorkshire.

WANTED, in a Builder's Office, a YOUTH who can write a good hand, quick at figures, and can trace drawings. One who has been in a Surveyor's or similar office preferred.—Address, with age, last engagement, salary, &c. to T. B. care of Mr. Paradise, 40, Watling-street.

WANTED, in a Surveyor's Office, a YOUTH of about 17 or 18. A good hand and quickness at figures indispensable.—Apply by letter, stating age, qualifications, and salary required, to J. B. Mr. Miller, Bookseller, &c. Little College-street, Westminster.

WANTED, an ARCHITECTURAL DRAUGHTSMAN, competent to prepare specifications, take off quantities, and measure up builders' works. Reference will be required.—Apply to M. JOYCE, Building Surveyor, St. Neots, Hunts.

TO HOUSE-PAINTERS AND DECORATORS.
WANTED, for an Establishment in Edinburgh, which has for thirty years carried on a very extensive business of the highest respectability, a MANAGER of first-rate ability and experience, thoroughly acquainted with the details of the trade; or, an ACTING PARTNER of like qualifications, possessed of adequate capital, or who can give security for the same. For further particulars apply to STODART MACDONALD and CO. No. 1, Abercromby-place, Edinburgh.

PLASTERING.—An experienced Plasterer is open to take PLASTERING, either by the whole or at measured prices. Good references.—Address, A. B. C. Oak Villa, Woodridings, New Pinner, Middlesex.

TO PLUMBERS, PAINTERS, GLAZIERS, OR BUILDERS
A PERSON, aged 33, wishes for a SITUATION as THREE-BRANCH HAND or FOREMAN; he understands Measuring and Estimating. No objection to the country.—Address, (post-paid) L. T. C. Mr. Haymans, 1, Great Carter-lane, Doctors'-commons.

TO ARCHITECTS, BUILDERS, AND CONTRACTORS.
WANTED, a RE-ENGAGEMENT as Clerk of Works, General or Shop Foreman, by a competent Person, who has lately had the management of very extensive public works, and has been accustomed to the management of steam-engines, sawing and other machinery. Locality no consequence.—Address M. A. C. Office of "The Builder."

WANTED, by a Practical Man, a RE-ENGAGEMENT as Outdoor Foreman. No objection to go into the country. The highest references can be given.—Address C. H. No. 2, Westmorland place, Westmorland-road, Walworth.

TO MANUFACTURING IRONMONGERS, BUILDERS, AND OTHERS.
WANTED, by the Advertiser, a Situation as FOREMAN. Has been many years used to the manufacturing of all kinds of smiths' work, and is thoroughly acquainted with every description of hot-water apparatus, bath-work, gas-cooking stoves, &c.—Address to G. H. Office of "The Builder."

TO BUILDERS AND OTHERS.
WANTED by the Advertiser, a Young Man, an ENGAGEMENT for a year or two as an IMPROVER at the BENCH. Has been five years in the trade, and has a good knowledge of the business.—Address, W. H. G. 85, Long-lane, Smithfield, London.

WANTED, by an experienced BUILDER'S FOREMAN, who understands accounts, a SITUATION as Shop or Out-door Foreman, or to take the management of a business.—Address, J. J. Mrs. Jones's, 16, Caroline-street, Eaton-square.

TO ARCHITECTS.
WANTED, a SITUATION in an Architect's Office, as Designer and Draughtsman, to get up finished plans, details, and perspectives, also in Lithography and Tinting.—References given, and specimens seen on application to A. PICTOR, Mr. Wright's, 3, Granby-street, Hampstead-road.

WANTED, a RE-ENGAGEMENT in a Builder's firm, by a respectable young man, a CARPENTER, with some knowledge of accounts and the routine of the trade, understands time-keeping, and would be willing to make himself useful. Good reference. Town or country. Salary secondary consideration.—Address, G. T. P. 10, St. Andrew's-terrace, Rhodeswell-road, Limehouse, London.

WANTED, by a respectable Young Man, aged 25, accustomed to the duties of Clerk to a Timber Merchant, a SITUATION in the same or any other capacity, in which strict integrity and stability of character are required. Can give most satisfactory references.—Address, R. B. 9, Sloane-street, London.

TO BUILDERS AND OTHERS.
WANTED, by a thoroughly competent middle-aged man, a SITUATION as a SHOP or GENERAL FOREMAN, or to take charge of a job, or the management of a business in town or country.—Address, prepaid, E. S. No. 3, Green-terrace, St. John-street-road, Clerkenwell.

WANTED by the Advertiser, who has held a most confidential and responsible situation as Foreman over a large wharf for upwards of thirty years, in the stone and coal trade, a similar SITUATION. He would be enabled by his own connection greatly to increase a business.—A letter addressed to A. Z. Mr. Maddox's Library, Upper Albany-street, Regent's park (prepaid).

WANTED, by Two Youths, aged 18, who have had some experience in the TRADE, SITUATIONS as IMPROVERS in a Country Carpenter's and Builder's Shop, wages 10s. per week.—Address L. M. E. Muckle and Son's, News Agents, George-street, Woolwich.

TO BUILDERS, CONTRACTORS, AND MASTER BRICKMAKERS.
WANTED, a SITUATION as FOREMAN, to manage a Brickfield, by a man who understands brickmaking in all its branches, for the last twenty-five years; that is, common stocks, malm bricks, close-kiln ware—that is, red and white bricks and tiles; or to take the work by contract, to dig, make, and burn. Any reference may be had that may be required. Please to direct to me, A. B. at Mr. Bundle's, Crown and Anchor, 43, North-street, Manchester square, London.

TO MANUFACTURERS, ENGINEERS, IRONFOUNDERS, SAW-MILL PROPRIETORS, AND OTHERS.
THE Advertiser, an active business Young Man, of mechanical and commercial abilities, conversant with workmen and the iron and timber trades, having held a responsible situation in a large manufactory, seeks a similar ENGAGEMENT. A good bookkeeper and correspondent, accustomed to the usual routine. Satisfactory reference to last employer.—Address, J. W. Post-office, Old Kent-road.

TO ARCHITECTS, CIVIL ENGINEERS, AND SURVEYORS.
THE Advertiser, who is a first-rate ARCHITECTURAL DRAUGHTSMAN, and has had great experience in detail, construction, and designing, is OPEN to an ENGAGEMENT.—Address, H. H. 17, Brompton-row, Brompton

TO ENGINEERS, MACHINISTS, GAS AND RAILWAY COMPANIES, BRASS MANUFACTURERS, &c.
THE Advertiser, a respectable Mechanic, is desirous of a SITUATION as FOREMAN, TIMEKEEPER, or in any capacity where energy and attention is required.—Address, J. B. 3, Cleveland-street, Mile-end-road.

TO CIVIL ENGINEERS, SURVEYORS, ARCHITECTS, BUILDERS, &c.
THE Advertiser, a Young Man of respectability, is desirous of an ENGAGEMENT (either temporary or permanent) to the above, either as Assistant, Clerk, &c. or any similar capacity, where he would render himself generally useful; would be found worthy of trust; has also a practical knowledge of the building business, keeping builders' accounts. No objection to going abroad. Unexceptionable references. Salary moderate.—Address F. H. C. Post-office, Hemingford-road, Islington.

TO MECHANICAL ENGINEERS.
THE Parents of a well-educated YOUTH, in his sixteenth year, are desirous of PLACING him with a MECHANICAL ENGINEER, where he would have every facility of acquiring a thorough knowledge of the profession.—Address, stating terms, to No. 500, at Mr. Bridgen's, Stationer, Wolverhampton.

TO ARCHITECTS.
THE Advertiser, a neat DRAUGHTSMAN, acquainted with building generally, and competent to make working, finished, and perspective drawings, is open to an ENGAGEMENT. Good references. Salary moderate.—Address, A. B. 9, Elizabeth-street South, Pimlico.

TO ARCHITECTS AND SURVEYORS.
OCCASIONAL ASSISTANCE.—A qualified ASSISTANT, of eleven years' experience, is desirous of affording temporary assistance to the Profession, at their offices or his own residence. Address, A. B. 38, Duke-street, Grosvenor-square.

TO SURVEYORS, CONTRACTORS, BUILDERS, &c.
A YOUNG MAN, aged 26, is desirous of an ENGAGEMENT in either of the above offices; has been six years with an architect and surveyor of extensive practice, and for two years past with a contractor and builder of eminence, in town: prefers town, but does not object to the country. References unexceptionable. Address, J. J. 2, Cowley-street, Westminster.

TO LOCAL BOARDS OF HEALTH, ENGINEERS, &c.
AN ENGINEER and SURVEYOR, of great practical experience, and who has recently surveyed and made a drainage plan of a large town, to the perfect satisfaction of the authorities thereof, is OPEN to an ENGAGEMENT, permanent or otherwise. Terms moderate. The highest testimonials of ability will be given.—Address, post paid, A. B. Z. Post-office, Edinburgh.

TO BUILDERS, CARPENTERS, &c. IN TOWN OR COUNTRY.
A YOUNG MAN, of steady habits, who has just left a London firm, wants EMPLOYMENT. Wages not so much importance as constant employment.—Address, D. Shoe Warehouse, 1, Queen's Head-row, Newington, Surrey.

TO ARCHITECTS.
A GOOD COLOURIST is desirous of EMPLOYMENT, to colour drawings for exhibition or otherwise.—Address to M. S. Mr. Dean's Library, 19, Wilmot-street, Russell-square.

TO CARPENTERS AND BUILDERS.
A MASTER in the above line is desirous to place with a freeman of the City of London, as TURNOVER, a LAD who has served five years in the business.—Address, T. E. Office of "The Builder."

CLERK of WORKS or BUILDER'S CLERK. The Advertiser, who has had considerable practice in taking out quantities, measuring up work, making drawings and estimates, also superintending various works, is now open to a RE-ENGAGEMENT.—Address, prepaid, S. T. Post-office, Worcester.

TO BUILDERS.
A PRACTICAL STAIRCASE HAND is OPEN to a RE-ENGAGEMENT in town or country. Piece work preferred. Satisfactory references given.—Address, T. K. No. 11, Draycott-street, Chelsea.

AN ARCHITECT'S ASSISTANT is desirous of a RE-ENGAGEMENT. Has had much practice in making working drawings, specifications, &c. for most kinds of buildings, including large public works. Salary, two and a half guineas.—Address A. B. 112, High Holborn.

TO ENGINEERS AND OTHERS.
A MECHANICAL ENGINEER is open to an ENGAGEMENT, either to design new machinery, or carry out the designs of others, preparing the requisite detail drawings.—Address, A. B. 3, Rutland-place, Cowper-road, Stoke Newington.

TO ARCHITECTS.
A YOUNG ARCHITECT will shortly be OPEN to an ENGAGEMENT. A good draughtsman, &c. Understands surveying and levelling.—Address, ALPHA, 38, Blackman-street, Southwark.

A SURVEYOR, DRAUGHTSMAN, &c. requires a SITUATION, permanent or not. Accustomed to general routine of work; good colourist, architectural or mechanical, &c. &c. Testimonials and references. Terms, two guineas per week.—Address, A. Z. 44, York-road, Lambeth.

TO WATERWORKS AND SEWERAGE ENGINEERS.

AN ASSISTANT, aged 30, thoroughly experienced both in making the plans, specifications, and estimates for such works, and in superintending their execution all their details, is desirous of a RE-ENGAGEMENT. Has excellent testimonials. Would not object to go abroad. — Address, A. M. Z. Office of "The Builder."

TO NOBLEMEN, GENTLEMEN, ARCHITECTS, AND OTHERS.

A HIGHLY respectable Person, aged 36, is open to an ENGAGEMENT as CLERK of WORKS, or to undertake the entire management of property, surveying land, &c. The highest references given.—Address, D. E. Office of "The Builder."

TO ARCHITECTS AND SURVEYORS.

A GOOD and RAPID DRAUGHTSMAN, both geometrical and perspective, and competent Assistant, desires to procure additional occupation either at home or in the office. Is a good Land Surveyor also.—Address, G. M. 8, St. Thomas street, Islington.

TO BUILDERS.

A YOUNG MAN, aged 20, of respectability, and accustomed to making plans, taking out quantities, keeping accounts, &c. &c. is desirous of obtaining a permanent SITUATION in a Builder's Office. The advertiser could prefer an engagement where the prospect may hereafter offer of investing a small capital upon advantageous terms.—Address, stating duties required, and salary per annum, to A. B. Mr. Darnill's Library, Richmond, Surrey.

JUNIOR PARTNER or ASSISTANT.— The Advertiser is anxious to meet with some well-established architect under whom he could occupy himself as above. Can give high references as to his professional qualifications, and is well connected, principally in the eastern counties.—Address, Y. M. S. News Rooms, Cheapside.

MARBLE.—Mr. B. FABBRICOTTI, of Carrara, Italy, Proprietor of Marble Quarries, and the only person in the United Kingdom selling Italian Marble the produce of his own quarries, begs to inform the gentlemen connected with the Marble Trade that he has established himself in London, the most extensive Depôt of Statuary, Veined, Sicilian, Dove, and Black and Gold Marbles, at CARRARA WHARF, THAMES BANK, PIMLICO, the foot of Vauxhall-bridge.

TO THE MARBLE TRADE.

MR. B. FABBRICOTTI begs to inform the public that he has REMOVED from the office lately held by him at No. 8, Crescent-terrace, Millbank, to offices on his own premises, at Carrara Wharf, Thames Bank, Pimlico, where he continues to carry on the marble trade solely on his own account. Mr. Thompson being no longer his agent.

Mr. B. Fabbricotti hopes that the trade will continue to favour him as usual, as, being the absolute proprietor of the quarries at Carrara, he can supply at better advantage and quality than any one else.

N B. The well-known qualities of Mr. Fabbricotti's marble are celebrated throughout all Italy, England, and America.

MARBLE SLABS.—MARBLE and STONE SAWING-MILLS, 8, NORTH WHARF-ROAD, PADDINGTON. The proprietors of the above mills beg to offer to masons and the building public generally their extensive assortment of veins, Sicilian, and statuary marble, in slabs and blocks, at prices never before offered. JAMES SIMMONS, Manager.

MARBLE.—THOMPSON and HOLMES, Marble, Stone, and Timber Brokers, Contractors, and Builders' Agents, beg to inform the gentlemen connected with the marble trade, that their STOCK of MARBLE is received direct from the principal quarry-owners in Italy and Belgium for SALE on COMMISSION ONLY, and that they can consequently supply the Trade with the finest marbles at the lowest prices. Sawn Slabs, Mortars, Vases, &c.; Yorkshire and Portland Stone for sale on commission.

The Marble Wharf, Thames-bank, Pimlico, adjoining Vauxhall-bridge.

TO BUILDERS, MASONS, AND OTHERS.

THE largest STOCK in England of MARBLE in Blocks and Slabs, veined, Burdilla, dove, black, black and gold, Sienna, St. Ann's, statuary, serpentine, verd antique, &c. Portland, Ketchill, Park Spring, and other stone, in blocks, slabs, landings, and hearthstones. Yorkshire paving, granite curb, &c. All goods are packed and forwarded to any part of England.—THOMAS JACKSON, Marble and Stone Sawing-Mills, Commercial-road, Pimlico, London.

CAEN and AUBIGNY STONE.— P. FOUCARD, Stone Merchant and Quarryman, Caregee shipped to order from Caen to any port. Contracts taken for any quantities. Depôts: Granite Wharf, East Greenwich; Lett's Waterloo-bridge. Offices: 946, High-street, Southwark, near the Townhall

CAEN and AUBIGNY STONE.— GATES and GEORGE (late Luard, Beedham, & Co.), General Stone Merchants, Caen Wharf, Rotherhithe, are supplying the above and Bath, Portland, Yorkshire, Granite and other stones from their depôt, at current prices by land and water carriage; also by vessel direct from the quarries, at moderate ship freight to any part of the United Kingdom.

N.B. Heavy goods landed, transhipped, or carted with despatch, and at moderate charges.

ANCASTER STONE, from the celebrated quarries of Mr. John Wilson, Ancaster, who has appointed GATES and GEORGE, Stone Merchants, his sole consignees for the London district. Ancaster Stone, as generally esteemed by the building profession, for its great durability, economy, and general utility, as to require but a trial to secure the approval of architects and others for its more extended use in building.—Samples and other information can be obtained at the Great Northern Depôt, King's-cross; Caen Wharf, Rotherhithe; and Hibernia-chambers, London Bridge, Borough; or forwarded to address, free of charge.

GODSTONE STONE.—GATES and GEORGE beg to solicit the attention of architects, engineers, and builders to this stone, which is valuable for the purposes of construction, either as a substitute for brickwork, or in connection therewith, the price in most respects being also the same as ordinary brickwork. It can be obtained in large quantities, and to specified sizes, in rubble or rough square blocks, direct from the quarries.—Information and samples given at Caen-wharf, Rotherhithe, and Hibernia-chambers, London-bridge, Borough.

GRANITE.—The Cheesewring Granite Company, Liskeard, Cornwall.

London Agents—TREGELLES and TAYLOR, 3, Pinner's-court, Old Broad-street. Manager—JAS. J. TRATHAN, Liskeard. This Granite is selected for the New Westminster-bridge.

TREVALGA ROOFING SLATE.— T. B HANNAFORD, Sole Consignee of the above beautiful Slate, is in a position to supply the same at extremely low prices. Cisterns, sinks, and every description of slate-slab work executed with despatch.

Trevalga Wharf, Ratcliff cross.

ENAMELLED SLATE. — REDUCTION in PRICE.—Mr. MAGNUS having completed some extra machinery, is enabled to announce a further reduction in the price in the shape of a large and increased discount to the TRADE. His best goods are now supplied at prices below those charged by other parties for very inferior imitations of his work.—PIMLICO SLATE WORKS, 39 and 40, Upper Belgrave place, Pimlico.

BANGOR WHARF, King's-road-bridge, Camden-town.—STRINGFIELD and COOPER, late W. W. Rawlins, beg to call the attention of Builders and others to their stock of Bangor slates, laths, plaster, Roman, Portland, and Keene's cement, blue lias, Dorking, and chalk lime, plasterers' hair, Yorkshire plain, pan, and ridge tiles, glazed sewer pipes, closet-pans, and traps, Welsh fire-bricks, gravel and shells for garden paths, ballast, sand, &c. Materials landed, wharfed, and carted.

MARKET-WHARF, REGENT'S-PARK-BASIN.—WEST-END DEPOT, for Yorkshire Paving, Portland and Derby Stone, Bangor Slates, Slabs, &c. Bricks, Lime, Cement, Plaster, Tiles, Laths, and Fire Goods. WOOD and ROBARTS invite the attention of Builders, Masons, and others, to their Stock as above, where everything will be charged at the lowest prices. Headstones, Ledgers, Steps, Landings, &c cut on the shortest notice. Country orders promptly attended to.

BATH STONE OF BEST QUALITY.

RANDELL and SAUNDERS, QUARRYMEN AND STONE-MERCHANTS, BATH.

List of prices at the quarries and depots, also cost for transit to any part of the kingdom, furnished on application to Bath Stone Office, Corsham, Wilts.

SILICEOUS STONE.—ORNAMENTAL WORK of every description executed at LOW PRICES in this most durable material. A large Stock kept of Mantel-pieces, Balustrades, Quoins, Tomb, Fonts, &c. at the new premises. Whitehall Wharf, Cannon-row, Westminster

BOW-BRIDGE SLATE WORKS, Stratford, near London.—A. A ROBINSON begs to inform Architects, Contractors, Builders, and others, that his PRICE LISTS for SLATES and SLAB WORK for 1851 are NOW READY, and can be had on application, inclosing a postage-stamp

N.B. A liberal discount to the trade.

VALENTIA SLATE SLABS.— The Valentia Slab Company invite attention to their Slabs now supplied, of very large dimensions and of superior quality. They have been used at the British Museum, National Gallery, Bethlem Hospital, various Lunatic Asylums, the Ordnance Works Model Prison, Pentonville, and other Penitentiaries; Mitre Floors in Bedfordshire and Hertfordshire, Breweries, the Race Stand at Brighton, Portsmouth Barracks, and are kept in stock in large quantities by Messrs. FREEMAN, Millbank-street; also by Messrs. Sharpe, Tooley-street; and at Messrs. Braby's, Belvidere-road, where terms may be obtained.

WILKINSON'S IMPROVED ARTIFICIAL STONE CHIMNEY-PIECES.— Nearly 3,000 of the above have been Sold, although only recently brought to their present state of perfection, and offered to the public. The prices range from 6s. for a neat bedroom set; with jambs, moulded with large ogee on inner edge, set on plinths. Mantel moulded with ovolo and fillet under shelf, and shelf with hollow on edge, to 50s. for sitting-room patterns of more elaborate character. A liberal discount for quantity.—Address W. B. WILKINSON, Newcastle-on-Tyne.

NORTH-WESTERN STONE DEPOT, Hampstead-road Bridge, Camden-town.—W. ANSTALL begs to call the attention of Contractors, Builders, and Masons, to his Stock of Portland, Park Spring, Potternewton, Newton, Harehill, Bath, Caen and other Block Stone; York Paving, Landings, Steps, Sinks, Sills, &c.; Robin Hood, Flare-hill Landings and Slabs. Also, Aberdeen, Guernsey, and Haytor Granite Curb and Pitching, all at the very lowest prices.

N.B. Estimates sent for Masons' Work.

HOUSEHOLDERS and GENERAL LIFE ASSURANCE COMPANY, 15 and 16, Adam-street, Adelphi.

Money received at interest at 5 per cent. per annum, payable in April and October.

Agents (with references) may apply.

R HODSON, Secretary.

THE ALBERT ASSURANCE COMPANY. (Established in 1838.)

MORTGAGE and other LOANS in connexion with life assurance are granted by this Office, either for long or short periods, on freehold and leasehold property, reversionary interests and on good personal security. — EASTERN BRANCH, 7, Finsbury-square. W. S. VARDY, Manager.

Prospectuses—with full Tables and Details—and Forms—may be had at the Company's Offices, or of the Agents.

WILLIAM NEWMARCH, Secretary.

N.B. Life Insurance Premiums are allowed as deductions in Income Tax Returns.

PATRON—H.R.H. PRINCE ALBERT.

ROYAL POLYTECHNIC INSTITUTION.—Monday Evening, the 14th inst. Lecture by Dr. Lankester, F.R.S. &c. On the Resemblance of Plants and Animals. Tuesday Evening, Telephonic Concert by Invisible Performers, by J. H. Pepper, Esq. Thursday, Dramatic Reading by Mr. Hugh Leslie, Macbeth. Friday, Astronomy, by Dr. Bachhoffner, with appropriate music. The Tyrolese Minstrels, Monday, Tuesday, Thursday, and Saturday Evenings. Friday Evening, Mrs. Furlong, on Oral Instruction. The Steam Gun, Dissolving Views of the War, Diorama of Sindbad the Sailor, Cosmorama, the Concert by Invisible Performers, and all the Lectures, on the New Bath Note, &c as usual.

GUTTA PERCHA TUBING.—May be buried for years, without injury, and it is therefore valuable for conveying water, chemicals, &c. It is peculiarly valuable for liquid manure, drain, and soil pipes. Being a non-conductor, it is not affected by the frost of winter or drought of summer, like metal or leather. Its strength is extraordinary; the small half-inch diameter tubing having resisted a pressure of 25 lbs on the square inch, without bursting. The smaller sizes may be had in 100 feet, and the larger in 50 feet lengths. The tubes are easily made. As a conductor of sound it is most valuable for conveying messages in lieu of bells. ELECTRIC TELEGRAPH WIRES INSULATED WITH GUTTA PERCHA. The GUTTA PERCHA COMPANY, Patentees, 18, Wharf-road, City-road London.

HANCOCK'S PATENT VULCANIZED INDIA-RUBBER TUBING, HOSE-PIPES, WASHERS, ENGINE-PACKING, both, round and flat, and SOCKET-RINGS, for Hot-water-pipes. Vulcanized Rubber Door-springs, and Solid Round Rubber Cord of all sizes of any length. Billiard Cushions and Rubber Strips cut to any pattern for bagatelle tables.

Drums dresses of superior make, and improved Vulcanized Rubber Stop-cocks for ditto.

Vulcanized Rubber, in sheets, from three to four feet wide, and of any thickness, Air beds, Pillows, and Cushions inflating Portable Baths, Invalid Cushions, and Articles of this kind made to any pattern to order

N.B. All communications and orders punctually attended to, addressed to the Manufactory, JAMES LYNE HANCOCK, Goswell-mews, Goswell-road, London

TO DRAUGHTSMEN AND CIVIL ENGINEERS.

H. MORRELL, BLACK LEAD PENCIL MANUFACTURER, No. 149, Fleet-street, London.

These Pencils are prepared in various degrees of hardness and shades.

H H H for drawing on wood.	F F light and shading.
H H H for copperplate.	F for general use.
H H for engineering.	B black for shading.
H for sketching.	B B ditto ditto.
H B hard and black for drawing.	B B B ditto ditto.
M medium.	B B B B ditto ditto.

Sold by all the principal Stationers in town or country.

TO CAPITALISTS and OTHERS.—The Advertiser is the inventor of the Improvements on Mr. Thomas Bevis's Hydro-Pneumatic Mode of Propelling, and has made far greater improvements, whereby a saving of one-half the expense is made, and the apparatus more effectual. Being desirous of carrying the above out, any communication will be duly attended to, and the advantages to be derived described.—Address to the Inventor, JAMES SHAKESPEARE, Engineer, 3, Lintonstreet south, Lane-street, Islington

PATENT SANITARY GAS SHADES.— These Shades, manufactured exclusively by RICE HARRIS and SON, Islington-street, Birmingham, on an entirely new principle, effectually destroy the effluvia and smoke which have hitherto made the use of gas so objectionable in dwelling-houses and offices, and secure cleanliness and freedom from smell are of importance. They are simple and inexpensive, and may be had at the Works in a variety of forms adapted to the style of fitting, or the taste of purchasers; also at Mr. JOHN SHORTORS, Crispin-street, Spitalfields, London.

ONE THOUSAND BEDSTEADS to CHOOSE FROM.—HEAL & SON have just erected extensive Premises, which enable them to keep upwards of One Thousand Bedsteads in stock. One Hundred and Fifty of which are fitted with Dovetail Joints, comprise every variety of Brass, Wood, and Iron, with Chintz and Damask Furnitures, complete. Their new warerooms also contain an assortment of BED-ROOM FURNITURE, which comprises every requisite, from the plainest Japanned Deal, for servants' Rooms, to the newest and most tasteful Suites of Mahogany and Rosewood. The whole is warranted of the soundest and best manufacture. HEAL & SONS'S ILLUSTRATED CATALOGUE of BEDSTEADS and PRICED LIST of BEDDING, sent free by post.—HEAL & SON, 196, Tottenham Court-road.

DRAWING, MODELLING & CARVING, &c.—A Person of good address, about 40, a good, quick, and accurate draughtsman and modeller, has spent some years in making designs, plans, perspective and working drawings, for ironwork, masonry, and carved work; is a practical marble, stone, or wood carver, has been much engaged in the two former lately; can keep books by double or single entry; is a fair accountant; is willing to take to the shop, floor, or road, an fair security, give the most unexceptionable references both as to character and ability, and will be at liberty on 25th March.—Address, M. S. Y. Post-office, Shrewsbury.

TO ARCHITECTS AND OTHERS.

MR. EDWARD L. PARAIRE is desirous of Meeting Gentlemen who require TINTED ARCHITECTURAL DRAWINGS. Carefully executed, Internal, Isometrical Perspectives got up; outlines of same neatly coloured, with background, or tinted with Indian ink, have spent some years in making designs, plans, perspective and working drawings, for ironwork, masonry, and carved work; is a practical marble, stone, or wood carver, has been much engaged in the two former lately; can keep books by double or single entry; is a fair accountant; is willing to take to the shop, floor, or road, an fair security, give the most unexceptionable references both as to character and ability, and will be at liberty on 25th March.—Address, M. S. Y. Post-office, Shrewsbury.

Shipping Depôt, Devon Haytor Wharf, Rotherhithe.

G. H. CLARK, Agent.

THE LONDON AND MANCHESTER PLATE GLASS COMPANY

Beg to inform the TRADE, that the EXTENSION OF THEIR WORKS being now completed, they are enabled to execute orders to any extent at immediate notice. The Company also beg to intimate that owing to improvements effected in the reconstruction of their Works, the COLOUR and QUALITY of their GLASS will be found to be considerably improved, and that they can guarantee the maintenance of these essential requirements. They further beg to invite attention to their reduced List of Prices, which may be obtained on application at their London Warehouse, or at the Works.

For the convenience of the LONDON TRADE, a large stock of POLISHED PLATE is now kept at the COMPANY'S WAREHOUSE, BARRAUD'S WHARF, WHITEFRIARS.

The Works, Sutton, St. Helen's, January, 1855.

TO ARCHITECTS, BUILDERS, CONTRACTORS, AND OTHER CONSUMERS OF GLASS.

HARTLEY'S PATENT ROUGH PLATE GLASS,

1-8th of an inch thick, or 2 lbs. to the foot; 3-16ths, or 3 lbs.; and 1-4th or 4 lbs. is now universally used for

RIDGE AND FURROW ROOFS, GREENHOUSES, RAILWAY STATIONS, MILLS, MARKET HALLS, BATHS AND WASH-HOUSES, FACTORIES, WORKSHOPS, SHIP-BUILDING SHEDS, AND OTHER EXTENSIVE BUILDINGS.

By a carefully prepared Estimate, it has been ascertained that FOUR-FIFTHS of the ROUGH PLATE, or non-transparent Glass, consumed in the United Kingdom in 1854, was manufactured by HARTLEY'S PATENT—thus affording the most incontestable evidence of its superiority over every other article of the kind, and as being the only description of Glass suitable for the purposes above named. It combines size and strength with economy of cost, and is manufactured in sizes expressly for RIDGE and FURROW ROOFS, giving a SPAN of TWELVE FEET, at a price not exceeding, weight for weight, that of Common Crown Glass. Its non-transparency renders BLINDS UNNECESSARY, and no scorching occurs in Greenhouses glazed with it; hence the preference given to this Glass for all Horticultural purposes.

For further particulars, apply to

JAMES HARTLEY AND CO. SUNDERLAND; AND PURFLEET WHARF, EARL-STREET, BLACKFRIARS, LONDON.

Sole Manufacturers of Lockhead's Patent Perforated Glass for Ventilation.

*** *Hartley and Co.'s Glass Tariff Newspaper will be forwarded gratis, on application.*

January 1, 1855.

These valves being steam-tight, and of the best workmanship, are particularly applicable to Baths and Washhouses, and the better class of work. They can be easily repaired without interfering with the pipes. Liberal discount allowed to architects and the trade.

J. J. CAPPER, Falcon Engine Works, Loughborough; orders in London kindly received by W. H. WALENN, C.E. 7, Duke-street, Adelphi.

TO BUILDERS AND PLUMBERS.
The attention of the Trade is called to
JOHN WARNER & SONS'
PATENT VIBRATING
STANDARD PUMP,

which is recommended for the simplicity of its construction, and the ease with which it works.

By the introduction of the vibrating standard, the cumbrous carriage and expensive slings and guides are unnecessary, rendering the price considerably less than pumps made on the old plan.

Beer and Water Engines for raising fluids from a depth not exceeding 28 feet; also, Garden Engines constructed on the same principle.

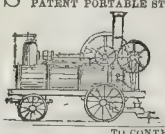
JOHN WARNER & SONS,
8, Crescent, Jewin-street, London,
Manufacturers and Patentees.

M. A. RICHARDS and SON, PUMP MANUFACTURERS and ENGINEERS.

Pumps in Wrought and Cast Iron and Brass, bored by machinery, and fitted in the best possible manner, suitable for excavators, roads, brickmakers, farms, gardens, stables, liquid manure, ships, barges, well-sinking, &c. adapted for any depth. Hydraulic Pumps for deep wells.

PUMPS ON HIRE.

Pumps of any size, single or double barrel, up to double 12-in. diameter, kept ready for use at reduced prices.



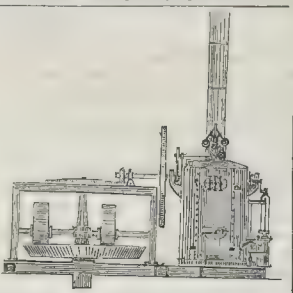
N.B. The above can be worked either by hand, horse, or engine power.

Iron Pails 38s per doz. painted.
Ditto .... 48s per doz. galvanised.

Upper Ground-street, Blackfriars Bridge, Surrey Side.

IRON PILLARS WANTED, CHEAP; four small and second-hand required. State length, substance, and lowest price, per letter, to C. C. 1, Edith-grove, New Brompton.

STEAM PUMPING ENGINES.—PATENT PORTABLE STEAM-ENGINES, from four to ten-horse power, always ready to let on hire, by the week or month, for pumping, sawing, pile-driving, raising materials, &c. &c.



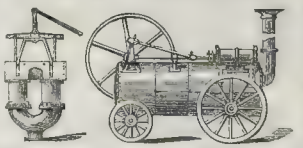
Contracts taken for pumping any quantity of water.

JAMES BURTON & SONS,
Engineers and Contractors,
John's-place, Holland-street,
Southwark, London.

TO CONTRACTORS.

PORTABLE STEAM-ENGINES TO BE LET, on HIRE, by the WEEK, MONTH, or for any period, of 8-horse, 10-horse, 12 horse, 16-horse, 20 horse, and 25-horse power, adapted for Contract work generally. These engines have been successfully employed for years by all the principal contractors, and are ready for delivery at a day's notice. Several may be seen at work at Messrs MILDWIN and HALL'S, Engineers, 92, Blackfriars-road, Sole Patentees and only Manufacturers

N.B. Any of these Engines may be purchased.



A SAVING of TIME and MATERIALS, with Solidity of Building.

HENRY GOUGH'S PATENT PORTABLE STEAM ENGINES of two, three, four, and six horse power, for grinding mortar, raising building materials, driving piles, circular-saws, pumps, &c. 46, Albert-street, Manchester.

"Railway Contractor's Office, Wellington, Salop.
"December 1, 1853.

"DEAR SIR,—We have much pleasure in bearing testimony of the value of your Patent Portable Engine that you fitted for us, for the construction of the tunnels on the Bacup Branch of the East Lancashire Railway in 1851, and have since used for sawing timber, and driving other machinery up to the present time, during which period, although for weeks the fire has never been out, we have no stoppage for repairs.

"We remain, dear sir, yours most faithfully,
"Mr. Gough." "DICKSON and McKENZIE."

PORTABLE STEAM-ENGINES and PUMPS kept in Stock for Hire at reduced Prices. M. A. RICHARDS and SON, Pump Manufacturers and Engineers, Upper Ground-street, Blackfriars-bridge (Surrey Side).

PAPER-HANGINGS.—The CHEAPEST HOUSE in London for every description of PAPER-HANGINGS is GROSS'S WHOLESALE WAREHOUSE, 29 GREAT PORTLAND-STREET, Oxford-street, where you can select from the LARGEST and MOST EXPENSIVE Assortment in the Kingdom, THIRTY PER CENT. CHEAPER than any other House in the trade. Builders, Decorators, Dealers, and large consumers will do well to visit this establishment.

LARK'S PATENT SMOKE-BURNER: an improved means of perfecting Combustion, and thereby destroying Smoke.

This invention is now in operation upon Steam-engine Furnaces, of Cornish and Wagon Boilers, and upon Ovens. It is adapted to other descriptions of Furnace, such as Marine Boilers, Coppers, Coke Ovens, Bakers' Ovens, Potteries, Chemical Works, &c. Its effect is acknowledged by Government Inspectors to be amongst the most perfect of the inventions extant in subduing the Smoke Nuisance, and in many instances with a diminished consumption of fuel.

Ten furnaces, of various construction, to which it has been successfully applied, may be seen in operation at the Cement Works of Messrs. FRANCIS, BROTHERS, Nine Elms, London.

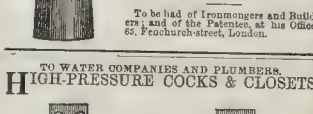
Address, THE SMOKE-BURNER COMPANY,
Nine Elms, London

VENTILATION.—PURE AIR.

Sheringham's Ventilator for the admission of pure air through an

EXTERNAL WALL.

With single pulley, from 6s. each; with leading pulley, from 6s. 6d.



These Ventilators are arranged that the requisite quantity of air may be admitted for the due ventilation of an apartment without the slightest draught being felt by the occupants; and as they are placed in the external wall, their action is not impeded when the house is closed for the evening, at which time a constant supply of fresh air is most required. HAYWARD, BROTHERS, sole Manufacturers, 196, Blackfriars road, and 117, Union-street, Borough; and of all respectable ironmongers, builders, &c.

SMOKY CHIMNEYS CURED EFFECTUALLY for TEN SHILLINGS, by SUPER'S PATENT WIND-GUARD.—This Guard allows free egress to the smoke, prevents the wind blowing down the mouth of the chimney, and is not liable to be injured by the most boisterous weather.

To be had of Ironmongers and Builders; and of the Patentee, at his Office, 65, Fenchurch-street, London.

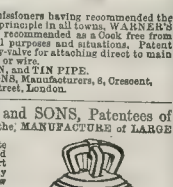
TO WATER COMPANIES AND PLUMBERS.
HIGH-PRESSURE COCKS & CLOSETS.

The Health of Towns Commissioners having recommended the adoption of the high-pressure principle in all towns, WARNER'S HIGH-PRESSURE COCK is recommended as a Cock free from leakage, and applicable for all purposes and situations. Patent Closets and Basins with supply-valve for attaching direct to main pipes without a cistern, cocks, or wire.

LEAD, IRON, and TIN PIPE.

JOHN WARNER and SONS, Manufacturers, 8, Crescent, Jewin-street, London.

JOHN WARNER and SONS, Patentees of IMPROVEMENTS in the MANUFACTURE of LARGE BELLS.



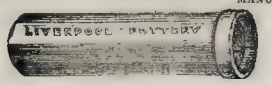
J. W. & SONS having of late years devoted much time and study to the long neglected art of Bell Casting, have recently invented and patented a new process connected therewith, by which they are enabled to manufacture Bells of any size, note, or weight, of superior tone, truer in form, and at less cost than has heretofore been accomplished.

Bells for Churches, Chapels, Colleges, Schools, Turret Clocks, &c. cast for any size, note, or weight, singly or in peals.

TUNED BY MACHINERY.

Stocked and wheeled ready for fixing. Old Bells recast or taken in exchange.

MUSICAL HAND-BELLS tuned to the Chromatic Scale, with improved Clappers, and pegged on a new system, which gives a superior tone and facility for ringing.



PURE WATER, for manufacturing purposes, may be obtained at very moderate cost by RANSOME'S FILTERING STONE. Estimates given for large or small quantities. Builders and Plumbers supplied with the concession and other Filters at trade prices. These filters, at one, two, three, and four guineas each, yielding 50, 100, 150, and 200 gallons per diem, will be found sufficient for ordinary domestic requirements; are self-acting, and not liable to get out of order. References to parties satisfactorily supplied with quantities up to 30,000 gallons per diem, may be obtained on application at the depôt, 71, Baker-street, Portman-square, London.

FORSTER and SLATE'S PATENT CONSTANT SUPPLY FILTERS, tested and approved by the first water engineers in the country. Used and approved at the Offices of the General Board of Health. Exclusively adopted by the Crystal Palace Company. Easily cleaned without trouble or expense.—To be seen in operation daily, at J. EVANS and SON'S, Ironmongers, 33, King William-street, London-bridge.

IMPORTANT TESTIMONIALS

TO THE EFFICIENT WORKING OF

STEPHEN GREEN'S

PATENT SYPHON FLUSHING BASIN,

AND

SELF-ACTING CLOSET CONNECTIONS.

Oxford, November, 1849.

GENTLEMEN,—Sixteen of your Closets having been put into operation at Christ Church College, I have great pleasure in giving you my testimony as to their efficiency and simplicity.

HENRY J. UNDERWOOD, Architect.
R. S. HOGGAR, Engineer.

Royal Arsenal, Woolwich, June 24, 1852.

GENTLEMEN,—I have much pleasure in giving my testimony in favour of your Patent Syphon Flushing Basin, with Self-acting Closet Connections. There are several fixed here, which have been in use for upwards of twelve months, giving perfect satisfaction.

I am, Gentlemen,
Your obedient Servant,
WILLIAM CARTWRIGHT.

REDUCTION IN THE PRICE OF CLOSET-PANS.

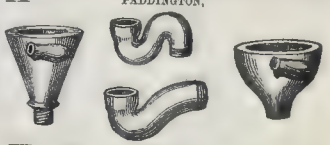
THOMAS LAMBERT and SON,
Patentees and Manufacturers, Short-street, New cut, Lambeth.

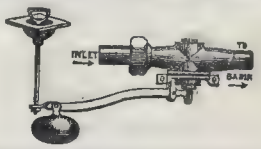
COLLIER'S TERRO-METALLIC and RED EARTHENWARE SOCKET DRAIN PIPES, BENDS, JUNCTIONS, and SYPHONS.—This ware, allowed by all to be of the best manufacture, by the unparalleled quality, combined with cheapness, will be found to meet the approbation of consumers.—Sole Agents, L. B. PEARSE and CO. Great Northern-wharf, York-road, King's-cross.



VICTORIA POTTERY, LEIGH, NEAR SOUTHEND, ESSEX.

DAVID MOUNTAGUE,

MANUFACTURER of superior GLAZED STONE WARE PIPES (in accordance with the rules established by the Commissioners of Sewers), Bends, Traps, Closet-pans, Jars, Bottles, and every article in Stone Ware on advantageous terms. Also MANUFACTURER of superior Roman Cement and Plaster of Paris at Orchard House, Blackwall. Orders executed from the above places, from Falcon-wharf, 80, Bankside, Blackfriars, and from Harrow-bridge-wharf, Stratford, Essex.



HENRY TURNER, 2, SOUTH WHARF, PADDINGTON,

5s. Traps, 2s. 6d. 5s.

Manufacturer of Closet Basins and Traps, yellow outsides, with white insides. These are warranted to be the most durable earthenware now manufactured. A list of shapes and prices sent free, on application. A large stock of Ping Basins of every variety.

BURSTING of PIPES by FROST.

This accident is prevented by the use of LAMBERT'S PATENT LEVER VALVE-COCKS, which act as safety-valves.

The lever is weighted, to resist the pressure of the column of water upon the valve, but it is not weighted sufficiently to resist the powerful expansion of water caused by the frost, which lifts the lever, and thereby prevents injury both to valve and pipe. When reaction takes place, the lever and weight resume their original position.

Many thousands of these Valve-cocks are now in use under pressures of from 3 to 300 feet, with uniform success.

Price of ½ inch bore, with sankplate and handle, 10s. 6d. each.

THOS. LAMBERT AND SON,
Patentees and Sole Manufacturers, Short-street, New-cut, Lambeth.

PATTEN'S PATENT HIGH-PRESSURE WATER-CLOSETS and WATER REGULATORS, manufactured upon an improved principle, dispensing with cistern, cranks, wire, lead trap, &c. Any number of Closets can be supplied from one main.

Also PATTEN'S improved powerful FLUSHING LOW-PRESSURE WATER-CLOSETS, patronised by the Board of Health, Government, and other large public establishments, in addition to numerous private individuals. Drawings, testimonials, and references of the highest respectability forwarded by post. Price of R. and A. Apparatus complete from 25s. and perfect action guaranteed. Fixed specimens to be seen on the premises of the Patentee, WILLIAM PATTEN, 29, Old Fish-street, near St. Paul's, London.

THE BUILDER.

SALES BY AUCTION.

BOROUGH of SOUTHWARK.—Ninety-three Freehold Houses, in single lots, each House entitling to a Vote,—particularly worthy the attention of small Capitalists.

MR. W. F. HAMMOND has been favoured with instructions from the proprietor to SELL by AUCTION at GARRAWAYS, on FRIDAY, MARCH 20, at ELEVEN for TWENTY, in single lots, the above Valuable FREEHOLD ESTATE, comprising Ninety-three Houses, all being comp te in four blocks, and known as Henry-street and Elham-street, with a frontage in Kent-street, Borough. The description of the property is of the third and fourth rates, well built, having been erected about thirty years, consisting of shops and dwelling-houses, which are well let or need, and producing rentals from 12 to 50l each, making a total sum of 1,300l. 4s. 8d per annum, each house entitling to a vote. This forms an important investment to small capitalists, being sold in separate lots, with a special condition granting to every purchaser, as a further facility, the option of leaving one half of the purchase-money upon mortgage, to be paid off by such instalments, and at such periods, as may be mutually agreed upon between the vendor and purchaser: but the vendor will not object to receive proposals for allowing a larger proportion of the purchase-money to remain on mortgage.—N.B. Although the property is apportioned into separate lots to meet the interests of small capitalists, the auctioneer will be prepared to put up several lots together, should it be desired by those present at the time of sale. Further particulars, with conditions of sale, and plans of the estate, may be had of Messrs. Lawson, Owen & Pearce, Solicitors, 4, Bucklersbury, City; at Garraway's Coffee-house, Cornhill; of Mr. Swann, the Collector on the Estate, 47, Henry-street; and at the Auctioneer's Offices, 3, Carey-street, Lincoln's-inn.

KING'S-ROAD, CHELSEA.—Valuable Timber yard, producing 19l per annum, free of ground-rent

MR. GEORGE BERRY will SELL by AUCTION, pursuant to a decree of the High Court of Chancery, made in a cause of Archbutt v. Clarkson, at the AUCTION MART, near the Bank of England, on TUESDAY, the 24th day of MARCH next, at ONE o'clock precisely in one lot, a valuable LEASEHOLD ESTATE, comprising a timber-yard, engine-house, workshop, counting-h use, sheds, and other buildings, situate on the north side of the King's road, Chelsea, in the county of Middlesex, and also a Cottage, situate on the east side of Robert street, Chelsea. The property is held direct from the fee holder for about 43 years unexpired, and is to mortgage for 1,000l. for a period of five years from 8th of May, 1854, and is sold subject to such mortgage. The whole of the premises are free of ground-rents, and are let to Mr. Thomas Alford for 60l. per annum from Midsummer, 1853, at a clear annual rental of 120l. The property may be viewed by leave of the tenant, and particulars and conditions of sale of Mr. J. E. Kay, 2, Newsham, Strand; Messrs. Jenkinson and Co. 29, Lombard-street; T. Tyerman, Esq Arel stect, Waterloo Chambers, Strand; and Mr. J. Wiley wood, 35, Lime Burnin Buildi, and of the Auctioneer, at his Office Motcomb street, Belgrave-sq. are.

ADVERTISEMENTS.

ROYAL ACADEMY of ARTS, Trafalgar-square.—NOTICE to ARTISTS.—All works of Painting, Sculpture Architecture, or Engraving, intended for the ensuing EXHIBITION at the ROYAL ACADEMY, must be sent in on MONDAY, the 9th, or TUESDAY, the 10th of APRIL next, after which time no work can possibly be received, nor can any works be received which have already been publicly exhibited.

FRAMES.—All pictures and drawn s must be in gilt frames Oil paintings under glass, and drawings with wide margins are inadmissible. Excessive breadth in frames as well as projecting mouldings may prevent pictures obtaining the situation they otherwise merit. The other regulations necessary to be observed may be obtained at the Royal Academy

JOHN PRESCOTT KNIGHT, R.A. Sec.

Every possible care will be taken of works sent for exhibition, but the Royal Academy will not hold itself accountable in any case of injury or loss, n r can it undertake to pay the carriage of any package. The prices of works to be disposed of may be communicated to the Secretary.

COMPETITIONS.

SOHAM BURIAL BOARD.—DESIGNS for NEW BURIAL-GROUND, CHAPELS, and ENTRANCE LODGE.—PREMIUM of 10*l*.—The Burial Board for the parish of Soham, in the county of Cambridge, hereby offer a Premium of 10*l*. to the architect or other person whose design for the above chapels and entrance-lodge shall be selected for adoption. Two chapels will be required, one for the use of the members of the Church of England, the other for all other denominations. The cost of the two chapels and entrance-lodge not to exceed in the whole 850*l*. The parish of Soham contains upwards of 4,500 inhabitants. The design, with a guaranteed estimate of the expense, to be sent to me, on or before WEDNESDAY, the 11th day of APRIL next, at TEN o'clock in the forenoon, when the examination will take place. The architect or other person whose design shall be approved shall, in order to be entitled to the above premium, within ten days next after the said 11th day of APRIL forward to me detailed working drawings and specifications complete, but the Board does not pledge itself to employ such architect.—By order,

THOMAS HUSTWICK, Clerk to the said Burial Board.
Soham, March 14, 1855.

KING'S LYNN UNION.—NEW WORKHOUSE.—The Poor-law Board having approved the plans of Messrs. MEDLAND and MABERLY, of Gloucester, the Authors of the other PLANS sent are requested to APPLY for them to me, by letter, pre-paid.—By order,

Lynn, 20th March, 1855. JNO. JAS. COULTON, Clerk.

CONTRACTS.

NEW TOWN-HALL BUILDINGS, PRESTON.—To BUILDERS.—Masons, Bricklayers, Plasterers, Slaters, Plumbers and Glaziers, Carpenters, Joiners, Smiths, and Painters, desirous of CONTRACTING for all or any of the works required to be done in the ERECTION of the above BUILDINGS, upon the site of part of the present buildings, are hereby informed that the plans and specifications may be seen at the Offices of the Architect, from MONDAY, the 9th, to SATURDAY, the 14th of APRIL next, both inclusive, and in the Council-chamber, Town-hall, Preston, from MONDAY, the 16th, to SATURDAY, the 21st of APRIL next, both inclusive. Tenders, endorsed "Tender for Works," must be sent to me on or before FOUR o'clock on TUESDAY, the 24th of APRIL next.—Bills of quantities, and any other information may be had at the Offices of the Architect, Mr. WILLIAM HILL, 59, Albion-street, Leeds. No allowance will be made for estimates, and the lowest Tender will not be necessarily accepted.

ROBERT ASCROFT, Town-clerk.

PONTYPRIDD GASLIGHT and COKE COMPANY.—To IRONFOUNDERS and GASHOLDER-MAKERS. The Directors of this Company are prepared to receive TENDERS for a CAST-IRON TANK, 63 feet in diameter by 16 feet deep, with columns, girders, &c. Also, a GASHOLDER, to work in the same, the whole to be erected and fixed complete, at the Company's Works, Pontypridd, Glamorganshire. Plans and specifications with conditions, may be seen, and forms of Tenders obtained, after the 16th instant, upon application to Mr. HENRY BOWEN, Engineer to the Works, Cardiff. Sealed Tenders addressed to the Chairman of the Directors, to be forwarded, under cover, to MONTAGUE GROVER, Esq. Solicitor, Cardiff, on or before the 4th day of April next, endorsed "Tender for Tank," or "Gasholder," as the case may be.—The Directors do not bind themselves to accept the lowest or any Tender.

Cardiff, March 8, 1855.

NEWPORT and PILLGWENLLY WATERWORKS COMPANY.—CONTRACT for WORKS. HENLLIS BROOK EXTENSION TUNNEL, 841 feet long, or thereabouts with Shafts, Tanks, Weirs, and other Works, and a quantity of Pipe-laying, in extent about 1¼ mile. The plans and specifications, with forms of Tender, may be seen at the Company's Office, Stow-hill, on and after the 19th inst.; and Tenders for the Works are to be sent in on or before the 16th day of APRIL next, at TEN o'clock in the forenoon. The Directors do not bind themselves to accept the lowest Tender, nor any Tender, until the securities are approved.—By order of the Directors.

HENRY W. WEBBER, Secretary.

Newport, Mon. 19th March, 1855.

NEWPORT and PILLGWENLLY WATERWORKS COMPANY.—CONTRACT for CAST-IRON PIPES.—The Directors of the Newport and Pillgwenlly Waterworks Company are desirous of receiving TENDERS for 400 to 800 TONS of 12-inch and 15-inch diameter CAST IRON SOCKET-PIPES, and sundry WROUGHT-IRON WORK to be delivered at Newport. Specifications and drawings, with form of Tender, may be seen at the Company's Office, Stow-hill, on or after the 19th inst. The Tenders to be signed and delivered on or before the 16th day of APRIL next, at TEN o'clock in the forenoon. The directors do not bind themselves to accept the lowest Tender, nor any Tender, until the security is approved.

By order of the Directors,
HENRY W. WEBBER, Secretary.

Newport, Mon 19th March, 1855.

MIDLAND RAILWAY.—The Directors of the Midland Railway are prepared to receive TENDERS to CONTRACT for the EXECUTION of the whole of the WORKS necessary to be done in keeping the Stations and Buildings on the West Branch of the Midland Railway between Birmingham and Derby, in proper and efficient Repair, for a term of Seven Years. The specification and draft contract may be seen, upon application at the Engineer's Office, Derby Station, on and after WEDNESDAY next. Tenders to be delivered to the Secretary of the Way and Works Committee, Derby Station, by TEN a.m. on TUESDAY, the 3rd of APRIL next. The Directors do not bind themselves to accept the lowest, or any Tender.—By order,

Derby, March 14, 1855. JOSEPH SANDERS, Secretary.

FAVERSHAM UNION.—To BUILDERS. The Guardians of the Faversham Union, are desirous of receiving TENDERS for certain ALTERATIONS and REPAIRS intended to be done to, and COOKING and WASHING APPARATUS to be put up at, the Union Workhouse, near Faversham. All Tenders must be delivered (free of expense), at the Office of the Clerk to the Guardians, sealed and endorsed, "Tender for Works at the Faversham Union Workhouse," on or before THURSDAY, the 29th day of APRIL next, and the Tenders will be opened by the Guardians, at their meeting on the following day, Friday. The plans and specifications, prepared by Mr. M. BULMER, Architect, may be inspected at the Union House, on any day, except FRIDAY and SUNDAY, between the hours of TEN and FOUR. The quantities will be furnished, and copies may be obtained of the Clerk, upon payment of five shillings for each copy. The Guardians will not be bound to accept the lowest or any other Tender, and security will be required for the due performance of the works.—By order of the Board,

Faversham, March 16, 1855 WILLIAM MAILE, Clerk.

TO BUILDERS AND TIMBER MERCHANTS.

CONTRACT for WOODEN BUILDINGS. Notice is hereby given, that Plans and Specifications for extensive WOODEN BUILDINGS for Hospitals, with conditions and form of Tender, may be obtained on and after WEDNESDAY, the 28th inst. on application at the War-office, Horse Guards, London.—The Tenders are to be delivered in at or before TWELVE o'clock, on TUESDAY, the 3rd APRIL next.

March, 1855.

CONTRACTS.

NOTICE TO BUILDERS.
Commanding Royal Engineer's Office, Dublin, March 16, 1855.

ORDNANCE CONTRACT.—The Commanding Royal Engineer in Ireland hereby gives Notice, that he will receive PROPOSALS for the following CONTRACT, viz.: For the CONSTRUCTION and ERECTION of TWO HUNDRED and THIRTY-THREE WOODEN BUILDINGS, to accommodate officers, with out-buildings, store rooms, guard rooms, hospitals, &c. &c. at the Curragh of Kildare, in the Dublin district. Persons desirous of Tendering for the same, will receive every information on application at the Commanding Royal Engineer's Office, Lower Castle-yard, Dublin; and at the Commanding Royal Engineer's Office, Manchester; and may obtain specifications, with the terms of contract, upon making a deposit of 1*l*. for the same, which deposit will be repaid when the specifications are returned uninjured. The whole of the buildings to be completed within sixty days after the acceptance of the Tender, but the Tenders to state the period (less than sixty days) within which the contractor will undertake to perform the work, on which point a preference will be given in the consideration of the offers.—The letters of Tender to be sealed and transmitted under cover to "The Commanding Royal Engineer in Ireland, Lower Castle-yard, Dublin," so as to be received on or before TWELVE o'clock, of the 27th day of MARCH, 1855; and to be marked on the outside, "Tender for Work at the Curragh of Kildare." These buildings are connected with the accommodation of ten battalions of Infantry, viz.—twenty-one huts for each battalion, and twenty-three for hospital accommodation; and it is to be understood that parties have the option of Tendering for two or more battalions, or for the hospital accommodation, or for the whole.

TO BUILDERS.

THE Plans and Specification for the Erection of TWO THIRD-RATE DWELLING HOUSES, may be seen at the Office of Mr. JAMES HARGRAVE, Architect, 34, Moorgate street, City, between the hours of TEN and FOUR. The Tenders are to be delivered on or before the 31st inst. No pledge is given to accept the lowest Tender.

PARTIES willing to CONTRACT to supply 500,000 STOCKS and GRISSELS, may have the particulars, by letter or application, at the Office, 14, Princes-terrace, Maldon-road, Haverstock-hill, Camden-town

TO CARPENTERS AND OTHERS.

TENDERS are required for a large quantity of FIR SPACE PALING, to be used in dividing the Camden-town Cemetery from the adjoining ground, about to be appropriated for building sites. The paling to be formed of good Memel fir, and of the following description and dimensions, viz.: posts, 6 inch. by 6 inch. with strong bases and spurs, to be 5 feet 6 inches out of the ground, and 7 feet 6 inches long, dressed on posts to be 6 inch. by 6 inch. well and securely set. The posts to be 9 feet apart. Three courses of Arris rails out diagonally from timber, 3 inch. by 6 inch. The fence to be 5 feet 6 inches high. Arris pales, cut diagonally from timber, 2½ inches by 2½ inches, to be 3 inch. apart, pointed at top, and studded with tenter hooks. The posts to be splayed at top, and also to have tenter hooks. The rails to be well and properly tenoned into the posts. All wood and ironwork to be twice gas-tarred. The whole of this work to be put together in the strongest manner, and to the entire satisfaction of the Surveyor to the Trustees. The whole of the above-described works to be completed within six weeks from the time that the ground is given up to the contracting parties. Tenders for supplying and putting up the above-described works at per 100 feet run, to be sent to H. E. KENDALL, Esq. Architect, 17, Suffolk street, Pall mall East, on or before the 27th day of MARCH, 1855, endorsed, "Tender for Space Fencing." The trustees of the estate will not undertake to accept the lowest or any other Tender.

RUNCORN UNION.—To BUILDERS and OTHERS.—Parties desirous of CONTRACTING for the whole of the works required in the ERECTION of a new WORKHOUSE, intended to be built at Dutton, in the county of Chester (about one mile from the Preston-brook station on the London and North Western Railway) may see the plans and specifications at the Office of Mr. CULSHAW, Architect, Runcorn-place, Liverpool, until the 14th day of MARCH next, and after that date at my Office, Frodsham, until the 28th day of MARCH. Sealed and indorsed Tenders to be delivered at my Office, on or before the 29th day of MARCH next, addressed to me. The Guardians do not pledge themselves to accept the lowest or any other Tender. Security will be required for the due performance of the contract when entered into

DANIEL ASHLEY, Clerk to the Runcorn Union.

Frodsham, Feb. 29, 1855.

WILLENHALL, STAFFORDSHIRE.—Public Health Act, 1848.—The Local Board of Health for the district of Willenhall, are prepared to receive TENDERS from Surveyors and others willing to undertake the complete SURVEY and preparation of PLANS of this district for the purposes of the Public Health Acts. The conditions, with further information, and also a form of Tender, may be obtained from the Clerk to the Board. Tenders, sealed and addressed to the Chairman, must be sent to the Office of the Local Board, Market-place, Willenhall, on or before TUESDAY, the 10th day of APRIL, 1855, accompanied by suitable testimonials of the general experience of the applicant, especially with reference to town surveys and levelling The Board do not bind themselves to accept the lowest or any Tender. By order of the Local Board,

JOB T. COOPER, Clerk.

Willenhall, 16th March, 1855.

TO BUILDERS.

PERSONS desirous of CONTRACTING for the ERECTION of a PARSONAGE HOUSE, at Barnardiston, Suffolk, may inspect the plans and specification of the work at the office of Mr. J. F. CLARK, Architect, Newmarket.—Tenders to be delivered and opened in the presence of the parties on the 9th day of APRIL next, and the lowest or any Tender will not necessarily be accepted.

[*For remainder of Contracts see next page.*

CONTRACTS.

COLCHESTER BURIAL-BOARD. — To BUILDERS and OTHERS.—Notice is hereby given, that it is the intention of the Colchester Burial-board to enter into a CONTRACT or CONTRACTS with some person or persons willing to undertake the Excavating, Brick-work, Plasterers', Masons', Carpenters', Joiners', Paperhangers', Smiths', Plumbers', Glaziers', and Painters' Works, in the erection of Two Mortuary Chapels, Porter's Lodge, Reception-house, and Entrance-gate upon their intended New Burial-ground, also of the Eastern Boundary Wall of the said ground next the Road to the East of Messrs. EDWARD, S and LEAVER, at No. 38, James-street, Covent-garden, London, the Architects, under whose superintendence the Works will be carried on. The working drawings and specifications may be seen at my Office; and all persons desirous of entering into such Contracts are to send proposals, under a sealed envelope, addressed to me, the undersigned, and endorsed "Tender for Mortuary Chapels, &c.;" and the same will be submitted to the Board on MONDAY, the 14th day of APRIL next, at SEVEN o'clock p.m. It shall not be incumbent, however, on the Board to contract with the person offering the lowest price, nor with any person proposing as aforesaid.—By order,

PHILIP SMITH SPARLING, Clerk to the Board

Dated the 24th day of March, 1855.

5, Vineyard-terrace, Colchester.

TO STONE MERCHANTS, MASONS, SCAVENGERS, CARMEN, AND OTHERS.

ALL SAINTS, POPLAR.—The Trustees of the Parish will meet at the VESTRY-HALL on TUESDAY EVENING the 3rd day of APRIL next, at SIX o'clock in the EVENING precisely, to receive PLANS for the following PARISH WORKS, and further particulars of the same may be obtained of Mr. JAMES BUNSTONE, Surveyor to the Trustees, at 2, Poplar-terrace, Lady-day, 1855 STONE MERCHANT 3,000 feet lineal of Abyssian Hexham, or Guernsey Granite kerb, edged to the footway, 6 inches deep, and laid in mortar, to be cut superficial not less than 7 inches broad; the tops of kerbers edged Scotch, and not less than 6 inches wide, dressed for crossings, also 300 tons of broken Guernsey Stone. MASON.—To provide the requisite Materials and Labour for Kerbing and Paving with Stone in Poplar High-street, Chapel-street, and other Streets, &c. as may be ordered; also to provide the necessary Labour and Mortar only for the laying the said Kerb, York, and Pitcher Paving. SCAVENGER.—To provide Men, Horses, and Carts for scraping and cleansing, and water for the roads, streets, and public places, and carting away the dirt, filth, rubbish, &c. &c. from the same, also to provide Horses and Carts to cart and carry away the dirt, filth, and rubbish, &c. &c. as before mentioned, in the cleansing and watering being performed by the trustees. CARMAN.—To provide Horses and Carts as may be required; to provide gravel and flints as may be required. —The Trustees do not bind themselves to accept the lowest or any Tender, and the contractor will be required to enter into sureties, and execute a bond for the due performance of his contract. Further particulars and forms of tenders may be had by applying at my Office any day from TEN till TWO p.m.

CHARLES C. CEELY, Clerk to Trustees.

Town-hall, All Saints, Poplar, March 21, 1855.

TO ROAD CONTRACTORS and others. The Executive Committee of the Peoples Freehold Land Society are prepared to receive TENDERS for CONSTRUCTING the ROADS and DRAINAGE on the ESTATE of HILLSTEAD, at Pudsey, near Bromley, Kent. The drawings and specifications may be seen at the Office of the Surveyor, Mr. SAMUEL BOOLE, London-street, Fenchurch-street, on and after MONDAY, MARCH 31st inst., between the hours of TEN and FOUR. Tenders to be sent in on or before Monday, April 2nd, addressed to the Surveyor, and endorsed "Tender for Roads, Spring Hill Estate." The Executive Committee do not bind themselves to accept the lowest or any Tender.

W. W. GURLEY SMITH, Secretary.

Provident Institution, London-street, Greenwich, March 20th, 1855.

TO BUILDERS.—PARTIES desirous of TENDERING for the whole of the WORKS required to be done in PULLING DOWN and RE-BUILDING a DWELLING-HOUSE, with Shop, Fixtures, Fittings, and Offices, in the Cornhill, Bradford, may see the plans and specification, and obtain every requisite information, at the offices of Mr. DOWN, Architect, Bridgewater-square, Bradford. Sealed Tenders are to be delivered on SATURDAY, the 31st of MARCH, but the Lowest Tender will not necessarily be accepted.

TO BUILDERS AND OTHERS.

HOLY TRINITY CHURCH, COVENTRY. PLANS and SPECIFICATIONS of the WORKS required to be done in certain Repairs and Restorations of the said Church, consisting of Re-roofing the Aisles and Porches, and Re-building the North Wall of the Nave, the Repairs of the Roofs and Walls of the Chancel, Re-building the North and South Walls of the Vestry, and other Works of the Church, may be seen at the Office of the undersigned Architect, Mr. G. G. SCOTT, 7, Spring Gardens, London, from THURSDAY, 8th day of MARCH, to SATURDAY, 24th day of MARCH, between the hours of NINE and FIVE. Tenders to be sent to the Accountant Churchwarden, Mr. LYNES, on or before TEN o'clock on MONDAY, 9th of APRIL. The Committee do not pledge themselves to accept the Lowest Tender.

CARTAGE of ROAD MATERIALS, and of SCRAPINGS and SLOP from HIGHWAYS and for Watering the same. The Board for the Repair of the Highways, Chesterbench Surrey, are ready to receive TENDERS for CARTAGE, from the Faleon, Waterson, or other Lambeth Wharfs, docks, of such ROAD MATERIALS as they may require for the repair of highways, on the day of contract, the 3rd of MARCH, 1856; and for the Cartage from off the highways of all such Mud, Scrapings, Slop, or other matters, as by the laborers of the Board may be gathered thereupon, the said laborers will load such matters into the contractor's carts. The contractor will be subject to an agreed fine or forfeiture of 20s for each day and for each article in the contract from which he may neglect, omit, or refuse to cart away the above-specified matters within forty-eight hours after the same has been delivered from off the highways ready for loading. The said Board will receive separate tenders for watering the whole of the highways of the said parish, extending from the Surrey foot Obelisk, Westminster-bridge, north to the King's Head, in Blackfriars-road south, and from Broadwall and Boundary-row west to Gravelhane and Holland-street east, except the two streets on the river bank, which are under local jurisdiction. The surveyors provide water and horses to work the pumps. The contractors to furnish never less than four water carts, in sound condition, and proper men, boys, and drivers, and a yet further number of carts, horses, and drivers, if more be required, to keep the dust on the aforesaid highways constantly laid, and the roads and streets satisfactory of the said Board, from the day of agreement to the 31st of OCTOBER, 1855; and the contractor will be subjected to an agreed fine or forfeiture of 40s. for each day and for each article included in the said contract in which he may fail to keep the roads constantly laid. Other particulars of the said Board. Forms of Tender may be had at the Surveyor's offices, 3, Lorette Row, Brompton-road, and all tenders must be forwarded to the said office on or before NINE in the morning of 3rd APRIL, sealed and endorsed "Tender for Cartage," or "Watering," as the case may be.

GREAT WESTERN RAILWAY.—CONTRACT for STATION BUILDINGS and other WORKS.

The Directors of the Great Western Railway Company will receive TENDERS for the execution of the following works:—

The Erection and Enclosing of Locomotive Engine Sheds at Landore.

The Enlargement of Station Buildings at Swansea.

Passenger Station Buildings and other Works at Oxford Canal Junction, Alvey.

The Construction of two Bridges on the Station of Level crossings at Langley and Basildon, and of a Timber Foot Bridge in place of a footpath level crossing at Leamington.

Drawings and specifications may be seen, and forms of Tender, with any further information, may be obtained at the Bute Street Office, Paddington, on and after MONDAY, the 26th of MARCH, and Tenders are to be sent in to the Secretary, not later than WEDNESDAY, the 11th of APRIL. The Directors do not bind themselves to accept the lowest Tender.

Paddington Station, March 19, 1855.

CONTRACTS.

PIERS, HARBOURS, SEA DEFENCES, and WHARFS.—To CONTRACTORS and OTHERS.—The Directors of the Margate Pier Company have to OFFER for SALE by TENDER the JETTY, known as "Jarvis's Landing-place," which consists of a large number of iron piles, in good condition, and fit for use in works of the above description, together with a large quantity of English oak of various dimensions. A specification may be seen, and full particulars obtained of Mr. CAVELIER, Secretary to the Company, Margate; or of Messrs. J. B. and F. BIRCH, 3, Cannon-row, Westminster, on and after TUESDAY, the 20th of MARCH. Sealed Tenders, addressed to the directors and endorsed "Tender for Purchase of Jarvis's Landing-place," to be received at the Pier Office, Margate, on or before NEXT BOYS, the 11th of APRIL, 1855. The Directors do not bind themselves to accept the highest or any other Tender.

By order of the Court of Directors,

ARTHUR SACKETT CHANCELLOR, Clerk.

Margate, March 15, 1855.

Superior Bell Brass for Engravers, Castings in Fine and Common Brass, Gong Metal, &c. at

RICHARD EVERED'S, Brass and Bell Foundry and Metal Warehouses, Nos. 10, 11, and 12, Charles-street, Long-acre, London.

ZINC ROOFING, INCLUDING TIMBER OR IRON FRAMEWORK,

IS AS

CHEAP AS SLATES OR GALVANIZED IRON, LIGHTER, AND MORE DURABLE.

Certificates, and Models of various descriptions, may be seen, and estimates obtained on application to

THE SURVEYOR OF THE VIEILLE MONTAGNE ZINC MINING COMPANY, 12, MANCHESTER BUILDINGS, WESTMINSTER.

ROOFS CONSTRUCTED UNDER HIS SUPERINTENDENCE GUARANTEED TO REQUIRE NO REPAIRS FOR AT LEAST TEN YEARS.

THE OLD METAL BEING ALWAYS RETAKEN AT HALF-PRICE, RENDERS IT ADVANTAGEOUS FOR ALL TEMPORARY BUILDINGS.

Many roofs covered with zinc thirty-five years ago have never required repairs.

THE LIVERPOOL AND MANCHESTER

PATENT GALVANIZED CORRUGATED IRON WORKS,

AND IRON ROOFING MANUFACTORY.

Head Offices: 13, JAMES-STREET (late the Coalbrookdale Company's Premises), LIVERPOOL,

Where all Letters are requested to be addressed.

FRANCIS MORTON AND CO.

Beg to inform ENGINEERS, CONTRACTORS, and the PUBLIC that they have no other manufactory of Corrugated Iron but the premises of the machinery and all the working dies of the late firm of Messrs. PORTER, BROTHERS, and STUART, of BIRMINGHAM.

Parties accustomed to use the PARTICULAR SIZES of Corrugations heretofore manufactured by that Firm can be still supplied with the same sizes from these premises.

FRANCIS MORTON and CO. manufacture now a greater variety of Corrugated Iron either galvanized or black, than any other house in the trade, comprising every intermediate size from 2 inches of 2½ inches each corrugation, in all lengths up to about 11 feet, as the special circumstances of each case may require.

STRONG PLATES CORRUGATED EXPRESSLY for FIRE-PROOF FLOORS, ROADWAYS, BRIDGES, PARAPETS, also for ALL KINDS of ROOFING, RAILWAY WAGGONS, &c.

GALVANIZED or PAINTED IRON ROOFS ERECTED in EVERY PART of the UNITED KINGDOM at the most moderate price, consistent with the best workmanship and material. Many years' experience enables FRANCIS MORTON and CO. to refer to many roofs, &c. erected by them, and works executed for the Government, railway, and other public companies: also to works in the Colonies, &c.

To ensure prompt execution of orders, large stocks are always kept on hand of Galvanized and Black Corrugated Plates

GALVANIZED SHEET IRON, and every description of GALVANIZED IRON and IRON WARES, NETTING, POULTRY NETTING, FENCING, &c., kept in stock.

WIRE ROPES, WIRE SASH CORDS, COPPER ROPE LIGHTNING CONDUCTORS, with attachments complete, always kept in stock. Galvanizing and Corrugating executed at the most moderate Prices.

THE TRADE SUPPLIED ON LIBERAL TERMS.

Head Offices: 13, JAMES-STREET (late the Coalbrookdale Company's Premises), LIVERPOOL;

Also 18, ST. MARY'S-GATE, MANCHESTER.

N.B. Ships fitted with Wire-rope Rigging and Lightning Conductors complete, Galvanized Anchors, Chain Cables, &c. &c.

SKAIFE'S GALVANIZING WORKS, Commercial-road, Limehouse, London.

Skaife's process is the most effectual preventive against rust, and is extensively used for all purposes where Iron not liable to rust is required.

Patent Galvanized Iron supplied in every form

Sheets plain and Corrugated—Roofs fixed complete

J. Skaife is also agent for Morewood and Rogers's Patent Galvanized Tunnel Iron, Plumbic Zink, and Tiles.

An Allowance to the Trade.

UNDER PATRONAGE of the ENGLISH and FRENCH GOVERNMENTS.

Portable Galvanized or Painted Corrugated Iron Dwellings, Barracks, Hospitals, Stables, Warehouses, Theatres, Billiard and Concert Rooms, &c.

IRON ROOFS.

Patent Corrugated, Galvanized, and Painted, Wrought-iron, Principal, Glass and Slated Roofs, to any span.

Wrought and Cast-Iron Bridges, Girders, Fire-proof Floorings, Shutters, Doors, &c.

Engineers' and Builders' Castings of all kinds manufactured by JOHN WALKER,

Builder, Contractor, and Ironfounder, Mill-wall, Poplar

Offices—Arthur-street West, London-bridge, where experienced draughtsmen are kept to furnish designs and estimates, which may be obtained on application.

N.B. Galvanized and painted Sheet-Iron, both plain and corrugated, supplied at the lowest possible prices, and a considerable allowance made to the trade.

TUPPER and CARR, Contractors and Manufacturers of all sorts of IRON ROOFING.

PLAIN, CORRUGATED, PAINTED, or GALVANIZED.

Estimates and Drawings furnished on application.

Experienced Workmen sent to all parts of the Country.

MANSION-HOUSE PLACE, and LIMEHOUSE, LONDON;

BERKLEY-STREET, BIRMINGHAM.

TUPPER and CARR'S (Craufurd's) PATENT GALVANIZED IRON

For Roofs, Flats, Cisterns, Gas Tubing, Gutters, Pipes, Pencing, &c.

To be obtained only at

TUPPER and CARR'S WAREHOUSES, REGENT'S CANAL DOCK, LIMEHOUSE, LONDON; or

BERKLEY-STREET, BIRMINGHAM.

Sheets, Bars, Rods, Hoops, Nails, Rivets, Screws, Wire, and Manufactured Articles, Pails, Coal-scoops, Buckets, Pumps, &c. always in Stock.

N.B. An allowance to the trade.

Address all letters to TUPPER and CARR, 2, MANSION-HOUSE-PLACE, CITY, LONDON.

JACKSON and COOK, Ironfounders and Manufacturers of CORRUGATED and GALVANIZED IRON ROOFS and BUILDINGS, beg to call the attention of Architects, Builders, and others, requiring roofing, to the superiority of iron as manufactured by them for that purpose, in point of lightness, cleanliness, durability, cheapness of construction, and being fire-proof. Drawings and estimates furnished.

Island Foundry and Ironworks, Millwall, London.

Offices: 12, Fenchurch-street, City.

SAMUEL HEMMING'S PATENT much approved PORTABLE BUILDING and ROOFING MANUFACTORY, REMOVED from BRISTOL to BOW, near London, close to the Bow Railway Station.—A large variety of buildings always on view, churches, chapels, shooting boxes, lodges, bazaars, ornamental villas, dwelling-houses, farm buildings, and fire-proof stores. Also, railway stations, trucks, and carriages made to any plan on the shortest notice

---

COLLINGE'S PATENT HINGES.—Sole Manufacturers, CHARLES COLLINGE and CO. 64 and 65, Bridge-road, Lambeth, where a great variety are always on view for church, park, railroad, coachhouse, and other gates and doors of large and small dimensions, a ton weight moving with these hinges as easily as a wicket. Ornamental hinges, adapted for drawing-rooms, &c.; doors fitted with them may be removed and replaced in an instant. Rising and double-acting spring hinges, and superior gate fastenings, at moderate prices None genuine unless marked "Charles Collinge, Patent, Lambeth." Plain and ornamental cast and wrought iron-work, for building and other purposes. Engines, machinery, patent axletrees, sugar-mills, &c.

WARMING and VENTILATING.—COTTAM and HALLEN, 2, Winsley-street, Oxford-street, having had thirty years' experience, and having warmed by the circulation of hot water upwards of 4,000 buildings, consisting of churches, prisons, lunatic asylums halls, and staircases, galleries, conservatories, forcing-houses, &c. can with confidence recommend their system, which, by the various improvements they have made, has perfected the construction and economised the expense. Greenhouses, conservatories, verandahs constructed and fitted complete, if iron or wood, and fixed complete. Estimates given on application.—COTTAM and HALLEN, Engineers and Ironfounders, 2, Winsley-street, Oxford-street.

ROYAL POLYTECHNIC GAS FIRE.

BACHHOFFNER and DEFRIES'S PATENT. The public is respectfully informed that arrangements have now been made for the supply of this unique and beautiful mode of warming private houses, shops, public buildings, &c. Smoke, dust, ashes, and accidents from fire are effectually prevented; a strong, white fire presents all the comfort and appearance of an open coal fire, securing at the same time, perfect ventilation. To be seen in action at DEFRIES'S Office, 147, Regent-street, London.

THE PATENT PRIZE KITCHENER, with Boiler to supply Bath, Scullery, Hot and Steam Closet in Manufactoried, with all its recent improvements, by THOMAS RADCLIFFE, Leamington, Warwickshire, of whom plans, prices, and testimonials may be had on application. It is made from three feet to twenty, all worked by one small fire. A great saving in fuel is effected by having the kitchener, and it eventually cures smoky chimneys, and is the best close fire grate extant

---

FIRST PRIZE KITCHEN RANGE.—The only prize ever competed for,—the prize of public approbation, has been obtained by BROWN and GREEN'S celebrated KITCHEN RANGE, which is pre-eminently the best, most perfect open metal, and complete apparatus for all cooking operations. It is warranted a certain cure for a smoky chimney.—Wholesale agents, R. W. KENNARD and CO. 67, Upper Thames-street, London. Manufactory, Luton, Beds.

THE SMOKE-CONSUMING STOVE, invented by Dr. ARNOTT, and explained by him at the Society of Arts, on WEDNESDAY, MAY 10, insures perfect combustion, economises fuel, requires much less attention than the register stoves in general use, and produces by the use of Dr. Arnott's improved Circular Valve, a perfect system of Ventilation.—Manufactured by D. and E. BAILEY, 273, Holborn.

HEATING by HOT WATER.—JOHN WEEKS and CO. King's-road, Chelsea, solicit the attention of architects, &c. to their superior APPARATUS At Messrs. Weeks' establishment, an apparatus with one boiler can be seen daily in full operation, heating a building containing 1,000 feet in length, at the small expense per day in fuel and labour of 6s. 6d. The achievement in heating by hot water is unprecedented.

TO IRONMONGERS, BUILDERS, &c

PATENT WROUGHT-IRON WELDED TUBE for GAS; galvanized ditto for water; high-pressure cocks, &c. Manufacturers of Dr. Arnott's improved ventilators.—HULETT and CO. 75, High Holborn.

NEW PATENT MACHINE for MORTISING and TENONING HARD or SOFT WOOD, and BORING WOOD or IRON.—House and Coach Builders, Joiners, Cabinetmakers, and others doing similar work, are invited to call at the Patentees, POWIS, JAMES, and Co. Wholesale Builders and Cabinet Makers, Ironmongery Establishment, 26 Watling-street, City, and see in action this very simple, powerful, and expeditious machine, which is the only one yet brought out, for performing these three separate kinds of work by one machine; and as it is self-feeding, it does not require any skill or care in using like the older inventions introduced. It can either be worked by a boy, or made to go by steam power.

P.S. Steam Engines and Machinery contracted for.

CHUBB'S LOCKS & FIREPROOF SAFES.

INEFFECTUAL ATTEMPT UPON THE STRONG ROOM OF THE LONDON AND NORTH-WESTERN RAILWAY, LIVERPOOL.

"London and North-Western Railway Company,
Liverpool, May 7, 1853.

"Gentlemen,—I have much pleasure in bearing testimony to the efficiency of the iron door and locks of your make, which secure the strong room at this office, and which completely baffled the efforts of one or more burglars to get at the money chest on the night of Tuesday last, although it is evident that considerable force was used to break open the door.—I am, gentlemen, your obedient servant, "GEORGE PALMER.

"Messrs. Chubb and Son."

FROM MR. OTWAY, SUPERINTENDENT OF POLICE, C DIVISION.

"5, Great Vine street, May 3, 1853.

"Gentlemen,—I have the pleasure to inform you, that having one of your locks on the street door of my house prevented my being robbed last night. The thief tried to open it, but not succeeding, has so damaged it that I have sent it to you for inspection, and shall feel obliged if you will have it repaired.—I am, gentlemen, your obedient servant, "C. OTWAY.

"Superintendent C Division of Police.

"Messrs. Chubb and Son."

CHUBBS LOCKS, with all the recent improvements; Cash, Deed, and Paper Boxes, of all sizes; Fireproof Safes and Chests; Iron Doors and Frames for Strong Rooms; all fitted with the Detector Lock.

Complete Illustrated Lists, with prices and sizes, will be sent on application.

CHUBB and SON, 16, MARKET-STREET, MANCHESTER; 57, St. Paul's Churchyard, London; 23, Lord-street, Liverpool; and Horsley-fields, Wolverhampton.

HOBBS'S PATENT AMERICAN and ENGLISH LOCKS.

Messrs. HOBBS, ASHLEY, and CO. are now manufacturing their celebrated American and English Locks, on the premises, 97, Cheapside, and 33, Lawrence-lane, London; where, by the introduction of their patent steam machinery, they are enabled to guarantee superior workmanship, combined with greater security, at a moderate price, than in any locks produced either in town or country.

EVERY LOCK being MADE and FINISHED at the MANUFACTORY, is warranted, and bears their OWN STAMP, without which none are genuine.

These Locks can be procured by order through any respectable Ironmonger in the United Kingdom; or at the Warehouse, as above, Wholesale and Retail.

PATENT FIRE and BURGLAR-PROOF SAFES, MILNES'S PATENT, fitted with HOBBS'S PATENT IRON DEED-PROOF LOCKS, form the strongest safeguards against Fire and Robbery; they are made of various dimensions, suitable for the security of Money, Plate, and important Documents, Deed Boxes, &c. Lists of prices and dimensions can be had on application to HOBBS, ASHLEY, and CO.—Wholesale and Retail Warehouses, 97, Cheapside, and 33, Lawrence-lane, London.

A PRIZE MEDAL for SUPERIOR LOCKS was awarded to J. H. BOOBBYER at the Great Exhibition of 1851, who invites the attention of Builders, &c. to his Stock of Ironmongery, Brass Foundry, Rods (wrought and cut), Copper and Zinc; Patent Locks of all descriptions; China, Glass, and Wood Furnitures of all kinds, with Patent Shifting Spindles; Dr. Arnott's Ventilator, 4s.; and the new registered Venetian Ventilator, so much admired, &c. 6s. 6d. each.

J. H. BOOBBYER (late BUURGH and BOOBBYER), established nearly 200 years, for the supply of Goods from the best Manufactories, at the lowest prices.

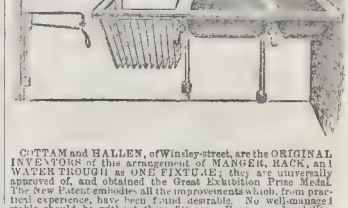
14, Stonhope street, Cave-market, London.

MACHINERY.—SAWING, PLANING, MOULDING, and WOOD CUTTING MACHINES.—To Timber Merchants, Contractors, and others. SAMUEL WORSSAM and CO. of Hertham-place, King's-road, Chelsea, invite the attention of Timber Merchants and others to their new inventions and improvements in all kinds of machinery used in Sawing, Planing, Moulding, and Wood Cutting. S. WORSSAM and CO. are able to execute orders with cheapness and despatch; they also invite an inspection of their machines constantly on hand and in progress; and they can refer to parties of the highest position and respectability, as to the goodness and efficiency of their machines.—Estimates made for Exportation, or otherwise.—Drawings and prices on application.

February 16th, 1856.

RAIN-WATER PIPES.—O-G and Half-round Gutters, Sash Weights, Railway Bars, Air Bricks, &c. J. JONES, Iron Merchant, Iron-bridge Wharf, No. 6, Bankside, has the largest stock in London of the above and other castings, of the very best quality. Also cast-iron pipes for gas, water, or drainage; bends, tees, &c.; flange and hot-water pipes, with all the usual connections; lamp-posts and retorts, stable fittings, pig-troughs, &c. &c.

J. JONES, IRON MERCHANT, IRON-BRIDGE WHARF, No. 6, BANKSIDE, LONDON, near the Southwark Iron Bridge.



LOSH, WILSON, and BELL, NEWCASTLE-ON-TYNE.

Manufacturers of Bar Iron, Railway Bars, Forge and Engine Work, Castiron & Works, and

STEWART'S PATENT CAST IRON GAS and WATER PIPES.

Office, No. 7, Sise-lane, London.

COTTAM'S NEW PATENT for STABLE REQUISITES.

COTTAM and HALLEN, of Winsley-street, are the ORIGINAL INVENTORS of this arrangement of MANGER, RACK, and WATER TROUGH as ONE FIXTURE; they are universally approved of, and obtained the Great Exhibition Prize Medal. The New Patent embodies all the improvements which, from practical experience, have been found desirable. No well-managed stable should be without these fittings. Economy, durability, appearance, cleanliness, safety, comfort to the horse whilst feeding, and being rendered impervious to infection, are some of the advantages of Cottam's improved Fitments. May be had either plain, galvanized, or enamelled. Every article for the harness-room and stable kept in stock. Descriptive catalogues and estimates on application to COTTAM and HALLEN, 2, Winsley-street, Oxford-street.

BARTON'S PATENT SAFETY STABLE FITTINGS, and ENAMELLED MANGERS.

The only Patented Invention of this description constructed so as to prevent considerable waste of Hay and Corn, together with all the recent improvements.

STABLE FITTINGS, FORTY SHILLINGS PER SET, to fill up the whole width of Stalls, and can be had enamelled or galvanized. Every description of Mangers, Racks, and Stable Furniture in stock; Iron Hurdles, Gates, Fencing, &c.

Manufacturer of Kirk's Patent Noiseless Cast-iron Smoke-curing Chimney Cap—Goon Reasonable Price, only 2s. 6d. each. Price-lists and Illustrated Catalogues forwarded on receipt of two postage-stamps

JAMES BARTON, Ironfounder, &c. 270, Oxford-street, a few doors east of the Pantheon.

SAW-MILL, with Engine and Gearing, TO BE SOLD for less than half its value.—For particulars, apply to DUNN and Co. 18, Great George-street, Westminster; and at their Works, Manchester; Mr. THOS. WRIGHT, 8, George-yard, Lombard-street, London; and Mr. THOS. MOLE, Engineer, Birmingham.

BUILDERS, Contractors, Carpenters, and others are invited to inspect the stock of NAILS, TOOLS, BRASS, AND GENERAL IRONMONGERY at PEELL and STEDALLS,
Nos. 5 and 6, BROAD STREET, BLOOMSBURY.
The prices will be found the lowest, and the stock one of the largest in the trade. A price list sent on application.

GAS CHANDELIERS and BRACKETS.—The increased and increasing use of gas in private houses has induced WILLIAM S. BURTON to collect from the various manufacturers all that is new and choice in Brackets, Pendants, and Chandeliers, adapted to offices, passages, and dwelling-rooms, as well as to have some designed expressly for him; these are now ON SHOW in one of his TEN LARGE ROOMS, and present, for novelty, variety, and purity of taste, an unequalled assortment. They are marked in plain figures, at prices proportionate with those which have tended to make his Ironmongery Establishment the largest and most remarkable in the kingdom, viz. from 12s. 6d. (two light) to 16l. 16s.
WILLIAM S. BURTON has TEN LARGE SHOW-ROOMS devoted to the show of GENERAL FURNISHING IRONMONGERY (including cutlery, nickel silver, plated and japanned wares, iron and brass bedsteads), so arranged and classified that purchasers may easily and at once make their selections.
Catalogues, with engravings sent (per post) free.
The money returned for every article not approved of
39, OXFORD-STREET (corner of Newman-street); 1 and 2, NEWMAN-STREET; and 4 and 5, PERRY'S-PLACE.

TO MANUFACTURING CHEMISTS, PLUMBERS, BUILDERS, &c.

ANDREW CLARK and COMPANY, PLUMBERS,
THE BEAR GARDEN LEAD WORKS, SOUTHWARK,
Sole Manufacturers of Delbruck's Patent Autogenous Soldering Apparatus, invite the attention of Manufacturing Chemists to their Patent method of
UNITING LEAD TO LEAD WITHOUT SOLDER.
Leaden Chambers, or any leaden vessels, made or repaired by this process, making them complete, without the introduction of any foreign metal
PLUMBERS and BUILDERS can be SUPPLIED with SHEET LEAD and PIPE, cut to any dimensions, and EXCHANGED for OLD LEAD, on the LOWEST TERMS.

TO IRON DEALERS AND OTHERS.
WANTED, an IRON DOOR and FRAME, with look and key complete, 6 feet 6 inches by 2 feet 6 inches, not less. Address, with full particulars, to J. HUTCHINGS, Builder, 16, Castle-street, Holborn.

FOR SALE, R. TROW'S DOUBLE-PURCHASE IMPROVED BUILDERS' CRABS, on a superior principle, combining power and lightness, being very little more than half the weight of the ponderous single-purchase crabs now in general use, and at a less cost, on a timber frame ready for immediate use.—To be obtained at 14, Huntley-street, Frances-street, Tottenham court road.
N.B. Tackle kept on hand for hire.

CHEAP GAS-FITTING WAREHOUSE.—The Trade supplied with every description of GAS CHANDELIERS, Hall Lamps, Pendants, Pillars, Brackets, Iron and Brass Tube, Tin and Composition Pipe, &c. &c. at J. PEALS', 20 and 21, Old-street, near St. Luke's Church, London.
P.S.—As large and choice an assortment as any house in London.
Gas-fitting Contracts to any amount.

MARBLE SLABS.—MARBLE and STONE SAWING-MILLS, 8, NORTH WHARF-ROAD, PADDINGTON. The proprietors of the above mills beg to offer to masons and the building public generally a very extensive assortment of vein, Sicilian, and statuary marble, in slab and block, at prices never before offered. JAMES SIMMONS, Manager.

MARBLE.—THOMPSON and HOLMES, Marble, Stone, and Timber Brokers, Contractors, and Builders' Agents, beg to inform the gentlemen connected with the marble trade, that their STOCK of MARBLE is received direct from the principal quarries in Italy and Belgium, for SALE on COMMISSION ONLY, and that they can consequently supply the Trade with the finest marbles at the lowest prices. Sawn Slab, Mortars, Vases, &c. Yorkshire and Portland Stone for sale on commission
The Marble Wharf, Thames-bank, Pimlico, adjoining Vauxhall-bridge.

MARBLE.—Mr. B. FABBRICOTTI, of Carrara, Italy, Proprietor of Marble Quarries, and the only person in the United Kingdom selling Italian Marble the produce of his own quarries, begs to inform the gentlemen connected with the Marble Trade that he has established, in London, the most extensive Depôt of Statuary, Veined, Sicilian, Dove, and Black and Gold Marbles, at CARRARA WHARF, THAMES BANK, PIMLICO, the foot of Vauxhall-bridge.

TO THE MARBLE TRADE.
MR. B. FABBRICOTTI begs to inform the public that he has REMOVED from the office lately held by him at No. 8, Cromer-terrace, Millbank, to offices on his own premises, at Carrara Wharf, Thames Bank, Pimlico, where he continues to carry on the marble trade solely on his own account, Mr. Thompson being no longer his agent.
Mr. B. Fabbricotti hopes that the trade will continue to favour him as usual, as, being the absolute proprietor of the quarries at Carrara, he can supply at better advantage and quality than any one else.
N.B. The well-known qualities of Mr. Fabbricotti's marble are celebrated throughout all Italy, England, and America.

MARBLE WORKS by PATENT MACHINERY, Commercial-road, Pimlico, London.
THOMAS JACKSON begs to draw the attention of the public to the most extensive stock of Marble Chimney-Pieces in the Metropolis; consisting of a selection of upwards of two hundred, and manufactured by steam power from the finest Italian and other marble, and with that careful attention to the details and finish so necessary in good marble work. The Stock consists of elegant Drawing-Room Chimney-Pieces in Statuary Marble; bold, massive Chimney-Pieces, in Black, Black and Gold, Bardilla, Sienna, Verd Antique, Brocatella, Dove, St Ann's, and Ser, entire Marble, suitable for Dining-Rooms, Libraries, Vestibules, and Entrance-Halls; and a great variety of others in Veined, San Juan, Emperor's Red and Amber Marble, for Boudoirs, Breakfast-Rooms, and Bed-rooms. Also, Monuments, Tombs, Tablets, and Pedestals for Busts and Statues, and Slabs for Cabinet Work, &c.; the whole executed from the most classical designs, and of the finest Italian and Belgian, Italian and British Marble, at the lowest remunerative prices.

BUILDERS, &c. &c.—Take Notice of the extraordinary Reduction made in the price of marble work at the WESTMINSTER MARBLE FACTORY.—A Vein Marble Box Chimney-piece, only 25s. A good-sized Vein Marble Box Chimney-piece, with cane and bance on plinths fitted up in the best style, only 1l 12s. Their patent machinery enables them to execute Marble Floor at 2s. 6d. per foot super. and every variety of Marble work at reduced prices. Their show Rooms contain the largest Stock of Chimney-pieces in England.—Address, WESTMINSTER MARBLE COMPANY, EARL-STREET, MILBANK.

AMATEURS, BUILDERS, and OTHERS, in want of two splendid STATUARY MARBLE DRAWING or DINING ROOM CHIMNEY PIECES, carved in the style of Grinling Gibbons, but not to be met with in any sale or stock at the price. Also Eight Basso-relievo Subjects, from the British Museum, in reduced scale, drawn by N. J. Cottingham, Esq.
N.B.—Carving executed in any style for the trade, &c. by J. C. 23, East-place, Kennington-road, Lambeth.

CAEN and AUBIGNY STONE.—P. FOUCARD, Stone Merchant and Quarryman. Cargoes shipped to order from Caen to any port. Contracts taken for any quantities. Depôts: Granite Wharf, East Greenwich; Lett's Waterloo-bridge. Offices: 246, High-street, Southwark, near the Townhall.

CAEN and AUBIGNY STONE.—GATES and GEORGE (late Luard, Beedham, & Co.), General Stone Merchants, Caen Wharf, Rotherhithe, are supplying the above and Bath, Portland, Yorkshire, Granite, and other stones from their depôt, at current prices by land and water carriage; also by vessel direct from the quarries, at moderate ship freight to any part of the United Kingdom.
N.B. Heavy goods landed, transhipped, or carted with despatch, and at moderate charges.

ANCASTER STONE, from the celebrated quarries of Mr. John Wilson, Ancaster, who has appointed GATES and GEORGE, Stone Merchants, his sole consignees for the London district. Ancaster Stone, so generally esteemed by the building profession, for its great durability, economy, and general utility, is to require but a trial to secure the approval of architects and others for its more extended use in building.—Samples and other information can be obtained at the Great Northern Depôt, King's-cross; Caen-wharf, Rotherhithe; and Hibernia-chambers, London Bridge, Borough; or forwarded to address, free of charge.

GODSTONE STONE.—GATES and GEORGE beg to solicit the attention of architects, engineers, and builders to the above Stone, as being suitable for all purposes of construction, either as a substitute for brickwork, or in connection therewith, the price in most respects being that the same as ordinary brickwork. It can be obtained in large quantities, and to specified sizes, in rubble or rough square blocks, direct from the quarries.—Information and samples given at Caen-wharf, Rotherhithe, and Hibernia-chambers, London-bridge, Borough.

GRANITE.—The Cheesewring Granite Company, Liskeard, Cornwall.
London Agents—TREGELLES and TAYLOR, 3, Pinner's-court, Old Broad-street. Manager—JAS. J. TRATHAN, Liskeard.
This Granite is selected for the New Westminster-bridge.

TREVALGA ROOFING SLATE.—T. B. HANNAFORD, Sole Consignee of the above beautiful Slate, is in a position to supply the same at extremely low prices. Cisterns, sinks, and every description of slate-slab work executed with despatch
Trevalga Wharf, Ratcliff cross.

ENAMELLED SLATE.—REDUCTION in PRICE.—Mr. MAGNUS having completed some extra machinery, is enabled to announce a further reduction in price in the shape of a large and increased discount to the TRADE. His best goods are now supplied at prices below those charged by other parties for very inferior imitations of his work. PIMLICO SLATE WORKS, 39 and 40, Upper Belgrave place, Pimlico.

MARKET-WHARF, REGENT'S-PARK-BASIN.—WEST-END DEPOT, for Yorkshire Paving, Portland and Derby Stone, Bangor Slates, Slabs, &c. Also Bricks, Lime, Cement, Plaster, Tiles, Tradia, and Fire Goods. SCOLES and WOOD invite the attention of Builders, Masons, and others, to their Stock as above, where everything will be charged at the lowest prices. Headstones, Ledgers, Slops, Landings, &c. out on the shortest notice. Country orders promptly attended to.

BATH STONE OF BEST QUALITY.
RANDELL and SAUNDERS,
QUARRYMEN AND STONE-MERCHANTS,
BATH.
List of prices at the quarries and depots, also cost for transit to any part of the kingdom, furnished on application to Bath Stone Office, Corsham, Wilts.

By Her Majesty's Royal Letters Patent.

SILICEOUS STONE.—ORNAMENTAL WORK of every description executed at LOW PRICES in this most durable material. A large Stock kept of Mantel-pieces, Balustrades, Quoins, Tombs, Fonts, &c. at new premises.
Whitehall Wharf, Cannon row, Westminster.

VALENTIA SLATE SLABS.—The Valentia Slab Company invite attention to their Slabs now supplied, of very large dimensions and of superior quality They have been used at the British Museum, National Gallery, Bethlem Hospital, various Lunatic Asylums, the Ordnance Works, Model Prisons, Penitentiaries, and other Penitentiaries; Malting Floors in Bedfordshire and Hertfordshire, Breweries, the Race Stand at Brighton, Portsmouth Barracks, and are kept in stock in large quantities by Messrs FREEMAN, Millbank-street; also by Messrs. Sharpe, Tooley-street; and at Messrs. Braby's, Belvidere-road, where terms may be obtained.

WILKINSON'S IMPROVED ARTIFICIAL STONE CHIMNEY-PIECES.—Nearly 3,000 of the above have been Sold, although only recently brought to their present state of perfection, and offered to the public. The prices range from 6s. for a neat bedroom set: with jambs, moulded with large ogee on inner edge, set on plinths, Mantel, moulded with ovolo and fillet under shelf, and shelf with hollow on edge, to 50s. for sitting-room patterns of more elaborate character. A liberal discount for quantity.—Address W. B. WILKINSON, Newcastle-on Tyne.

NORTH-WESTERN STONE DEPOT, Hampstead road Bridge, Camden-town.—W. ASPINALL, begs to call the attention of Contractors, Builders, and Masons, to his Stock of Portland, Park Spring, Potterscrton, Newton, Harebith, Bath, Caen, and other Block Stone; York Paving, Landings, Steps, Sinks, Sills, &c; Park Spring, Robin Hood, Hare-hill Landings and slabs. Also, Aberdeen, Guernsey, and Haytor Granite Curb and Pitching, all at the very lowest prices.
N.B. Estimates given for Masons' Work.

IMPERISHABLE STONE.—TRICKETT and PERKINS having erected new and powerful machinery, at their extensive quarries, are now able to execute orders to any extent with their much esteemed RAWDON-HILL STONE, which, from its strength and durability, together with its beautiful colour and readiness of conversion, renders it one of the most desirable stones cut, being at once useful and ornamental. Architects and others are requested to test its qualities for strength and durability, either for external, internal, or ornamental purposes. Samples and prices furnished by SAMUEL TRICKETT, Stone Wharf, Isle of Dogs.
NOTE.—Can be got any size, or delivered to any part by rail or water carriage.

BOW-BRIDGE SLATE WORKS, Stratford, near London.—A. A. ROBINSON begs to inform Architects, Contractors, Builders, and others, that his PRICE LISTS for SLATES and SLAB WORK for 1855 are NOW READY, and can be had on application, inclosing a postage-stamp.
N.B. A liberal discount to the trade.

HOUSEHOLDERS and GENERAL LIFE ASSURANCE COMPANY, 15 and 16, Adam-street, Adelphi.

SOLICITORS.—Messrs. Dawes and Sons, Angel-court.
Insurances against loss by fire are effected by the PHŒNIX COMPANY upon every description of property, in every part of the world, on the most favourable terms.
Persons insuring with the Phœnix Company are not liable to make good the losses of others, as is the case in some offices.
Insurances with this Company expiring at Lady-day must be renewed within fifteen days thereafter, or they will become void.
Receipts are now ready at the Offices, Lombard-street, and Charing-cross, and with the respective Agents throughout the United Kingdom.

THE ASYLUM LIFE ASSURANCE OFFICE, 72, CORNHILL, LONDON.
Established 1824.
Policies on healthy and diseased lives, at home and abroad, for civil, military, and naval employments.
The only Office on purely proprietary principles, involving therefore no partnership among policy-holders.
For prospectuses, proposal papers, &c. apply to
MANLEY HOPKINS, Resident Director.

SECRETARY—Geo Keys, esq
ACTUARY.—Samuel Brown, esq.
LIFE DEPARTMENT. Under the Provisions of an Act of Parliament, this Company now offers to future insurers four-fifths of the profits, with quinquennial division, or a low rate of premium, without participation of profits.
The next division of profits will be declared in June, 1855, when all Participating Policies which shall have subsisted at least one year at Christmas, 1854, will be allowed to share in the profits.
At the several past divisions of profits made by this Company, the reversionary bonuses added to the policies from one-half the profits amounted, on an average of the different ages, to about one per cent per annum on the sums insured, and the total bonuses added at the four septennial divisions exceeded 770,000l.
FOREIGN RISKS. The extra premiums required for the East and West Indies, the British Colonies, and the northern parts of the United States of America, have been materially reduced
INVALID LIVES.—Persons who are not in such sound health as would enable them to insure their lives at the lowest premiums, may have their lives insured at extra premiums.
LOANS granted on Life Policies to the extent of their values, provided such Policies shall have been effected a sufficient time to have attained in each case a value not under 50l.
ASSIGNMENTS OF POLICIES.—Written Notices of, received and registered.
Medical fees paid by the Company, and no charge will be made for Policy Stamps.
NOTICE is hereby given, That Fire Policies which expire at Lady-day must be renewed within fifteen days at this Office, or with Mr. SAMS, No. 1, St. James's-street, corner of Pall-mall; or with the Company's Agents through out the Kingdom, otherwise they become void.
Losses caused by Explosion of Gas are admitted by this Company.

LADDERS, BARROWS, &c. for SALE or HIRE. GEORGE ELL, 3, Tottenham-court, New road, opposite the Hampstead-road, and corner of Praed-street, Paddington, has on hand at all times, a large stock of LADDERS, EXCAVATORS', BRICKLAYERS', and other BARROWS, PAINTERS' TRESTLES, MACHINES, STEPS, &c. Price lists can be had on application, at 3, Tottenham-court.

ARTESIAN WELLS, Boring for Water, Sinking Shafts, &c. The nobility, gentry, water-companies, towns, baths, brewers, and manufacturers of every description, may be supplied with any quantity, by DAVID GREENLEY, Civil Engineer and Patentee of Boring Tools, 10, Camming-street, Pentonville. Pumps and machinery for raising water from deep wells, boring-tools, and well-pipes for exportation. Men and tools supplied to bore for railroads, minerals, &c.

THE PERMANENT WAY COMPANY, 26, Great George-street, Westminster, beg to call the attention of Civil Engineers, Contractors, and others interested in the construction of railways to the present low price of iron, by which a saving may be effected of nearly 300l. per mile, single line, in the adoption of Mr. W. H. BARLOW'S Patent Wrought-iron Permanent Way overthat of the ordinary road.—Every information can be obtained on application to
WILLIAM HOWDEN Secretary

TO ARCHITECTS, BUILDERS, CONTRACTORS, AND OTHER CONSUMERS OF GLASS.

HARTLEY'S PATENT ROUGH PLATE GLASS,

1-8th of an inch thick, or 2 lbs. to the foot; 3-16ths, or 3 lbs.; and 1-4th or 4 lbs. is now universally used for

RIDGE AND FURROW ROOFS, GREENHOUSES, RAILWAY STATIONS, MILLS, MARKET HALLS, BATHS AND WASH-HOUSES, FACTORIES, WORKSHOPS, SHIP-BUILDING SHEDS, AND OTHER EXTENSIVE BUILDINGS.

By a carefully prepared Estimate, it has been ascertained that FOUR-FIFTHS of the ROUGH PLATE, or non-transparent Glass, consumed in the United Kingdom in 1854, was manufactured by HARTLEY'S PATENT—thus affording the most incontestable evidence of its superiority over every other article of the kind, and as being the only description of Glass suitable for the purposes above named. It combines size and strength with economy of cost, and is manufactured in sizes expressly for RIDGE and FURROW ROOFS, giving a SPAN of TWELVE FEET, at a price not exceeding, weight for weight, that of Common Crown Glass. Its non-transparency renders BLINDS UNNECESSARY, and no scorching occurs in Greenhouses glazed with it; hence the preference given to this Glass for all Horticultural purposes.

For further particulars, apply to

JAMES HARTLEY AND CO. SUNDERLAND; AND PURFLEET WHARF, EARL-STREET, BLACKFRIARS, LONDON.

Sole Manufacturers of Lockhead's Patent Perforated Glass for Ventilation.

*** *Hartley and Co.'s Glass Tariff Newspaper will be forwarded gratis, on application.*

January 1, 1855.

THE LONDON AND MANCHESTER PLATE GLASS COMPANY

Beg to inform the TRADE, that the EXTENSION OF THEIR WORKS being now completed, they are enabled to execute orders to any extent at immediate notice. The Company also beg to intimate that owing to improvements effected in the reconstruction of their Works, the COLOUR and QUALITY of their GLASS will be found to be considerably improved, and that they can guarantee the maintenance of these essential requirements. They further beg to invite attention to their reduced List of Prices, which may be obtained on application at their London Warehouse, or at the Works

For the convenience of the LONDON TRADE, a large stock of POLISHED PLATE is now kept at the COMPANY'S WAREHOUSE, BARRAUD'S WHARF, WHITEFRIARS.

The Works, Sutton, St. Helen's, January, 1855.

THOMAS MILLINGTON

Begs to inform ARCHITECTS, BUILDERS, and the Trade, that he supplies the following articles of the best quality and at the same time upon the lowest terms:—

ENGLISH AND FOREIGN SHEET GLASS, PLATE, PATENT PLATE, PATENT ROUGH AND FLUTED PLATE, MILLED SHEET LEAD,

PATENT PIPE, LEAD, IRON, AND BRASS PUMPS, AND WATER-CLOSETS,

Genuine White Lead, Colours, Varnish, Brushes, and every article in the Trade.

FOR PRICE SEE ADVERTISEMENT FIRST SATURDAY IN EVERY MONTH, OR UPON APPLICATION AT THE WAREHOUSE.

87, BISHOPSGATE-STREET WITHOUT, LONDON.

LOOKER'S PATENT VENTILATORS,

FOR FACTORIES, WORKSHOPS, GREENHOUSES, STABLES, FARM BUILDINGS, &c. &c.

The Inventor solicits an inspection of the above at his POTTERY and DRAIN-PIPE WORKS, Kingston-Hill, where orders to any extent can now be received. The Ventilators are extremely simple in construction, and can be made of any size or shape, in Pottery, Metal, or other Material. They admit fresh air without the slightest draught, can be regulated with perfect ease, and are not a third the cost of any other arrangement for the purpose hitherto introduced.

Full particulars, with prices, forwarded to any part of the United Kingdom, on application to the Inventor, Patentee, and Manufacturer, BENJAMIN LOOKER, JUN. Kingston-on-Thames.

SUPERIOR BRITISH PLATE-GLASS AT VERY LOW RATES.

THE UNION PLATE-GLASS COMPANY having recently completed very considerable improvements and additions to their works, take the opportunity of informing their friends that they will now be able to supply orders without delay; and respectfully invite the attention of the trade generally to the low rates at which their now much-esteemed manufacture is sold.

Lists of prices may be obtained on application at

The Works, Pocket Nook, St. Helen's, Lancashire.
The Warehouse, 99, Hatton-garden, London.
" 45, Piccadilly, Manchester.
Messrs. C. and J. Malloch, 30, Turner's-court, Glasgow.
" John Dix and Co. Bath-street, Bristol.
" H. Sibthorpe and Son, Cork-hill, Dublin.

ROUGH PLATE-GLASS from ¼ to ¾ in. thick, suitable for the windows and roofs of mills, mechanics' shops, market halls, railway stations, &c.

Beautiful and highly-finished POLISHED PLATE-GLASS, for shop fronts and all superior glazing purposes, and for silvering.

Superior silvered Plate-glass Mirrors of all sizes.

SOHO CROWN, SHEET, ORNAMENTAL, PATENT PLATE, AND PLATE-GLASS WAREHOUSE, 26, SOHO-SQUARE.

ALFRED GOSLETT begs to inform Builders, &c. that he is prepared to Tender for the supply of EVERY DESCRIPTION of Glass, now manufactured at WHOLESALE PRICES.

WHOLESALE BRITISH and FOREIGN WINDOW GLASS WAREHOUSE, established upwards of Sixty Years.—ROBERT METTAM begs to call the attention of builders and the trade in general to his prices of British and Patent Plate, Rough Plate, Crown, Sheet, and Ornamental Window Glass of every description. Shipping Depôt, Devon Raytor Wharf, Rotherhithe.
G. H. CLARK, Agent.

PATENT SOLID SWISS PARQUETERIE. This beautiful, unique, economical, and elegant description of Flooring, so extensively used in Paris and other continental cities, is now introduced into this country: an extensive assortment of specimens and patterns commencing at 1s. per foot super. together with every particular of its cost and adaptation, can be obtained of Mr. BURT, 2, Charlotte-row, Mansion House; or of Messrs. ARROWSMITH and CO. 80, New Bond-street.

REMOVAL.—MR. MEAKIN (late of Tokenhouse-yard), begs to inform his patrons and friends, that he has REMOVED his OFFICES to No. 4, MARTIN'S-LANE, Cannon street, close to King William-street.

SALE of OAK TIMBER, Hainault, Essex.—By order of the Hon. Charles Gore, Commissioner in charge of Her Majesty's Land Revenue.—TO BE SOLD by TENDER, in five lots, a large quantity of very valuable OAK TIMBER, comprising about 5,000 trees, together with their top, lop, and bark, many of them being of large size, and well adapted for navy and general purposes, as now standing on a portion of the Queen's allotment in Hainault, which is slightly situate for water carriage by the River Thames at Barking, or by railway, being about four miles from the Romford and Ilford stations, on the Eastern Counties Railway, and about ten miles by the high road from London. Sealed Tenders (endorsed Tenders for Timber) will be received at the Office of Woods, 1, Whitehall-place, Westminster, on or before THURSDAY, 5th APRIL, 1855. Printed particulars and conditions, with form of Tender, may be had on application at the Office of Woods; of Mr. JOHN CLUTTON, 8, Whitehall-place; or of Mr. MOODIE, at Paddnall-grove, Ilford, who will show the timber.
March 12, 1855.

REDUCED PRICES.—EDWARD SIMMS (late William Cleave), of Wilton-road, Pimlico Basin, beg to acquaint Builders and the Trade that he has now on hand, at his Manufactory (the first of its kind ever established), a very large Assortment of Dry and Well seasoned OAK and DEAL PREPARED FLOORING BOARDS and MATCH BOARDING of all sorts, from ¾ inch to 1¼ inch thick, planed to a parallel width and thickness, and at greatly Reduced Prices. Also, Timber, Deals, Oak Planks, Scantlings, Sash Stiles, Mouldings prepared by Machinery, Laths, &c.—Apply at E. SIMMS'S (late W. Cleave's) Flooring Manufactory, Wilton-road, Pimlico Basin.

FURTHER REDUCTION of PRICES.—SAMUEL PUTNEY respectfully solicits the attention of manufacturers and others to the greatly reduced prices of PINE, SPRUCE, and YELLOW DEALS, MAHOGANY, &c. &c.:—

Pine Planks, 13 ft. 3 in. by 11 in.	from 4s. 6d.	each.
Spruce Deals	3d.	per foot.
Yellow ditto	4½d.	"
Six-feet Pipe-staves	2s. 6d.	each.
Spanish Mahogany	3d.	per foot.
Honduras ditto	6d.	"
Wainscot	9d.	"

Prepared Flooring, Veneers, &c. at equally low prices.
Borough-road, Southwark, and Elm-street, Gray's-inn-lane.

IMPROVEMENT in WOOD MOULDINGS: J. SIMMONS'S improved WOOD MOULDINGS are acknowledged by all who have tried them to be the best ever produced by machinery. J. S. in returning thanks to his friends and customers for the liberal patronage already bestowed upon him, begs to call their attention to his large stock of Mouldings now on hand, feeling assured that one trial will insure a continuance of their favours. Price lists can be obtained on personal application, or by letter, enclosing six postage stamps, the cost of postage.—Steam Works, 20, North Wharf-road, Paddington.
N.B. Builders supplied with all kinds of Marble and Stone Chimney-pieces, at prices lower than any house in London.

ACORN TIMBER WHARF, Canal-bridge, Old Kent-road.—RICHARD MAY'S extensive Drying Warehouses and Waterside Premises, with the improved machinery for sawing all kinds of wood, enable him to keep one of the largest stocks in London, of
PLANKS, DEALS, BATTENS,
DRY PREPARED FLOOR-BOARDS, AND MATCH-BOARDING.
FOREIGN FIR TIMBER OF ALL KINDS.
English Oak, Elm, Ash, Laths, Mouldings, Sash Sills, always on sale at the lowest prices for cash.—A monthly Price Current forwarded on application.

ALFRED ROSLING begs to inform his Customers and the Building Trade generally, that he is enabled to allow a discount of 15 per cent. upon his list prices for Mouldings.—A large stock of dry flooring at low prices.—Southwark bridge Wharf, Bankside.

TIMBER and DEAL YARD.—A large CONSIGNMENT of PREPARED FLOORS (dry), DEALS, BATTENS, &c. for SALE on COMMISSION, at very low prices for cash. Timber Deals, &c. received for Sale on Commission.—THOMPSON and HOLMES, Wood and Stone Brokers, the Marble Wharf, Thames-bank, Pimlico, adjoining Vauxhall-bridge.

STAINING WOOD, to imitate Oak and all other woods, twenty-two different shades.—A perfect substitute for paint. 6s. per gallon; varnish prepared for ditto, 10s. and 12s. per gallon.—WILSHERE'S, 2, Talbot-court, Gracechurch-street. Agents: WILSHERE, Edinburgh; SMITH and SONS, Northampton. Specimens sent, and estimates given for staining churches, chapels, &c.

STAINING DEAL TO IMITATE ALL KINDS of WOODS. It requires NO SIZING, and will stand the exposure to the weather. Price 6s. per gallon. Varnishes for W. NAYLOR'S Stains may be had at the Patent Depôt, 44, James-street, Oxford-street; also Manufacturer of Improved Knotting and Decorative Varnishes.

TO THE CLERGY AND TO ARCHITECTS, BUILDERS, &c.
STEPHENS'S WOOD STAINS as a SUBSTITUTE for PAINT, and at less than half the cost, and without the disagreeable smell and deleterious consequences of paint, well adapted for Churches, Chapels, Schools, or other public buildings, as well as private dwellings, giving the effect of Oak, Mahogany, or Satin Wood. Those who noticed the Entrance Doors of the Crystal Palace of 1851, which were coloured with these stains, would be struck with their beautiful effect.—Prospectuses, giving full particulars, and specimens sent free to any part of the kingdom.
HENRY STEPHENS, 54, Stamford-street, London.

BRANDE'S DICTIONARY of SCIENCE, LITERATURE, and ART. Second Edition, corrected; with a Supplement, which may be had separately, price 3s. 6d.

London: LONGMAN, BROWN, GREEN, and LONGMANS.

In one volume, 8vo. containing upwards of 1,500 pages, with 82 Maps, drawn by Sidney Hall, and upwards of 1,000 other Woodcuts, price 50s.

MURRAY'S ENCYCLOPÆDIA of GEOGRAPHY; comprising a complete Description of the Earth. Exhibiting its relation to the Heavenly Bodies, its Physical Structure, the Natural History of each Country, and the Industry, Commerce, Political Institutions, and Civil and Social State of all Nations.

London: LONGMAN, BROWN, GREEN, and LONGMANS.

Just published, fcp. 8vo. price, stitched, 2s.

GEOMETRY as an ART; being the Second Part of Elements of Geometry and Mensuration, with Easy Exercises, designed for Schools and Adult Classes.

By the Rev. T. LUND, B.D.
Formerly Fellow of St. John's College, Cambridge; Editor of "Wood's Algebra." (8vo. 12s. 6d.), and Author of "Companion to Wood's Algebra." (post 8vo 6s.)

Just published, Part I.

GEOMETRY as a SCIENCE, 1s. 6d. stitched.

Parts I. and II. together, price 3s 6d. boards.

In the press, Part III.

GEOMETRY combined with ARITHMETIC (commonly called Mensuration); Part IV. GEOMETRY combined with ALGEBRA.

A KEY to the Exercises is also in preparation.

London: LONGMAN, BROWN, GREEN, and LONGMANS.

In 8vo. with about 2,000 Woodcuts, price 50s.

LOUDON'S ENCYCLOPÆDIA of TREES, and SHRUBS; or, the Arboretum et Fruticetum Britannicum abridged, containing the Hardy Trees and Shrubs of Great Britain, Native and Foreign, scientifically and popularly described, with their propagation, culture, and uses in the arts; and with Engravings of nearly all the Species. Adapted for the use of Nurserymen, Gardeners, and Foresters.

London: LONGMAN, BROWN, GREEN, and LONGMANS.

A Corrected Edition, in 8vo. with 2,000 Woodcuts, price 42s.

LOUDON'S ENCYCLOPÆDIA of COTTAGE FARM, and VILLA ARCHITECTURE and FURNITURE.

Edited by Mrs. LOUDON,
By the same Author, New Editions.

AN ENCYCLOPÆDIA of GARDENING. 8vo. price 50s.

AN ENCYCLOPÆDIA of AGRICULTURE. 8vo. 50s.

ENCYCLOPÆDIA of PLANTS. New Edition in April.

HORTUS BRITANNICUS. 8vo. price 31s. 6d.

London: LONGMAN, BROWN, GREEN, and LONGMANS.

THE EDINBURGH REVIEW, No. CCVI.

ADVERTISEMENTS and BILLS intended for insertion are requested to be forwarded to the Publishers on or before TUESDAY, APRIL 3.

London: LONGMAN and CO. 39, Paternoster-row.

THE QUARTERLY REVIEW.—ADVERTISEMENTS for the forthcoming Number must be forwarded to the Publisher by the 26th, and BILLS for insertion by the 31st instant.

JOHN MURRAY, Albemarle-street.

A NEW CATALOGUE OF WORKS UPON ARCHITECTURE AND ORNAMENT.

Gratis on application, or post free on receipt of four stamps.

CATALOGUE of about ONE THOUSAND WORKS UPON ARCHITECTURE, including a valuable collection of upwards of sixty different works upon ornamental design, with others upon gardening, vases, ironwork, Venetian architecture, picturesque and illustrative architecture, numerous editions of Vitruvius, Palladio, Serlio, Vignola, Alberti, and Scamozzi, with most of the modern publications by Sharpe, Brandon, Pugin, Simonsau, Richardson, Shaw, Britton, Robinson, Bowman, &c. on sale at very moderate prices.—A. E. EVANS and SONS, 40, Strand London.

MENSURATION FOR MECHANICS AND ARTIZANS. Third Thousand, with important additions, 1s. or bound in cloth, 1s. 6d., or post-free on receipt of eighteen Queen's heads.

MENSURATION MADE EASY; or, the Decimal System for the Million, with its Application to the Daily Employments of the Artizan and Mechanic.

By CHARLES HOARE.

"To those who desire to make themselves acquainted with the sciences on which it treats, without the aid of a master, it would be impossible to overrate its importance."—*Morning Advertiser.*

London: EFFINGHAM WILSON, Publisher, 11, Royal Exchange.

THE FREEMASONS' MONTHLY MAGAZINE. Price 1s. A Specimen Number will be sent on receipt of six postage-stamps (the cost of postage). No. III. for March, just published.

GEO. ROUTLEDGE and CO. Farringdon-street; and 16, SPENCER, 314, High Holborn.

Just published, price One Shilling,

NOTES on SPONTANEOUS COMBUSTION: an Appendix to "Notes on the Causes of Fires in Buildings."

By WYATT PAPWORTH, Architect.
C. and E. LAYTON, 150, Fleet-street.

This day, 1s.; post-free, 1s. 6d.

PLAGUE CRADLES of the METROPOLIS.

By a PEDESTRIAN.

Respectfully dedicated to the Right Hon. Sir Benjamin Hall, Bart. M.P. President of the Board of Health.

London: THOMAS BOSWORTH, 215, Regent-street.

ARCHITECTURE, CIVIL ENGINEERING, and SURVEYING CLASSES. Established by Messrs. HYDE, SMITH, and LEWIS, Architects, Civil Engineers, Surveyors, &c. For Preparing Gentlemen for Architects, Builders, Engineers, Surveyors, Draughtsmen, Measurers, &c. and for giving EVENING INSTRUCTION in Architectural and Civil Engineering, Drawing, and Colouring. Making Finished and Working Drawings, Preparing Specifications, Taking out Quantities, Estimating, &c. &c.—Terms One Guinea per Quarter, which includes Drawing Materials, Instruments, Colours, Paper, Drawing, Boards, T squares, Squares, &c. Prospectuses and full particulars may be had at the Offices 24, Guildford-street, Russell-square.

TO ARCHITECTS.

COMPETITION and other DRAWINGS.—Mr. THOMAS S BOYS, Member of the New Society of Painters in Water Colours, and author of "The Picturesque Architecture of Paris, Ghent, Rouen," &c. and of "London as it is," offers his services in Tinting Backgrounds, Landscapes, Perspective Views, Interiors, &c. From the long experience he has had in such subjects, he is fully aware of the points essentially necessary to be attended to. Drawings and designs lithographed in a superior manner.—Address, Mr. BOYS, 32, Albany-street, Regent's-park.

The Builder.

SATURDAY, MARCH 24, 1855.

THERE are few places in London which produce more useful results than the Reading-room at the British Museum. In this place is stored and arranged an immense amount of varied and useful knowledge, open to all without difficulty. It is true that a stranger calling at the reading-room would for a time be puzzled to know where to lay his hands on the matters he wanted, but "Rome was not built in a day," and no valuable knowledge, in connection with either literature, art, or science, can be acquired without a certain amount of exertion. Properly and fairly to understand a book we must fairly and patiently run over the lines, and by some consideration and study gather up the sense.

Fresh works are in progress to increase the efficiency of the Reading-room. The question of additional space for the collection is one which has occupied the trustees from a period even before the completion of the present building, as planned by Sir Robert Smirke, up to the present time. Our attention just now will be confined to that part of the question which refers to the library of printed books. When the present building approached an end, it was found that that portion which was allotted to the department of printed books would not contain more than about 20,000 volumes above the number then in the library, whilst books were pouring in at the rate of a larger number than that *per annum*. It became necessary, therefore, at once to provide for future accumulations. This was done by the erection of an additional room at the north-west end of the building. The space thus afforded gave relief for a few years, but it soon became apparent, from the rapid increase of the collection, that further accommodation must be provided, and it was determined by the trustees to build a room on the east side of the Royal library. This erection filled up all the available space for the library, and Mr. Panizzi began very soon to call out for more room. He suggested that a new library and reading-room should be erected on ground to be purchased in Russell-square.* This scheme was viewed favourably by the trustees, and also by the Commissioners, but the expenses involved in it were so great, that it was necessarily abandoned.

Several reports upon the subject of want of room, and also upon the insufficient accommodation afforded to readers in consequence of the contracted space of the present reading-rooms, were afterwards addressed by Mr. Panizzi to the trustees; and under the date of the 5th of May, 1852, we find one in which, after adverting again to the serious evils which must result from the accumulation of books without proper shelf-room being provided for them, he proceeded to show that any comprehensive system of relief for the whole establishment must involve delays fatal to the library. He then submitted to the trustees a plan, by which he thought that the inconveniences then felt, so far as the library of printed books and the reading-rooms were concerned, could be completely remedied, as well as all eventual difficulties removed in a short time, and at a comparatively small cost, by the erection of a suitable building in the inner quadrangle. This proposal was accompanied by a ground-plan, explanatory of Mr. Panizzi's views upon the subject.

* See Minutes of Evidence, taken before the Commissioners, to inquire into the constitution and management of the British Museum, Q. 4934, 4976, &c.

The plan which offered the greatest facilities was one for building in the quadrangle of the museum a reading-room, with additional libraries round it, clear space being reserved all round for giving light and air to the existing buildings. This plan had the advantage of involving the purchase of no new ground; and, being absolutely out of sight, it spared the necessity of any expense in exterior architecture.

This arrangement was finally adopted. Mr. S. Smirke was authorised to obtain tenders, and last year a contract was entered into for the execution of the whole work by Messrs. Baker and Fielder, for about 100,000*l*.

The new reading-room is a circular apartment, 140 feet diameter, and 106 feet high, lighted by twenty windows, at the springing of the dome, and by a glazed aperture in the crown of it, 40 feet in diameter. The superintendent will sit on a raised platform in the centre, and he is surrounded by two concentric ranges of table cases, for catalogues, &c. The tables for readers radiate from these as a centre, a small segment of the circle being partitioned off to give free access for the attendants going to and from the library, and for the temporary deposit of books *in transitu*. Allowing upwards of 4 feet for each reader, there will be room for 336 readers. The cubic content of air within this room is about 1¼ million of cubic feet, and this ample volume of air will be constantly and gradually renewed by a provision for summer and winter ventilation.

Between the entrance-hall and the reading-room, are the cloak-rooms and other offices; the whole of the remainder of the new building being appropriated to the reception of upwards of a million volumes of books. The book-cases are of wrought-iron, and in the construction of the libraries and of the central dome, bricks and iron are exclusively used. The dome will be covered with copper. The galleries in the reading-room will be of slate, those throughout the rest of the new building, of perforated cast-iron. The decorations will be painted. It is proposed to introduce a series of statues around the room, at the springing of the dome.

The new reading-room will be the largest, and may be made the handsomest in the world. Its position in the quadrangle allows immediate access from the hall, through which readers will proceed to the reading-room, from the king's library, and from the library in the north wing of the building. It is calculated that this structure will be completed and fit for the reception of books and readers in less than two years from the present time. The plan we publish in our present number (p. 138), will give a clear idea of the arrangement, and the view shows the appearance it will take.

To return for an instant to the rooms as they now are, we feel sure that we shall have the concurrence of the majority of those who use the reading-room when we offer testimony to the painstaking endeavours of all the attendants to meet the wants of the readers. Without joining in the common cry against the arrangements, we would yet point out one evil allowed to exist, and that is the length of time during which books of reference are occasionally absent on the score of "binding." The annoyance occasioned at times is very great.

It is much to be desired that arrangements should be made to open some portion of the library at night—say till ten o'clock, to meet the wants of those who have no time at their disposal till the regular pursuits of the day are finished.

It would be a great convenience, too, if the library and print-room were brought more immediately together, and the necessity of obtaining separate admissions to these departments abrogated. The print-room, notwithstanding many important gaps which require filling, is undoubtedly a very fine collection, most interesting both to the scholar and artist; and yet from its isolated position or some other cause, the place is but little frequented. The collection of Flemish prints here brought together is perhaps unrivalled. The Italian and German schools are fairly represented; and the engravings after the works of Reynolds, Lawrence, Turner, and other of our eminent English artists, offer a field of interesting study. The late Sir Robert Peel warmly supported an idea, suggested, we believe, by Mr. Carpenter, the curator of the print-room, to form a gallery of engravings, which would be open to the public in the same manner and at the same time as the other parts of the Museum; and we believe that the long gallery which now contains the Nineveh marbles was originally intended for this purpose, the advantages of which it would be difficult to estimate.

If this gallery were formed, the public would have the opportunity of viewing the rare etchings of Rembrandt, engravings of the works of Raffaelle, Michelangelo, and other magnates in art. The prints might be changed at intervals, and a constant and varied interest kept up.

To the student in architecture or art, the print-room is much injured in utility by the strict regulation against either tracing or measuring the engravings. No doubt the scarce and valuable proofs should be treated with care, but not so much as to render them, to a certain extent, a dead letter; for of what use is the architectural collection if the architect who goes there for information is neither allowed to trace nor measure the proportions? Some plan should be hit upon, to facilitate the means of obtaining correct copies, either by squared glasses, or by some other process.

ON THE MOSAICS AND OTHER DECORATIONS OF THE CHURCH OF STA. SOPHIA, CONSTANTINOPLE.

THE following is the substance of Mr. Digby Wyatt's address referred to in our last;—

The decoration of Sta. Sophia is of two principal kinds: one consists of a certain number of points, more or less structural, to which I shall first call your attention; and the other of a system of mosaic ornamentation of the highest importance in relation to the history of that art,—so important, indeed, that I propose to bring under your notice first, the mosaics of Sta. Sophia as they exist; secondly, their historical position as compared with other mosaics; and, thirdly, their peculiar technicalities of production: so that our review may embrace not only the artistical nature of these magnificent monuments of early Christian art, but their historical position, and the actual mechanical operations by which they were executed.

The principal technical point in relation to the general working of the sculptured ornament of Sta. Sophia to which I would call your attention is displayed, almost universally, in the capitals and other carved features which stamp Byzantine architecture with its leading peculiarities of style. In classical architecture, the principle of superadding foliage to construction was generally followed, and in obedience to this law both ancient Greeks and Romans usually adopted a bell or a moulding line as a basis, and then planted on such a fundamental form whatever decoration of leafage they desired to use. The Byzantine architects departed from that system by first cutting their stonework into the general shape required, and then sinking or draughting into it all their different enrichments; and from this it follows as a corollary, that Classic ornament was completed before the erection of the block of stone or marble decorated, and that Byzantine was executed subsequently to the fitting in place of the main structural forms. This is the general principle which distinguishes Byzantine from Latin work; and wherever we recognise its adoption in the architecture of India, Russia, Lombardy, or the North, we may be sure that the influence of the Byzantine school was paramount; as was especially the case at Pisa and in Sicily. As Byzan-

tine architecture reached its earliest, as well as its highest, development in Sta. Sophia, it becomes exceedingly interesting to recognise the unquestionable assertion of this principle by its architects and artificers.

The second point with regard to ornamental decoration to which I shall allude is very important, since it materially affects the history of both plain and coloured glass. The windows of Sta. Sophia are formed of a series of slabs of marble, pierced in apertures of about 8 inches by 10 inches. In these sash-bars, as I may call them, there is a rebate left on the outside in all cases, and it appears to me most probable that these apertures were filled in with coloured glass. The reason I have for thinking so is, that we know that the Byzantines were perfectly well acquainted with all the processes of glass-making. Their enamels were proverbially beautiful, and Buonarotti has given us many interesting details concerning their glass vessels, which they painted with fluxes, and decorated by other processes at a very early period. Of many varieties of such vessels there are specimens existing in the Museum Christianum of the Vatican at Rome. These actual remains prove to us that they were masters of the technicalities of glass-work. Paulus Silentiarius alludes to the beautiful effect of light and colour in this building of Sta. Sophia, when seen in the early morning; and Paul the Hermit, and Fortunatus of Poictiers, in his "Carmina," also describe this effect. Theophilus, who was a writer on the technical arts a little before our Conquest, has a whole treatise upon the subject of stained glass, which he prefaces by stating that he had taken the pains to go to Sta. Sophia to examine the effect of the light, coloured by transmission, in order to qualify himself for writing this section of his book. When it is remembered that Sta. Sophia was commenced in the year 532, and completed about 540, it is interesting to have grounds for the belief that stained glass was extensively used at such an early period.

Until recently, the assertion of the Benedictines, that coloured glass was not known previously to the time of Charlemagne, has been generally regarded as correct. French and English antiquaries have, however, found allusions to its existence at a much earlier period; as early, indeed, as the year 600, and the details now given to the world concerning Sta. Sophia afford a strong corroboration of their views.

These windows, in their general form, present a certain number of square compartments, by filling in some of which, and omitting others, a Greek cross would be produced in the centre opening, and crosses, similar to those carved beneath the window, in the side openings, supposing such an ornament was wanted. Although frequently alluded to by ancient writers, few remains exist agreeing with what they called the "simplex fenestra;" but it appears that in the early days of the history of coloured glass, that was the most common form; and I have little doubt that the windows of Sta. Sophia presented the primitive type of such windows as those which Benedict and Biscop, according to Bede, introduced into this country in the seventh century.

Another circumstance which corroborates my view that there was stained glass in Sta. Sophia, is that the Eastern nations generally, whose architecture was originally based on that of Byzantium, have windows cut or pierced out of stone, and occasionally made up with plaster, on the weather side of which they fix pieces of coloured glass of singular shape and pattern. Occasionally these windows are introduced in domes, and in such cases, the stone or plaster inside forms the lines of the dome, and light enters through the little pieces of stained glass which cover the apertures, which are formed into simple geometrical patterns, as they would be in this pierced part of the dome of Sta. Sophia.

These are the most important special points to be noticed, so far as the building of Sta. Sophia itself is concerned; but since its peculiarities of style and the novelties of form introduced in its construction can be properly appreciated only by contrast with the monuments which preceded it, we shall glance for a few moments at them.

One of the plates in Salzenberg's work, to which Mr. Nelson did not particularly allude, gives illustrations, showing the extent to which the Latin or Basilican arrangement was carried in the church of Agios Johannes, built by Leo the Great, in 463, only seventy years before Justinian commenced the building of Sta. Sophia. We find in that church a perfect basilican arrangement, exactly similar to that of Sta. Agnese at Rome, with narthex, apse, choros, second story, forming galleries for females, &c. complete. A hasty comparison of the plan of this church with that of Sta. Sophia shows how the Latin mode of arrangement differed from the Byzantine, while a close investigation of the subject generally, will demonstrate that, as the styles were retained clearly and distinctly in architecture, they were no less so in portraiture and ideal painting.

Proceeding now to the mosaics of Sta. Sophia itself, I will begin by describing the visitor's impressions on entering and making the circuit of the building. He first passes through a small and rather unimportant pro-narthex, or portico, which conducts him into the long gallery, which is the real narthex. As it is in this gallery that we first meet with any indication of Byzantine individuality of faith and character, I may be allowed perhaps to dwell briefly upon qualities which lie at the very root of the outward and visible forms in which much religious fervour was for ages embodied, not only by means of mosaic, but by calligraphy, sculpture in stone, metal, and ivory, embroidery, and every process by which the voice of art has ever hitherto appealed to the heart and conscience of man. Now, the great distinction between the Byzantine and Latin modes of working out religious conceptions (that is, between the Eastern and the Western modes) is, that, in the Western or Latin mode, symbolism was universal. The art of the Catacombs was followed distinctly, though frequently remotely, developing itself in mythical and sentimental forms, and systems of parallelism between type and prototype. In the Greek Church, the exposition of faith through art took a more tangible form. Symbolism was avoided on all possible occasions; and direct representation led to a partial transfer to the representation of the adoration due to the thing represented. In the advanced periods of Greek art, this realistic tendency led to a painful view of the nature of religion, more particularly in connection with the martyrdom of saints, and the physical sufferings of our Saviour and his followers, which were represented in the most positive and often repellent forms.

I stop at this point to point out that over the entrance-door is to be found the only piece of symbolism throughout the building. Over that door is a small panel cut in stone, intersecting the mouldings of the architrave, and containing a representation of a sort of enclosure or "cancellum," with a seat of honour, and upon it an open book with the Holy Ghost in the figure of a dove descending upon it; being, in fact, the Spirit of Holy Wisdom (to which Justinian dedicated his Church) embodied. The inscription on the book is, "I am the door for the sheep: let him who is fitted enter, and he may walk in and out, and there shall he find pasture."

Numerous doors from the narthex lead into the main building. The whole of the sides of the walls were lined with precious marbles to a certain height, and above that commenced the mosaic work. This is, like all Byzantine glass mosaic work, on *a gold ground;* but it also has the peculiarity (unique, so far as I, or anybody I know, is aware of), that it has, in its patterns, in addition to gold mosaics, *silver mosaics.*

There is a very valuable MS. known as the Lucca MS. supposed to be of the seventh or eighth century, and printed by Muratori, in his great "Annali d'Italia," in which the writer gives an account of the process of making golden and silver mosaics. Both in the "Schedula diversarum Artium," of Theophilus, and in another MS. of rather later date, about the year 1200, known as the "Mappæ clavicula," or key to drawing), published by Sir Thomas Phillips in the Archæologia, and supposed to be an English work, there is an almost identical description of the art of making mosaics, but omitting any special allusion to silver work. In writing a book on the subject some time ago I mentioned this process, though I was not then aware of the existence of any actual specimen of it; and I am therefore very glad to recognise it in Sta. Sophia, since it proves that the old writer of the Lucca MS. described things which really existed, and not myths or traditions only.

We here meet with a very interesting and entirely new element of design, which is totally different from any of the Roman ornament. A comparison of these with analogous Latin remains will show that the latter are almost entirely imitations of antique work; but here, coupled with these silver mosaics, we find a distinctly Oriental character of decoration. It is again repeated in other mosaics—particularly in this form of leaf, which is quite Oriental in character.

Now, it is a curious fact, that the year in which Sta. Sophia was commenced was the very year in which Justinian concluded an eternal peace with Chosroes Nushirvan, king of Persia. We know that in one or two reigns antecedent to his, Greek artists had been employed in Persia, and that there had been a friendly communication between the two countries. We may therefore assume, that when Justinian proposed to build this structure in so short a time, he not only enlisted the ability of those about him, but that he attracted back those erring spirits who had gone to seek their fortunes in other countries. He probably, indeed, employed not only his own subjects, but foreigners—and in that way we may believe that a considerable portion of what no one can fail to recognise as Oriental art was mixed with Byzantine.

The principal portion of the mosaic work in the narthex is over the centre door, which was known as the King's door; and there we find a very beautiful mosaic, which represents the figure of Our Saviour in the act of benediction.

There is a peculiarity about the mode of benediction which it may be interesting to point out. The Latin benediction was given with the thumb and two fingers extended, representing the Trinity. Here, however, the first finger is presented straight—representing the J in "Jesus"—the second is crooked, to form the Greek capital S in the same word—the third finger is crossed to it, but still bent, to make the Ch for "Christus"—and the fourth is bent to make the S the last letter, and in that ingenious way the benediction appears to have been given, as here represented.

The book held by Our Saviour in this mosaic bears the words in Greek, "Peace to you. I am the light of the world;" confirming the view that it is actually the representation of Our Saviour. In medallions, on one side is the Virgin Mary, and on the other the Archangel Michael holding the abacus, which was a symbol of chiefdom. There is another figure, prostrated in the Eastern manner introduced by Diocletian. There has been a question as to whom this figure represents. Salzenberg supposes it to be Justinian himself. Fossati says it is Constantine Pogonatus. I think the mosaic is certainly of Justinian's time, and that it is a *capo d'opera*—the best piece of all the mosaics, and one upon which the artist would take most pains, and that it therefore probably represents the great emperor himself. It appears to be in good preservation. Unfortunately Sta. Sophia has suffered very much indeed, and the highest class of representations is that which has been most injured; because, as the Mussulman could not bear the representations of the Giaour, they covered them up as far as possible, and damaged them wherever they could.

Passing through the King's door, and turning to the right or left, we enter the side halls, which are groined over with flattened heads to the groins, just as in the narthex; and the mosaics are of a similar character. They exhibit the same principle of marking all the arch lines and the lines of the vaults, and indicating the round basin-shaped termination by a circular ornament in the centre.

It is remarkable that in these mosaics there is no religious symbol but the cross; a circumstance which does not occur in any building of the period in the Latin Church.

Leaving the under part of these galleries, appropriated to the men, for the upper part (or

naeum) appropriated to the women, we find e richest kind of mosaics, placed there no doubt ecause they were conspicuous from the nave low through the openings between the pillars the upper arcade. From the central point of ew under the great cupola, these domes and oins would appear to great advantage and ave a very beautiful effect. Here appear to ave been a certain number of domical parts sing to a higher basin shape than the lower nits. There are only two of the decorations isting, and of them only some small fragments e perfect; but there is enough to make out at the central subject was our Saviour, and ound him the twelve apostles, with the fire scending from heaven upon their heads: a epresentation of "The Day of Pentecost." The gures in the pendentives are spectators looking p in wonder at the miracle.

These patterns are the triumph of the whole eries of illustrations of surface decoration. They re singularly beautiful, and in them we find the aste of the master architects themselves displayed, who no doubt gave the predominant nes; and we see, as might be expected from nthemius of Tralles and Isodorus of Miletus, remarkable retention of Greek forms, while in thers an Oriental character is introduced pparently by the workman or "pattern-rawer," an occupation which has ever remained istinct in the East from that of the architect or uilder.

The central nave has a great semi-conch at ach end, with subsidiary conchæ opening into hem. From the springing level of the greater onchæ the pendentives start, and over them ises the main dome. It appears that the de-oration of both conchæ and of the great hollow f the roof was plain gold ground mosaic. The ain western and eastern arches were orna-ented, but both of them were executed at a eriod subsequent to that of Justinian, or at ny rate some accident may have happened to hem, and what now appears is of a later era.

The principal mosaics of this part of the entral nave are between the windows. Under-eath the windows are a series of Greek saints n arched recesses, St. Gregory, St. Nicholas, St. Basil, St. Anthemius, and others. The figures re very dignified; they wear the pallia so con-picuous in the bishop's dress of the Greek hurch. Above them stand the twelve minor rophets, and at the ends are two larger figures n each side, representing the four greater-rophets. Above are some slight remains of our figures, supposed to be the four evangelists.

In the pendentives there are enormous eraphim. These figures are of immense scale, nd fitly carry up the eye to this "empyrean" —(the dome itself). The effect produced in his dome by the cross lights admitted through he coloured windows at its base, must have een that of an air of mist and rainbow-tinted apour, so that any great picture at the summit would appear to be floating in it, especially if he glass contained a predominance of blue. The ancient writers describe a great figure of he Almighty in this place. So that, in looking t this series of mosaics, we ascend the grada-ions of the saints, the prophets, and the evan-gelists to the abode of Deity itself—a very eautiful conception, and very beautifully vorked out.

As we enter the bema or sanctuary, we find hat here, over the high altar, stood guardian ngels. The whole arrangement of the east nd is very simple: there is no dramatic story old, but the treatment is noble and impressive.

Architecturally speaking, there is great ability displayed in the introduction of lines of colour n the ribs of the great dome, to give the gold which occupies the spaces between the ribs tint nd substance. The rib patterns are shown on he drawing. The detail looks coarse, but as it was very distant from the eye, the forms and colours required to be strongly contrasted.

This is a section through the windows at the ase of the dome. As the light played on their lluminated jambs or sides, and flowed across his coloured work, the effect must have been quite exquisite.

The two main arches having to do the prin-cipal work in the support of the dome have uffered most, and have consequently needed eparation. This western one was repaired in the time of Basil the Macedonian, late in the ninth century. The other or eastern one was restored in the time of Johannes Palœologus (about the year 1345). The first of these has in the centre a representation of the Virgin Mary, with St. Peter and St. Paul on each side, and two other figures which are not very clear. On the other is a representation of a sort of throne, which is very much defaced, and figures of the Virgin Mary, St. John the Baptist, and Johannes Palœologus himself, who repaired the arch. The presence of the Virgin, as she is represented in the picture, would at once indicate a later date than that of Justinian, even if we did not know the exact period of its execution.*

AN ARCHITECTURAL SCAMPER IN FLANDERS AND BRABANT.†

GHENT AND ANTWERP.

WE will now proceed to furnish a few notes on the far-famed city of Ghent. Architecturally speaking, there is much more of an interesting character to be found in Ghent than in Bruges, whilst its historical associations are of a much higher order. The streets are more modernized, but the antique specimens which remain bear a more costly and magnificent stamp. Stone is very generally the building material employed, and the house-fronts being in many cases profusely carved, a degree of richness is produced, which, in brick, would be utterly impracticable.

Viewed from a distance, the appearance of the city is extremely picturesque. The great number of towers, and the peculiar shape of some of the cupolas and other crowning portions, impart something of an Oriental aspect to the place.

Some of the old buildings still preserve a little of the castellated character. The castle of the counts of Flanders still exhibits its portcullised gateway, and in the Friday's Market a lofty circular tower with conical roof flanks the corner of the square. The Hotel de Ville is a thing of shreds and patches, erected at different periods and in different styles. The more ancient part is a fine example of the dying glories of the Gothic style, when, like the expiring dolphin, its convulsive struggles resulted in a hue of richness which for a time almost atoned for the progress of decay. The general description is something as follows. There are two tiers of windows, the lower having four-centred depressed arches, the upper ones trefoil cuspated: each tier have transoms, and are in two lights each. Between the windows shallow angular buttresses spring from the base, and are corbelled out, and branch into two niches each, surmounted with canopies and tabernacle-work, rising to the summit of the building. The spandrels and wall-spaces are sunk in panels, with tracery of the most elaborate character worked in them. Rich dormers rise from the roof, but they have either never been completed, or have been partially destroyed. This general character of the façade is broken into in several places. In one part a double portal with panelled division occupies two bays: in another, a semi-hexagonal oriel of shallow projection in three lights extends the whole height of the building. At the external angle an octagonal turret is carried up with a projecting balcony carried round midway. The more modern part of the stadt house, is a bald and tame structure in the revived Italian of the seventeenth century, with three orders over each other, and is utterly unworthy of criticism, though the dormers on the roof are rather picturesque.

The beffroi, or belfry tower of the city, is of very ancient date; but the windows having been built up with brick, and all signs of decoration destroyed, it presents nothing specially worthy of notice. An ugly lantern of cast iron, surmounted by a low open spire, is now in process of erection.

Of the churches, the cathedral of St. Bavon claims the pre-eminence. It is a large and noble structure, the exterior bold and effective. The style of the work varies in different parts, commencing with the choir, which is the oldest, probably the latter end of the thirteenth century, and continuing on westward to the latter part of the fourteenth. The western tower, which is of later date, has octagonal turrets carried up in the angles, which are detached in the upper part. The window tracery is geometrical in the choir, and flowing in the nave. The exterior, generally, is rather decayed and dilapidated.

The plan of the building is a Latin cross, with apsidal east end, and multangular chapels round the choir. The piers are shafted. The shafts of the choir piers have foliated capitals. The shafts of the nave piers have no caps at the spring of the pier arches. The shafts which go up to the summit have foliated caps at the spring. There is no triforium in the nave. In its place there is a recess in the wall over the pier arches, along which a passage extends. The choir has a triforium of continuous panelling. The north and south transept windows are large and lofty, but the tracery has disappeared. The screen between the choir and its aisles, is in black and white marble. The screens of the side chapels are in coloured marbles, with columns and pediments, and statuary above. The chapels are rich in pictures. The organ is a fine Renaissance composition. It is placed against the east wall of the south transept over the arch of the aisle. The pulpit is a very beautiful piece of sculpture, having statues in marble of a man awaked from sleep by an angel, with the inscription, "Awake, thou that sleepest, and Christ shall give thee light."

The church of St. Jacques is a very ancient building, in a wretched state of dilapidation externally. The interior has been restored in modern Gothic. The plan is the usual Latin cross, with apsidal east end, and multangular chapels. The transepts do not project beyond the side aisles, which are carried out to the outside of the buttresses, forming recesses internally.

There are two towers at the west-end, and an octagonal tower and slated spire at the intersection. The western towers are Romanesque in character, with semi-circular blank arcades. The southern tower has a low octagonal stone spire, crocketted at the angles, with lower spirets at the corners. This is apparently of twelfth-century date. The North-Western tower has a slated square spire. The pulpit is rich, with a fine marble statue of Moses below. The choir screen is Renaissance, in black and white marble.

The church of St. Nicholas is also much dilapidated, the tracery knocked out of the windows, and hovels built against the exterior. The original style appears to be early thirteenth century, continued down to a later date. The plan is similar to the churches already described, the aisles carried to the outside of the buttresses. The interior possesses the main features of the thirteenth-century architecture, but they have been considerably pared away and modernized in the style of the seventeenth century. The choir has no screen, and is merely surrounded by a simple railing. There are two stained glass windows, recently inserted, of the modern Flemish school,—one by Capronnier, the other by La Roche of Brussels,—which possess considerable merit. A carved marble balustrade behind the high altar is worthy of notice. There is also some new carved woodwork across one bay, between the choir and north aisle, which is very beautifully executed in wainscot, in the Renaissance style. The tower is at the intersection of the cross, with round turrets at the angles. The turrets and towers are covered with slated spires. It has two tiers of coupled windows on each face, with flowing tracery.

St. Michel is a large cross church, with apsidal east end, of late thirteenth-century character. The tracery in the clerestory windows is, for the most part, gone. That in the aisle windows is of flowing design. There is no triforium, its place being occupied by a balustrade, in the Renaissance style. This church, in the upper part especially, has evidently been patched up and restored with small regard to consistency. The pulpit is very fine, carved in mahogany, with white marble bas-reliefs in the panels, and a group of statuary below, of Christ restoring the Blind.

The Church of the Dominicans, in the Rue de la Vallée, is a somewhat remarkable building. It is apparently of early fourteenth century date, a period when boldness of design and

* To be continued. † See p. 98, *ante*.

daring construction began to take the place of the simplicity of the previous century. In plan it is a simple parallelogram, without aisles. The buttresses are of great depth. The windows, which are brought to the outer edge of the buttress, occupy the entire space of each bay, and are faced externally by gables rising above the eaves. The internal recesses thus formed are vaulted with stone. The main roof in one span is a pointed arched barrel vault, with wood ribs, and boarded with oak shingles. The whole strength of the walls has been concentrated in the buttresses, to resist the thrust of the roof ribs, but their strength has been insufficient, the walls having yielded, and the roof is now tied with iron rods. The west front is remarkable for the enormous triple windows which occupied originally nearly the entire breadth and height of the façade. This construction, like the other, appears to have been too daring, the tracery has disappeared, and the apertures are built up with brick.

The modern public buildings in Ghent are not numerous. The university, built in the year 1826, has an octostyle composite portico, with pediment over. The details are said to be copied from the Roman Pantheon. The sculpture is hard and poor, in the worst Roman style, and the whole composition wants life and vigour.

The Palais de Justice, by the same architect (Roelandts), is a much superior building in point of design. It is in plan a rectangular parallelogram, with pedimented central projection on each front. The principal front—which, unfortunately, like too many of our own public buildings, faces the north—has a Corinthian portico, hexastyle pseudodipteral, crowned by a pediment with sculpture in the tympanum and statues at the angles and summit. The portico is elevated on a lofty rustic basement, and is approached by two flights of steps, with balustrades extending laterally on each side from the ends of the projection. The windows of the principal story are faced with Corinthian columns, pediments, and balustrades, supported on corbels, and corresponding with the sub-order underneath the portico. Altogether the arrangement and conception of this façade are exceedingly effective. The lateral staircases were a happy idea, extending the base of the portico, giving apparent strength and dignity to the centre, assisting to carry the eye easily upwards, and imparting an agreeable variety to the design.

The situation of the building is admirable, the river flowing along one side, and an open area round the three others. The interior arrangements, so far as accessible, appear to be good, with evidences of careful study, and some originality of design and construction.

Some of the modern houses in Ghent are worthy of notice for the taste displayed in their designs. We will not further allude to the subject here, as before concluding the paper it is our intention to say a few words on the modern domestic architecture of Flanders.

Let us now proceed to the far-famed city of Antwerp, which is to a much greater extent the resort of tourists than either Ghent or Bruges. Few cities present greater claims to the notice of the artist, the architect, and the antiquary. The birthplace and the residence of Rubens, and the depositary of the most precious relics of this prince of Flemish painters, it is the shrine towards which the steps of many an art-pilgrim are yearly directed. Its marvellous cathedral offers food for thought and practice for the pencil of the architectural student; whilst as a commercial city of the first class during the Middle Ages, and still retaining many of its ancient characteristics, the historical student may glean suggestive illustrations of the highest value.

Some of its street architecture, both ancient and modern, is very fine, particularly that in the Flemish modification of the Cinque cento style, the influence of which may be traced down to the present time.

The cathedral naturally claims our first architectural notice. In size and proportions it ranks in the very first class, being 500 feet long and 250 feet across the transepts. It has also the great advantage of unity of design and consistency of style, being pure Mediæval, without any admixture of Renaissance. The plan is the usual Latin cross, with apsidal east end. The nave has five aisles in the width, open without obstruction from side to side. The choir has also double side aisles, but the outer aisle is formed into chapels. Many of the windows have lost their tracery heads. That which remains is of flowing character, some of it of beautiful design. The clerestory windows are unusually large. There is no triforium, in the usual sense of the word, its place being supplied by a gallery or passage, faced with a balustrade and panelling continued down to the extrados of the pier arches. The piers are shafted in a very elaborate manner, the shafts carried round the pier arches without capitals. The shafts which run up to the upper vaulting have foliated caps.

The vaulting consists simply of pier ribs and cross springers, with bosses at the intersections. The walls of the side aisles under the windows are worked in narrow sunk panelling with trefoil arched heads. The lantern at the intersection of the cross is wood, of modern construction.

The stalls in the choir are modern, very beautifully carved, but with a certain degree of stiffness and constraint about them: some of the figures are exquisite. From an examination of some repairs going forward, it appears that the interior face of the walls is brick, covered with a thin coat of plaster.

The pulpit, situated on the south side of the nave, is a rich piece of sculpture by Verbruggen, comprising emblematical figures of the four quarters of the globe, foliage, drapery, cherubs, angels, birds of all climes, &c. The organ occupies the west end of the nave, and blocks up a large portion of the great west window. It is Renaissance in style, and very large. The orchestral gallery is supported by columns of coloured marbles, with similar balustrade.

In one of the octagonal side chapels of the choir, we observed a monument somewhat novel in style, but very effective. It consisted of a bas-relief in white marble, placed within a pointed arch, forming a shallow niche, the exterior mouldings carried up square, so as to form spandrels. The mouldings and spandrels were richly ornamented in gold and colours. Within the niche under the bas relief is placed a brass panel, on which is engraved the memorial inscription. The contrast of the white marble with the richness of its enclosing frame, so far from being inharmonious, rather seemed to add to the beauty of each.

The exterior of the minster is so completely hidden by the buildings erected round it, that it is only at the portals and the west end that a glimpse can be obtained. The portals are large and fine, but have been, to some extent, mutilated in the restoration of them. Some polychromic decoration has been introduced, with good effect.

The appearance of the west front, with its twin towers, one truncated, the other shooting up its rich coronal to the height of 403 feet, is well known, and in its particular style—that of early or middle fifteenth century work—is unsurpassed. The plan of its construction is very simple,—a square substructure in four stages, slightly recessed back in each of the upper stories, having square buttresses at the angles finished with a corbelled projecting parapet. A multangular staircase turret is carried up in one of the resilient angles of the buttresses, partially obscuring one bay of the windows. From the level of the parapet rises an octagonal lantern in three stages, crowned with an ogival coronal. The buttresses are carried up as counterforts, encrusted with tabernacle work, and connected with the lantern by flying buttresses. The tracery of the windows is peculiarly light and delicate, and the whole of the surfaces are covered with panelling, tracery, crockets, finials, &c. for which all the resources of mediæval skill and taste have been laid under contribution. In the upper part of the lantern, where there is a profusion of light and delicate shafts standing detached from extraneous support, a system of iron ties and bands has been adopted, which very judiciously *encircles* the parts to be supported, instead of—as is too often the case—letting in the iron rods and ties, and so hastening decay by the very means adopted to prevent it.

The Dominican Church of St. Paul is more celebrated for its "Calvary," with its artificial rockwork and tawdry accessories, than for any special architectural beauty. It deserves, however, a passing notice, for some peculiarities of construction. Its plan is the usual Latin cross; the transepts shallow, and the choir without aisles. The piers are cylindrical. In place of the triforium, galleries are carried over the side aisles. The south transept has an aisle carried across its south end, opening by arches into the transept,—a very unusual arrangement. The choir windows are very long, and extend nearly down to the top of the stalls: they have transoms, and are filled in with flowing tracery of rather late date. The vaulting is somewhat dome-shaped between the pier ribs, a peculiarity not common in Flanders, but very frequent in the centre and south-west of France. The west end, with its portal, has been very effective, though, in style, of late date. It is now much dilapidated. Internally, the walls are lined with good carving in wainscot, having twisted columns in the Renaissance style. A noble organ, with an orchestral gallery, fills up the western end of the nave. An octagonal tower of seventeenth century architecture, crowned with a dome and cupola, is carried up on the east side of the south transept.

St. Jacques is a large and noble cross church, with a tower at the west end. Its principal celebrity is derived from the tomb of Rubens, which is situated in a chapel immediately behind the high altar. Architecturally, the nave and choir have double aisles, the outer range of which are chapels, very rich in marbles, statues, stained glass, and pictures. The transepts have double aisles on the east side; the piers are cylindrical; the vaulting slightly domical; the window tracery of flowing design. The east end is apsidal, with multangular chapels round. The general character of the architecture is early fifteenth century. The tower is apparently of the same date as the western towers of the cathedral, which it much resembles in style, having boldly-projecting buttresses with deep recesses, incrusted with panelling and tabernacle-work. Though now of considerable height, it is incomplete, having evidently been intended to be carried much higher. The western portal is large and lofty. It bears the date of 1694, and is a curious and almost unique specimen of Gothic architecture as understood at that time. As may be supposed, the design and detail are as poor and meagre as could well be imagined. The exterior of the church is almost entirely blocked up with buildings erected against the walls.

The Jesuits' Church, dedicated to St. Charles Borromeo, is a florid Renaissance design, bearing the date of 1621. The western front is now undergoing a thorough restoration. It consists of three stages or orders. With some freedom and originality in the design, it is too much broken up into detached portions, with fritteredy patches of ornament stuck on. Internally it is fine, being somewhat of a basilica in form. The aisles have two tiers of arcades, with galleries the full width of the aisles. The east end is semicircular. Two chapels at the sides are very rich in marbles. The gates of these chapels are fine specimens of metal-work, and the altar balustrades richly sculptured in marble. The wainscotting of the walls, the confessional, and pulpit, are beautiful specimens of wood-carving. The panels are fitted in with bas-reliefs, illustrating scenes in Scripture history.

The church of St. Andrew owes most of its fame to the celebrated pulpit, by Van Hool and Van Gheel, of the Calling of Andrew and Peter. Architecturally it possesses no features worthy of special remark. It is a cross church, the transepts shallow, the choir short, without aisles, the latter being, however, prolonged two bays to the eastward of the cross. The tracery has disappeared from most of the windows. What remains is of geometrical design. The piers are cylindrical. There is no triforium. The vaulting consists of pier ribs and cross springers slightly domical.

A new church in the Rue de Malines, dedicated to St. George, is in progress, but the works seem to be at present suspended. The architecture is in a very good style of late Pointed, having a little of the Flamboyant cha-

racter. The depth of the projections and recesses gives great boldness and vigour to the design.

Of the secular buildings, the Bourse is, on many accounts, the most interesting. Erected in the palmy days of mediæval commerce, it furnished Sir Thomas Gresham with the model for his own Royal Exchange of London, which was but a humble copy of its continental original. How different have been the fortunes of the two erections! Whilst the younger edifice has been twice a prey to the flames, and has each time risen from its ashes with expanding vigour and increasing splendour, until it has become the centre of the world's commercial transactions, its prototype has quietly dozed down the march of time a monument of departed greatness. The situation and arrangement of the building are somewhat peculiar, though well adapted for its purpose. It is placed at the intersection of two lines of streets at right angles, which abut upon the centre of each face of the building, so that the only external façades it presents are those closing the ends of the four streets. Within it consists of a quadrangle, with a surrounding cloister, having an upper story. The architecture is debased Gothic, of the date 1531. The front is supported by slender cylindrical columns, having shallow tracery or panelling of various patterns worked on the shafts. The cloister is groined with stone, with tracery of very complicated design. The vaulting, pressing outwards on the slender columns supporting the front, has required the introduction of iron ties, by which the edifice is now bound together, both laterally and transversely.

Within the last twelve months a roof of iron and glass has been thrown over the centre quadrangle.* The execution of this work required more than common boldness and skill. The old building was so ricketty, that no support whatever could be permitted from that quarter, and the introduction of cross ties was deemed objectionable, probably from the lowness of the structure. These difficulties have been overcome in a most skilful and scientific manner by the architect, M. Marcellis, of Liége. The size of the area covered is 140 feet by 100 feet. The roof is formed by four cast-iron ribs at the angles, and two on each of the four sides, springing from strong cast-iron columns, and abutting against the rim of a large oval lantern in the centre. The unequal lateral thrust of the ribs at the sides, compared with those at the angles, is overcome by a very ingenious application of a simple geometrical principle. All the ribs except the hips are projected over to such a distance beyond the supporting column that they are all the same length. The extremities being tied by strong iron bars, form a regular polygonal figure, counteracting the lateral thrust, and supported by the iron columns, entirely independent of the building. The projections alluded to are not visible, being hidden by the roof of the building surrounding the quadrangle.

The Grand Theatre is a large and spacious building of classical design. The entrance front is a composition of considerable merit. The basement is open, with an attached semi-circular colonnade on the principal story of the Corinthian order, having niches in the intercolumniations, filled with busts of Mozart, Racine, Molière, and other dramatic writers and composers. On the entablature statues are placed over each column.

* A view of this was given some time ago in the *Builder*.

WAGES WITH STOPPAGES.

The truck system has more than once formed a subject of legislative inquiry and enactment, on account of the rascality by which, through its means, the poor working classes have been cheated of the fruits of their labour. If what is represented to us be true, there is another system of stoppage of wages to which the Legislature, and even the Government, would do well to turn their immediate attention. We allude to the frame rent system of the frame-work knitters in the midland districts. Under this system, it is alleged that it frequently occurs that where a master has a certain number of frames in his premises, for which it is the custom to charge a weekly rent, payable by those who work at them for the frame proprietors themselves or while in their employment, the master, instead of employing only so many operatives as may be able to earn a sufficient livelihood, will, if possible, employ as many of these poor people as he has frames for them to work at; and that he makes it his object to give each, in the first place, only so much as will pay himself the rents demanded for being allowed to work at the frames, so that when each may thus earn 3s. 6d. only in the course of a week, as often happens, they actually get nothing for their labour. Nay, that in cases where the frame has been idle for several weeks, the rent for all these weeks is first deducted, so that as lately occurred, one poor workman had to pay 9s. 1d. out of 9s. 2d. or rather was paid one penny out of 9s. 2d. earned by his labour! In another case, brought in vain before the magistrates, a master who "did not like to be hard with" the unfortunate who worked for him, liberally gave him 6d. out of 5s. 11½d. thus earned. There is something so incredible—so abominable in such a system, that for the sake of humanity we do hope it is much exaggerated; but if not, the Government ought to look to it; for it would seem to explain much of the turbulent spirit not seldom manifested amongst the frame-work knitters of the midland district. Here, in solemn earnest, are, in that case, the seeds of revolution. This is the tinder or the explosive train which only awaits the spark, and its action will be sudden and unexpected, and may rouse thousands, and tens of thousands, who may have their own special subjects of discontent, real or imaginary, but have no other interest in common with these poor unfortunate frame-work knitters. At this moment, we do not hesitate to say that, throughout the whole country, disturbance could thus and otherwise be but too easily excited. There is a chafed feeling amongst these poor frame-work knitters against our legislators, for allowing the iniquity of which they complain to continue, in spite of efforts to put an end to it, so that our legislature as well as our Government, ought to give the subject their most serious attention. Petitions are meantime being prepared, with the view of once more trying to put an end to this frame rent stoppage of wages, allowing the employers of course to substitute a modified rate of money wages for labour actually done. Why should frame-work knitters pay rent for frames any more than ploughmen for ploughs, spinners for spinning machines or steam-engines, clerks for desks, or workmen in general for their masters' benches and workshops?

THE LOCAL MANAGEMENT OF THE METROPOLIS.

The Bill brought into the House of Commons by Sir Benjamin Hall, for the better local management of the metropolis, seems calculated to effect improvement to a great extent. As it will not be brought up for second reading till the 16th of next month, we may defer particulars for a week. It is much to be regretted that Sir Benjamin Hall should have been led to repeat his charge against the district surveyors for neglect of duty touching the occupation of cellar dwellings, in the face of the legal opinions expressed, and the strong evidence to the contrary which was laid before him.

CHURCH-BUILDING NEWS.

Great Horkesley.—Two windows have recently been placed in Great Horkesley Church, in memory of a late rector. The glass is by Wailes. The subjects are "The Sower," from St. Matthew; "Christ blessing Little Children," from St. Mark; "The Good Samaritan," from St. Luke; and "Feeding the Multitude," from St. John.

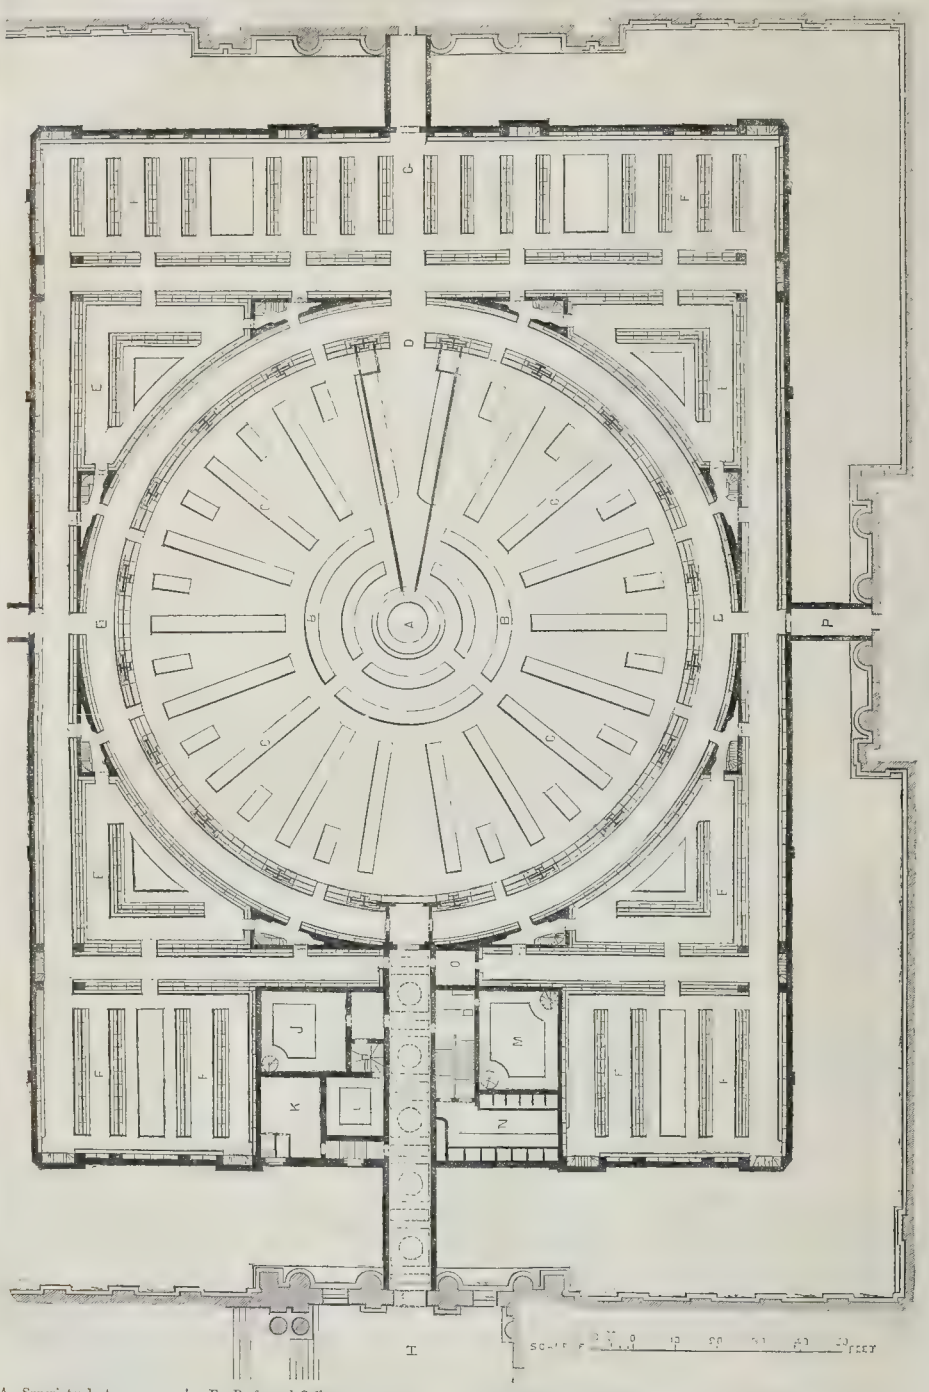
Norwich.—Scaffolding has been erected outside the west side of the tower of Norwich Cathedral, and men are now engaged in restoring the exterior, after the original design. The work is being executed under the superintendence of Mr. John Brown, architect to the Dean and Chapter. One of the fronts of the tower was restored in cement some time since; but in the present instance stone is to be used.

Stamford.—We stated lately that the new burial-ground here had been consecrated by the Bishop of Lincoln. The chapels are nearly alike in the interior: they are floored with Minton's Staffordshire tiles, and have stained deal roofs; but the string-course under the plate of the roof is plain in the Dissenters' chapel, while that in the Episcopal chapel is inscribed in illuminated letters.

Tiptree-Heath (Essex).—A new church is to be erected here, to hold 500 persons, at a cost of about 2,000*l.* Messrs. Christian, Laing, Watson, and Hayward, and a gentleman of Colchester have been invited to submit designs in a private competition. The drawings were to be sent in on 17th inst.

Romsey.—Braishfield New Church, erected mainly during the past year, was consecrated on Thursday before last by the Bishop of Winchester. The building has windows of pointed Gothic, with a south entrance. The interior consists of a main and north aisle, the latter having been added at the expense of the Rev. J. Davis, and as a memorial token to his late wife. The church was erected by Mr. Petty, of Wellow, and the benches were fitted up by Mr. Wheeler, of Romsey.

Over Tabley.—The new church at Over Tabley, near Knutsford, Cheshire, was consecrated by the Bishop of Chester, on Tuesday before last. The edifice is situated close to the high road to Northwich. It has no tower. The building is sufficiently capacious to afford the church accommodation required in the neighbourhood, and is similar to the new church at Bollington, near Altrincham.



Harpurhey (near Manchester).—The Union Chapel, Queen's-park, Harpurhey, was opened on Thursday, March 8th. The general plan of the building is in the form of a parallelogram, with a tower on the north-west angle. The tower contains the gallery staircase, and a smaller turret is carried up with it, which has an open belfry, with crocketed spire and vane, altogether 90 feet high. The main entrance is in the centre of the front to Rochdale-road, and is formed with a large archway which spans the porch. On either side the porch are the doors leading to the interior. The roof is of novel construction, having two trussed tie-beams running parallel with the length of the chapel, thus dividing it into three parts. The centre part or nave, extends the full length of the building, and includes the recess which contains the choir at the east end. The roof is overlaid with boarding, and asphalte roofing felt is placed between the boarding and the slates. From the point of the roof are suspended three chandeliers. The back gable is pierced with a circular window filled with stained glass. Underneath the orchestra is a lecture-room, and on one side is the minister's vestry, on the other a staircase to the organ-gallery. The style of the architecture is Decorated, chiefly expressed in the window tracery and carving; the other details being exceedingly simple. The outside length of the building is 90 feet, and the outside width 46 feet. There is now accommodation for 700 persons, and when the side galleries are added, there will be a total accommodation for 900. The cost of the whole, including heating apparatus, gas fittings, upholstery, gates, railings and fences, architect's commission, &c. will not exceed 2,100*l.* The architect is Mr. R. Moffat Smith, of Manchester; and the contractors Messrs. Farrell and Griffiths, of Lower Broughton.

Barnsley.—A stained-glass window, by Hardman of Birmingham, is being put up in the east end of St. George's Church here, at a cost of upwards of 200*l.* defrayed by voluntary subscription.

Gateshead.—The decision of the rector and churchwardens, according to the *Observer*, was formed on Monday week, when the whole of the works required for the restoration of the parish church were let, in one contract, for 1,127*l.* to Messrs Kyle, who will perform their task under the superintendence of Mr. Dobson, architect.

Destruction of the Opera-house at Dessau.—The Opera-house at Dessau, one of the largest in Germany, was burnt to the ground on Wednesday, the 7th inst. The building was completely gutted in a few hours. The front portion of the building has been preserved.

THE NEW READING-ROOM, BRITISH MUSEUM.—Mr. Sydney Smirke, A.R.A. Architect.

THE OPENING OF NEW BRANCHES OF INDUSTRY.

AN anonymous writer in the New World, has somewhat skilfully grouped together many of the wonderful exchanges which free-trade and advancing civilization have effected, and the spirit of enterprise brought to their shores. The picture is almost equally true and graphic when applied to either hemisphere. To take a condensed view of the opening of new branches of industry:—Among the two or three hundred thousand vegetables and animals that God has created, to satisfy our natural and artificial wants, there are very few that we have yet acclimated or domesticated, or know how to employ. However few they may be, we continue to increase them, and our power to make acquisitions would appear to have no limits but those of creation. A considerable number of the plants which grow among us, have been brought very recently from climates quite different from ours. It will be useful to notice this fact.

Thus, Asia has given us hemp, the cherry, the peach, the French bean, the tarragon, the onion, rhubarb, mint, the mulberry, the citron, the lime, the orange, the chesnut, the pine of Siberia, the pine of Jernsalem, the plane-tree of the East, the aloe, the rose of Provence, the mallow rose, the millet, the cypress, and so forth. Grain and buck-wheat we get from the Levant, and the olive from Africa.

Europe has borrowed from America the potato, the maize, tobacco, the banana, the love-apple, the strawberry, the medlar-tree, and a hundred other trees, fruits, plants, and flowers.

Within three or four centuries Europe and America have been literally invaded with vegetables from all parts of the globe. We live almost entirely upon what has been borrowed from other countries, and it is but the advance guard of the immense quantity and variety which science, and the rapid intercommunication between the different parts of the world will give us. We are at liberty to choose from the general herbal of creation all that suits us.

An inventory of all the riches we appropriate would be a long one. It would be almost endless labour to give such a catalogue of creation. To glance at a few only of the alimentary plants,—the *arto carpe* (so precious to the inhabitants of Tahiti), the *sagotier*, the palm cabbage, the bamboo of Celebes (of which the young sprouts have a delicious flavour), the cocoa-tree (of which the fruit is both meat and drink), the gum-tree, the bread fruit, the sugar-palm, the plantain, and banana; the tamarind, the *papaver*, the mangosteen, &c. Among the textile plants, may be noticed the New Zealand flax and the *abaca* (*artica utilis*), a kind of flax in the Philippine Islands and China, of which the Chinese make the most superb stuffs. Of the trees for cabinet-making, for building, and for the masts of vessels, a thousand might be taken from the pines, the cedars, the ebony, the sandal, and the satin wood. Then there are trees which yield us gums, resins, tinctures, and medicines; the spice-tea, and tea-plant; and a number of others, not so useful perhaps, but which would delight us with their beauty and fragrance.

To speak of the animal kingdom: how many more kinds might we domesticate than we have? M. Jeoffry St. Hilaire cites several in his memoir upon the utility of a menagerie of acclimatization, those great antelopes, which would furnish an abundance of healthy food; the Peruvian sheep, of which the wool is so fine and soft; the tapir, larger than the pig, and as easy to feed, the flesh of which is very agreeable and wholesome, and which might be made useful as a beast of burden; the lama, the alpaca, &c. Again, among birds, if we direct our attention to the subject, we shall discover many other kinds worth introducing or domesticating, for their flesh, their eggs, or their beauty. With respect to fish also, our rivers or our streams and small lakes could be peopled with a vast multitude and variety of the finny tribes. Fish increase very abundantly, and science will teach us to transform those of the sea into fresh-water fish. Carp did not appear in England till the sixteenth century, and the plaice of the North Sea have multiplied infinitely in the ponds of the New World.

PROVINCIAL NEWS.

Lynn.—The Public Baths Committee here, having come to a resolution in favour of annexing washhouses to the baths already decided on, have called a meeting of the subscribers to consider that proposal.

Newark.—Since the destruction of Kelhambridge, the county magistrates have met and resolved to re-erect a new bridge on the same site. They have appointed a committee to ascertain as to whether the new bridge should be of stone or on the suspension principle.

Clitheroe.—Out of the four tenders selected from eighteen, received by the directors of the Clitheroe Waterworks Company, for making a reservoir and laying upwards of twelve miles of main pipes, the tender of Mr. Ibbetson, of Blackburn, was selected. The works are now being carried out from the designs and under the directions of Mr. McLandsborough, of Bradford, the company's engineer.

Oldham.—One day lately, eighty-three persons were summoned before the General Purposes Committee, and fined 2s. 6d. each, for not having whitewashed their dwellings within seven days after the 1st of March.

Chester-le-Street.—The local guardians are about to erect a new workhouse here, on an elevated site south of the town, and from the designs of Mr. Matthew Thompson, of Newcastle, architect.

Newcastle and Gateshead.—"Our friends at a distance," says the *Gateshead Observer*, "are often sorely perplexed by the sister boroughs at Tyne Bridge." In reference to a note of ours as to a music-hall, it is then explained that "the Mayor of *Gateshead* was presiding over a company in *Newcastle*, when he threw out the invitation to his fellow members of the Sacred Harmonic Society; and it was in that town that the 'castle in the air' was to be conjured into existence."

Witton.—The Wear Valley Railway-bridge across the Wear, at Witton Park, has been completed. It is built (on piles) in stone, with six brick arches, and is 375 feet in length. The rails run at the height of nearly 68 feet above the level of the water, and the parapet is nearly 71 feet above that level. The three centre arches are askew at an angle of 66 degrees, with a rise of 22 feet, the span of each being 66 feet on the skew, and 60 feet 3 inches on the square. The two end arches are square, with a span of 47 feet, and a rise of 19 feet 3 inches.

ROAD BOOKS TO ART.*

"IF from all that has been written on painting," says Mr. Leslie, in his preface to "A Hand-Book for Young Painters," the truth could be brought out, and presented clear from every ambiguity of language, the student of the present day would stand in little need of further guidance." And his aim has evidently been to strip theory of ambiguity, in imparting the knowledge derived from years of practical experience, and to assist in clearing a proverbially long, toilsome path of some of its besetting brambles, difficulties almost sufficient to discourage the most adventurous of aspirants.

The lectures delivered at the Royal Academy, during the author's professorship, form the basis of this very interesting volume, which independently of its value to the student, has a charm for the most general reader. While recommending it cordially, we would remind "young painters," that the necessity for individual exertion—manual and mental—precedes theory, however preceptive and comprehensive — there is very much more to be learned besides laws and rules; yet the guide is indispensable—practice is as likely to lose its way by lagging behind as getting too far in advance of it. It must further be remembered that, "it is not the length of time spent in study that is to make a painter of you, but *how* you spend that time. Try to keep in mind the greatest things, and secure these first."

It must not be expected that rules will give a royal road to art. "There is, I believe," says our author, "a good deal of what may be called honest quackery among painters; quackery, I mean, which those who practise it mistake for sound doctrine. One safeguard against this is, to beware of all rules that promise an easy acquirement of the art, and to mistrust our own dexterity when we find it saving us the labour of thought."

"There is no easy way of becoming a good painter", wrote Sir Joshua Reynolds, and it is an undeniable fact. Early use of the brush is advocated, and fine colour considered as essential an element as fine drawing. "But colour, it is, said, is sensual as addressing itself to the sense of sight only, and not to the mind."

After ably combatting this objection, Mr. Leslie says, "I can never, therefore, think that Venetian or Dutch colour can do otherwise than exalt the highest subjects; and it seems to me a most injurious error for painters to consider colour a thing that may be either neglected as a minor excellence, or deliberately rejected as inconsistent with other qualities."

Instruction, founded on thorough knowledge of the subject, conveyed so concisely as it is in this volume, can be appreciated by any reader.

The illustrations that embellish it are well selected, as examples of the various great masters, and make it a book for the drawing-room as well as the studio.

A series of very useful lessons in water-colour drawing, has been compiled by Mr. George Barnard, in his "Theory and Practice of Landscape Painting," in which Messrs. Leighton, Brothers' chromatic process proves an efficient assistant to the amateur and an admirable auxiliary in demonstrating the directions of the master to the pupil. With very little other help, one might cultivate a taste for sketching from nature, and those who are at all advanced in acquiring the ability, will be wise to avail themselves of the means afforded by this treatise of furthering it.

Mr. Charles Martel dissertates cogently, chiefly on the modification of colour by contrast, as pointed out by Chevreul, and makes a variety of useful deductions for the advantage of those who will not trouble themselves to master more elaborate works.

* "A Hand Book for Young Painters." By C. R. Leslie, R.A. (John Murray, Albemarle-street.)—"The Theory and Practice of Landscape Painting in Water-Colours." By G Barnard. Wm. S. Orr and Co. Amen-corner.)—"The Principles of Colouring." By C. Martel. (Winsor and Newton, Rathbone-place.)

STREET-WATERING.

ON a hot day, near the end of last July, I saw in the clean-swept streets of Cambridge what I do not remember to have seen anywhere else, namely, water, pure and bright, from a public fountain, running in the channels outside the footpaths,—and the effect was most grateful to the senses. If I mistake not, the water is brought by the small canal, named Hobson's stream, to the fountain in the market-place, and is there set free, to proceed on its refreshing and purifying mission. An excellent individual, no doubt, was Hobson; and happy are the dwellers on the classic Cam in having been peculiarly that Hobson's choice. The water, be it noted, comes by way of the *Trumpington*-road. The channels (not kennels), I think, were sunk and parallel, and, therefore, tidy, and easy to step over.

It has occurred to me that the above method of watering the streets might be much improved upon, for the Cambridge carriage-ways were quite dry. In those of the leading thoroughfares of the metropolis, I should think, rectangular cast-iron pipes, narrow and deep in their proportions, might with advantage be sunk, flush with the surface, transversely to the direction of the street, connected with the mains of the water-companies, and perforated along their upper side, to permit the escape of the water. The water-cart in those thoroughfares would thus be superseded, and their contents no longer, at the touch of the driver, take the shine out of our boots: the way would be cleared of a slow-going vehicle, and the distribution of the water would be more equable. A turncock would have the charge of turning on the water, and would adjust the pressure, so that it should just run over at the perforations: the longitudinal slope and transverse convexity of the street would carry it forward, with a sideward tendency: the distances of the pipes would be regulated with reference to the efficiency of the slope, which few streets are without, it being usually given to them, for drainage purposes, where the ground may happen to be level. Where the street was but slightly inclined lengthways, a herring-bone arrangement of the pipes would ensure the water performing its office before running off at the sides; and if in any case it was perfectly level, they might might be laid longitudinally in the centre.

J. W.

THE INSTITUTION OF CIVIL ENGINEERS AND THE METROPOLITAN SEWERS COMMISSION.

SIR,—In the course of a recent discussion, at the Institution of Civil Engineers, on the flow of water through pipes, reference was made to a paper of mine, published by the Metropolitan Commissioners of Sewers, and entitled "Memorandum on the Data employed by Mr. Bazalgette in determining the Sizes and estimating the Cost of the Works designed for the Main Drainage of the Metropolis."

The first paragraph of this paper, which was quoted, in terms of disapproval, by one of the most distinguished speakers on that occasion, runs as follows:—

"Mr. Bazalgette has, I think, fallen into unintentional error in his mode of applying the formula he employs to calculate the sizes of the great intercepting sewers.

He says ('Data,' p. 4) that the various formulæ propounded lead practically to the same results. So far is this from the truth, that De Prony's formula, based on the results of Dubuat's experiments, leads to conclusions totally different from those obtained by Eytelwein's formula, with the modified co-efficients which he deduced from the experiments of Brunings, Woltmann, and Funk, on larger streams of a wider range of velocities. De Prony's formula applied to this latter class of cases, gives results which, as Claudel states ('Formules,' p. 110), deviate in some instances from the truth by no less than 29 per cent. The approximate formula adopted by Mr. Bazalgette, and applied in the manner he describes, to determine the discharging power of each tunnel, 'at all those points where a change in its dimensions has been made,' leads necessarily, I think, to fallacious conclusions.

For, the discharging power of any point (*a*) of the tunnel assumed as running full bore, having been thus computed, it is assumed by Mr. Bazalgette that any additional influx brought into the tunnel by a branch *below* that point, would require as much increase of capacity as an equal influx *above* that point,—a conclusion obviously erroneous.

Mr. Bazalgette's mistake lies, I think, in the assumption of constant parallelism between the declivity of the running stream and that of the channel in which it flows; whereas this parallelism is liable, in the case of sewers receiving branches, to continual disturbance; seeing that, while the declivity of the channel remains fixed, the declivity of the stream varies with every increase of its velocity.

Such increase of velocity is doubtless partly determined by the accelerating force of gravity, as the stream runs down the channel; but it partly, also, results from the head or momentum of the branch streams coming in, and producing a quickened flow of the resultant mass.

Hence it happens that a tunnel running full bore at the head may take in a number of collateral streams at different points of its course, without requiring any increase of its capacity; room having been made (so to speak) for the additions, by the quickened speed, and therefore diminished section of the original stream."

In the course of the debate, as reported in a paper issued from the private press of the Institution, certain experiments conducted by Mr. Medworth, under the Trial-works Committee of a former Commission, and referred to in my "Memorandum," were stated "to have cost 7,000*l*.;" "to have been tampered with and perverted, apparently with the object of fitting them to preconceived theories;" and "to have given results utterly worthless for all practical purposes."

In stating that the experiments in question cost 7,000*l*. the eminent speaker fell into an error, which I have no doubt was inadvertent, and which, I am sure, he will be the first to acknowledge and regret. The accountant of the Metropolitan Sewers Commission, to whom I referred this point, assures me that the sum in question includes the whole cost of all the experiments ever made by the Trial Works Committee, as, for instance, the sewage irrigation experiments, the street cleansing experiments, the establishment of improved kilns for the manufacture of pipes, hollow bricks, &c. besides sums expended in clothing for the men, and in other stores available for general purposes. I have requested the accountant to dissect the figures; and I shall have much pleasure in communicating the result to the honourable Institution of Civil Engineers, who, I am convinced, will readily withdraw an imputation which they will see to be groundless.

With reference to the speaker's assumption that Mr. Medworth's experiments on waterflow were "tampered with and perverted to fit them to preconceived theories," there is sufficient internal evidence in the printed results of the experiments, to exonerate Mr Medworth from this very serious charge; which must, I think, have escaped the speaker in the warmth of impromptu debate. Thus, for instance, in one of Mr. Medworth's diagrams, showing the time required to discharge 50 cubic feet of water through 100 feet of 4-inch pipe, laid at varying inclinations, and with varying heads, the velocity of discharge is seen to have increased with the declivity up to 1 in 120; but at higher rates of fall the results appear anomalous and irregular, an increase of slope from 1 in 80 to 1 in 10 giving often no appreciable improvement of the discharge. This curious, and at first sight perplexing result is, I think, susceptible of explanation; in which opinion I have the concurrence of an engineer whom I have consulted on the point, and who is profoundly conversant with this department of hydraulics. But the faithful record of anomalies so likely to excite suspicion of his care and accuracy, tends, I think, to prove that Mr. Medworth simply stated what he saw, and was too honest to "tamper" with his results.

In reply to the allegation that these experiments were practically worthless, I would point to the incontestable value of one of the results they elucidated; the only one, indeed, on which, in the paragraph quoted from my paper, I had occasion to lay stress, viz.—that a pipe, fed by branches at intervals along its course, discharges more than a similar pipe supplied only at the head.

The honourable Institution of Civil Engineers will not, I think, on consideration, deny either the fact here stated itself, or its practical bearing on the determination of the size and cost of Intercepting-sewers. These sewers will receive collateral streams at many points along their course; and it would be a waste of public money to provide in the main tunnels an amount of space equal to the collective areas of all the tributaries. A tunnel so calculated would certainly never run full; and its excessive capacity, while increasing its cost, would impair its scour, and render it more apt to silt up.

These experiments, and others of the same sort, made under the Trial-works Committee of the first consolidated Commission, though, probably, like those on which Eytelwein and De Prony themselves rely, open in some respects to criticism, prepared the way for the introduction of tubular sewers and drains, of which 380 miles, varying from 3 inches to 20 inches in diameter, are now working successfully in London, with a saving of more than 200,000*l*. cost to the public. This splendid result surely justifies the relatively trifling outlay that was incurred in the experiments which prepared its achievement.

With respect to a passage quoted in my "Memorandum" from Claudel's "*Formules*," p. 110, to the effect that De Prony's formula, when applied to a particular class of cases, gives results deviating from the truth in some instances by no less than 29 per cent. it is stated in the authorized report of the debate, that on reference to the work quoted by me, "it appeared that no such passage existed."

In reply to this grave imputation, I subjoin, in Claudel's original French, the passage referred to, of which, for convenience, I add a literal translation:—

"La formule de Prony, modifiée par les nouvelles valeurs de *a* et *b* d'Eytelwein, convient mieux au cas des grandes rivières; mais elle ne s'applique pas également bien aux quatre-vingt-onze expériences discutées par Eytelwein; ainsi, pour vingt d'entre elles, les vitesses données par la formule s'écartent de 0·11 à 0 29 des vitesses observées."—*Formules, &c. par J. Claudel, p.* 110. *Paris*, 1849.

"The formula of Prony, modified by Eytelwein's new values of *a* and *b*, applies better to the case of great rivers; but it does not agree so well with the ninety-one experiments discussed by Eytelwein; thus, for twenty of them, the velocities assigned by the formula differ from the observed velocities by from 0 11 to 0 29."

The minimum deviation here stated, it will be observed, is 11 hundredths, and the maximum, 29 hundredths, *i. e.* 29 per cent.

The report contains other charges, susceptible of equally easy refutation; but I forbear further discussion of these ungrateful themes. I will not believe these errors, authoritatively promulgated as they are, to be otherwise than inadvertent; nor will I suffer them to diminish my esteem for the engineering profession, whose many splendid works I regard as an honour to our country. The engineers, on their part, will not I hope take amiss my brief refutation of charges, reflecting not only on my own character, but also on that of the Commission to which I have the honour to belong.

F. O. WARD.

A FEW THOUGHTS ON THE STATE OF THE FINE ARTS IN ENGLISH SOCIETY.

IT is a theme, I believe, often played upon by our continental neighbours, that the English, as a nation of shopkeepers and contractors, have no taste for the fine arts. As an Englishman, and one professionally engaged in one branch of the fine arts, I feel a pang of regret come over me, because it is in a great measure true. Should any one doubt this, I would advise him to do as I have done, viz. go to the fine art corridors of the British Musum, the National Gallery, and the Architectural Courts of the Crystal Palace, and watch the visitors, and listen to the remarks of the varied groups who come and depart, and he will then find that two-thirds of the number will either excite his pity or contempt, and in many instances both. The ignorance of the concatenation and history of art, together with the elements that constitute the really beautiful in a work of art, be that art architecture, painting, or sculpture, is often as great in the educated gentleman as in the unlettered ploughman. This is a defect wofully seen in the greater portion of the middle classes of society, thus proving that the defect is owing in a great measure to our systems of education, in which the fine arts are almost universally left in the back-ground, as if they were some dry philosophic lore. If we turn to our mechanics' institutes, our literary and scientific institutions, scattered throughout the length and breadth of our land, what do we find the general tone of their lecture-lists to be? Alas! far from what they ought to be. They are generally replete with lectures of mere amusement, a scientific lecture being the exception. I have seen many in the western, eastern, midland, and southern counties, and such has been my experience. Their various committees seem to pander to the public instead of endeavouring to elevate it—to raise the higher and intellectual portions of our nature to their proper position. To accomplish this is no mean object; but this is the mission of the fine arts to

"This dim spot which we call earth."

Truly is the ark of science and the fine arts afloat on some unknown sea, and we can scarcely trace her course through the clouds which every way gather round her.

Music for some has no charms: poetry for others has no perspicacity or beauty: the sublime conceptions displayed in a great painting, to some are a dead letter: to others, the Minerva of Phidias would be no more than a mere mass of marble, carved into the shape of the human figure; or perhaps the beauty of the marble would excite more of their attention than the grandeur of art displayed in the proportional parts, and the exquisite beauty of the anatomical portions; whilst in the other, the vivacity of the colours raise the value of the picture more than the genius evinced in its conception. But on by far the greater number, the lines of beauty conveyed by architecture in living representations to the soul, rest there as if in the soul of an automaton.

"Surely the time shall come
When this fine overplus of might,
No longer sullen, slow, and dumb,
Shall leap to Music and to Light."

So sang the poet, and shall it not be so? Of a truth the fine arts shall yet ascend to their proper position in the scale of our being, for their study cannot fail to lead our minds

To truth's eternal source,

and enable us more and more to glorify the Almighty Creator of the Universe.

F. E. D.

BUILDERS AND THEIR TENDERS.

Burial-Board Equity.—The Portsea Burial Board, anxious doubtless to do their duty to the ratepayers who are their constituents, by getting the chapels and other works at their new cemetery erected at as reasonable a rate as possible, advertised for tenders to that effect, and obtained ten separate offers, ranging in amount from 4,516*l*. to 3,605*l*. 12*s*. The right man not appearing on this list to be in the right place, the Board directed the cards to be shuffled again, on the ground that the sum total must be reduced as much as possible, by the omission of something that could be dispensed with, as well as by the competition of the tenderers themselves, eight of whom were accordingly again applied to for new and reduced tenders. Four of those applied to do not seem to have thought it prudent or worth while to waste any more time, so that four only of the original tenderers remained to be dealt with. Now it so happened that the lowest tenderer on the first list was also the lowest on the last, and that accordingly, having thus doubly committed themselves, by a special and formal second request that he in particular *would* tender, thereby foreclosing themselves from all pretence of rejection on the score of insufficient respectability or anything else objectionable on the part of the tenderer, Mr. Callaway,—the Portsea Burial Board were of course bound, in honour to themselves as well as in justice both to their constituent ratepayers and to their tenderers, to accept the terms on which Mr. Callaway had thus twice secured the preference. Nevertheless, this only fair and honourable way of settling the matter was not taken. The tendering firm who stood the highest, on the first list, of all the four who latterly re-tendered, were the favourites of fortune. The amount of their first tender was 4,200*l*. The amounts of reduction made by the other three tenderers of the second order were

respectively 663*l.* 10s., 515*l.*, and (Mr. Callaway's), 501*l.* 8s. The firm who were destined to have the preference, right or wrong, made a strong effort certainly to deserve it, for they cut off 1,025*l.* from their first tender: still, however, they stood 70*l.* short of the mark, and it remains for the Portsea Burial Board to explain to their ratepaying constituents why they chose to make a clear present of 70*l.* out of the ratepaying pockets to any favourite of their own.

Withdrawal of Tenders.—Messrs. Faudell and Co. complain that, having received tenders from four well-known builders, varying from 1,100*l.* to 417*l.* for certain proposed alterations, the firm who made the lowest tender have since declined to ratify the contract: they wish to know the custom on this point and our opinion. Although not a desirable proceeding, it seems to us there are various circumstances which might justify such a course. If, as in this case, for example, the parties tendering discovered an important error in their calculations before entering into *mutual* engagements, we should certainly not think it dishonourable if they declined to proceed farther. What the legal position of the parties may be we cannot say: this would depend on the special facts of the case.

THE ART-UNION OF LONDON ILLUSTRATIONS.

THE volume of "Illustrations of Childe Harold" produced by the Art-Union of London (to a copy of which *every* subscriber of the current year is entitled, in addition to an engraving after Chalon), is by far the best set of wood engravings yet issued by that Society; in fact, it would scarcely be too much praise if we said it is the best thing of its kind yet done. It contains thirty designs by Ansdell, Cope, R.A., Corbould, Dodgson, E. Duncan, Faed, James Godwin, F. Goodall, A.R.A., Gilbert, Holland, Hulme, Hart, R.A., Leitch, Lake Price, H. C. Selous, Tenniel, and Wehnert, and a portrait of the poet. The engravers are Messrs. J. L. Wiliiams, Dalziel, J. Thompson, W. J. Linton, W. Measom, H. D. Linton, W. T. Green, F. J. Smyth, and M. Jackson. Many of the designs are remarkable for a poetical feeling and sentiment not often found in wood engravings; take, for example, the "Bridge of Sighs," by Mr. Lake Price,

"A palace and a prison on each hand;"

the Hall of the Childe's Father, by Mr. Hulme, bathed in a flood of moonlight; Mr. Faed's Rustics gazing after a departing Son (though a reversal of the lines quoted); and Mr. Ansdell's illustration of,—

"Then to the dogs resign the unburied slain,
Then to the vulture let each corse remain."

Mr. Leitch's Storm amongst the Mountains,—

"With night, and clouds, and thunder, and a soul
To make these felt and feeling;"

Mr. Tenniel's Baronial Feud, where love,

"Through all the mail of iron hearts would glide;"

Mr. Wehnert's "Tasso,"—

"Hark to his strain! and then survey his cell!"

and Mr. Duncan's rendering of the magnificent apostrophe to the sea, beginning—

"Roll on, thou deep and dark blue ocean—roll!
Ten thousand fleets sweep over thee in vain;"

all demand more than ordinary admiration.

Mr. Cope illustrates The Departure,—

"The sails were filled, and fair the light winds blew;"

Mr. J. Godwin,—

"Maidens, like moths, are ever caught by glare;"

and Mr. Hart, "Blind Old Dandolo," and "The starry Galileo."

We must add, that Mr. Murray is preparing an edition of the poem, in 4to, expressly for the use of those members who may desire to bind up the text with the illustrations of which we have spoken.

Notices of Books.

VARIORUM.

"THE Golden Colony; or, Victoria in 1854," is a neat little book by Mr. G. H. Wathen, known to our readers as the author of "Arts, Antiquities, and Chronology of Ancient Egypt." The present volume (published by Messrs. Longman and Co.) embodies much interesting personal experience in the colony and among the gold-diggers, from the first dawn of the golden sun of Australia down to a recent period. It is illustrated with original sketches, by the author, including some characteristic traits of the "diggins;" and also contains remarks on the geology of the Australian gold-fields, with maps, &c. The whole forms a pleasant as well as instructive compendium, both for emigrants and for those who have no intention to emigrate.——"Fenn's Compendium of the English and Foreign Funds," &c. is a reliable work, revised and re-edited by Mr. H. Ayres, the editor of the *Bankers' Circular*. It contains a large mass of information as to the funds, debts, and revenues of all nations, banks, railways, mines, and joint-stock companies, forming in all an epitome of the various objects of investment and speculation negotiable in London; with explanatory tables, and stock-exchange regulations. The present is the fifth edition, but though nominally Fenn's, it is really Ayres's as much as if it had been an old building, comprising valuable building materials, re-erected into a new and more extensive mansion. With the date 1855 on the title-page, however, we ought not to meet with a slip such as the following, touching the 3½ per cent. annuities. "The present rate of interest on this stock is to continue until the 10th of October, 1854, and then to be reduced to 3."——Messrs. Trübner and Co. of Paternoster-row, have just issued in this country the Boston "Annual of Scientific Discovery, or Year-book of Facts in Science and Art for 1855;" edited by Mr. D. A. Wells, A.M. Those who possess the previous volumes of this valuable annual will be glad, we are sure, to know that a new one is now in store for their perusal.——"Mensuration made easy; or, the Decimal System for the Million, with its Application to the Daily Employments of the Artizan and Mechanic," is a shilling tract published by Mr. Wilson, of the Exchange, and prepared by Mr. C. Hoare. It seems to do justice to its title, and is simple and intelligible.——Mr. J. J. Scott, Barrister-at-Law, has had published by Knight and Co. Fleet-street (the publishers to the General Board of Health), two useful little volumes, or tracts rather, one a manual for the Clerk to a local Board of Health, containing directions and instructions as to his appointment, duties, responsibility, &c. so that any one who wishes or requires to look into the duties of such an office can now do so without wading through various tedious Blue Books, or Parliamentary Acts. The other is a "Guide for Burial Boards," under the Metropolitan and Local Burial Acts, with respect to fees and charges for interments, monuments, &c. with all the sections of the Acts relating to the subject, and various scales of fees charged by burial boards, both at home and abroad, and miscellaneous information thereon.——Mr. S. C. Gant, C.E. Engineer and Surveyor to the Merthyr Tidvil Local Board of Health, has had published by Messrs. Longman and Co. and Knight and Co. "Notes and Queries on the Public Health Act, 1848, with Suggestions for a new Bill." The object of this pamphlet is simply to direct the public attention to the difficulties experienced in the working of the Act. Mr. Gant is of opinion that local Boards of Health should be virtually General Improvement Commissioners as well as trustees for the public health.

Miscellanea.

NORTH BIERLEY UNION WORKHOUSE COMPETITION.—The competition for the North Bierley Union Workhouse, was decided on Monday last in favour of Messrs. Lockwood and Mawson, architects. The building is for the accommodation of 400 inmates, properly classified according to the requirements of the Poor Law Board, with every requisite convenience suitably arranged for each class of inmates, and a detached infirmary for the accommodation of 50 patients. The elevation is in the Italian style of architecture. There were 15 competitors, and the plans of Mr. Milnes, of Bradford, obtained the next number of votes.

PATRIOTIC FUND ART EXHIBITION AND SALE.—An influential list of patronesses and patrons has been formed for the purpose of obtaining a collection of Works of Art, by artists and amateurs, for exhibition and sale; the amount so raised to be applied to the relief of the widows and orphans of British officers, who may fall in the war with Russia. The exhibition will be open in the last week in March (the current week of this announcement) at the Gallery, 121, Pall-mall. All the contributions were to be sent in by the 16th inst. By Her Majesty's special permission, the Princesses will contribute drawings and other of their works. If they are as good as some we have accidentally had a sight of, they will be eagerly sought for.

NEW DETACHMENT OF NAVVIES.—A body of 2,000 "navvies," says the *Times*, is going out to the Crimea, to do all that digging and trenching work which, rough as it may seem, requires as much apprenticeship as a soldier's proper trade. The soldier, for the future, is to be reserved as much as possible as the fighting man. These "navvies" are to be victualled by contract: they take out their own horses, their own chief, Mr. Cochrane, who did most of the work of the Crystal Palace at Sydenham under the contractors. It is a great experiment in the work of commissariat, and, as civilians are the subject of it, it is endured in military circles.

EDINBURGH ARCHITECTURAL INSTITUTE.—At a meeting of the Institute, held on Thursday night, in their hall, George-street, Mr. M. Rhind in the chair, Mr. D. R. Hay read a paper, in which he touched on the present state of the fine arts in connection with science, and threw out a number of striking views in relation to the laws which govern architectural proportions. A discussion followed, in which the chairman, Mr. Cousins, Mr. Peddie, and Mr. Ballantine took part.

A CAMP IN IRELAND.—Messrs. Courtney and Stephens, of Dublin, have received government orders for the erection of 450 huts and stables for a camp about to be formed on the Curragh of Kildare. The work was to be completed in sixty days from Wednesday before last, and if before a premium to be granted. The contractors are employing upwards of 600 men, 450 of them carpenters. It is said to be estimated that the contract will amount to 40,000*l.*: this would be equivalent, however, to about 90*l.* a hut, so that unless these and the stables are very large and extensive, there must surely be some mistake in the amount of estimate named.

THE NEW CONSUMPTION HOSPITAL IN VICTORIA PARK.—The visitors to the Victoria-park will have remarked a stately edifice at its south-eastern angle. This is the new Consumption Hospital, of which the foundation-stone was laid by Prince Albert, in 1851, and which now, after a long delay, occasioned by a deficiency of funds, is about to be opened. It appears that the building has cost about 21,000*l.*

THE MARYLEBONE EXTRAMURAL CEMETERY has been consecrated. According to the daily papers, the St. Marylebone Extramural Cemetery is situate at East End, in the parish of Finchley, and is in extent about 26 acres. It possesses a frontage to the public road, and is about half-a-mile distant from the cemeteries of St. Pancras and Islington, the consecration of which took place in July last. The cemetery is entered beneath an arched gateway, and a circular carriage-drive leads to the Episcopal Chapel, situate midway between the entrance and east lodges. The church is of a cruciform character, with open bell-turret and spire on the nave or western gable, 70 feet in height, strangely placed, if the view we have seen be correct. On each side of the entrance, entered under cover of the church, are waiting-rooms and conveniences for persons in attendance on funerals. The edifice is pewed to accommodate 120 persons. The roof is open. The architects are Messrs. Barnett and Birch, and the builders are Messrs. Higgs and Cullingford. The total expenditure, including the purchase of the land, is said to be about 20,000*l.*

MASTERS AND MEN.—At an entertainment recently given by the Westminster Marble Company to their workmen, it was stated that in connection with the marble works, Mr. Hartley had established a Masons' College for the improvement of his apprentices. During the past year, a statistical account has been kept of those residing in the college and those residing out: the result shows that the out-door apprentices have lost in value of time 42*l.*; whilst the indoor apprentices of the same number have lost 11s. only.

THE PARIS EXHIBITION. — The department of Science and Art have published a report on the results of the preliminary measures adopted for transmitting works of industry and art to the Paris Universal Exhibition. It seems not to include the section of Fine Arts. Mr. Henry Cole, C.B. will have the general superintendence on the part of England.

BALMORAL.—Allow me to express to you the pleasure I have derived from inspecting the plan in the *Builder* of Her Majesty's new palace at Balmoral. It is quite a treat to an old Jacobite Scotsman, even though he is now a resident in Canada, to learn that a royal palace is in progress of erection in the highlands of Scotland. I will not criticise the building, but am impelled to notice what appears to me a strange omission, viz. that no provision seems to be made for a chapel. That a royal palace, in the nineteenth century, should be erected for the head of the English Church, without a chapel for domestic use, wherein the sacred rites of the distinctive religion which Her Majesty so solemnly professed at her coronation may be decently and reverently celebrated, does seem to me a strange omission.

AN OLD SCOTSMAN.

Cobourg, Canada West.

THE LATE JOHN MARTIN'S PLANS FOR IMPROVING THE THAMES.—We have had more than one inquiry concerning the plans designed and prepared at so much cost of thought and money by the late Mr. John Martin for the improvement of London; and one writer is under the impression that they are in the hands of some who have no right to them. We find, however, that the drawings are all in the safe keeping of Miss Martin, the painter's daughter, who, more than any one else, aided her father for years in setting forth his views, and bringing them under the notice of persons interested in the matter.

GRATUITOUS ARCHITECTS.—A building committee required the assistance of a professional architect in the decision of some plans sent in through the public competition. But being in want of a job, he proposed that he should be the architect *gratuitously*, and his services were accepted on these conditions. Now, is it usual for the gratuitous architect to receive a bonus or a per-centage from the contractors? and if so, at what per-centage, so that it can be added to the contract? Secondly, is it usual for a professional gentleman so placed to take into his care certain plans, in order (as the secretary said) to cull some ideas from them; and that after keeping the drawings about six months, they should be returned, without even thanks, in not the most cleanly state?—A. B. C.

ST. GEORGE'S, SOUTHWARK.—RUINOUS BUILDINGS.—Mr. Combe is clearly wrong in not allowing the expenses of hoarding to the overseers. The wording of the Act is explicit, as are also the obvious intent and meaning of the same. Mr. Day should at once proceed by requisition to the official referees, requiring them to determine the liabilities or non-liabilities in question by award under their seal. The Act provides that all matters of doubt, dissatisfaction, and dispute, may be referred to them (sec. 82). Such a course is more clear, than to call upon a police magistrate to interpret the complicated points arising under the Buildings Act. A real Metropolitan Buildings Court is what is wanted.—FIAT JUSTITIA.

THE IRON FOUNDRY TRADE.—Mr. Edington, of Glasgow, gives the following list of contracts likely to be given out during 1855:—Water-pipes for Melbourne; water-pipes for Litchfield, Walsall, Wednesbury, Bilston, Darlaston, Willenhall, Sedgeley, Tipton, West Bromwich, Rowley Regis, Dudley, and Old Bury; chairs, &c. for the Rhymney Railway Company, South Wales; water-pipes for Hamilton, Canada West, and other towns in Canada; additional chairs, waggon wheels, axles, &c. for Nova Scotia Railway Company; chairs, &c. for extensive railways in South Australia; iron cannon, shot, gates, railings, &c. for East Indies; water-pipes for Loch Katrine scheme; additional quantities of cast-iron cannon, mortars, shot, and shells, for the Government; gas-pipes, &c. for Calcutta, Valparaiso, Liverpool, Haverhill, Beccles, &c., water-pipes for Wallasey, Grantham, Grimsby, Kelso, Beccles, Halifax, &c.; additional railway chairs for the East-Indies and Canada.

NASH AND JEWELL'S SAFETY SASHES.—This appears to be a very practicable arrangement for the purpose of preventing accidents during the cleaning or painting of upper windows. The inventor claims for it, that the sashes may be reversed with the greatest ease by the most inexperienced servant, and the outside of the window cleaned with perfect safety, and with a great saving of time; that they present the same appearance as the ordinary hanging sashes, and are perfectly air-tight, and free from any possibility of shaking, as they act by means of springs, instead of balance-weights and lines; that the whole space of the window may be opened to afford full ventilation; and that old sashes may be altered to act on this principle without disturbing the frames.

DRAINING THE GASES FROM SEWERS.—A report from Mr. Gurney, on his experiment for draining the noxious gases from the sewers in the neighbourhood of the Houses of Parliament, recently published, asserts that perfect success in this respect has attended the use of the steam jet, and that the gases were decomposed.

LIMITED LIABILITY IN PARTNERSHIP.—Lord Palmerston has announced his intention to bring a Bill before the Commons on this subject.

THE CONSERVATIVE LAND SOCIETY.—At the tenth quarterly general meeting of the members of this society, held on Wednesday, the 14th inst. the accounts showed an excess in the receipts of the quarter. The gross receipts up to the date of the report were 163,509*l.* 19s.; less withdrawals, 152,730*l.* 6s. 4d. The total number of shares issued to March 10th was 10,729. The returns of the sale of land showed the following results:—

	£.	s.	d.
From Michaelmas to Christmas, 1854	2,985	0	0
From Christmas to March 10th, 1855	7,892	10	0
Total land sold in less than 6 months	10,877	10	0

The total sold during the operations of the society amounted to 102,994*l.*

THE COLOSSEUM, REGENT'S-PARK.—When the Colosseum, in the Regent's-park, with the Cyclorama, in Albany-street, were put up to auction, at the Auction Mart, by the Messrs. Winstanley, the other day, the auctioneer stated that the Colosseum was erected after a design by Mr. Decimus Burton, at a cost of 23,000*l.* for Mr. Thomas Horner, who held a lease of it direct from the Crown, at a ground rent of 262*l.* 18s. for a period of ninety-nine years, sixty-nine of which were unexpired on the 10th of October, 1854. He subsequently expended above 100,000*l.* to carry out the objects for which it was intended, by decorating the interior, purchasing the pictures, &c. In August, 1836, the lease was sold to Messrs. Braham and Yates. Mr. Braham laid out about 50,000*l.* on the building, which in a few years afterwards became the property of Mr. Turner, who added the Cyclorama, which cost 20,000*l.* to the establishment, with many decorations, which cost several thousand pounds, so that the entire edifice has cost above 200,000*l.* The sum of 20,000*l.* was bid, but as this was below the reserve price, the property was not sold.

FALL OF BUILDINGS.—Accidents of this kind have been rather frequent of late. During Saturday night before last, according to the local papers, a portion of two of the arches of the west end of the New Market House, at Bolton, fell to the ground. The fourth pillar from the west end, and the third from the east, had sunk at the foundation two feet, thereby causing the fall of the arches of which it was the support. The fall is about 52ft. by 42ft. The iron pillar which supported the beam for the roof snapped at the top, and fell into the vault with the ruins of the arches, and the adjoining pillar to the west was also broken by the weight suddenly thrown upon it; but the heavy iron beam which rested on the fallen pillar remained in its position, though much strained for want of support.——Between 30 and 40 yards of the outer north wall of the General Prison of Perth, lately fell, and by the *débris* the South Inch lade was dammed up, and the water thrown upon the Inch. The cause of the fall was owing, it is said, to the water in the lade having undermined the foundation of the wall.——At Glasgow, on Friday before last, a chimney stalk, 80 feet in height, at Townhead, fell to the ground, in consequence, as is believed, of some operations at its base having undermined the foundation.——About 48 feet of the Holywell Tunnel, on the Wilts, Somerset, and Weymouth Railway, went down on the 4th instant. The other part of the tunnel stands good. The cause of the accident was the undermining of a pond, the water weakening the work. The damage is estimated at 1,000*l.* which will have to be borne by the contractor.

STRIKES.—In consequence of a depression of certain branches of trade in the northern towns, the masters have been reducing wages, more especially builders and joiners. In November last, the North and South Shields master masons and joiners gave notice of a reduction of wages from 30s. to 24s. during winter. The men refused such terms, struck work, and, except a few engaged fitting up iron steam-ships, have remained idle ever since. The master painters of Sunderland having given notice of a reduction of wages from 27s. to 24s. the men have refused to accede. We learn that the masons, plasterers, and bricklayers of Hartlepool have resolved to strike for an advance from 24s to 27s. a week. The puddlers at large iron works at Middlesborough, turned out on notice of reduction; but after striking a fortnight, have returned to work. The fortnight they were out, they lost, it is said, 6,000*l.*; and though several had been earning 10s. to 20s. a day for a considerable time, they were quite unprepared for a prolonged strike, as in the second week they were soliciting aid from fellow-workmen.

THE ROYAL ACADEMY.—Mr. E. M. Ward has been elected an Academician: a better choice could not have been made.——Professor Hart's Lectures on Painting are being published *in extenso* in the *Athenæum*, and well deserve study.

THE PUBLIC LIBRARIES AND MUSEUMS' BILL.—This Bill, as amended in the committee of the whole House, has been printed. As it now stands, the overseers of the poor are to call public meetings to determine on the adoption of the Act, ten days' notice to be given. The list of articles for the libraries now includes books, newspapers, maps, and specimens of art and science.

THE LATE MR. GEORGE PAPWORTH.—We regret to have to announce the death on the 14th (Wednesday), of Mr. George Papworth, of Dublin, architect, Member and Treasurer of the Royal Hibernian Academy, aged about 75. We shall shortly illustrate one of his most recent works.

TENDERS FOR HOUSES AT HOLLOWAY.—The tenders for four fourth-rate houses at Holloway, for the Equitable Building Society, ranged from 973*l.* (Baker), to 769*l.* (Charles Warr), which latter was accepted.

ST. MARYLEBONE.—In a map published in 1742, the diminutive church of St. Marylebone is shown detached from London, with two zig-zag ways leading to it, one near Vere-street, then the western extremity of the new buildings, and the second from Tottenham-court-road. Rows of houses, with their backs to the fields, extended from St. Giles's-pound to Oxford-market; but Tottenham-court-road had one cluster on the west side, and the spring-water house. The zig-zag way above mentioned, near Vere-street, still retaining its original name of Marylebone-lane, was the communication between the high road and the village. A friend, born in 1780, remembers his father and mother relating how they walked out *through the fields* to be married at Marylebone Church.—*Timbs's Curiosities of London.*

COLOURING.—He who first developed the harmony of colours, out of the systole and diastole to which the retina is formed, this synkrisis and diakrisis, as Plato would call it, was the discoverer of the principles of colouring.—*Goethe.*

TO PREVENT PASTE FROM GETTING MOULDY.—A correspondent, "W. L." asks us for a recipe as to this matter, which he reminds us appeared in the *Builder*. We have no time to search for it; but would be glad to have a recipe anew from some one who can give it. If we mistake not, alum and finely pounded resin are used, as also some spirit or essence.

"NATURE-PRINTING."—Mr. Smith, of Auchterarder, a chemist, is said to have discovered a means of transferring the impressions of natural objects to glass with minute accuracy.

SURVEYOR FOR WEST HARTLEPOOL.—Mr. Smith, of Bingley, has been appointed surveyor and inspector of nuisances for West Hartlepool, at a salary of 120*l.*

WHAT ARE THE BUILDERS AT?—The following tenders have been delivered for finishing four houses, situate in the Drive, St. German's-park estate, Forest-hill. Mr. William Purdue, architect:—

Dove and Co.	£1,025	0	0
Colls and Co.	989	0	0
Thomas Nash	945	0	0
Richard Case	777	0	0
W. H. Unwin	737	0	0
J. Bishop	688	0	0

He is of irreproachable character.—Address, A. Z. 8, Twyford-street, Caledonian-road, Islington.

TO ARCHITECTS, &c.

AN Artistic Colourist, Draughtsman, and Designer, OFFERS his SERVICES in the preparation of Perspective Views, with landscape and figures, also in general drawing, on moderate terms.—Address, A. Z. 51, Denbigh-street, Belgravia.

AN ARCHITECT'S ASSISTANT, who thoroughly understands every branch of his profession, and has been employed by some of the first Architects, is desirous of a RE-ENGAGEMENT in the above capacity. -Address, F. H. 2, Shawfield-street, King's-road, Chelsea.

TO LAND SURVEYORS AND CIVIL ENGINEERS.

A RE-ENGAGEMENT required by a thorough experienced and practical SURVEYOR, competent to take the sole management of any survey, either of town or country. The best of reference will be given. For further particulars, address Y. Z. Town Surveyor's Office, Burton-on-Trent, Staffordshire.

A CIVIL ENGINEER, of considerable experience on railways, offers his services to any Engineer or Contractor in want of assistance on Foreign Railway or other Works. Is a good surveyor, draughtsman, can design, or take out quantities, and has had several lengths of railway under his charge during construction.—Address, R. X. Post-office, Sydenham, Kent.

TO ARCHITECTS.

A GENTLEMAN, possessed of considerable professional attainments, who is, moreover, an artistic draughtsman, is desirous to occupy the WHOLE, or a PORTION of his TIME,—preferred with a view to Partnership.—Address to W. G. B. 59, Stanley-street, Eccleston-square.

AS IMPROVER.—A Gentleman, well acquainted with construction, a good draughtsman, and accustomed to take out quantities, wishes for more experience in house and street architecture, and is therefore willing to make arrangements with any architect or builder of considerable practice who may require temporary assistance. Aged 30 years.—Address O. C. at Mr. Hailes', Stationer, Leadenhall-street, City.

TO ARCHITECTS.

A PRACTICAL CLERK of WORKS wishes a RE-ENGAGEMENT.—Address, J. COLEMAN, Clerk of the Works, Guildford Militia Depôt.

TO ARCHITECTS.

A GENTLEMAN who, under several eminent Architects, has had considerable experience in preparing working drawings, specifications, &c. especially of Gothic work, desires a RE-ENGAGEMENT.—Address, A. B. 112, High Holborn.

AS CLERK of WORKS.—An experienced Clerk of Works is open to an ENGAGEMENT. The highest references given.—Address K. L. Office of "The Builder."

TO ARCHITECTS, CIVIL ENGINEERS, AND OTHERS.

A YOUNG MAN, well educated, desires a RE-ENGAGEMENT. He is a good architectural draughtsman, a ready accountant, can map, plan, and take out quantities, and is thoroughly acquainted with book keeping, and the principles of levelling and surveying. Salary moderate.—Address A. C. Messrs. Hookham's Library, Old Bond-street.

TO BUILDERS AND OTHERS.

AS CLERK or TIME-KEEPER.—WANTED, by a respectable Young Man, a SITUATION as above. He is thoroughly acquainted with taking men's time, and booking materials, understands figures and accounts, can copy or trace drawings.—Address to W. M. G. Office of "The Builder."

TO BUILDERS, CONTRACTORS, AND OTHERS.

A PERSON who has had great experience has two or three days a week disengaged, and would be happy to offer his services to make estimates, measure up works in progress or finished, or assist in making up accounts. Any Builder or Contractor whose accounts are in arrear would find him capable of wading through almost any difficulty, and he can introduce a most perfect and simple method of keeping their accounts.—Address in the first instance, to No. 225, at the Office of "The Builder."

AN experienced man, with good references, is open to an ENGAGEMENT with a Surveyor or Builder, as FOREMAN or CLERK of WORKS.—Address, K. H. care of Mr. J. Rowell, 19, Raphael-street, Trevor-square, Knightsbridge.

PARTNERSHIP.—An Architect and Surveyor of long standing, in a rapidly increasing town, on the south of England, is desirous of taking into PARTNERSHIP a gentleman who will not object to undertake the more active part of the business.—Apply, by letter, addressed G. H. care of Messrs. Job and Co. Wellington-chambers, Cannon-street West, London.

WILLIAM BATLEY, Engineer and Boiler Maker, Northampton.—Manufacturers, Local Boards of Health, or any persons requiring Engines, Machinery, or Boilers of any description, may be supplied with the same of the very best material and workmanship on the shortest notice.—For catalogues, estimates, or contracts apply as above.

DO YOU BRUISE YOUR OATS YET? or, HOW TO KEEP A HORSE FOR ONE SHILLING PER DAY.—One bushel of Oats when crushed will make two.—Great saving. OAT BRUISERS, Chaff Cutters, Ploughs, Thrashing Machines, Flour-mill Carts, Corn-dressing ditto, Horse and Steam Machinery, put up, &c.—M. WEDLAKE, 118, Fenchurch-street.—Book on Feeding, 1s.

THE GOODWILL of an established BUSINESS of a Carpenter, Builder, and Undertaker to be DISPOSED OF, on account of the proprietor going abroad. Also the leasehold interest in the LEASE of the capital business PREMISES and RESIDENCE, which comprises three sleeping rooms, parlour, kitchen, washhouse, store-room, &c. a large, light workshop, counting house, sheds, good timber-yard, and every convenience for carrying on the above business. Held for an unexpired term of 16½ years, at the low rent of 15l. per annum, Premium moderate. For further particulars, apply to Mr. CAIN, Auctioneer and Estate Agent, Richmond.

TO ARCHITECTS AND SURVEYORS.

TO BE DISPOSED OF, upon moderate terms, a small but increasing PRACTICE, in a rising and beautiful watering-place – For particulars, address, S. S 9, Studley-terrace, Larkhall lane, Stockwell, Surrey.

FREEHOLD LAND.—To Builders or Parties wishing to Build Suburban Residences.

FREEHOLD LAND TO BE SOLD on some of the most eligible building estates in the neighbourhood of London, viz.:—

Forest-hill, Croydon Railway.
St. Margaret's, near Richmond, South-western Railway.
Oatlands Grange, Weybridge, Surrey, ditto
Tottenham-green, Eastern Counties Railway.
Putney, South-Western Railway.
Rectory Estate, Ealing, Great Western Railway.
The Waddington Estate, Enfield, Eastern Counties Railway.
Wood-green, Green-lanes, Hornsey, Great Northern Railway.
Old Ford, Stratford, Eastern Counties Railway.

Each of the above estates offers its own peculiar advantages. Plots of land of any size, or for any class of house, to the extent of One acre, can be obtained. On the two first estates, large pleasure-gardens are allotted to the freeholders or tenants of houses. Part of the purchase-money may remain at 6 per cent. interest. Parties assisted in the building of their own residences. Builders may obtain the freeholds of plots of land to build upon, and the greater portion of purchase-money may remain at an annual charge for about ten years less in amount than the ground-rent of the same under the usual system. In addition, therefore, to the amount to be raised on the building by mortgage, they can sell the ground-rent created by themselves at a large profit. Several plots to be let on building lease. Money advanced to responsible parties.—Apply to Mr. GEORGE MORGAN, Architect, 5, Chancery-lane.

TO BE SOLD, within a few minutes' walk of the Kilburn Station, on the North-western Railway, and immediately adjacent to the intended line of the Hampstead Junction Railway, about EIGHTEEN ACRES of COPYHOLD LAND, having a frontage next Willesden-lane of more than 800 feet. The estate, which is beautifully situated, is at present let to a yearly tenant, and immediate possession may be had. The soil is capable of being made into bricks, and a specimen of the earth may be seen at the Office of Mr. POWNALL, 37, Bloomsbury-square, where lithographed plans and further particulars may be obtained; or of R. B. ARMSTRONG, Esq. 8, Staple-inn.

ALDERSHOT CAMP.—FREEHOLD BUILDING GROUND TO BE SOLD or LET, on Building Lease, fronting the new military (paving ground, with frontages to the main road, near two railway stations, where houses are much required, and may be had in large or small quantities. Apply to Mr. HUGHETT, 4, Bouverie-buildings, Strand, where plans of the ground and neighbourhood may be seen.

NEAR the SOUTH DOWNS.—FOR SALE, by Private Contract, a compact and improving FREEHOLD PROPERTY. Present rental, 150l. per annum; secure by lease.—Apply to FREDK. R. BEESTON, 21, Northumberland-street, Strand.

CEMETERY LAND for SALE.—Sewers Office, Guildhall, March 13th, 1855. The Commissioners of Sewers of the City of London, acting as the Burial Board for that city, have about 200 acres of suitable FREEHOLD LAND, which they are desirous to DISPOSE OF, for the formation of one or more cemeteries, it being peculiarly adapted for such purposes. The land is situate at Little Ilford, and abuts upon the Eastern Counties Railway, which, by arrangement, may run direct into it. It is also directly accessible by the high road from London, and from Wanstead, and is about one mile and a quarter west of Ilford. The cemetery for the City of London is formed on the adjoining portion of the estate. The land tax is redeemed. Plans of the property may be inspected at this Office; or at the Office of the engineer, Mr. HAYWOOD, 14, Old Jewry Chambers. The Commissioners will receive proposals for the said land, or any portion thereof, on MONDAY, APRIL 30th, at ONE o'clock. Such proposals must be sent sealed and endorsed "Tenders for Land at Ilford," to the undersigned, at this Office, before TWELVE o'clock on that day. The Commissioners do not bind themselves to accept any of the proposals unless deemed eligible.

JOSEPH DAW, Principal Clerk.

ELIGIBLE BUILDING-GROUND, NORWOOD, SURREY.—LEASES FREE of CHARGE.—TO BE LET, the few remaining PLOTS of GROUND in Edenroad and Woodstock-place, Norwood, Surrey, to fill up the line of buildings, the chief part of the ground being already built on.—Apply to Mr. PEACOCK, Architect, 11, Coburg-place, Kennington-lane, and G. HULKS, 8, Woodcote place, Norwood.

WATERSIDE PREMISES, WESTMINSTER, TO BE LET, near the Houses of Parliament, a good WAREHOUSE, having one floor over. It could be easily converted into excellent workshops.—For further particulars apply to Messrs. EVERSFIELD and HORNE, Auctioneers, &c. 60, Parliament-street, or Coal Exchange.

TO MANUFACTURERS.—TO BE LET, with immediate possession, with or without the machinery, CHEMICAL WORKS for COPPERS MANUFACTORY. The copperas manufactured will, in addition to the rent, leave a clear profit of 100l. per annum. The premises are large, waterside, and within one tide's sail of London; suitable for carrying on manure or other noxious manufacture. Application to RICH COMYN, Esq. 31, Lincoln's-inn-fields, by letter only.

FREEHOLD BUILDING LAND TO LET, abutting on the Barking station of the Tilbury line, twenty minutes from Fenchurch street, where moderate-sized houses are greatly in demand, and a handsome church is wanted for the accommodation of the station and neighbourhood.—Apply to Mr. EDWARD LACKIE, 23, Lamb's Conduit-street, Foundling Hospital.

MAITLAND-PARK, HAVERSTOCK-HILL, Hampstead-road.—LAND-TAX REDEEMED.—TO BE LET, upon Building Leases, for ninety-nine years, desirable BUILDING SITES upon the above Estate. The continued demand for houses in this locality, and the picturesque position of the property adjoining the ground of the Orphan Working School, render this a desirable opportunity for builders or gentlemen wishing to erect villas for themselves.—For terms, and to view plans, apply to the Secretary of the Orphan Working School, 32, Ludgate-hill; Messrs. TERRELL and CHAMBERLAIN, 30, Basinghall-street; the Architects, Messrs. WEHNERT and ASHDOWN, 43, Charing-cross; or at the Porter's Lodge, on the Premises.

TO BUILDERS and OTHERS requiring roomy premises.—TO BE LET, a valuable and useful piece of GROUND, good HOUSE thereon, near the City.—Apply to the freeholder, S. ROBERTS, 58, Shoreditch.

THE ARUNDEL, SURREY, and SUSSEX BENEFIT BUILDING and FREEHOLD LAND SOCIETY.—The DRAWING for Rights of Choice will take place at the BRIDGE HOUSE, ARUNDEL, on TUESDAY, APRIL 3, 1855, at TWELVE o'clock at noon. All persons becoming members previously to such drawing will be entitled to participate therein.—Prospectuses may be had of the Secretary, Mr. WILLIAM WOODS MITCHELL, Arundel, Sussex.

LAMBETH and PROVINCIAL FREEHOLD LAND SOCIETY.
Enrolled as the "Borough of Lambeth Benefit Building Society

PRESIDENT.
The Hon. JOHN LESLIE KING, M.P.

TRUSTEES.
George Singer, Esq. James Bevan, Esq. S. Etches, Esq.

Offices, 211, High-street, Borough.
Open from Ten A.M. till Seven P.M.

Entrance fee, 1s. Payments, 4s. monthly.

Allotments distributed by rotation, ballot, and to completed Shares in the order of their completion.

No Fines on unadvanced Shares. No back payments.

This Society within four years has divided five estates, satisfying 1,514 Shares out of 3,750. The value, as divided amongst members, being 67,797l.

A Bonus of 5 per cent. in addition to 5 per cent. interest, in all 10 per cent. was declared upon the unadvanced Shares at the annual meeting of 30th January last.

211, High-street, March 1 1855 WM. BANKS, Secretary.

NOTICE TO ARTISTS

NORFOLK and NORWICH FINE-ARTS ASSOCIATION.

PRESIDENT.
His Grace the Duke of Wellington.

VICE PRESIDENTS.

The Lord Bishop of Norwich.	Edward Warner, Esq. M.P.
The Mayor.	Sir Morton Peto, Bart.
The Right Hon. Lord Stanley, M.P.	Sir E. H. K. Lacon, Bart. M.P.
Lord Sondes.	J. H. Gurney, Esq. M.P.
Sir Samuel Bignold, M.P.	Henry J. Stacey, Esq.
	Robert J. H. Harvey, Esq.
	Edmund Wodehouse, Esq. M.P.

COUNCIL.

John Barwell, Esq.	Alfred Masters, Esq.
William Claborn, Esq.	John Nevgate, Esq.
William Freeman, Esq.	Rev. P. Nursey.
J. G. Johnson, Esq.	T. S. Patteson, Esq.
Thomas Lound, Esq.	Rev. A. B. Power.
George Middleton, Esq.	James Smith, Esq.
John Middleton, Esq.	James Stone, Esq.
	Claude L. Nursey, Esq.

The EXHIBITION of the above Society will OPEN in MAY next, at the Exhibition Rooms, Broad-street, St. Andrew's, Norwich. Those artists receiving the society's circular are requested to forward their works (if in London) to Mr. GREEN (the Society's Agent), 14, Charles-street, Middlesex Hospital, on or before the 10th of MAY. Those artists not residing in London or its vicinity, who have received the circular, are requested to forward their works direct to the Secretary, as above.

Artists will observe that the time has been extended from the 8th to the 10th of MAY.

The object of the Society is to promote a knowledge of the fine arts, and aid in the sale of works of art. The council has resolved to apply for authority to establish an Art-Union in connection with the Exhibition. CLAUDE L. NURSEY, Hon. Sec.

MATHEMATICAL DRAWING INSTRUMENTS.—JOHN ARCHBUTT, 20, Westminster Bridge-road, Lambeth (near Astley's Theatre), begs to call attention to his Stock of Instruments manufactured by superior workmen. The prices will be found considerably lower than those charged for articles of similar quality and workmanship. Rules, scales, tapes, &c. at equally low prices. An illustrated price-list will be immediately forwarded, free, on application.

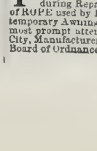
DRAWING, CARTRIDGE, TRACING, and MOUNTED PAPERS, TRACING LINEN, CONTINUOUS CARTRIDGE, &c. for the use of Architects, Engineers, Surveyors, Builders, &c. are sold by EDWARD STANFORD, Mapseller and Stationer, 6, Charing-cross. A book of samples and prices may be obtained on application, or per post for six stamps.

SWISS DRAWING INSTRUMENTS, equal in quality to the very best London-made instruments, and considerably cheaper.—Apply to Mr. S. BARLOW, 3, Thavies-inn, Holborn (between 1 and 2 p.m.); or to Mr. H. B. HARLOW, Office for Patents, Dudley-place, Exchange, Manchester.

TO ARCHITECTS.—EXHIBITION and COMPETITION DRAWINGS COLOURED or TINTED, and Lithography in its various branches executed by Mr. T. J. RAWLINS, 36, University-street, University College, London.

TO BUILDERS AND HOUSE DECORATORS.

THE LARGEST STOCK of Upholsterers' Cloths, Baizes, and Druggets, in every width, colour, and quality, is kept at HILL and SONS, 88 and 89, St. Martin's-lane, Charing-cross. Patterns forwarded upon application.



WHITE OXIDE of ZINC.—Addington-Wharf, Camberwell.—This article in its pure state, can be obtain'd at the Patent Oxide of Zinc Works, Addington-Wharf, Camberwell, where it is manufactured.

CLARK'S PATENT SMOKE-BURNER: an improved means of perfecting Combustion, and thereby destroying Smoke.

This invention is now in operation upon Steam-engine Furnaces, of Cornish and Waggon Boilers, and upon Ovens. It is adapted to other descriptions of Boilers, such as Marine Boilers, Coppers, Coke Ovens, Bakers' Ovens, Potters', Chemical Works, &c. Its effect is acknowledged by Government Inspectors to be amongst the most perfect of the inventions extant in subduing the Smoke Nuisance, and in many instances with a diminished consumption of fuel.

Ten furnaces, of various construction, to which it has been successfully applied, may be seen in operation at the Cement Works of Messrs. FRANCIS, BROTHERS, Nine Elms, London.

Address, THE SMOKE-BURNING COMPANY, Nine Elms, London.

SMOKY CHIMNEYS CURED EFFECTUALLY for TEN SHILLINGS, by SUTCH'S PATENT WIND-GUARD.—This Guard effectually allows free egress to the smoke, prevents the wind blowing down the mouth of the chimney, and is not liable to be injured by the most boisterous weather.

To be had of Ironmongers and Builders; and of the Patentee, at his Office, 65, Fenchurch-street, London.

GUTTA PERCHA TUBING.—Many inquiries having been made as to the durability of this tubing, the Gutta Percha Company have great pleasure in drawing attention to the following letter received from Mr. C. Hacker, surveyor to the Duke of Bedford:—"Office of Works, Woburn-park, Jan. 10, 1853. "In answer to your inquiries respecting the gutta percha tubing for pump suctions, I find that the water has not affected it in the least although it will eat lead through in two years; we have much easier bxed and a more perfect job. Yours, &c. C. Hacker." N.B. The Company's Illustrated Circulars, containing instructions to plumbers for joining tubes, lining tanks, &c. will be forwarded on the receipt of three postage stamps. The Gutta Percha Company, Patentees, 18, Wharf-road, City-road, London.

TARPAULINS for COVERING ROOFS during Repairs. SCAFFOLD CORD and every description of ROPE used by Builders upon the lowest terms. Marquees and temporary Awnings on sale or hire. Orders per post receive the most prompt attention.—WILLIAM PIGGOTT, 115, Fore-street City, Manufacturer, by appointment, to her Majesty's Honourable Board of Ordnance.

MAW'S ENCAUSTIC TILE PAVEMENTS—a highly durable and decorative substitute for ordinary flooring and their perishable oil cloth coverings; for entrance halls, passages, verandahs, conservatories, &c.

MAW and Co. send, free of expense, their pattern and price book, with designs, to any given spaces (and estimates), free of expense.

BENTHALL WORKS, BROSELEY, SALOP

PEAKE'S TERRO-METALLIC TILES, PIPES, &c.—Notice is hereby most respectfully given, that the LONDON DEPOT for this WARE is REMOVED to No. 21, WHARF, Maiden-field-street North, City-road Basin. Secondly, that the trade term, "TERRO-METALLIC," is the exclusive right of the Proprietor; and, thirdly, that the "REPORT OF THE JURIES," page 981, of the Great Exhibition, rank the Manufactories known so long as "The Tileries," Tunstall, Staffordshire, as the first of the kind in the world.

MINTON and CO.'S ENCAUSTIC and other PATENT TILES, for Churches, Entrance Halls, Conservatories, Balconies, &c.; Antique, Geometrical, and Alhambra Mosaics, manufactures of a highly decorative character, and extreme durability, Slabs and Tiles for Fireplaces and Hearths, Covings for Grates, Door Furniture, White Glazed and Ornamental Tiles for Baths, Pairces, and Kitchen Ranges, may be had in great variety at their Warehouse, 9, Albion-place, Blackfriars-bridge, London; and at their Manufactory, Stoke-upon-Trent, Staffordshire.

LOANS from 25l. to 1,000l. upon approved personal or other security, repayable by easy instalments, at weekly or any periods not exceeding fifty months, are readily OBTAINABLE from the BRITISH MUTUAL SUBSCRIPTION LOAN ASSURANCE CLASSES. Prospectuses, reports, and every information may be obtained on application at the British Mutual Life Office, 17, New Bridge-street, Blackfriars. Rules 6d. each copy 1s. per post.

CHARLES JAMES THICKE, Resident Secretary.

PAPER-HANGINGS.—The CHEAPEST HOUSE in London for every description of PAPER-HANGINGS is GROSS'S WHOLESALE WAREHOUSE, 23, GREAT PORTLAND-STREET, Oxford-street, where you can select from the LARGEST and MOST EXTENSIVE Assortment in the Kingdom, THIRTY PER CENT. CHEAPER than any other house in the trade. Builders, Decorators, Dealers, and large consumers will do well to visit this establishment.

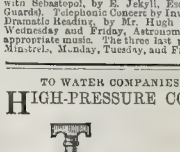
PATENT SANITARY GAS SHADES.—These Shades, manufactured exclusively by RICE HARRIS and SON, Islington Glass Works, Birmingham, on an entirely new principle, effectually destroy the effluvia and smoke which have hitherto made the use of gas so objectionable in dwelling-houses and offices where cleanliness and freedom from smell are of importance. They are simple and inexpensive, and may be had at the Works in a variety of forms adapted to the style of fitting, or the taste of purchasers; also at Mr. JOHN SHORTHOUSE, Crispin-street, Spitalfields, London.

ONE THOUSAND BEDSTEADS to CHOOSE FROM.—HEAL & SON have just erected extensive Premises, which enable them to keep upwards of One Thousand Bedsteads in stock. One Hundred and Fifty of which are fixed for inspection, comprising every variety of Brass, Wood, and Iron, with Chintz and Damask Furnitures, complete. Their new warerooms also contain an assortment of BED-ROOM FURNITURE, which comprises every requisite, from the plainest Japanned Deal for Servants' Rooms, to the newest and most tasteful designs in Mahogany and other Woods. The whole warranted of the soundest and best manufacture. HEAL & SONS'S ILLUSTRATED CATALOGUE of BEDSTEADS and PRICED LIST of BEDDING, sent free by post.—HEAL & SON, 196, Tottenham Court-road.

BUILDING MATERIALS.

BECK'S WHARF, ISLEWORTH.—Builders having works to execute south-west of London, will find a great saving in time and cost, on reasonable terms, with every convenience for speedy loading by travelling cranes, either into barges or carriages. Portland, Caen, Bath, and Yorkshire Block Stone, always in stock. Paving, &c. Also, Marble in Slab, Chimney-pieces, &c. Slab and Roofing Slates from the Penrhyn Quarries. Timber, Deals, Limes, Cements, Clay Goods, &c.—N.B. This wharf is very near the St. Margaret's estate.

WINDOW BLINDS.—TYLOR & PACE, Window Blind Manufacturers, 104, New Bond-street, and 3, Queen-street, Cheapside, London, submit the following PRICES of WINDOW BLINDS, as they can recommend as being made in the best manner: Venetian blinds, per square foot, 9d.; best holland blinds, on rollers, 6d.; best ditto, on spring rollers, 8d.; gauze wire blinds, in mahogany frames, 3s.; perforated zinc blinds, in ditto, 1s. 10d.; outside blinds of striped cloth, 2s. Transparent blinds in great variety. Engravings, with prices and discounts to builders and the trade, forwarded on application, post free.



PARTNERSHIP.—WANTED, in an established Carpenter's and Builder's Business, at the West End, an active person with about 2 or 300l. to command. The above is a first-rate opening for any party wishing to make position, and not necessary to have a knowledge of the business if of business habits, the advertiser is only a single man, and wishes association.—Apply for further particulars, with real name and address, to A. Z. Mr. Spencer's, 7, Great Portland-street, Oxford-street.

PATRON: H.R.H. PRINCE ALBERT.

ROYAL POLYTECHNIC INSTITUTION. Monday Evening, the 26th inst. Lecture by J. H. Pepper, Esq. on the Chemistry of the Non-Metallic Elements. Tuesday Evening, important Lecture on Siege Operations in connection with Sebastopol, by C. Jekyll, Esq., late Captain Grenadier Guards). Telephonic Concert by Invisible Performers. Thursday, Dramatic Reading, by Mr. Hugh Leslie, Richard the Third. Wednesday and Friday, Astronomy, by Dr. Buchhoffner, with appropriate music. The three last performances of the Tyrolese Minstrels, Monday, Tuesday, and Friday Evenings.

TO WATER COMPANIES AND PLUMBERS.

HIGH-PRESSURE COCKS & CLOSETS.

The Health of Towns Commissioners having recommended the adoption of the high-pressure principle in all towns, WARNER'S HIGH-PRESSURE COCK is recommended as a Cock free from leakage, and applicable for all purposes and situations. Patent Closets and Basins with supply-valve for attaching direct to main pipes without a cistern, cocks, or wire.

LEAD, IRON, and TIN PIPE.

JOHN WARNER and SONS, Manufacturers, 8, Crescent, Jewin-street, London.

HUBBUCK'S PATENT WHITE ZINC PAINT,

The Permanent White of the Ancient Artist.

HUBBUCK and SON, the Original Manufacturers of White Zinc Paint on a large scale in this country, are enabled, by a process, which is patented, to supply their Pure White Zinc Paint at the price of White Lead. Those direful maladies, paralysis and painters' colic, will be entirely avoided. It is entirely free from any poisonous or pernicious property. Neither exposure to heat, nor tropical climates not upon it. The Powdered White Zinc may be had for grinding in Oil; also for Plaster Decorations, and where it is used with Size, Varnish, &c. To be had of the Wholesale Painters-dealers in Original Packages, each cask stamped HUBBUCK—LONDON PATENT. And if not so marked, the quality is not guaranteed. Full particulars may be had of THOMAS HUBBUCK and SON, the Original Wholesale Manufacturers in this country. Paint and Varnish Works, Upper East Smithfield, opposite the London Docks.

WHITE OXIDE OF ZINC AND ZINC PAINT.

(LANGSTON SCOTT'S PATENT.)

CROWLEY, WHITE, AND CROWLEY, *Sole Manufacturers.*

This healthful substitute for White Lead, of unrivalled colour and texture, may be obtained from most of the principal Paint Grinders, Oil and Colourmen, and Ship Chandlers in the United Kingdom, or direct from the Works, Grand Surrey Docks (Wholesale under Brand), either in the dry state or ground in Oil.

Zinc Paint, being unchangeable in colour, stands pre-eminent for the highest purposes of Art; and from its perfectly pure and innocuous qualities, is peculiarly applicable to first-class Decorations and House Painting For Iron it possesses great affinity, and hence its preservative properties for that Metal, whether employed for Marine or other purposes. It is now ground in Colours, and may be successfully employed on Stucco, or any other outside work for which White Lead is used; it sets harder, is consequently more durable, economical in first cost, and covers equal to any known pigment.

Messrs. MORANT and BOYD, 91, New Bond-street, who have lately used Zinc Paint to a great extent at Cliefden (the Duke of Sutherland's), and other mansions, have specimens, and will give any information respecting it.

PRICE LIST AND TESTIMONIALS FORWARDED IN ANSWER TO LETTERS ADDRESSED TO

MESSRS. CROWLEY, WHITE, AND CROWLEY, 39, KING WILLIAM-STREET, CITY, LONDON.

DAMP WALLS.

STENT'S COMPOSITION FOR PREPARING NEWLY-PLASTERED OR DAMP WALLS FOR PAPERING,

Is the result of practical experiments and long experience; it is unfailing in its application. Entire houses have been papered a few days after plastering. In repairs of old plastering it is invaluable. A moderate room can be papered for 2s. 6d.

Prepared only by W. J. STENT, Warminster.

London Agents: Messrs. GEO. and THOS. WALLIS, 64, Long-acre. Agent for Ireland: Mr. S. BOYD, 46, Mary-street, Dublin.

THE VIEILLE MONTAGNE ZINC MINING COMPANY'S PURE PATENT WHITE ZINC PAINT is unequalled for permanency of colour, hardness, and brilliancy of surface; it is unaffected by sulphureous or any other vapours or emanations. Being completely innocuous and free from the pernicious effects of white lead, it may be employed in all apartments whilst in use without any inconvenience to the inmates.

The greatest caution is recommended to avoid any spurious compounds that might be sold at cheap rates as Pure Oxide of Zinc If any adulteration has taken place in the oxide, either in consequence of impurity in the material primarily made use of to produce it, an imperfect mode of production, or by mixing with the oxide certain substances calculated to give it increased weight, it then produces a very inferior instead of a very superior paint, and the economy realised by the purchasers of such oxides becomes a very expensive result to the owner of the premises painted with them.

The VIEILLE MONTAGNE'S ZINC OXIDES, dry or ground in oil, are sold with the VM mark-in Hull by Messrs BLANDELL, SPENCE, and CO.; when ground and dry, by Messrs. T. B MORLEY and CO and by the Company's Grinding Agents, in London, Messrs. CHARLES DEVAUX and CO., Wholesale Agents, 62, King William-street City; FREDERICK BRABY, Wholesale and Retail Agent, 8, Tottenham-court, New-road. In Manchester and Liverpool by R. CLAY, 6, Mersey-street, who is the acknowledged Painter to the Company for Zinc Paints, and undertakes painting shire, warehouses, dwelling-houses, &c. In Leith, by Messrs. R. ANDERSON and CO. Flint-proof, Dry OXIDES and PAINTS, in kegs of 14, 21, and 28 lb and upwards, to be had of the Company's Agents in Birmingham, Newcastle, Glasgow, Bristol, Plymouth, Portsmouth, Norwich, Ipswich, Poole, and the Isles of Jersey, Guernsey, Man, and Wight; also in Dublin, Cork, and Belfast.

The Company also employ an acknowledged Painter in London, who will undertake any description of painting with Zinc Paint by contract.

For further particulars, apply to the Company's General Agency in London, 12, Manchester-buildings, Westminster.

SOUTHAM BLUE LIAS LIME WORKS. OLDHAM and TATHAM have the pleasure of announcing to Engineers, Architects, Builders, and Contractors, that they have erected extensive works near Southam, for the manufacture and grinding of BLUE LIAS LIME, the value of which is now so universally admitted, especially for hydraulic purposes, concrete, &c. &c.; and they most respectfully solicit orders.

O. and T. can deliver by their own boats, or by rail to any part of the kingdom.

Office, Warwick.

SOUTHAM CEMENT WORKS.—OLDHAM and TATHAM respectfully request a trial of their PORTLAND, ROMAN, and LIAS CEMENTS, which they do not hesitate to pronounce as good as any now in the market. Their unvarying cementitious properties will ensure regularity in colour and quality.

Office, Warwick.

6, South Wharf, Paddington.

PORTLAND CEMENT.—CHARLES RICHARDSON has the greatest confidence in introducing to the Trade the above superior CEMENT, being of uniform colour and quality,—a desideratum never before attained in Portland Cements. It possesses extraordinary cementitious qualities, resists the action of frost and heat, and is more durable than any other Cement; does not vegetate, turn green, or smack; combined with which, its eminent hydraulic properties stamp it at once as the first Cement of the day for work where all the above qualities are requisite. It is manufactured on the only principle Portland Cement can be, and contrary to the statements put forth by those who have hitherto had the monopoly.—Manufactured by R. GREAVES, Esq. at his Works, near the River Avon, and sent to all parts of the kingdom per boat or rail, at a reduced price to the trade.

PORTLAND CEMENT.—FULLWOOD THOMPSON and CO. beg to request the attention of Contractors, Merchants, and others, to the quality of their Roman, Portland, and Bath Cement, as further are manufacturing at their works, situate on the Bristol and Exeter Railway, two miles north of Bridgewater, and adjoining the Dunball Wharf, on the river Parrett.

These Cements are, they believe, the best for any purpose now in the market; they will set under water in a few minutes, and are insensible to extremes of heat or cold. The material used is such as will produce a certain and unvarying cementitious power, and a consequent regularity, the want of which is so obvious in Cements manufactured in the ordinary method.

FULLWOOD THOMPSON and CO. will be happy to forward prices by post on application, and can offer favourable terms to large purchasers and exporters.

Dated St. Mary-street, Bridgewater, July 26th, 1854.

PORTLAND CEMENT.—ASPDIN'S PATENT.

Messrs. ASPDIN, ORD, and CO. have much pleasure in informing consumers of this valuable Cement, that they have, by means of a recent discovery (patented by Mr. ASPDIN) much improved the quality of this Cement without any increase in price.

Engineers and architects are recommended to specify "Aspdin's Patent," as there are numerous imitations sold as Portland Cements resembling it only in colour

ASPDIN, ORD, and CO. beg to call attention to their SECOND QUALITY, which is equal, if not superior, to most of the Cements sold as Portland, and is considerably cheaper.

A report of experiments made to prove the extraordinary strength of their Patent Portland Cement, may be had at their Office, New Wharf, Abingdon-street, Westminster; at their Works, Gateshead-on-Tyne; at Messrs. Rosher's Wharfs, Holland-street, Blackfriars, Kingsland Basin, and Limehouse; or from their Agent, Mr. HENRY ROBINSON, 31, King-street, Liverpool.

PORTLAND CEMENT WORKS, NORTHFLEET, KENT.—Messrs. ROBINS and CO. with much pleasure announce to their Friends and the Public, that they have completed the enlargement of their works, in order to meet the great increasing demand for their Cement; and are now prepared to supply any quantity of the very best PORTLAND CEMENT, manufactured by them for all the purposes Cement is applicable.—Orders received at Great Scotland yard, and at the Works.

PORTLAND CEMENT.—JAMES WESTON having enlarged that portion of his CEMENT WORKS on Mill-wall, Poplar, for Manufacturing the above CEMENT, begs to inform the Trade in general that they can be supplied with any quantity they may require, either at his Works, St. Andrew's Wharf, Earl street, Blackfriars, or Middle Wharf, Scotland yard, Westminster. Manufacturer of Roman, Lias, and Mastic Cements, English and French Plaster, &c

PORTLAND CEMENT WORKS, NORTHFLEET, Kent—KNIGHT, BEVAN, and STURGE, Manufacturers only of first-class quality, for the home and foreign trade. Portland cement is manufactured at these works with especial reference to its destination, whether for stuccoing, brickwork, blocks for breakwaters, tidal work, or otherwise.—London Wharf, Belvedere-road, Lambeth.

KEENE'S and PARIAN CEMENTS and FRENCH PLASTER, for internal uses These well-known hard Stuccoes dry quickly, and can be painted upon within a few days.—Made and sold by JOHN BAZLEY WHITE and BROTHERS, Millbank-street, Westminster.

PARIAN CEMENT, for Internal Use, to be painted in a few hours, and papered within a couple of days. FRANCIS, BROTHERS, Manufacturers of Roman, Parian (under patent), and all other Cements in use for building purposes, Nine Elms, London.

GEO. & THOS. EARLE, CEMENT MANUFACTURERS, HULL, Light and Dark, equal to any made. Manufacturers also, for Delivery, Plaster, Paris White, Mastic, Hair, Lias Lime, Laths, Slates, and Slate Slabs, Firebricks, Grindstones, Cement Chimney-tops, ditto Vases, Ridging, &c Paints, Stucco, &c. Marble Merchants and Importers of Pozzolano

ARTIFICIAL HYDRAULIC or PORTLAND CEMENT combines the valuable qualities of the natural Cements with the additional advantage that it greatly excels them in its cementitious properties; that it is not affected by frost, and does not vegetate in damp situations. Account of COMPARATIVE EXPERIMENTS on the strength of this and other Cements read at the Institute of Civil Engineers, to be obtained from the Makers, JOHN BAZLEY WHITE and BROTHERS, Millbank-street, Westminster, who prepare one quality only of Portland Cement

ATKINSON'S CEMENT, so long known and esteemed in London for plastering purposes, is a quick-setting Cement, that requires no colouring. Sold exclusively by JOHN BAZLEY WHITE and BROTHERS, Millbank-street, Westminster; and Seel-street, Liverpool.

CEMENT.—ROMAN and PORTLAND CEMENTS, and PLASTER of PARIS, manufactured by C. HILTON, can be had in any quantity, wholesale and retail, at his wharf, 6, Upper Thames-street, London; and also at the manufactory, Faversham, Kent.—N.B. These Cements supplied for shipment, on advantageous terms.

GREAVES'S BLUE LIAS LIME.—The superior manner in which the above is ground renders it cheaper for concrete or stucco than any other lime or cement The shell lime for mortar is burnt on an improved principle, leaving scarcely any core. The satisfaction constantly expressed by Engineers, Architects, and Contractors, of the above, is its best recommendation.

Gibbs, Canning, and Co.'s Blue Vitrified Bricks, Pipes, Junctions, Bends, and Fire Goods.

ROMAN, PORTLAND, PARIAN, ANSTON, and LIAS CEMENTS of the best quality.

SECONDS, PAVIORS', STOCKS, and other BRICKS.

CHARLES RICHARDSON, 6, South Wharf, Paddington.

NOTICE.

Greaves's Blue Lias Lime and Cement, 6, South Wharf, Paddington-basin, London, March 30, 1850.

CHARLES RICHARDSON hereby informs his friends he has taken another Wharf adjoining, especially to keep a LARGER STOCK of the above valuable HYDRAULIC LIME always on hand, that in future all orders may be punctually attended to. Orders for export, or alongside rivers, canals, or railway stations, should be given a few days before required.

BUILDERS, IRONFOUNDERS, and OTHERS.—The Subscriber is in possession of several PATENTABLE WATER CEMENTS and COMPOUNDS (Frost, Fire, and Waterproof), adapted to every branch of plain and ornamental art, cheap in material and working. No engines, presses, or kilns required. Also, a Loom, wherein duplicate casts of metal can be taken out without destroying the mould; and a Material for Cores of Pipes, Cylinders, &c. with many advantages over any in present use The undersigned will treat with any capitalist for carrying out the above on easy terms.—Information personally, or address to THOS. HODGSON, 101, Drummond-street, Euston-square.

BRICK-MAKING MACHINES. TO CONTRACTORS, BRICK AND TILE MAKERS, AND EXPORTERS.

ATLAS WORKS.

CLAYTON'S PATENTS, patronized by H. R. H. Prince Albert.

CLAYTON'S PATENT BRICK-MAKING MACHINES offer a most important and profitable investment.

CLAYTON'S PATENT BRICK MACHINE (of which there are upwards of 600 in use) is worked by one horse by steam or water power, and combines the whole process of pugging the clay and making the bricks at one time. Awarded the prize medal at the Great Exhibition at Amsterdam, Nov. 1853.

CLAYTON'S PATENT CLAY SCREENS, for cleansing clay from stones, roots, &c.

CLAYTON'S PATENT TILE, PIPE, and HOLLOW-BRICK MACHINES, of various sizes and construction.

CLAYTON'S PATENT BRICK or TILE-PRESSING or MOULDING MACHINES.

CLAYTON'S PATENT DIES, for the manufacture of socketing sewerage pipes

CLAYTON'S PUGGING MILLS, of various sizes and construction, for tile clay, brick earth, mortar, &c.

And every article connected with the brick, tile, and pottery trades

The above machines may be inspected, and illustrated catalogues obtained, at the Manufactory, Atlas Works, Upper Park-place, Dorset-square, London.

TESTIMONIAL.

"Haslingden, near Manchester, Dec 2, 1854.

"SIR,—Several kilns of bricks made by your machines have been burnt, and I have great pleasure in informing you that they are as good as can be desired. They are in all respects superior to hand-made bricks, and command a much better price. Your machines are simple and efficient implements. I have sent you a few bricks for a sample, which I hope you have received.—I remain, yours very truly,

"Mr. Clayton, London." "J. RAWSTHORNE."

WHITE FACING BRICKS.—The public can now be SUPPLIED with a very BEAUTIFUL ARTICLE on moderate terms. Dies of any size. Stock bricks may also be had W. FOSTER, Manager.

Patent White Brick Works, Rugby, March, 1853.

TO AGENTS AND TILE MERCHANTS.

WANTED, by the Advertiser, THIRTY THOUSAND, of best quality, PANTILES, delivered alongside of any wharf at Paddington. Tenders on or before the 1st APRIL, to be sent to Mr. J JONES, Lead and Glass Merchant, 17, High-row, Knightsbridge.

BRICKS.—Best Kent Grey Stocks, delivered alongside in the River; also Patent Perforated and Solid White Suffolk and Red Facings—Apply to W. ALLAWAY, 4, Catherine-court, Tower-hill.

GREAT NORTHERN WHARF, York-road, King's-cross.—WHITE BRICK and TILE DEPOT.—L. R. PEARSE and CO. Brick, Tile, Lime, and Cement Merchants. Builders, contractors, and others supplied with every description of building material at the lowest market prices.

BRICKS.—Malm Cutters, Yellow and Pale Seconds, Paviors and Pickings, of good and sound quality, constantly on sale at H. DODD'S Brickfields, which are only a quarter of an hour's walk from the City. H. D. earnestly requests purchasers to favour him with a visit, in order to inspect his stock, and to judge for themselves.

Malm Place, half-washed Stocks, and Place Bricks, also on sale. These bricks are sound, well burnt, and unusually free from defects; a very large proportion of the stock being suitable for external use

Apply to HENRY DODD and CO. at the Counting-house, Hoxton Brickfields, Grange-walk, near the Rosemary Branch, Hoxton.

N.B. Light-coloured Pale Stock of approved quality constantly on sale upon reasonable terms This Sand, from its not containing any saline matter, is acknowledged to be preferable to river sand

MILLS and PRICE, Brick and Stone Merchants and Agents, very respectfully announce, that their business will be carried on at Newington Causeway, Kingston butts, will, from MONDAY, the 11th inst be carried on at 5, ADELAIDE PLACE, LONDON-BRIDGE.—Dec. 8, 1854.

BRICK-MAKING EXTRAORDINARY!! BY OATES AND INGRAM'S PATENT MACHINE.

TO CAPITALISTS AND BRICKMAKERS.

Messrs. OATES and INGRAM beg to announce, that the above powerful and effective machine may be seen (by order only) in daily operation at the works of the Vaughton's Hole Brick Company, near Birmingham.

To great advantages possessed by this machine over all others are, no tempering is required.

The bricks are produced at the rate of twenty-five per minute, smooth on the surface, being pressed in moulds, and sufficiently dense to be backed up in ranks before leaving the machine, which is entirely self-acting, consequently requires only the labour of feeding and carrying off.

Applications, either to view the machine, or for the purchase of the patent right for counties or for royalties, to be addressed, T. WELLS INGHAM, Engineer, Birmingham; or to J. P. OATES, Inventor and Patentee, Lichfield.

WHITE SUFFOLK and RED FACING BRICKS.

COWLEY, KENT, and ESSEX BRICKS.

Also Yellow and Pale Malm Seconds, Cutters, Paviors, Shippers, &c.

KENTISH RAG-STONE of the FINEST QUALITY.

MILLS and PRICE (successors to Mr. Benjamin Gough), 5, ADELAIDE-PLACE, LONDON-BRIDGE.

CRYSTAL PALACE BRICK and TILE COMPANY'S WORKS, Lordship-lane, Dulwich, one mile from Forest-hill station, on the Croydon and Epsom Line, are prepared to supply, 1,000,000 REDGRAIN and RED KILN BRICKS for SALE, at the Works of the Crystal Palace Brick and Tile Company. Applications to be made to Mr. T. H. MAYHEW, on the ground, or to Mr. DOWELL (the Secretary, at No. 1, George street, Croydon.

O. M'CARTHY, CARMAN, and SAND and CEMENT MERCHANT, Whitefriars Wharf, Whitefriars, Fleet-street, City. Sand, from above or below bridge, delivered by the yard or per barge. Ballast screened or unscreened, by the yard or per barge. Stocks, lime, and old bricks. Dry sand delivered per barge, in any quantity, alongside the Thames.

BRICK MOULDS (improved), STEEL-FACE STOCKS and PLATES, with regulating screw pegs, used three seasons by the leading brickmakers, bowls, hoes, cuckholds, pug-mills, &c. Numerous references where in use. T. LEACH, Manufacturer, 90, Critchill-place, New North-road, Hoxton.—N.B. A variety of sizes kept on hand.

PURE WATER, for manufacturing purposes, may be obtained at very moderate cost by RANSOME'S FILTERING STONE. Estimates given for large or small quantities. Builders and Plumbers supplied with the ascension and other Filters at trade prices. These filters, at one, two, three, and four guineas each, yielding 50, 100, 150, and 200 gallons per diem, will be found sufficient for ordinary domestic requirements; are self-acting, and not liable to get out of order. References to parties satisfactorily supplied with quantities up to 30,000 gallons per week, may be obtained on application at the depôt, 71, Baker-street, Portman-square, London.

FORSTER and SLATE'S PATENT CONSTANT SUPPLY FILTERS, tested and approved by the first water engineers in the country. Used and approved at the Offices of the General Board of Health. Exclusively adopted by the Crystal Palace Company. Easily cleaned without trouble or expense.—To be seen in operation daily, at J. EVANS and SON'S, Ironmongers, 33, King William-street, London-bridge.

FOWLER'S
IMPROVED FARM AND
COTTAGE PUMPS.

To be had of any Ironmonger or Plumber, 1l. 15s.
The usual allowance to the trade.

PUMPS of SUPERIOR CONSTRUCTION bored perfectly true by improved machinery, in various plain and ornamental patterns, for squares and market-places, roads, conservatories, liquid manure, ship, barge, brickmakers, contractors, gold diggers, brewers, chemical works, and in wrought and cast iron, copper and brass, for hot or cold liquids, &c. &c. Long barrel and hydraulic lift pumps, with handles on planks; and engines of various powers, for wells of any depth.

FARM AND COTTAGE PUMPS.

WARNER'S PATENT
CAST-IRON PUMPS, for the use of FARMS, COTTAGES, MANURE TANKS, AND SHALLOW WELLS.

Patent Pump..... £1 12 0
Patent Pump, with 15 feet of lead pipe attached, and bolts and nuts ready for fixing..... 2 12 0
Larger sizes if required.

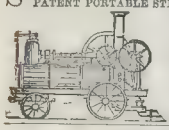
The smaller sizes are also much used for supplying Hot, Foreing, and Plant Houses, from underground Water-Tanks, and can be readily fixed in any situation.

May be obtained of any Ironmonger or Plumber in town or country, or of the Patentees and Manufacturers,

JOHN WARNER AND SONS,
8, CRESCENT, JEWIN-STREET, LONDON.

Every description of Machinery for raising Water, Fire Engines, &c.
The usual allowance to the Trade.

M. A. RICHARDS and SON, PUMP MANUFACTURERS and ENGINEERS.
Pumps in Wrought and Cast Iron and Brass, bored by machinery, and fitted in the best possible manner, suitable for excavators, roads, brickmakers, farms, gardens, stables, liquid manure, ships, barges, well-sinking, &c. adapted for any depth. Hydraulic Pumps for deep wells.
PUMPS ON HIRE.
Pumps of any size, single or double barrel, up to double 18-in. diameter, kept ready for use at reduced prices.

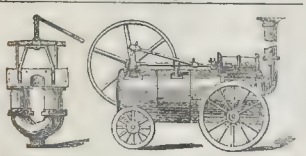


N.B. The above can be worked either by hand, horse, or engine power.

Iron Pails 38s per doz. painted.
Ditto .... 48s per doz. galvanized.

Upper Ground-street, Blackfriars Bridge, Surrey Side.

STEAM PUMPING ENGINES.—
PATENT PORTABLE STEAM-ENGINES, from four to ten-horse power, always ready to let on hire, by the week or month, for pumping, sawing, pile-driving, raising materials, &c. &c.
Contracts taken for pumping any quantity of water.



JAMES BURTON & SONS,
Engineers and Contractors,
John's-place, Holland-street, Southwark, London.

TO CONTRACTORS

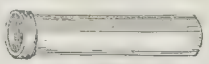
PORTABLE STEAM-ENGINES TO BE LET, on HIRE, by the WEEK, MONTH, or for any period, of 8-horse, 10-horse, 12-horse, 16-horse, 20-horse, and 25-horse power, adapted for Contract work generally. These engines have been successfully employed for years by all the principal contractors, and are ready for delivery at a day's notice. Several may be seen at work at Messrs MEDWIN and HALLS, Engineers, 92, Blackfriars road, Sole Patentees and only Manufacturers N.B Any of these Engines may be purchased.

PUMPING ENGINES.—TO BE LET ON HIRE, TWO PORTABLE STEAM-ENGINES, of three and five horse power with pumps, complete—Apply to Mr HENRY JOHNSON, 71, Bleeding Heart-yard, Hatton Garden, London; and 44, Broad-street, Birmingham.

PORTABLE STEAM-ENGINES and PUMPS kept in Stock for Hire at reduced Prices. M. A. RICHARDS and SON, Pump Manufacturers and Engineers, Upper Ground-street, Blackfriars-bridge (Surrey Side).

TERRA-COTTA.—Statues, Statuettes, Vases, Tazzas, Busts, Consoles, Bas-relievi, &c. by J. M. BLASHFIELD, of Millwall, near the West-India Docks Station, and sold at No. 1, Praed-street, Paddington-road, where prices and designs can be obtained. Examples of Terra cotta, by J. M. Blashfield, are to be seen at the Crystal Palace, Sydenham, in the Mineral Court. The statues of Australia, Venus de Medici, and the colossal Tritons in the gardens at Sydenham, are in Terra-cotta, so are the friezes at the Renissance Court, and the roof of the Alhambra Court. The Pompeian roofs of Terra-cotta and red cement combined. Since the execution of these works, J. M. Blashfield has taken a patent for an improvement in the manufacture of Terra-cotta and pottery, whereby larger and more even surfaces can be produced, and a higher degree of vitrification attained.

E. and W. STURGE invite special attention to their revised LIST of PRICES of Drain Pipes, Junctions, Pans, Traps, &c.; also, to their Paving, Sills, &c.; Slates of the best quality, wholesale and retail. Country millers and others supplied at all information, on application to E. and W. S. URGE, Bristol wharf, City-road.
N.B. Bristol is well situated for carriage by canal, boats, or to the railways, to which but a small charge for cartage is made.
January, 1859.

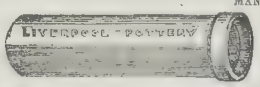


SALT-GLAZED STONEWARE PIPES, BENDS, JUNCTIONS, CLOSET-PANS, TRAPS, &c. at the

NEAR POOLE, DORSET

These Pipes being made under immense pressure by patented machinery, and burnt by intense heat to an unusual degree of hardness, are very far superior to the best ware hitherto manufactured in Hants and Dorset; they are made of clay of the finest quality, the produce of the estate, and will bear comparison with any Pipes in the kingdom, and can be had upon application to THE AGENTS.
Mr. G. S. WHITTON, 17 and 18, Princes-street, Lambeth, London;
Mr. J. S. HUDSON, the Pottery, Bournemouth, Poole;
Where a large stock is always kept on hand.

THE NORTH DEVON POTTERY COMPANY,
MANUFACTURERS OF SUPERIOR SALT-GLAZED STONEWARE PIPES, &c.



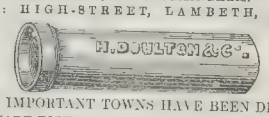
SOCKET.

HALF SOCKET

BUTT-JOINT WITH SLEEPERS.

To the LATTER attention is invited as the most SIMPLE and EFFICIENT yet introduced, obviating all difficulty in examining and repairing a Drain, all pipes and sockets at the Joint, with many other advantages at once apparent.
Prices and Terms may be obtained at the Manufactory, near Bideford.

JOHN DOULTON, BROTHERS, AND CO. LIVERPOOL POTTERY, ST. HELEN'S.
MANUFACTURERS OF



DOULTON'S STONE-WARE DRAIN-PIPES.
DOULTON'S HALF-SOCKET PIPES.
DOULTON'S INVERT BLOCKS FOR SEWER BOTTOMS

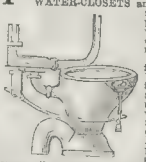
HENRY DOULTON AND CO. MANUFACTURERS OF GLAZED STONE-WARE DRAIN-PIPES
MANUFACTORIES, HIGH-STREET, LAMBETH, LONDON; ROWLEY REGIS, STAFFORDSHIRE; AND SMETHWICK, NEAR BIRMINGHAM.
OFFICES: HIGH-STREET, LAMBETH, LONDON.



TWENTY-ONE LARGE AND IMPORTANT TOWNS HAVE BEEN DRAINED WITH DOULTON'S GLAZED STONE-WARE PIPES, *and in no case has the slightest failure occurred.*
Messrs D. and Co. do not publish Testimonials, but references can be given to any of the Engineers and Surveyors under whom they have executed works. DRAWINGS, WITH PRICES, MAY BE HAD ON APPLICATION AS ABOVE.

BURSTING of PIPES by FROST.

This accident is prevented by the use of LAMBERT'S PATENT LEVER VALVE-COCKS, which act as safety valves.
The lever is weighted, to resist the pressure of the column of water upon the valve, but it is so weighted sufficiently to resist the powerful expansion of water caused by the frost, which lifts the lever, and thereby prevents injury both to valve and pipe. When reaction takes place, the lever and weight resume their original position.
Many thousands of these Valve-cocks are now in use under pressures of from 3 to 300 feet, with uniform success.
Price of 1 inch. bore, with sandplate and handle, 10s 6d. each.
THOS. LAMBERT AND SON,
Patentees and Sole Manufacturers, short street, New-cut, Lambeth.

PATTEN'S PATENT HIGH-PRESSURE WATER-CLOSETS and WATER REGULATORS, manufactured upon an improved principle, dispensing with cistern, cranks, wire, lead trap, &c. Any number of Closets can be supplied from one main.

Also PATTEN'S improved powerful FLUSHING LOW-PRESSURE WATER-CLOSETS, patronised by the Board of Health, Government, and other large public establishments, in all of which numerous private individuals.—Drawings, testimonials, and references of the highest respectability forwarded by post. Price for Closet and Apparatus complete from 20s. and perfect action guaranteed. First Specimens to be seen on the premises of the Patentee, WILLIAM PATTEN, 22, Old Fish street, near St. Paul's, London.

ISAAC PARRY'S
GLAZED STONE SEWER PIPES,
RED DRAIN PIPES, AND CHIMNEY-POT MANUFACTORY,
CHURCH-STREET, DEPTFORD, KENT.
ESTABLISHED UPWARDS OF 100 YEARS.

SUPERIOR GLAZED STONEWARE
DRAIN PIPES, invented and manufactured by
WILLIAM NORTHEN, UNION POTTERY, No. 14, VAUXHALL-WALK, LAMBETH.

W. NORTHEN begs to inform surveyors, contractors, builders, water companies, &c. that he has completed "Spencer's" new patent machinery for making GLAZED STONEWARE DRAIN PIPES, JUNCTIONS, BENDS, ELBOWS, SYPHON-TRAPS, &c. &c. Amongst the many advantages of pipes made by this machinery over all others may be mentioned, that it insures perfect uniformity in form and size, both of pipes and sockets, the dies being of a different and better construction than any others now in use; and the pipes and sockets being made by one process are secure from separation.
W. N. invites particular attention to the superior quality of the glaze used in his manufacture, which is equal to glass, and renders leakage stoppage in the drains impossible.
W. NORTHEN'S PIPES MAY BE INSPECTED AT THE FOLLOWING PLACES, WHERE ORDERS ARE RECEIVED:—
Rosher and Co.'s Wharfs: Kingsland, Blackfriars, and Millbank.—Martin and Wood's Market Wharf, Regent's-park Basin.—J. C. Hilton's, Crown and Horse-shoe Wharf, No 8, Upper Thames-street.—C. Richardson's, South Wharf, Paddington.—G. Frith's, Cambridge Heath Wharf, Hackney. Millwood and Co.'s Wharfs, Kensington Basin, and Creek Wharf, Hammersmith.—J. Corbet's Depôt, Britten-street, Chelsea; and at the Pottery.

AGRICULTURAL LAND DRAIN-PIPES of all sizes, and in any quantities, may be obtained of L. B. PEARSE and CO. Great Northern Wharf, York-road, King's-cross.

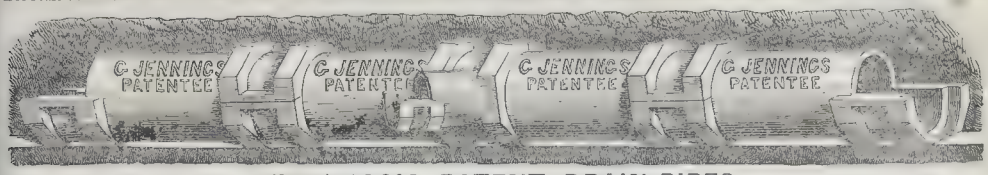
UNDERHAY'S PATENT
REGULATOR CLOSETS, for constant or intermitting supply, dispense with cisterns. Service Boxes, Valves, Levers, Cranks, Wires, &c. &c.; much time is saved in fixing, and a better flush of water obtained in use.

Pan-valve, Self-acting, and Servants' Closets, on this principle, may be seen at the Works. They are very cheap, their efficiency is guaranteed. Nine of them have been sold, and no instance of failure has occurred.

These VALVES are cheaper, stronger, and more ornamental, than any other. Many thousands are in use, and greatly approved of

Manufactured by
CHARLES BOTTEN and SON,
Brass Founders, Crawford passage, Clerkenwell, London.

HOSPITALS FOR THE BRITISH ARMY.



THE FRIENDS OF SANITARY PROGRESS are informed that, after strict inquiries, AT GUY'S HOSPITAL and other PUBLIC WORKS,

JENNINGS'S WATER-CLOSETS, PIPES, LAVATORIES, VALVES, AND URINALS, HAVE BEEN SELECTED.

GEORGE JENNINGS HAS RECEIVED ORDERS TO PREPARE, WITHIN ONE MONTH,

TWENTY-ONE SETS OF THE ABOVE, FOR TWENTY-ONE HOSPITALS, NOW IN COURSE OF CONSTRUCTION FOR THE EAST.

These sets comprise ONE HUNDRED AND SIXTY-EIGHT OF JENNINGS'S EARTHENWARE WATER-CLOSETS (Fig. 3 fitted as Fig. 5; see Jennings's Illustrated Book); ONE HUNDRED AND TWENTY-SIX OF JENNINGS'S PATENT LAVATORY ARRANGEMENTS (see Figs. 21 and 31); besides JENNINGS'S BELL-TRAPS, PIPES, URINALS, &c.

JENNINGS'S PATENT DRAIN-PIPES

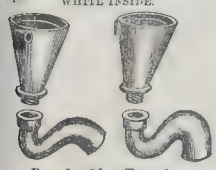
Have just been ordered by, and supplied to, Messrs. Fox, Henderson, and Co., for the WOOLWICH ARSENAL, and they have also been ordered for the GOVERNMENT ARMS FACTORY, ENFIELD-LOCK, and for many other important PUBLIC AND PRIVATE WORKS, during the past week.

Licenses are now being granted to MEN OF KNOWN MECHANICAL ABILITY in all parts of the United Kingdom; and by a COMBINATION OF FIRE WITH OTHER CLAYS, Pipes, not only of superior manufacture, but of QUALITY, will be readily obtainable in any quantities, of any size, in any part of the kingdom, and at such prices as must cause their UNIVERSAL ADOPTION.

SINCE THE TIME OF THE ROMANS, little or no alteration has been made in drain pipes, and no testimonials would help them as regards the IMPOSSIBILITY OF EXAMINATION, THE INTRODUCTION OF JUNCTIONS AFTER PIPES ARE LAID, DEFECTIVE JOINTS, &c. &c.

The favour with which the POTTERS have received JENNINGS'S Improvements in Drainage Pipes is most satisfactory, and is another proof that COMMON SENSE INVENTIONS have only to be submitted to the INTELLIGENT manufacturers of this country to insure their adoption.

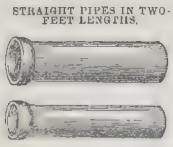
A Book containing Illustrations and Description of many of JENNINGS'S Sanitary Inventions, can be had FREE ON APPLICATION, or by post, if two stamps are inclosed to



GEORGE JENNINGS, SANITARY ENGINEER, 29, GREAT CHARLOTTE-STREET, BLACKFRIARS-ROAD.

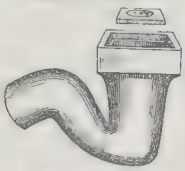
N.B.—Engineers and Architects are respectfully invited to visit Jennings's Factory.

JAMES STIFF,



MANUFACTURER OF GLAZED STONEWARE DRAIN PIPES, WATER-CLOSET PANS, SINK TRAPS, INVERT BLOCKS, AND ALL OTHER ARTICLES SUITABLE FOR DRAINAGE AND OTHER PURPOSES, LONDON POTTERY, HIGH-STALEL, LAMBETH, LONDON.

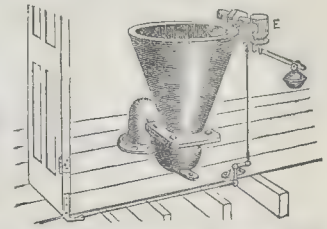
IMPROVED WATER-CLOSET PANS AND TRAPS, WHITE INSIDE.



Pan, 3s. 6d. Trap, 2s.

STRAIGHT PIPES IN TWO-FEET LENGTHS.

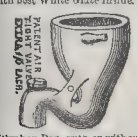
IMPROVED YARD SINK.



HALF-SOCKET PIPES, in 2 feet lengths, at usual prices, by the use of which, Drains may be readily examined, and Junctions inserted, in the event of requiring further connections.

May be had also at Messrs. GLADDISH'S LIME WHARFS, Pedlar's-acre, Westminster-bridge, City-road Wharf, City-basin; Dock-head, Bermondsey; Isaacs's Wharf, foot of Battersea-bridge, Chelsea; Pratt Wharf, King's-road, Camden New Town; J. TURNER, 2, South Wharf, Praed-street, Paddington; COLWILL, Brothers, 33, Bryde's-street, Covent Garden; and at EDWARD COCK'S, 94, Wardour-street, Oxford-street. Drawings and List of Prices will be forwarded free on application.

LAMBERT'S DOOR-ACTION CLOSET.



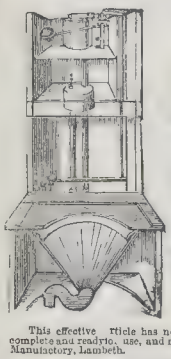
100 of these Closets have been four years in use at Colney Hatch Asylum. They are also in use at St. Mary's Hospital, Wilts County Asylum, &c. Price, complete with enamelled iron basin and trap, and 1½ inch patent valve-cook, lever, weights, &c. 1l. 18s.; Ditto, Closet complete, with white wedgewood basin and trap, with ¾ inch patent valve-cook, lever, and handle to pull up, 7s. 6d.

THOMAS LAMBERT and SON,
Patentees and Manufacturers, Short-street, New-cut, Lambeth.

COLLIER'S TERRO-METALLIC and RED EARTHENWARE SOCKET DRAIN PIPES, BENDS, JUNCTIONS, and SYPHONS.—This ware, allowed by all to be of the best manufacture, by the unparalleled quality, combined with cheapness, will be found to meet the approbation of consumers. Sole Agents, L. B. PEARSE and Co. Great Northern-wharf, York-road, King's-cross.

Superior Glazed Stoneware Pipes, Bends, Junctions, Traps, &c. Hopper and other Pans, with best White Glaze inside.

Pan, 3s. 6d.



Trap, 2s.

Syphon Pan, with or without STEPHEN GREEN'S Patent Air-tight Valve.

Registered Flushing Basin,—the most effective Syphon-trap yet offered to the public.

IMPORTANT TESTIMONIALS

TO THE EFFICIENT WORKING OF

STEPHEN GREEN'S

PATENT SYPHON FLUSHING BASIN,

AND

SELF-ACTING CLOSET CONNECTIONS.

Oxford, November, 1849.

GENTLEMEN, Sixteen of your Closets having been put into operation at Christ Church College, I have great pleasure in giving you my testimony as to their efficiency and simplicity.

HENRY J. UNDERWOOD, Architect.
R. S. HOGGAR, Engineer.

Royal Arsenal, Woolwich, June 24, 1852.

GENTLEMEN,—I have much pleasure in giving my testimony in favour of your Patent Syphon Flushing Basin, with Self-acting Closet Connections. There are several fixed here, which have been in use for upwards of twelve months, giving perfect satisfaction.

I am, Gentlemen,
Your obedient Servant,
WILLIAM CARTWRIGHT.

This effective Article has not any Crank or Wire to get out of order, and is all complete and ready for use, and may be seen in operation at STEPHEN GREEN'S Manufactory, Lambeth.

VICTORIA POTTERY, LEIGH, NEAR SOUTHEND, ESSEX.

DAVID MOUNTAGUE,
MANUFACTURER of superior GLAZED STONE WARE PIPES (in accordance with the rules established by the Commissioners of Sewers), Bends, Traps, Closet-pans, Jars, Bottles, and every article in Stone Ware on advantageous terms. Also MANUFACTURER of superior Roman Cement and Plaster of Paris at Orchard House, Blackwall. Orders executed from the above places, from Falcon-wharf, 50, Bankside, Blackfriars, and from Harrow-bridge-wharf, Stratford, Essex.

SLUICE-VALVES, fitted with square double-threaded screws, springs, brass nuts, glands, and facings; price, from 2½-inch to 9-inch, 2s. per inch. These valves being steam-tight, and of the best workmanship, are particularly applicable to Baths and Washhouses, and the better class of work. They can be easily repaired without interfering with the pipes. Liberal discount allowed to architects and the trade.

J. J. CAPPER, Falcon Engine Works, Loughborough; orders in London kindly received by W. H. WALENN, C.E. 7, Duke-street, Adelphi.

REDUCTION IN THE PRICE OF CLOSET-PANS.

DOULTON AND WATTS,
LAMBETH POTTERY, HIGH-STREET, LAMBETH,
Have reduced the Price of their PATENT ENAMELLED CLOSET-PANS WITH TRAPS, to

5s. 6d.

These Pans, therefore, which have a strong Vitrified Body, as well as a White Interior Glaze, may now be obtained at the price of the commonest description of Closet pans.

SALES BY AUCTION.

BOROUGH of SOUTHWARK. Ninety-three Freehold Houses, in single lots, each House entitling to a Vote, — particularly worthy the attention of small Capitalists.

MR. W. F. HAMMOND has been favoured with instructions from the proprietor to SELL by AUCTION at GARRAWAY'S, on FRIDAY, MARCH 30, at 12 for TWELVE, in single lots, the above valuable FREEHOLD ESTATE, comprising Ninety-three Houses, all living compact in four blocks, and known as Henry-street and Ethan-street, with a frontage to Kent street, Borough. The description of the property is fit for first and fourth rates, well built, having been erected about thirty years, consisting of shops and dwelling-houses, which are well occupied, and producing rentals from 13l. to 40l. each, making a total sum of 1,334l. 4s. 8d. per annum, each house entitling to a vote. This forms an important investment to small capitalists, being sold in separate lots, with a special condition granting to every purchaser, as a further facility, the option of leaving one half of the purchase-money upon mortgage, to be paid off by such instalments, and at such periods, as may be mutually agreed upon between the vendor and purchaser; but the vendor will not object to receive proposals for allowing a larger proportion of the purchase-money to remain on mortgage.—N.B. Although the property is at present let into separate lots, to meet the interests of small capitalists, the auctioneer will be prepared to put up several together should it be desired by those present at the time of sale.—Further particulars, with plans of the property, and plans of the estate, to be had of Messrs. JASON, COBB, & PEARSON, Solicitors, 4, Bucklersbury-street, City; at Garraway's Coffee-house, Cornhill; of Mr. Shadbolt, the Collector on the Estate, 47, Henry-street; and at the Auctioneer's Offices, 3, Carey-street, Lincoln's-inn.

Catalogues containing full descriptive particulars may be seen at the Office of "The Builder," or had, on application to EDWARD CHALONER, Broker,

No. 6, East Side, Queen's Dock, Liverpool.

SALES BY AUCTION.

WIMBLEDON, SURREY.—Four substantially-built Freehold Residences, situate on the park side of Wimbledon-common, producing rentals and of the value of about 63l. per annum, eligible for investment and occupation; also a valuable Plot of Freehold Building Land in the rear, having a frontage of 135 feet, by a depth of 276 feet.

MESSRS. NORTON, HOGGART, and TRIST have received instructions to OFFER for SALE, at the MART, on FRIDAY, APRIL 6th, at TWELVE, in lots (unless previously sold by private contract), FOUR capital FAMILY RESIDENCES, very substantially built and delightfully situate at West-hill, between Wandsworth and Wimbledon-park, and within a mile of the Putney Station on the Richmond Railway. The houses command fine views of the surrounding country; they contain several bedchambers and dressing-rooms, elegant drawing, dining, and breakfast rooms; gardens 40 feet in depth, stabling, &c. and every accommodation for moderate establishments. Three are let to highly respectable tenants, at rentals amounting together to 46l. per annum, and several plots of Building Land, the whole free hold and land-tax redeemed

MESSRS. NORTON HOGGART, and TRIST have received instructions to offer for SALE, at the MART, on FRIDAY, APRIL 6th, at TWELVE, in lots, eight unfinished semidetached VILLA RESIDENCES, with good garden, pleasantly situate in the West-hill road, Wandsworth, and near to Wimbledon-park, and only a mile from the Wandsworth station on the Richmond and Windsor Railway, several plots of valuable freehold building Land, situate in the West-hill, Melrose, Spencer, and Seymour roads, and a pair of secure, well-secured freehold ground-rents, amounting together to 32l. per annum, arising from eleven dwelling-houses and gardens, situate in Mount-pleasant, near to the Park, Putney, in the road leading from Wandsworth to Merton and Wimbledon, the rack rental of the houses being about 80l. per annum. Particulars may be had fourteen days prior to the sale, at the Inns at Windsor, Wandsworth, and Putney; of J. W. FLOWER, Esq. Solicitor, 17, Gracechurch-street, at the Mart; and of Messrs. NORTON, HOGGART, and TRIST, 62, Old Broad-street, and Royal Exchange

WIMBLEDON-PARK, SURREY. Freehold Mansions, with Coach-houses, Stabling, Offices, and Pleasure-grounds, one mile from the Palace, Station on the Windsor and Richmond Railway. Another of the value of about 1,000l. per annum, and eligible for occupation or investment.

MESSRS. NORTON, HOGGART, and TRIST have received instructions to offer for SALE, at the MART, on FRIDAY, APRIL 6, at TWELVE in lots, THREE very valuable and elegant FREEHOLD MANSIONS and tax redeemed beautifully situate fronting Wimbledon-common, in the county of Surrey, commanding uninterrupted and lovely views over the richly-wooded scenery of the park, and the surrounding highly picturesque country, the district being remarkable for its pure air and extremely healthy. They are of handsome elevation, stand perfectly detached, are most substantially built, and the interior arrangements are most complete. The accommodation in each consists of numerous lofty bed chambers and dressing-rooms, servants' apartments, secondary staircase, spacious landings and wide staircase a suite of splendid reception-rooms, including noble drawing and dining rooms, library and morning rooms, all fitted with plate-glass windows; an elegant entrance hall, three water closets, inner hall, very superior domestic offices, and every convenience for a gentleman's establishment; the detached offices comprise excellent stabling for four horses, double coach house, harness-room, loft and man's room over, carriage yard, &c.; large pleasure grounds an acre and a quarter in extent, beautifully laid out in lawn and flower beds, and planted with choice shrubs; and the premises are abundantly supplied with spring water. Two of these first-class residences have been finished in a very superior style at great cost, and they are fit for immediate occupation. The third house is immediately

ADVERTISEMENTS.

ROYAL ACADEMY of ARTS, Trafalgar-square. NOTICE to ARTISTS.—All works of Painting, Sculpture, Architecture, or Engraving, intended for the ensuing EXHIBITION at the ROYAL ACADEMY, must be sent in on MONDAY, the 30th, or TUESDAY, the 31st of APRIL next, after which time no work can possibly be received, nor can any works be received which have already been publicly exhibited.

FRAMES.—All pictures and drawings must be in gilt frames. Oil paintings under glass, and drawings with wide margins are inadmissible. Excessive breadth in frames as well as projecting mouldings may prevent pictures obtaining the situation they otherwise merit. The other regulations necessary to be observed may be obtained at the Royal Academy.

JOHN PRESCOTT KNIGHT, R.A. Sec.

Every possible care will be taken of works sent for exhibition, but the Royal Academy will not hold itself accountable in any case of injury or loss, nor can it undertake to pay the carriage of any package. The prices of works to be disposed of may be communicated to the Secretary.

EXHIBITION of the SOCIETY of BRITISH ARTISTS, incorporated by Royal charter.—The THIRTY-SECOND ANNUAL EXHIBITION of the SOCIETY is NOW OPEN, from NINE a.m. until dusk.—Admittance, 1s. Suffolk-street, Pall-mall East.

ALFRED CLINT, Hon. Sec.

COMPETITIONS.

SOMERSET ASSIZE COURTS.—All Architects who have sent designs for new Assize Courts, House for the Judges and Record Rooms, and Office for the Clerk of the Peace (except the one who adopted the motto of "Equitas"), will have their plans, &c. returned to them by Mr. OAKLEY, Governor of the Gaol, at Wilton, near Taunton, on application to him by the various parties, with sufficient instructions as to the desired mode of their conveyance.

EDWIN LOVELL, Clerk of the Peace.
Wells, Somerset, March 22nd, 1855.

ROYAL INSTITUTE of BRITISH ARCHITECTS.
Incorporated 7th William IV.
16, Grosvenor-street, London.

Her Majesty having been pleased to grant her gracious permission for the ROYAL MEDAL to be conferred on such distinguished Architect or Man of Science of any Country, as may have designed or executed any building of high merit, or produced a work tending to promote or facilitate the knowledge of Architecture, or the various branches of Science connected therewith, the Council will proceed, in January, 1856, to take into consideration the appropriation of the Royal Medal.

The SILVER MEDALS of the Institute will be awarded to the Authors of the best Essays on any subjects tending to promote or facilitate the knowledge of Architecture, or the various branches of Science connected therewith.

The SOANE MEDALLION will be awarded for the best Design for any of the following subjects:—

A Town Mansion;
Drawings of the Remains and a Restoration of the Church and Conventual Buildings of the Priory of St. Bartholomew the Great, Smithfield, London;
A Building to contain Six Courts of Law;

Or any other like subject of equal importance, at the option of the Candidate.

The successful competitor, if he go abroad within three years after receiving the medallion, will be entitled to the sum of 50*l.* at the end of one year's absence, on sending satisfactory evidence of his progress and his studies. The competition is open to all Members of the Profession under the age of thirty years.

Full particulars may be had on application to the Honorary Secretaries, by letter, prepaid.

CONTRACTS.

NEW TOWN-HALL BUILDINGS, PRESTON.—To BUILDERS.—Masons, Bricklayers, Plasterers, Slaters, Plumbers and Glaziers, Carpenters, Joiners, Smiths, and Painters, desirous of CONTRACTING for all or any of the works required to be done in the ERECTION of the above BUILDINGS, upon the site of part of the pres nt buildings, are hereby informed that the plans and specifications may be seen at the Offices of the Architect, from MONDAY, the 26th, to SATURDAY, the 14th of APRIL next, both inclusive, and in the Council-chamber, Town-hall, Preston, from MONDAY, the 16th, to SATURDAY, the 21st of APRIL next, both inclusive. Tenders, endorsed "Tender for Works," must be sent to me on or before FOUR o'clock on TUESDAY, the 24th of APRIL next. Bills of quantities, and any other information may be had at the Offices of the Architect, Mr. WILLIAM HILL, 59, Albion-street, Leeds. No allowance will be made for estimates, and the lowest Tender will not be necessarily accepted.

ROBERT ASCROFT, Town-clerk.

FAVERSHAM UNION.—To BUILDERS.—The Guardians of the Faversham Union are desirous of receiving TENDERS for certain ALTERATIONS and REPAIRS intended to be done to, and COOKING and WASHING APPARATUS to be put up at, the Union Workhouse, near Faversham. All Tenders must be delivered free of expense at the Office of the Clerk to the Guardians, sealed and endorsed, "Tender for Works at the Faversham Union Workhouse," on or before THURSDAY, the 26th day of APRIL next, and the Tenders will be opened by the Guardians, at their meeting on the following day, Friday. The plans and specifications, prepared by Mr. M. BULMER, Architect, may be inspected at the Union House, on any day, except FRIDAY and SUNDAY, between the hours of TEN and FOUR. The quantities will be furnished, and copies may be obtained of the Clerk, upon payment of five shillings for each copy. The Guardians will not be bound to accept the lowest or any other Tender, and security will be required for the due performance of the works.—By order of the Board,

Faversham, March 16, 1855. WILLIAM MAILE, Clerk.

TO BUILDERS.

PERSONS desirous of CONTRACTING for the ERECTION of a PARSONAGE HOUSE, at Harkardiston, Suffolk, may inspect the plans and specification of the work at the office of Mr. J. F. CLARK, Architect, Newmarket.—Tenders to be delivered and opened on the presence of the parties on the 9th day of APRIL next, and the lowest or any Tender will not necessarily be accepted.

TO BUILDERS.—PARTIES desirous of TENDERING for the whole of the WORKS required to be done in PULLING DOWN and RE-BUILDING a DWELLING HOUSE, with Front shop, Workshops, and offices, on the Cornhill, Bridgewater, may see the plans and specifications, and obtain every requisite information at the offices of Mr. DOWN Architect, Bridgewater.—Sealed Tenders are to be delivered on SATURDAY, the 7th of APRIL, but the lowest Tender will not necessarily be accepted

HER MAJESTY'S CROWN ESTATE, SUNK ISLAND, county of York.—Persons desirous of CONTRACTING for the ERECTION of sundry HOUSES, COTTAGES, and other BUILDINGS upon this Estate, are requested to communicate their intention to the undersigned, Mr. TEDLON, 9, Craig's court, Charing-cross, London. The plans and specifications are deposited with Mr. SUTTON, the Clerk of Works, at Mr. SUDDABY'S, Sunk Island; and the Tenders are to be delivered, free of expense, on or before the 8th of APRIL next, to the Office of Woods, &c. 1, Whitehall-place, London, addressed to the Hon. G. A. GORE, on H.M.'s service, and endorsed "Tender for Works at Sunk Island."

TO BUILDERS AND CARPENTERS.

PARTIES desirous of TENDERING for certain WORKS contemplated in the RESTORATION of MERE CHURCH, Wilts, are informed that the plans and specification may be seen at Mere, on application to Mr. G. CARD, Churchwarden, on and after MONDAY, the 2nd of APRIL.—Further information may be obtained, on application to T. H. WYATT, Esq. 77, Great Russell-street, London, at whose office the Tenders are to be delivered, on the 12th of APRIL, sealed and endorsed "Tenders for Mere Church." The Committee will not bind themselves to accept the lowest Tender."

CONTRACTS.

Royal Engineers' Office, London District, 23th March, 1855.

NOTICE to BUILDERS.—The Commanding Royal Engineer in the London District hereby gives Notice, that sealed TENDERS, addressed to the Secretary to the Board of Ordnance, will be received at the Office of Ordnance, Pall mall, on or before the 16th of APRIL, 1855, for the ERECTION of a STOREHOUSE in the Tower of London. The specification and plans for the above service may be seen, and forms of Tender obtained at the Royal Engineers' Office, No. 11, James-street, Pimlico, between the hours of TEN and FOUR o'clock, from the 2nd to the 14th of APRIL, 1855. The Board of Ordnance reserve to themselves the right of rejecting the whole or any of the Tenders.

TOWNSHIP of MANCHESTER.—ERECTION of NEW WORKHOUSE.—The Guardians of the Poor of the township of Manchester are prepared to receive sealed TENDERS for the whole or any of the following WORKS, required in the ERECTION of a NEW WORKHOUSE, capable of affording accommodation for 1,600 inmates, together with the necessary staff of officers, &c. and intended to be built at Crumpsall, near Manchester, namely:—Carpenters' and Joiners' Work, Bricklayers' Work, Masons' Work, and Smiths' and Ironfounders' Work. The plans and specifications may be seen at the offices of Messrs. MILES and MURGATROYD, Architects, Exchange-chambers, Bank-street, Manchester, where full particulars on all matters connected therewith may be obtained. Tenders addressed to the Board of Guardians, and superscribed "Erection of New Workhouse," must be delivered to me at the Poor-law offices, New Bridge-street, Manchester, on or before SATURDAY, the 28th day of APRIL next. The Guardians do not pledge themselves to accept the lowest Tenders.—By order, &c.

JNO HARROP, Clerk to the Guardians.
Poor-law Offices, New Bridge-street, Manchester,
March 23, 1855.

CONTRACT for CAST-IRON PIPES.—The Local Board of Health for the borough of Preston are prepared to receive proposals from parties willing to CONTRACT for about 260 TONS of CAST-IRON PIPES. The specification may be seen, and forms of Tender obtained, at the Office of the Engineer, on and after MONDAY, the 26th instant. Tenders must be lodged by the 7th of APRIL, 1855. Further information that may be required can be obtained from the Engineer.

HENRY WRIGG, Engineer to the Preston Waterworks.
Preston, 24th March, 1855.

TO BUILDERS.

PERSONS desirous of CONTRACTING for the ERECTION of extensive BUSINESS PREMISES, at Bridgwater, may see the plans and specifications at the Offices of Mr. EDWARD, Architect, Bridgwater. Tenders to be delivered on or before SATURDAY, the 7th of APRIL next. The proprietors do not pledge themselves to accept the lowest Tender. Quantities supplied.

Dated Bridgwater, 27th March, 1855.

TENDERS are required for COMPLETION of EIGHT semi detached DWELLING-HOUSES, with additions, at CROYDON, Surrey. The plans and specifications may be seen, and copies of Bill of Quantities obtained, at the Offices of Messrs CHURCH and SON, Surveyors, Wolverton, to whom the Tenders are to be sent on THURSDAY next, the 5th day of APRIL. The lowest or any Tender will not necessarily be accepted.

FISHERTON ANGER CEMETERY, SALISBURY, WILTS.—To BUILDERS.—The Burial Board of the Parish of Fisherton Anger, are desirous to receive TENDERS for the several WORKS required to be done in ERECTING the ENTRANCE BOUNDARIES, the BOUNDARY ENCLOSURES, and the two CHAPELS, and FORMING, and LAYING OUT, and PLANTING the NEW CEMETERY in the Devizes Road. The plans and specifications of the same may be seen at the Office of Mr. JOHN TURNER, 15, Wilton-street, London, the Architect, until the 27th instant; and at my Office, High-street, Salisbury, from the 28th instant, to the 7th day of APRIL next. The Burial Board will not object to receive Tenders for the separate trades, or for the whole works, but they do not bind themselves to accept either of these, or the lowest Tender. The Tenders are to be forwarded to me on or before the said day of APRIL next, marked on the outside, "Tender for Fisherton Cemetery," and if for either of the trades, stating which. The contractor or contractors will be required to give such security as the Board may require for the due performance of the work, agreeably to the plans, and the general conditions and specification, such security to be prepared at his or their expense.

G. SMITH, Clerk to the said Board.
Salisbury, March 23, 1855.

CAMDEN-HILL ESTATE, Beaulieu-hill, Norwood.—To BUILDERS, &c.—Parties desirous of CONTRACTING for the CONSTRUCTION of about 60 yards of ROAD and SEWER, and the ERECTION and FINISHING of SIX HOUSES, can see the drawings and specification at the Office of the Architect, HORACE JONES, Parliament-street. The property is within 200 yards of the Crystal Palace, in the parish of Lambeth.—N.B. It will be one of the conditions of Contract, that the builder will have to take ground for, and erect six other houses on the same estate. The ground-rent of each house will be 7*l.* 7*s.*

TO BUILDERS AND OTHERS.

NOTICE is hereby given, that Plans and Specifications for REBUILDING the Parish Church of the HOLY CROSS, at Wherwell, in the County of Hants, may be seen on application to the Parish Clerk, at Wherwell, on MONDAY, the 2nd day of APRIL, until SATURDAY, the 22nd inclusive. All persons willing to contract for the works are to send in sealed Tenders, directed to the Rev. S. G. DUDLEY, Wherwell, on or before the 24th day of APRIL. The Building Committee will not bind themselves to accept any or the lowest Tender.

[For remainder of Contracts see next page.

CONTRACTS.

COLCHESTER BURIAL-BOARD. — To BUILDERS and OTHERS. Notice is hereby given, that it is the intention of the Colchester Burial Board to enter into a CONTRACT or CONTRACTS with some person or persons willing to undertake the Excavators', Bricklayers', Masons', Carpenters', Joiners', Paperhangers', Smiths', Plumbers', Glaziers', and Painters' Works, in the erection of Two Mortuary Chapels, Porter's Lodge, Reception-house, and Entrance-gate upon their intended New Burial-ground; also of the Eastern Boundary Wall of the said Ground, according to the design of Messrs. EDWARDS and DAY, of No. 81, St. James's-terrace, Cumberland-road, London, the Architects, under whose superintendence the works will be carried on. The working drawings and specification may be seen at my Office; and all persons desirous of entering into such Contract are to send proposals, under a sealed envelope, addressed to me, the undersigned, and endorsed "Tenders for Mortuary Chapels," &c.; and the same will be submitted to the Board on MONDAY, the 16th day of APRIL next, at SEVEN o'clock p.m. It shall not be incumbent upon the Board to contract with the person offering the lowest price, nor with any person so proposing as aforesaid. By order,

PHILIP SMITH SPARLING, Clerk to the Board.

Dated this 18th day of March, 1855.
3, Abbeygate-street, Colchester.

CARTAGE of ROAD MATERIALS, and of SCRAPINGS and SLOP from HIGHWAYS and for WATERING the same. The Board for the Repair of the Highways, Christchurch, Surrey, are ready to receive TENDERS for CARTAGE, for a term of Two Years, Workmen, or other good paving flecks, of such ROAD MATERIAL as they may require, for the repair of highways for the day of contract till the 31st MARCH, 1856; and for the Cartage from off the highways of all such Mud, Scrapings, Slop, or other matters, as may by the Labourers of the Board may be gathered thereupon, the said Labourers will find such matters into the contractor's carts. The contractor will be subject to an agreed fine or forfeiture of 40s for each and for every such load, that in the contractor's opinion they may neglect, omit, or refuse to cart away the above-specified matters within forty-eight hours after the same has been gathered from off the highways (reading, Tuesday Board will likewise receive tenders for watering the whole of the highways of the said parish, extending from the Surrey Side Toll-bar-bridge north to the King's Head, in Blackfriars-road; south, and from Broadwall and Boundary-row west to Gravel-lane and Holland-street east, except the first streets on the river bank, which are under local management. The surveyor to render and labourers to work the pumps. The contractors to furnish never less than four water-carts, in sound condition, and provided with troughs, horses, and drivers, and a sufficient number of other horses, and drivers if more be required, to keep the dust on the above-said highways constantly laid, and the roads sound, to the satisfaction of the said Board, from the day of agreement to the 31st of OCTOBER, 1855; and the contractor will be subjected to an agreed fine or forfeiture for a failure and for every street omitted on the said contract in which he or they shall not effectually keep the dust instantly laid, to the satisfaction of the said Board. Forms of Tender may be had at the Surveyor's Offices, 8, York-street, Blackfriars-road; and all tenders must be forwarded to the said office on or before NINE in the morning of 3rd APRIL, sealed and endorsed "Tender for Cartage," or "Watering," as the case may be.

GREAT WESTERN RAILWAY.—CONTRACT for STATION BUILDINGS and other WORKS.

The Directors of the Great Western Railway Company will receive TENDERS for the execution of the following Works:—

The Erection of an Engine-house at Didcot Junction.

Two Carriage-sheds at Oxford Station Works at Swindon.

Passenger Station Buildings and other Works at Grange-court Junction. Also,

The Construction of two Bridges in substitution for level crossings at Langley and Basildon, and of a Timber Foot Bridge in place of a footpath level crossing at Moulsford.

Drawings and specifications may be seen, and forms of Tender, with any further information, obtained at the Engineer's Office, Paddington, on and after MONDAY, the 26th of MARCH, and Tenders are to be addressed to the Secretary on or before WEDNESDAY, the 11th of APRIL. The Directors do not bind themselves to accept the Lowest Tender

Tenders to be sent in on or before the 23rd day of APRIL next, to the Offices of Messrs. HARRIS, SONS, and HUSBARD, endorsed "Tenders for Elborow Schools." The lowest or any Tender will not necessarily be accepted. Any further particulars may be obtained by application to Mr. HENRY HADDON, Albert-street, Rugby.

SOUTH STAFFORDSHIRE WATER-WORKS COMPANY.—To CONTRACTORS and FOUNDERS. The Directors are prepared to receive TENDERS for the CONSTRUCTION of the following WORKS:—

CONTRACT, No. 1.—For a RESERVOIR, HEADINGS, and WELLS, at LICHFIELD.

CONTRACT, No. 2. For a RESERVOIR, at the MOAT HILL, near Walsall.

CONTRACT, No. 3. For PROVIDING and LAYING DOWN about 6,000 tons of cast-iron MAIN PIPE.

Plans, specifications, and quantities, may be seen at the Offices of Mr. HENRY WARREN, Market-street, Wolverhampton, on and after the 1st instant, and at the Office of Messrs. MARRIAN and STEWART, Great George-street, Westminster, S.W., and after the 24th instant, Tenders, addressed to the Secretary, as below, must be sent in on or before the 7th day of APRIL next.

By order, JOSIAH CHURCHILL, Secretary.

Darlaston-street, Wolverhampton, March 5, 1855.

DONCASTER CHURCH.—To BUILDERS and OTHERS. Such Builders or other persons as may be willing to TENDER for the ROOFING FITTINGS &c. of the Nave and Chancel, are requested to send their names to HENRY WHITAKER, Esq., Doncaster, or to the Architect, GEORGE GILBERT SCOTT, Esq., 2, Spring-gardens, London, from which Architect the plans, specifications, and general drawings and specifications, and uniformal on estimate, as to the details of the execution. The drawings and specifications may be seen at the Office of the CLERK of the WORKS, at the Church, in Doncaster. Each Tender to be sent addressed to the Rev. HENRY WHITAKER, Rectory, Doncaster, endorsed "Tender for Roofing, Fittings, &c. for Doncaster Church," before TEN o'clock on the morning of SATURDAY, March 31. Proper forms will be required, and the Committee do not pledge themselves to accept the lowest Tender

Doncaster, March 28, 1855

R. BAXTER,
H. WHITAKER, } Hon. Secs.

CONTRACTS.

TO BUILDERS.

PEOPLE'S INSTITUTE, BELPER.—Builders desirous of CONTRACTING for the ERECTION of the above, are requested to send in sealed TENDERS, free of charge, on or before MONDAY, the 9th day of APRIL, 1855. The drawings, specifications, and conditions may be seen on and after THURSDAY next, on application to the Hon. Secretary, and bill of quantities may be obtained on payment of one guinea. The Committee do not bind themselves to accept the lowest, or any Tender; and no Tender will be received unless upon the form attached to the bill of quantities.

By order, REES L. LLOYD, Hon. Sec.

Belper, Derbyshire, March 20, 1855.

TO ROAD CONTRACTORS AND OTHERS.

THE DIRECTORS of the LAMBETH and PROVINCIAL FREEHOLD LAND SOCIETY are prepared to receive TENDERS for the FORMATION of ROADS and other WORKS on their Estate at Potter's Bar, Middlesex. Plans and specifications may be seen each day from TEN till SEVEN o'clock, at the Office of the Society up to the 31st inst. Tenders to be sent in addressed to the Secretary, on or before FIVE o'clock, p.m. on the 2nd APRIL next, endorsed "Tenders for Roads, &c. Potter's Bar." The Directors do not bind themselves to accept the lowest or any Tender.

WM. BANKS, Secretary.

211, High-street, Borough, March 22, 1855.

TO BURIAL BOARDS.—COMPETITION. TEN SHILLINGS PREMIUM.—An Architect of London, offers a premium of 10s. for the best ESSAY upon the Constitution of Burial Boards in general, and that of Soham, in Cambridgeshire, in particular. The writers are clearly to state the amount of education and gentlemanly feeling necessary to exclude any man from membership of such Boards, also the amount of emolument requisite to ensure to a candidate the position of Secretary to the Board.

HART AND SON,
IRONMONGERS AND MANUFACTURERS,

53, 54, & 55, WYCH-STREET, STRAND.

Illustrated Catalogues post-free on receipt of six postage-stamps.

A PRIZE MEDAL for SUPERIOR LOCKS was awarded to J. H. HOOBBYER at the Great Exhibition of 1851, who invites the attention of Builders, &c. to his Stock of Ironmongery, Brass Foundry, Nails (wrought and cut), Copper and Zinc; Patent Locks of all descriptions; China, Glass, and Metal Furnishers of all kinds, with Patent Shifting Spindles; Dr. Arnott's Ventilator, &c.; and the new registered Venetian Ventilator, on the ground floor, No. 63, Old-street.

14, Stanhope-street, Clare-market, London.

TUCKER and REEVE'S LOCKS afford absolute security at a moderate price.

"The novel and evidently effective principle of security on which these locks are constructed, places them at once in the foremost rank of such inventions; in the present state of the art, picking them would seem to be impracticable." *Standard.*

Depôt: 120, FLEET-STREET; where also may be had PRICE'S FIREPROOF SAFES, &c.

COPYING PRESSES, CASH and DEED BOXES.

LISTS and Prospectuses free.

FIRE-PROOF CONSTRUCTION.—FOX and BARRETT'S PATENT.

This improved system of fire-proof construction has been most extensively adopted, and its application has been extended to nearly EVERY DESCRIPTION of BUILDING, whether public or private.

The system combines ECONOMY, with great simplicity of construction, perfect security from fire, increased durability, and many other important advantages.

The floors and roofs are formed by a combination of joists of wrought or rolled iron with concrete; so constructed that each floor becomes in effect a beam of artificial stone, with ribs of iron; the structure possessing great strength and rigidity, and forming a fire-proof foundation adapted to receive a finished surface, either of the ordinary flooring-boards, or of cement, asphalte, tiles, slate, or other material.

Some of the largest and most important buildings in the kingdom are now in course of erection upon this principle, which is recommended to the notice of all who are interested in building, both as superseding the necessity for cast-iron girders and brick arches, and as bringing the great desideratum of fire-proof construction, even for ordinary dwelling-houses and domestic buildings, within the reach of everyone.

Further information may be obtained of the Proprietor of the patent,—Mr. BARRETT, 13, York-buildings, Adelphi.

LOSH, WILSON, and BELL, NEWCASTLE-ON-TYNE,
Manufacturers of Bar Iron, Railway Bars, Forge and Engine Work, Cast-iron Goods, and
STEWART'S PATENT CAST-IRON GUTTER and WATER PIPES.
Office, No. 7, Size-lane, London.

Engineers' and Builders' Castings of all kinds manufactured by
JOHN WALKER,
Builder, Contractor, and Ironfounder, Mill-wall, Poplar.
Offices—Arthur-street West, London-bridge, where experienced draughtsmen are kept to furnish designs and estimates, which may be obtained on application.
N.B. Galvanized and Painted Sheet-Iron, both plain and corrugated, supplied at the lowest possible prices, and a considerable allowance made to the trade.

DESTRUCTION of WAREHOUSES at MANCHESTER, by FIRE.—Messrs. Rylands and Sons' Books, Papers, and Bank-notes preserved in one of CHUBB'S SAFES.—"Unsurpassed for security."—Latest testimonial.
COPY OF MESSRS. RYLANDS AND SONS' TESTIMONIAL.
"24, High-street, Manchester, March 6th, 1854.
"Messrs. Chubb and Son.
"Gentlemen,—We have great pleasure in communicating to you, that the large 'Patent Fire-proof Safe' that we purchased from you 12 years ago, from your Show-room, 57, New Bridge-street, has been the means of preserving our books, cash, notes, &c., enclosed therein, in the recent fire of the 1st of March, when our entire premises were destroyed by fire. The safe, after being subject to fourteen hours' intense heat, was unlocked on the morning of the 3rd of March; the books all answered to their respective keys, and all the damage the contents received (under one pint) was that only some of the books were slightly singed at the edge.
"You are at liberty to make what use of this communication you may think proper.
"We are, Gentlemen, yours respectfully,
"RYLANDS and SONS."
CHUBB'S LOCKS, with all the recent improvements; Cash, Deed, and Paper Boxes, of all sizes; Fireproof Safes and Chests; Iron Doors for Strong Rooms; all fitted with the Detector Lock. Complete Illustrated Lists, with prices and sizes, will be sent on application.
CHUBB and SON, 57, St. Paul's Churchyard, London; 28, Lord-street, Liverpool; 16, Market-street, Manchester; and Horsley-fields, Wolverhampton.

GAS CHANDELIERS and BRACKETS.—The increased and increasing use of gas in private houses has induced WILLIAM S. BURTON to collect from the various manufacturers all that is new and beautiful in cut glass pendants, and chandeliers, adapted to offices, passages, and dwelling-rooms, as well as to the more expensive decorated furniture; these are now ON SHOW in one of the TEN LARGE ROOMS, and present, for novelty, variety, and purity of taste, an unparalleled assortment. They are marked in plain figures at prices to correspond with those which have tended to make his Ironmongery Establishment the largest and most remarkable in the kingdom, viz. from 12s. 6d. (two lights) to 10l.
WILLIAM S. BURTON has TEN LARGE SHOW-ROOMS devoted to the sale of GENERAL FURNISHING IRONMONGERY, including cutlery, nickel silver, plated and japanned wares, iron and brass bedsteads), so arranged and classified that purchasers may easily and at once make their selections.
Catalogues, with engravings, may be had free. The money returned for every article not approved of.
39, OXFORD-STREET (corner of Newman-street); 1 and 2, NEWMAN-STREET; and 4 and 5, PERRY'S-PLACE.

SAW-MILL, with Engine and Gearing, TO BE SOLD for less than half its value. For particulars, apply to DUNN and CO., 18, Great George-street, Westminster; and at their Works, Manchester; Mr. PIM, 9, Wrington-street, Gray's-inn-road; Mr. WRIGHT, 9, George-yard, Lombard-street, London; and Mr. THOS. MOLE, Engineer, Birmingham.

CAST-IRON PIPES, WORK FOR OVENS, &c.
RAIN PIPES, &c.—F. A. TIDDEMAN and CO. of St. Ann's-wharf, Earl-street, City, near Blackfriars-bridge, keep a large stock of Rain Pipes, Heads, Shoes, Elbows, &c. half-round and round gutters, Socket Pipes for Water or Gas, Plunge Pipes, Hot Water Pipes, and Connections, Sash Weights, Sash Cord, Nails, Iron work for Makers' Use of every description, fitted complete, to be had in sets or in parts.—Prices equal to all competition. Contracts taken to any extent. Goods landed. A powerful crane.

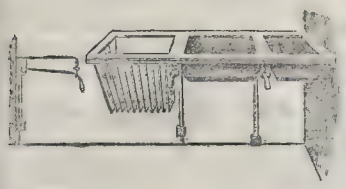
ZINC ROOFING, INCLUDING TIMBER OR IRON FRAMEWORK,

IS AS

CHEAP AS SLATES OR GALVANIZED IRON, LIGHTER, AND MORE DURABLE.

Certificates, and Models of various descriptions, may be seen, and estimates obtained on application to

THE SURVEYOR OF THE VIEILLE MONTAGNE ZINC MINING COMPANY, 12, MANCHESTER BUILDINGS, WESTMINSTER.



ROOFS CONSTRUCTED UNDER HIS SUPERINTENDENCE GUARANTEED TO REQUIRE NO REPAIRS FOR AT LEAST TEN YEARS.

THE OLD METAL BEING ALWAYS RETAKEN AT HALF-PRICE, RENDERS IT ADVANTAGEOUS FOR ALL TEMPORARY BUILDINGS.

Many roofs covered with zinc thirty-five years ago have never required repairs.

COTTAM'S NEW PATENT FOR STABLE REQUISITES.

COTTAM AND HALLEN,

the original projectors of the above arrangement of MANGER RACK and WATER TROUGH, AS ONE FIXTURE, which obtained the Great Exhibition Prize Medal, and universally approved of, have added all the latest improvements to their invention (secured by patent), which includes an entirely new method of attaching the water bell and rein, giving to the horse greater freedom, and rendering it scarcely possible to operate, and much to its comfort whilst feeding and convenience when at rest.

COTTAM'S ENAMELLED MANGERS

are constructed in the best possible manner, both as to form and utility, are cleanly in appearance, durable, and impervious to infection; manufactured PLAIN, GALVANIZED, or ENAMELLED.

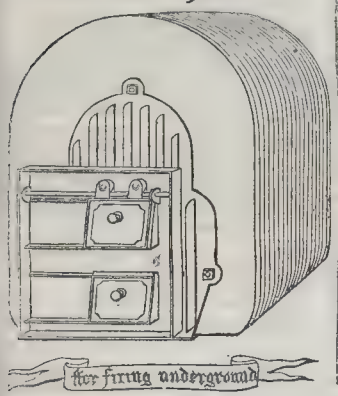
Improved Stable Guttering, with Moveable Safety Covers.

Loose Box Fittings, Harness-room Appendages, and every Article in Stable Furniture kept on show.

Descriptive Catalogues and Estimates on application to

COTTAM AND HALLEN, 2, WINSLEY-STREET, OXFORD-STREET, LONDON.

IMPROVED PUMPS,



Of the best Workmanship and warranted.

The VALVES and SUCKERS of these Pumps are constructed upon an entire new and SIMPLE principle; they are not likely to get out of order; should they do so, can easily be repaired, as the Pump is so contrived that the valves can readily be got at.

An Improved CAST IRON TRAP strongly recommended by the Sanitary Commissioners, and suitable for Sugar Bakers, Slaughter Houses, &c. &c. It is so formed that the Trap-plate will pass any matter the top grating will let through and therefore is not liable to stoppages and well adapted to Stables and Stable-yards, for saving the best part of Liquid Manure.

Grill Stove.

for firing underground

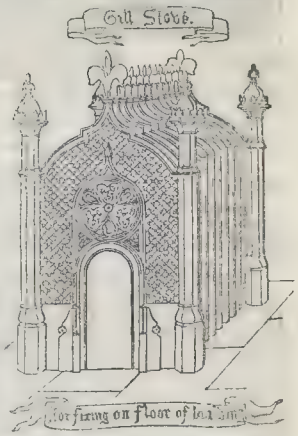
STUART AND SMITH'S PATENT GRILL STOVE,

FOR

HEATING CHURCHES AND OTHER PUBLIC AND PRIVATE BUILDINGS.

The constant failures, and enormous expense, consequent upon the endless variety of experiments to warm buildings has left the public in doubt as to whether there exists any certain, economical, and safe mode of effecting that object or not.

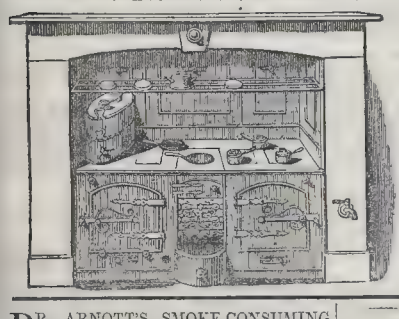
STUART AND SMITH,



ROSCOE-PLACE, SHEFFIELD,

confidently assert, that the Air-Warmer they recommend, possesses the desired qualifications, and respectfully request Gentlemen interested in the question, to ascertain the fact from the actual working of the invention.

It has been fixed in the following, besides a great many other private and public buildings:—St. Stephen's, Longsight, Manchester; Grassendale Church, Aigburth, Liverpool; St. Ann's, Aigburth, Liverpool; North Wootton, near Lynn, Norfolk; St. Paul's, Alnwick, Northumberland; Bettesanger Church, Sandwich, Kent; St. Mary's, Pitsmoor, and Grimesthorpe, Sheffield; County Lunatic Asylum, Derby, &c. &c. &c.



Prospectuses, and every information, sent on application.

Grill Stove.

for firing on floor of building

FLAVEL'S PRIZE KITCHENER.

These Ranges are strongly recommended for their simplicity of construction and their economy and cleanliness in use.

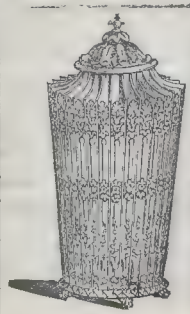
The top forms a Hot-plate, and the open fire removes many of the objections which are felt to close Ranges.

They are made in all sizes, from 3 feet to 18 feet in width, suitable for large or small establishments.

They are admirably adapted for the Cure of Smoky Chimneys.

SOLE AGENTS:

BENHAM AND SONS,



19, WIGMORE-STREET, LONDON;

and at the Crystal Palace, Sydenham.

DR. ARNOTT'S SMOKE-CONSUMING FIRE-GRATE is manufactured by F. EDWARDS, SON, and CO. 32 Poland-street, Oxford-street, where one may be seen in daily use. The advantages of this grate consist in the smoke being perfectly consumed, no chimney sweeping being required, and a saving of from 40 to 50 per cent. being effected in the cost of fuel. Prospectuses, with testimonials, sent on application.

WARMING and VENTILATING.—COTTAM and HALLEN, 2, Winsley-street, Oxford-street, having had thirty years' experience, and having warmed by the circulation of Low water upwards of 1000 buildings, consisting of churches, prisons, lunatic asylums, halls, and staircases, galleries, conservatories, forcing houses, &c can with confidence recommend their system, which, by the various improvements they have made, has perfected the construction and economised the expense. Greenhouses, conservatories, verandahs constructed entirely of iron or wood, and of iron and wood combined. Estimates upon application to COTTAM and HALLEN, Engineers and Ironfounders, 2, Winsley-street, Oxford-street.

HEATING by HOT WATER.—J. JONES, Iron Merchant, has always a great variety of CONICAL and SADDLE BOILERS in STOCK; also fire and furnace bars, ornamental and plain supply cisterns, double doors and frames, furnace-grates, soot doors for the same, hot-water pipes, elbows, &c; sashes, troughs, pipes, brazing, and prices of the above, on application to J. JONES, Iron-bridge-wharf No. 6, Bankside, London, near the Southwark-iron-bridge.

SYLVESTER'S HOT WATER STOVES, for Warming Halls, Staircases, Galleries, Warehouses, Stores, Hotels, and Offices, require no Flue, create no Dust, and are safe from all risk of fire.

Any number of these Stoves may be heated from one Boiler, and may be used equally well with steam or Hot Water.

SYLVESTER'S IMPROVED AIR WARMER is the most powerful, salubrious, and economical Apparatus yet invented for Heating Churches, Chapels, Schools and Public Rooms, by means of Hot Air.

Prospectuses and Estimates may be obtained on application to

SYLVESTER and CO. Engineers and Manufacturers of Heating Apparatus, 96, Great Russell-street, Bloomsbury.

ROYAL POLYTECHNIC GAS FIRE. BACHOFFNER and DEFRIES'S PATENT.—The public is respectfully informed that arrangements have now been made for the supply of this unique and beautiful mode of warming private houses, shops, public buildings, &c. Smoke, dust, ashes, and accidents from fire are effectually prevented by its use, while it presents all the comfort and appearance of an open coal fire, securing, at the same time, perfect ventilation. To be seen in action at DEFRIES'S office, 145, Regent-street, London.

THE PATENT PRIZE KITCHENER, with Boiler to supply Bath, Scullery, Hot and Steam Closet, is Manufactured, with all its recent improvements, by THOMAS RADCLIFFE, Leamington, Warwickshire, of whom plans, prices, and testimonials may be had on application. It is made from three feet to twenty, all worked by one small fire. A great saving in fuel is effected by having the kitchener, and it effectually cures smoky chimneys, and is the best cooking range extant.

FIRST PRIZE KITCHEN RANGE.—The only prize ever competed for,—the prize of public approbation,—has long been obtained by BROWN and GREEN'S celebrated KITCHEN RANGE, which is pre-eminently the best, most perfect, economical, and complete apparatus for all cooking operations. It is warranted a certain cure for a smoky chimney.—Wholesale agents, R. W. KENNARD and CO. 67, Upper Thames-street, London. Manufactory, Luton, Beds.

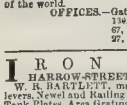
HEATING by HOT WATER.—JOHN WEEKS and CO. King's-road, Chelsea, solicit the attention of architects, &c &c. to their superior APPARATUS. At Messrs. Weeks' establishment, an apparatus with one boiler can be seen daily in full operation, heating building measuring 100 feet in length, at the small expense per day in fuel and labour of 3s. 8d. This achievement in heating by hot water is unprecedented.

TO IRONMONGERS, BUILDERS, &c

PATENT WROUGHT-IRON WELDED TUBE for GAS; galvanized ditto for water; high-pressure cocks. Manufacturers of Dr Arnott's improved Ventilators. HULETT and CO. 85, High Holborn.

PATRONISED BY H. R. H. PRINCE ALBERT.

S. HOOD and CO.'S REGISTERED STABLE-FITTINGS, with FRONT REVOLVING ROLLER, plain or enamelled.



Castings Warehouse, 81, Upper Thames-street.

LIGHTNING CONDUCTORS.—R. S. NEWALL and CO. Patentees of the Copper Rope Lightning Conductor, beg to inform the nobility, clergy, &c. that they supply Lightning Conductors, with the point and all staples complete for fixing, at 6d. shilling the foot.
R. S. NEWALL and CO.'s Patent Copper Rope Conductor is being used by architects, engineers, and scientific men in all parts of the world.
OFFICES.—Gateshead-on-Tyne.

Dr. Arnott's Ventilators, 4s. 6d. each.
An extensive stock of bar, rod, hoop, and sheet iron.
Brick Moulds kept in stock. Any size made to order.

TO IRONMONGERS AND THE TRADE GENERALLY.
D. HULETT and CO. Manufacturers of GAS CHANDELIERS, HALL LANTERNS, GLASS LUSTRES, &c. &c. A large assortment of the newest designs always on show every article marked in plain figures. Patentees and manufacturers of the Mercurial Gas Regulator. Complete pattern-book and price list, 10s.—35 and 36, High Holborn.

COLLINGE'S PATENT HINGES.—Sole Manufacturers, CHARLES COLLINGE and CO. 64 and 65, Bridge-road, Lambeth, where a great variety are always on view for church, park, railroad, conservative, and other gates and doors of large and small dimensions, a ton weight moving with their hinges as easily as a wafer; ornamental hinges, adapted for drawing-rooms, &c.; doors fitted with them may be removed and replaced in an instant. Rising and double acting spring Hinges, and every description, at moderate prices. None genuine unless marked "Charles Collinge, Patent, Lambeth." Plain and ornamental cast and wrought iron-work, for building and other purposes. Engines, machinery, patent axle-trees, sugar-mills, &c.

STEPHENSON and PEILL, 61, Gracechurch-street, London, and 17, New Park-street, Southwark, Manufacturers of COPPER CYLINDRICAL and improved CONICAL IRON BOILERS, and Conservatory and Hot-house Builders, either in wood or iron, respectfully call the attention of the nobility, gentry, and nurserymen to their simple but efficacious method of warming horticultural and other buildings by Hot Water. From the extensive works they have executed, reference of the highest respectability can be given, and full particulars furnished on application.

NEW PATENT MACHINE for MORTISING and TENONING HARD or SOFT WOOD, and BORING WOOD or IRON. House and Coach Builders, Joiners, Cabinetmakers, and others, doing similar work, are invited to call at the Patentees, DAVIS, JAMES, and Co. Wholesale Ball-iron and Railway Makers, Ironmongery Establishment, 24, Watling-street, City, and see in motion this very simple, powerful, and expeditious machine, which is the only one yet brought out, for performing these different separate kinds of work by one machine; and as it is self-feeding, it does not require any skill or care in using like the older inventions introduced. It can either be worked by a boy, or made to go by steam power.
P.S. Steam Engines and Machinery contracted for.

MACHINERY.—SAWING, PLANING, MOULDING, and WOOD CUTTING MACHINES.—To Timber Merchants, Contractors, and Others.—SAMUEL WORSSAM and CO. of Hortulan place, Kings-road, Chelsea, invite the attention of Timber Merchants and others to their new inventions and improvements in all kinds of machinery used in Sawing, Planing, Moulding, and Wood Cutting. S. WORSSAM and CO. are able to execute orders with cheapness and despatch; they solicit an inspection of their machines constantly on hand and in progress; and they can refer to parties of the highest position and respectability, as to the goodness and efficiency of their machines. Estimates made for Exportation, or otherwise.—Drawings and prices on application.
February 16th, 1850

TO MANUFACTURING CHEMISTS, PLUMBERS, BUILDERS, &c.
ANDREW CLARK and COMPANY, PLUMBERS,
THE BEAR GARDEN LEAD WORKS, SOUTHWARK,
Sole Manufacturers of Delhruck's Patent Autogenous Soldering Apparatus, invite the attention of Manufacturing Chemists to their Patent method of
UNITING LEAD TO LEAD WITHOUT SOLDER.
Leaden Chambers, or any leaden vessels, made or repaired by this process, making them complete, without the introduction of any foreign metal.
PLUMBERS and BUILDERS can be SUPPLIED with SHEET LEAD and PIPE, cut to any dimensions, and EXCHANGED for OLD LEAD, on the LOWEST TERMS.

BUILDERS, Contractors, Carpenters, and others are invited to inspect the stock of NAILS, TOOLS, BRASS, AND GENERAL IRONMONGERY at PEILL and STEDALL'S,
Nos. 5 and 6, BROAD-STREET, BLOOMSBURY.
The prices will be found the lowest, and the stock one of the largest in the trade. A price list sent on application.

CHEAP GAS-FITTING WAREHOUSE.—The Trade supplied with every description of GAS CHANDELIERS, Hall Lamps, Pendants, Pillars, Brackets, Iron and Brass Tube, Tin and Composition Pipe, &c. &c. at J. JEALS 20 and 21, Old street, near St. Luke's Church, London.
P.S.—As large and choice an assortment as any house in London.
Gas-fitting Contracts to any Amount.

PIMLICO MARBLE WORKS, LOWER BELGRAVE-PLACE.
SAMUEL CUNDY.
THE STOCK OF LOW-PRICED CHIMNEY-PIECES ARE WELL AND CAREFULLY MANUFACTURED OF THE BEST MATERIAL.
PRIZE MEDAL IN 1851 FOR A MONUMENTAL WORK.

MARBLE SLABS.—MARBLE and STONE SAWING-MILLS, 8, NORTH WHARF-ROAD, PADDINGTON. The proprietors of the above mills beg to offer to masons and the building public generally, their extensive assortment of vein, Sicilian, and statuary marble, in slabs and blocks, at prices never before offered. JAMES SIMMONS, Manager.

MARBLE.—THOMPSON and HOLMES, Marble, Stone, and Timber Brokers, Contractors, and Builders' Agents, beg to inform the gentlemen connected with the marble trade, that their STOCK of MARBLE is received direct from the principal quarry-owners in Italy and Belgium, for SALE on COMMISSION ONLY, and that they can consequently supply the Trade with the finest marbles at the lowest prices. Sawn Slab, Mortars, Vases, &c.; Yorkshire and Portland Stone for sale on commission.
The Marble Wharf, Thames-bank, Pimlico, adjoining Vauxhall-bridge.

MARBLE.—Mr. B. FABBRICOTTI, of Carrara, Italy, Proprietor of Marble Quarries, and the only person in the United Kingdom selling Italian Marble the produce of his own quarries, begs to inform the gentlemen connected with the Marble Trade that he has established, in London, the most extensive Depôt of Statuary, Veined, Sterling, Dove, and Black and Gold Marbles, at PARKIARA WHARF, THAMES BANK, PIMLICO, the foot of Vauxhall-bridge.

TO THE MARBLE TRADE.
MR. B. FABBRICOTTI begs to inform the public that he has REMOVED from the office lately held by him at No. 8, Crescent-terrace, Millbank, to offices on his own premises, at Carrara Wharf, Thames Bank, Pimlico, where he continues to carry on the marble trade solely on his own account, Mr. Tinson being no longer his agent.
Mr. B. Fabbricotti hopes that the trade will continue to favour him as usual, as, being the absolute proprietor of the quarries at Carrara, he can supply at better advantage and quality than any one else.
N.B. The well-known qualities of Mr. Fabbricotti's marble are celebrated throughout all Italy, England, and America.

TO BUILDERS, MASONS, AND OTHERS.
THE largest STOCK in England of MARBLE in Blocks and Slabs, veined, Bardilla, dove, black, black and gold, Sienna, St. Ann's, statuary, serpentine, verd antique, &c. Portland, Norfolk, Bath, York-paving, and other stone, in blocks, slabs, landings, and headstones. Yorkshire paving, granite curb, &c. All goods carefully packed and forwarded to any part of England. THOMAS JACOMB, Marble and Stone Sawing-Mills, Commercial-road, Pimlico, London.

CAEN and AUBIGNY STONE.—P. FOUCARD, Stone Merchant and Quarryman. Carcos shipped to order from Caen to any port. Contracts taken for any quantities. Depôts: Granite Wharf, East Greenwich; Lett's Waterloo-bridge Offices, 246, High-street, Southwark, near the Townhall.

CAEN and AUBIGNY STONE.—GATES and GEORGE (late LUARD, BEDDAM and CO.) Caen Wharf, Rotherhithe, London, General Stone Merchants and Quarrymen, continue to deliver from their Wharf and Depôts CAEN STONE, AUBIGNY, CHILMARK, and CHASTER, BATH, GODSTONE, BUILDING, BLOCK, and RUBBLE STONE, BLOCK and BURR HEARTH STONE, RUBBLE BUILDING STONE, direct from the Quarries, and Aubigny quarries, at very moderate charges, to compete with the price of Brickwork.—For information, direct to Caen Wharf, Rotherhithe; or to Hibernia-chambers, London-bridge, Borough.

ANCASTER STONE, from the celebrated quarries of Mr. John Wilson, Ancaster, who has appointed GATES and GEORGE, Stone Merchants, his sole consignees for the London district. Ancaster Stone, so generally esteemed by the building profession, for its great durability, economy, and general utility, as to require but a trial to secure the approval of architects and others for its more extended use in building.—Samples and other information can be obtained at the Great Northern Depôt, King's-cross; Caen-wharf, Rotherhithe; and Hibernia-chambers, London Bridge, Borough; or forwarded to address, free of charge.

GODSTONE STONE.—GATES and GEORGE beg to solicit the attention of architects, engineers, and builders to the above Stone, as being suitable for all purposes of construction, either as a substitute for brickwork, or in connection therewith, the price in most respects being about the same as ordinary brickwork. It can be obtained in large quantities, and to special sizes, in rubble or rough square blocks, direct from the quarries.—Information and samples given at Caen-wharf, Rotherhithe, and Hibernia-chambers, London-bridge, Borough.

BANGOR WHARF, King's-road-bridge, Camden-town.—STRINGFIELD and COOPER, late W. W. Rawlins, beg to call the attention of Builders and others to their stock of Bangor slates, laths, plaster, Roman, Portland, and Keene's cement, blue lias, Dorking, and chalk lime, plasterers' hair, Yorkshire plain, pan, and ridge tiles, glazed sewer pipes, closet-pans, and traps, Welsh fire-bricks, gravel and shells for garden paths, ballast, sand, &c. Materials landed, wharfed, and carted.

BATH STONE DEPOT, BOX STATION.—ROBERT STRONG, STONE MERCHANT, Box, Wilts. Box Ground Stone, Scaliett Block, Ashlar, Ringework, &c. &c. supplied direct from the Quarries; also every description of Stonework for Building purposes, both plain and ornamental, prepared ready for fixing, and forwarded to any part of the kingdom. Vases in elegant variety always on view; Urns, Fountains, Chimney-piece, Tombs, &c. &c.

GRANITE.—The Cheesewring Granite Company, Liskeard, Cornwall.
London Agents—TEGGELLES and TAYLOR, 3, Pinner's-court, Old Broad-street. Manager—JAS J. TRATHAN, Liskeard.
This Granite is selected for the New Westminster-bridge.

TREVALGA ROOFING SLATE.—T. B. HANNAFORD, Sole Consignee of the above beautiful Slate, is in a position to supply the same at extremely low prices. Cisterns, sinks, and every description of slate-slab work executed with despatch.
Trevalga Wharf, Ratcliff cross.

ENAMELLED SLATE.—REDUCTION in PRICE.—Mr. MAGNUS having completed some extra machinery, is enabled to announce a further reduction in price in the shape of a large and increased discount to the TRADE. His best goods are now supplied at prices below those charged by other parties for very inferior imitations of his work.—PIMLICO SLATE WORKS, 39 and 40, Upper Belgrave-place, Pimlico.

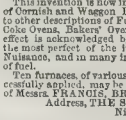
MARKET-WHARF, REGENT'S-PARK-BASIN.—WEST-END DEPOT, for Yorkshire Paving, Portland and Derby Stone, Bangor Slates, Slabs, &c. Also Bricks, Lime, Cement, Plaster, Tiles, Laths, and Fire Goods. SCOLES and WOOD invite the attention of Builders, Masons, and others, to their Stock as above, where everything will be charged at the lowest prices. Headstones, Ledgers, Steps, Landings, &c. cut on the shortest notice. Country orders promptly attended to.

BATH STONE OF BEST QUALITY.
RANDELL and SAUNDERS, QUARRYMEN AND STONE-MERCHANTS, BATH.
List of prices at the quarries and depots, also cost for transit to any part of the kingdom, furnished on application to Bath Stone Office, Corsham, Wilts.

By Her Majesty's Royal Letters Patent.

SILICEOUS STONE.—ORNAMENTAL WORK of every description executed at LOW PRICES in this most durable material. A large Stock kept of Mantel-pieces, Balustrades, Quoins, Tombs, Fonts, &c. at the new premises, Whitehall Wharf, Cannon-row, Westminster.

VALENTIA SLATE SLABS.—The Valentia Slab Company invite attention to their Slabs now supplied, of very large dimensions and of superior quality. They have been used at the British Museum, National Gallery, Bethlem Hospital, various Lunatic Asylums, the Ordnance Works, Model Prison, Pentonville, and other Penitentiaries; Malting Floors in Bedfordshire and Hertfordshire, Breweries, the Race Stand at Brighton, Portsmouth Barracks, and are kept in stock in large quantities by Messrs. FREEMAN, Millbank-street; also by Messrs. Sharpe, Tooley street; and at Messrs. Braby's, Belvidere-road, where terms may be obtained.



WILKINSON'S IMPROVED ARTIFICIAL STONE CHIMNEY-PIECES.—Nearly 3,000 of the above have been Sold, although only recently brought to their present state of perfection, and offered to the public. The prices range from 6s. for a neat bedroom set; with jambs, moulded with large ogee on inner edge, set on plinths, Mantel, moulded with ovolo and fillet under shelf, and shelf with hollow on edge, to 50s. for sitting-room patterns of more elaborate character. A liberal discount for quantity.—Address W. B. WILKINSON, Newcastle-on-Tyne.

NORTH-WESTERN STONE DEPOT, Hampstead-road Bridge, Camden-town.—W. ASPINALL begs to call the attention of Builders, Masons, and Masons, to his Stock of Portland, Park Spring, Potternewton, Newton, Harehill, Bath, Caen, and other Block Stone; York Paving, Landings, Steps, Slabs, Sills, &c.; Park Spring, Robin Hood, Harehill Landings and Slabs. Also, Aberdeen, Guernsey, and Haytor Granite Curb and Pitching, all at the very lowest prices.
N.B. Estimates given for Masons' Work.

PAVING, 2s. 9d. per SQUARE YARD.—Basements, Foot-walks, Malt-houses, Corn Stores, Floors of Warehouses, and every description of Pavement laid down at the above low price, and the work guaranteed.
Apply to JOHN DE POLONCEAU'S BITUMEN, PAVEMENT OFFICE, MONUMENT CHAMBERS, 14, FISH-STREET-HILL.
N.B. Country Agents and Railway Engineers and Contractors supplied with the best Bitumen for covering Bridges and Arches.

ASPHALTE.—GERVASE FOOTTIT, Trinidad Asphalte Works, Rotherhithe; established 1834. Every description of Flooring laid with the above durable material to the best manner. Asphalte for Railway Arches, 33s. per ton. Importer of Trinidad Asphalte.
Shipping Depôt, Devon Haytor Wharf, Rotherhithe.
G. H. CLARK, Agent.

THE SMOKE NUISANCE.—M COUPLAND and CO. beg to call the attention of all parties concerned, to their improved PATENT APPARATUS for the PREVENTION of the SMOKE, and saving of fuel. May be seen in operation in one of the largest establishments in London, every day Sunday and Monday excepted. Apply, between the hours of TEN and FOUR, to M. C. and CO. Engineers and Millwrights, St. John's-terrace, Hackney-road, London. Prospectuses and drawings sent free.

SMOKY CHIMNEYS CURED EFFECTUALLY for TEN SHILLINGS, by SUTER'S PATENT WINDGUARD.—This Guard allows free egress to the smoke, prevents the wind blowing down the mouth of the chimney, and is not liable to be injured by the most boisterous weather.
To be had of Ironmongers and Builders; and of the Patentee, at his Office, 65, Fenchurch-street, London.

CLARK'S PATENT SMOKE-BURNER: an improved means of perfecting Combustion, and thereby destroying Smoke.
This invention is now in operation upon Steam-engine Furnaces, of Cornish and Waggon Boilers, and upon Ovens. It is adapted to other descriptions of Furnaces, such as Marine Boilers, Coppers, Coke Ovens, Bakers' Ovens, Chemical Works, &c. Its effect is acknowledged by Government Inspectors to be amongst the most perfect of the inventions extant in subduing the Smoke Nuisance, and in many instances with a diminished consumption of fuel.
Ten furnaces, of various construction, to which it has been successfully applied, may be seen in operation at the Cement Works of Messrs. FRANCIS, BROTHERS, Nine Elms, London.
Address, THE SMOKE-BURNER COMPANY, Nine Elms, London.

GUTTA PERCHA TUBING.—May be buried for years, without injury, and it is therefore valuable for conveying water, chemicals, &c. It is peculiarly valuable for liquid manure, drain, and soil pipes. Being a non-conductor, it is not affected by the frost of winter or drought of summer, like metal or leather. Its strength is extraordinary; the small half-inch diameter tubing having resisted a pressure of 250 lbs. on the square inch, without bursting. The smaller sizes may be had in 100 feet, and the largest in 50 feet lengths. The joints are easily made. As a conductor of sound it is most valuable for conveying messages in lieu of bells. ELECTRIC TELEGRAPH WIRES INSULATED WITH GUTTA PERCHA. The GUTTA PERCHA COMPANY, Patentees, 18, Wharf-road, City-road, London.

WHITE OXIDE of ZINC.—Addington-Wharf, Camberwell.—This article in its pure state, can be obtained at the Patent Oxide of Zinc Works, Addington-Wharf, Camberwell, where it is manufactured.

TO ARCHITECTS, BUILDERS, CONTRACTORS, AND OTHER CONSUMERS OF GLASS.

HARTLEY'S PATENT ROUGH PLATE GLASS,

1-8th of an inch thick, or 2 lbs. to the foot; 3-16ths, or 3 lbs.; and 1-4th or 4 lbs. is now universally used for

RIDGE AND FURROW ROOFS, GREENHOUSES, RAILWAY STATIONS, MILLS, MARKET HALLS, BATHS AND WASH-HOUSES, FACTORIES, WORKSHOPS, SHIP-BUILDING SHEDS, AND OTHER EXTENSIVE BUILDINGS.

By a carefully prepared Estimate, it has been ascertained that FOUR-FIFTHS of the ROUGH PLATE, or non-transparent Glass, consumed in the United Kingdom in 1854, was manufactured by HARTLEY'S PATENT—thus affording the most incontestable evidence of its superiority over every other article of the kind, and as being the only description of Glass suitable for the purposes above named. It combines size and strength with economy of cost, and is manufactured in sizes expressly for RIDGE and FURROW ROOFS, giving a SPAN of TWELVE FEET, at a price not exceeding, weight for weight, that of Common Crown Glass. Its non-transparency renders BLINDS UNNECESSARY, and no scorching occurs in Greenhouses glazed with it; hence the preference given to this Glass for all Horticultural purposes.

For further particulars, apply to

JAMES HARTLEY AND CO. SUNDERLAND; AND PURFLEET WHARF, EARL-STREET, BLACKFRIARS, LONDON.

Sole Manufacturers of Lockhead's Patent Perforated Glass for Ventilation.

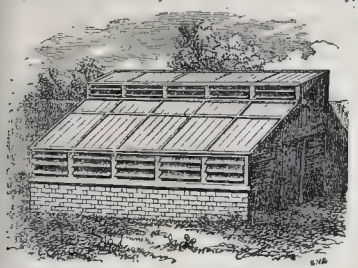
*** *Hartley and Co.'s Glass Tariff Newspaper will be forwarded gratis, on application.*

January 1, 1855.

THE LONDON AND MANCHESTER PLATE GLASS COMPANY

Beg to inform the TRADE, that the EXTENSION OF THEIR WORKS being now completed, they are enabled to execute orders to any extent at immediate notice. The Company also beg to intimate that owing to improvements effected in the reconstruction of their Works, the COLOUR and QUALITY of their GLASS will be found to be considerably improved, and that they can guarantee the maintenance of these essential requirements. They further beg to invite attention to their reduced List of Prices, which may be obtained on application at their London Warehouse, or at the Works

For the convenience of the LONDON TRADE, a large stock of POLISHED PLATE is now kept at the COMPANY'S WAREHOUSE, BARRAUD'S WHARF, WHITEFRIARS.



The Works, Sutton, St. Helen's, January, 1855.

MOORE'S PATENT VENTILATOR,

FOR EVERY DESCRIPTION OF

FARM-BUILDINGS, CONSERVATORIES, HOT-HOUSES, WAREHOUSES, MARKET-HOUSES, BELL-TURRETS, ALSOFOR VENTILATING-SHAFTS, &c.

81, FLEET-STREET, LONDON. Manufactory, SEKFORD WORKS, CLERKENWELL.

These Ventilators are fitted to side-slips of wood with iron levers, iron flangers, and brass screws, with rough plate or 32 oz. sheet glass, at 5s. per foot super. 2s. 6d extra for necessary fittings to each ventilator. If with brass levers in place of iron, 4s. per pair extra.

It is presumed the accompanying drawing of a Greenhouse will show the advantages obtained (independent of a most perfect system of ventilation, by admitting any amount of fresh air, and distributing equally over the plants, &c. and at the same time emitting the vitiated), viz. a much neater appearance, and an uninterrupted view of the whole interior.

Greenhouses at Mr. JAMES VEITCH, Jun. Exotic Nursery, King's-road, Chelsea;* Messrs. VEITCH and SONS, Nursery, Exeter; Messrs. PERRY, Nursery, Banbury; and the Pleasure-grounds at Hampton-court Palace; having been fitted with these Ventilators with perfect success, the Patentee has obtained permission to refer to the above places, all parties desirous of seeing the same.

These Ventilators have been applied to many other Greenhouses, Conservatories, &c.; but they are not published, in order to avoid giving unnecessary trouble.

Fifty-four of these Ventilators, 5 feet square (thirty-four on the roof at an angle of 60 degrees), have been fitted at her Majesty's Saltpetre Works, Waltham Abbey; the success of which has been proved by the fact, that the saltpetre is crystallized in little more than half the time, previously to the light and ventilation obtained by the adoption of these Ventilators.

MOORE'S double-current Ventilators for External Walls, &c. to the palace. Stained and ornamental glass, if required.

In taking the size, the exact opening should be given, stating the height and width distinctly.

Tariff prices of the ordinary Ventilators may be had on application at either of the above addresses. Packing-cases allowed full price when returned free.

N.B. These Ventilators can be readily fitted to Greenhouses already erected, by removing the entire sashes and fixing the Ventilators in their places.

Ventilators for every description of apartment, from the cottage

PERFECT VENTILATION IN ALL CASES GUARANTEED.

Church, Turret, Musical, and House-clock Makers to the Lords of the Admiralty, the Hon. Board of Ordnance, the Emperor of China, &c.

* JAMES VEITCH, Jun. fully impressed with the correct principle of Ventilation for Plant Houses, &c. afforded by MOORE'S PATENT VENTILATORS, has had a house fitted up with them, which it will be a pleasure to him to show to any person visiting his Nursery. For the admission of fair, in upright sashes, he believes it to be the most complete and best plan at present in use. In appearance it is neat and elegant, easily worked, and not liable to get out of order; but what is of far more consequence than this, these Ventilators admit the air in such a manner that they can be used in all weathers, and with them the admission of air is so under command that plants cannot fail to be benefited by their adoption.

CHARLES WM. WATERLOW AND CO.

MANUFACTURING JOINERS,

121, BUNHILL-ROW, FINSBURY, AND BOW, MIDDLESEX.

N.B. — ORDERS RECEIVED AT THE COUNTING-HOUSE, 121, BUNHILL-ROW, ONLY.

London: J. MASTERS, Aldersgate-street and New Bond-street.

CURIOSITIES OF LONDON.
Now ready, in a closely printed Volume of 800 pages, price 18s. with a portrait of the Author, from a photograph by J. G. Bulk,

CURIOSITIES of LONDON; Exhibiting

the most Rare and Remarkable Objects of Interest in the Metropolis; with nearly Fifty Years' Personal Recollections.
By JOHN TIMBS, F.S.A.

"Lifelong observation, books, conversation, and tradition, have each contributed to swell the facts that find a place in the 'Curiosities of London.' These facts are numerous, and well brought together; nor do we know where so much information respecting the metropolis can be found in a single volume, or even in many volumes."—*Spectator*, Feb. 4, 1843.

"The plan of the work is excellent, and every page bears proof of the research and industry of the author. We have been surprised at the amount and variety as well as the accuracy of the information."—*Literary Gazette*, Feb. 17, 1838.

"The execution is creditable to Mr. Timbs's great industry and research. It is remarkable for careful compilation and judicious observation. Intending readers, men of business, antiquarians, may all profit by the 'Curiosities of London.'" *Economist*, Feb. 11, 1838.

DAVID BOGUE, 86 Fleet street.

On Wednesday next, in crown 8vo. with Diagrams,

THE UNITY of WORLDS and the PHILOSOPHY of CREATION

By the Rev. RADEN POWELL, M.A. V.P. R.S. &c.
Savilian Professor of Geometry in the University of Oxford.
London: LONGMAN, BROWN, GREEN, and LONGMANS.

Just published, in 8vo. price 6s.

A TREATISE on the CALCULUS of OPERATIONS. Designed to facilitate the Processes of the Differential and Integral Calculus and the Calculus of Finite Differences

By the Rev. ROBERT CARMICHAEL, A.M.
Fellow of Trinity College, Dublin; Member of the Royal Irish Academy, and Examiner in Mathematics in the Queen's University in Ireland
London: LONGMAN, BROWN, GREEN, and LONGMANS

In Two Volumes, 8vo. with nearly 1600 Woodcuts, price 60s.

DR. URE'S DICTIONARY of ARTS, MANUFACTURES, and MINES: Containing a clear Exposition of their Principles and Practice. The Fourth Edition, much enlarged and corrected throughout.

"These Volumes of Dr. Ure's consist chiefly of original and exact treatises, written with so much accuracy and care that they may be universally resorted to as authoritative, and indeed the former editions have been, as well by artists and manufacturers as by British and foreign scientific writers. The author has throughout the entire work kept most seriously before his mind the one object of promoting the best and most economical development of the arts and manufactures, and has produced a work which altogether surpasses every other of its kind with which we are acquainted." *Mechanics' Magazine.*
London: LONGMAN, BROWN, GREEN, and LONGMANS.

THE EDINBURGH REVIEW, No. CCVI.

ADVERTISEMENTS and BILLS intended for insertion are requested to be forwarded to the Publishers on or before TUESDAY, APRIL 11.
London: LONGMAN and CO. 39, Paternoster-row.

TO ARCHITECTS.—EXHIBITION and COMPETITION DRAWINGS COLOURED or TINTED, and Lithography in its various branches executed by Mr T. J. RAWLINS, 38, University-street, University College, London.

The Builder.

SATURDAY, MARCH 31, 1855.

BEFORE pursuing the course of our history of architecture, brought up to about the period of the French Revolution, we should refer to some peculiarities of art in the seventeenth and eighteenth centuries, of which we deferred speaking, and which it is very desirable should be rightly understood. Few styles may be deemed so familiar to every one as those comprehensively designated "Louis Quatorze,"—from the French king, in whose reign they were originally introduced into France. Yet, these styles, in modern practice, are often intermingled with other favoured systems, with which they had no original connection—further than the general debt to Italian origin—and with which they may be unfitted to coalesce.

The question of "synchronism of style," indeed, we are not now prepared to argue. We might even discover that that question is one which there should never be occasion to enter upon, as it is usually raised, with reference to modern practice. All the materials of art are for our application or instruction, and the chief point should be—whether the lines, contours, proportions, and so forth, are such as harmonize. Were Grecian and Gothic ornament placed together in the same composition, we presume there would be an apparent dissonance of a different nature from the mere "anachronism." If evidence for that belief were wanted, we have it in what all must have noticed,—namely, that the same draughtsman never yet presented both classes of ornament. But, assuming the unison of forms to be secured, we may still have to settle—whether we can afford to part, in cases of whatever description, with even the reflection of historic interest. That may lend a charm to the highest living *art*. It may be the excusable part in the *sentiment* animating the revival of Gothic architecture. The idea that a certain permanence of character should be found in the architecture of religious uses, held place even in the works of the Anglo-Italians, and gave to the steeples of Wren the character that we discovered in them.

Clearly, however, on all grounds, it is important that the architect should study the materials which he uses, somewhat more intimately than with the mere pencil; and whatever be the purpose to which he may afterwards turn them. Therefore, when with this view, we seek to define the character of a style, we must reject much that has, perhaps, entered into combination, in the works of the best architects.

The difficulty of fixing upon examples, we may say, is sometimes considerable; for it seems to be forgotten, that the works of architects were not designed by them to illustrate particular systems: the works derived their chief value from *innovation* upon the system, and from their giving forth examples of the artist's mind. Rickman found the difficulty so great, that he attempted his own illustrations of styles'—a plan always regarded with suspicion by the professional reader.

We saw that the grand monumental style of the English and French architects was, in the main, free from the vices of manner which formed the whole style of the most influential of the contemporary Italians. In each country the same styles were existent—Cinque-cento, degenerate Italian, and "Louis Quatorze," each originally transported from Italy. What *prevailed* in one country, was, however, the exception in the other. In both countries, the Cinque-cento art was that to which men would again and again recur, as the highest attained standard of excellence,—the mother-earth from which they derived fresh strength for the contest, at every touch. Yet, as we saw, circumstances led to great difference in the character of the external architecture, as viewed in the greater number of works. In the treatment of interiors generally, there was still greater discrepancy between the two countries. The principle of the English architects was to carry the same general style throughout the building: but in the course of this praiseworthy endeavour, they occasionally gave to the interior, features too nearly resembling those of exteriors, and originally designed, if not for direct utility in the open air, with that "semblance of utility" which should always be found. We are not preferring the *Rococo* of French abasement to the doorways with pediments, and the excessively massive cornices in some English works. We merely point out that the style adopted in France was one which would have allowed a change in the principle of decoration—indeed, greater than it effected at first—and free from the eccentricities which were ultimately reached,—a modification which might, perhaps, have been made to contrast advantageously with the ponderous dressings and moulded panellings of the more strictly Italian architecture. As regards the pediment in interiors, the objection may be mitigated, but only in the case of the broken pediment of the degenerate style,—so that it would appear that what might be intolerable throughout an exterior, might be used,—because elsewhere the form could convey no idea of insufficiency. The whole question here raised, is one about which the moment we begin to reason we find the difficulty. Take up one extreme view, and you would lose the labels to Gothic arches in interiors, and, perhaps, cornices, and many of the most important features of architecture altogether, such as there was no idea of rejecting in the French interiors. Casuistry surely cannot be allowed to trench so much upon the field of art. With dogmas for the support of everything, *art* itself will evaporate. Rules are not unimportant: indeed, nothing can be effected unless there are guiding principles expressed or felt. Those rules, however, which are in the latter position, are what are most valuable. It is not possible, and, perhaps, not desirable, to prevent each spectator from settling the question in his own way. The feeling in our own case is not always shocked by the use of pediments to windows,—because there may be just the semblance of use, which is all we care about. Inside the building, however, the case is very different; for there, the idea of protection, or of a roof, is instantly negatived by the recollection that we are already under cover. In the broken pediment in exteriors, however, we are a degree further removed from actual use; whilst in the interior the same form cannot challenge our objections, for it is clearly not fitted for the duty which it has not to perform. There is only just so much connection between it as an architectural decoration, and the original pediment, as there may be between the triglyphs of the Grecian Doric and their supposed origin, the ends of beams. These observations will be found to apply to the styles we are now more especially contemplating,—not only because of the general tendency of those styles away from *structural* design, but also on account of their frequent use of the broken pediment.

But, we were about to remark, that whilst the Louis Quatorze style, and its successors, were essentially belonging to the architecture of interiors, their growth out of the degenerate Italian, necessarily brings occasional Louis Quatorze ornament into exteriors. Seldom, however, anywhere, is the style found to pervade a whole façade. A few churches of the Jesuits are the chief examples. Features both of the degenerate Italian and the Louis Quatorze, thus may be found strangely mingling with a general style, the principle of which was to reject them. Of the former innovation, St. John's Church, Westminster, by Archer, might have served to illustrate a former article. The Louis Quatorze character may be seen along with the architecture of Wren, and in certain parts of the tower of that church in the Strand, which Gibbs would seem to have raised as though it should be a pattern card of everything that he had brought from Italy. Where, however, the Louis Quatorze ornament is sparingly introduced, as in some of the details of St. Paul's—where it mingles with the regular lines of the entablature—it seems to perform the part of a useful foil to increase the beauty of the ordinance.

The "Louis Quatorze,"—speaking of the styles as one, under the name generally used,—had, then, this especial and distinctive character, that it was essentially a style of decorative art. Vitruvius, indeed, directs a difference of treatment between the design of external and internal architecture; but the difference is merely a difference of proportions, not that radical change in both composition and style which would seem in the license of the later period of French extravagance, to require the employment of two different architects.

It may be urged that the case as here put, should be subject to exceptions. The Alhambra, plain externally, gorgeous within, might be instanced; and the Roman houses themselves, judging from those at Pompeii, exhibited something of the same contrast. Still, the difference there, naturally arises from the plainness of exteriors,—kept so for reasons unconnected with art,—rather than from any intended difference in the architecture. The Alhambra decorations are little more than flat surface ornaments; and in the Roman villas, the differences occur only where pictorial art has, in some degree or other, been called into play. Even in the Elizabethan decoration, the styles of exterior and interior are plainly identical. Such as the Roman style is, much of it may be taken as condemned by one of the passages in Vitruvius.

Whilst a right conception of the principles of architecture would dictate, in design for furniture, the use of members different from those of masonic and structural architecture, it is remarkable that after the period of Greek art, the error of copying the parts of buildings in unsuitable positions was frequent. A general unity of feeling and character should of course pervade the whole building, its interior, its fittings, furniture, and household utensils. The same ornaments which the Grecks used in their buildings and vases, were the most beautiful and appropriate decorations for the edges of garments. But the true principle of architecture is to confine forms originally designed for peculiar *structural* offices, to similar situations and materials; and in every fresh case, to seek without prejudice the form which is best fitted for the new office, or for the new material, and which will usually have distinct characteristics. It is to inattention to this first principle of design, that is due a pestilential fallacy,—that real skill in architecture does not imply skill in furniture design and interior decoration;—whereas a proper view of what is necessary to success in the one department of architecture, should recognise that aptitude to seize all new requirements, which is the indispensable condition of success in any branch of our art. But it does not appear, that distinctions in structural purpose were held in view until the Louis Quatorze period,—when, however, the separation of what is essentially one profession, into the two of architecture and decoration, which then seems to have first taken

place, whilst seeking one object, eventually went to the extreme of divergence, and terminated the existence of true art in decoration by the disregard of the structural element altogether.

The proportions of the column had been fixed by properties of a friable and disintegrating material, as well as by consideration for effect,—indeed, with reference to this, we must not disregard the theories founded on the supposed perception of the structural sufficiency as having to do with the sense of delight. We shall not, for the sake of building up a theory, question the propriety of the Gothic mullions in the particular material; for, the same line of reasoning may touch upon the use of all stones set on end, of slender dimensions, or indeed of everything originally derived from "post and beam" construction. Still, in any new attempt, and where materials such as wood or iron are employed, we seem to be justified in seeking for forms and proportions, better suited to the new structural office and the different properties of the material. The Italian artists, however, adopted the classical columnar system in furniture, where no great weight had to be supported, and for a fibrous material. It is clear that the leg of a table, or the post of a bedstead, could be executed in wood or iron of much more slender proportions than either could be in stone, and that it might even be twisted or curved without endangering the structural sufficiency. The point, then, is that which was not perceived in the heavy table-legs and the bed-posts formed of the classical columns, that were used in the Elizabethan furniture,—interesting though that may be to us. It was perceived in the furniture of the Greeks. It was felt also by the artists of the age of Louis Quatorze. By these last, however, whilst one error was avoided, it may be said that another was fallen into. That was one avoided in a style, which, like the Italian, had not escaped some mistakes. The Gothic architects generally recognized the fact that furniture in woodwork is not built up or carved from one block, but that pieces are framed together. The Louis Quatorze system, however, would treat the form of a chair as though it were necessary to give the notion of having been carved from a single piece. The infusion of new thought into the profession of architecture had its advantages: at first, at least, it prevented the mimicry of forms suited to one object, where the purpose was different—such erroneous taste as even the mediæval artists indulged in, in small coffers and altar furniture mimicking the forms of buildings—but it fell into the error which we have alluded to. The Louis Quatorze style is beautiful in many of its features: it is highly suggestive as to the application of materials: it is instructive as material for study: but it is dangerous as "example."

The characteristics of the Louis Quatorze differed essentially from those of all contemporary or preceding styles. It was, indeed, a development of the degenerate Italian, as that style was a variation on the Cinque-cento. It therefore recognised the classical orders, and comprised many successful adaptations of their mouldings and ornaments. But it was essentially an ornamental style,—one finding its more genial home in mere surface work and decoration, than in anything where structural principle was concerned, and which there was danger that it might set at nought. This last result was not generally attained during the early and better period of the style, but was reserved for the works of the period of Louis Quinze, which, although a development of the same principle, are rather an extravagant caricature of the original style, than part of what for the moment we included above under one general designation. Mr. Wornum's valuable course of lectures, to which we have before referred, is the source from which we may derive a nice perception of the peculiarities. The chief aim of the style was effect, by a brilliant play of light and shade. To this, mere beauty of form in detail was secondary—though we think frequently provided. In the decoration of walls, colour, unless in flat tints, was omitted. Gilt stucco work for a time, almost superseded decorative painting. Thus the absence of certain previous characteristics of decorative art led to the predominance of others—in this case, the infinite play of light and shade. We may ourselves remark, that this fondness for gilding,—which eventually went to great excess and extended to England,—has ever since weighed heavily upon efforts for the real improvement of art. It seems to have been considered, that under the new direction taken, exact symmetry was no longer essential. It was not, however, till the period of Louis Quinze, that symmetry was systematically disregarded. We think, however, that the Louis Quatorze may have been not the first style which disregarded the important element mentioned; for we recollect many Flamboyant windows in which there is decidedly a similar tendency. These instances of repetition of events in the history of art are important, and should be instructive to us.

The distinctive character of the Elizabethan was, that it used all those elements of the comprehensive "Renaissance" which did not become the especial property of the Cinque-cento. Thus the cartouche and strap work are predominant in the Elizabethan. The general principle of Louis Quatorze, however, is explained to be—the assumption of those elements which were rejected by the Elizabethan. Thus, strictly speaking, in the Louis Quatorze, the cartouche and strap work have no place. Where in the Louis Quatorze style we should meet with round surfaces, in the genuine Elizabethan there would be flat surfaces. The flatness in the latter case was modified by the cartouche-work element of the age of James I. In the Louis Quatorze, both scroll and shell work are common, and much of the character of the ornament may be traced to developments of the shell form. The classical anthemion is conjoined with the shell, to produce a new ornament. A small scroll, sometimes clothed with acanthus foliations, is common. We may add, that curves of contrary flexure are general, though frequently the junction is interrupted by a rectilinear break. Curves, with voluted ends, are profusely employed, and these placed end to end, often serve to make up a design. In fact, nothing is so easy as to get over an awkward space by a few of these forms. Applied as *decoration*, they are to be tolerated; but where they are laid together, for a structural office, the contrary flexure necessarily acquires the appearance of weakness. In the combination of scrolls, a fiddle-shaped appearance is common. Flowers, Cupids, stalactites, and "rocaille," or grotto work, and imitations of architecture, at length made up a curious combination, and led to the extreme of *bizarrerie* in ornament—the "Rococo," the origin of which term has not been exactly explained.

Thus in the Louis Quinze, even in the better versions of it, which sometimes are marked by much inventive fancy, the exceptional characteristics of the earlier style become prominent. Original classical types are still further departed from. What were elements in the former style, rule the composition in the later version. Want of symmetry is general. As the authority we have before referred to says,—in many of its examples, the Louis Quinze is an almost random dispersion of the scroll and shell, mixed only with flat peculiar crimping of shell-work—the "coquillage." The feathered scroll was also used. The mixture of round and hollow forms for the mere play of light and shade became a mannerism. There was no object but the sensuous—no individuality in ornament—and therefore the result at length was the entire destruction of art. As in the degenerate Italian architecture, the greatest skill in construction was called up, for the object of accomplishing ornaments contravened by the ordinary structural conditions, so in the French furniture, like skill was required by the opposition to constructive truth. It must be allowed, however, that in the furniture of the period, the importance which we attached to the style at the outset of our remarks is evidenced. Many excellent methods were invented for the treatment of surface work, as by metals in relief, ivory, *pietra dura*, and inlays of tortoise-shell and metal, called "buhl-work." The amount of design often displayed in these, and the extraordinary skill of the workmanship, must be conveyed to the mind of our readers by their recollection of the exhibition at Gore House, for it is beyond powers of description. The inlays of porcelain which were used in the later period, had both beauty and appropriateness as enrichment; and the mode of veneering so as to give various modifications of surface, should lead to a similar practice now, in preference to the ordinary form of application. The one form may be open to the objections of certain opinionists,—the other is unquestionably free from them, and consistent with the attainment of good art.

The Louis Quatorze style of ornament, believed to have had its nearest type in the Chiesa del Jesu, at Rome, may be said to commence in France with the king's reign in 1643. The succeeding style commenced about 1715, with the reign of Louis XV. Watteau, the chief of the characteristic painter's art of the time, died in 1721. The style, as a general system of decoration, is said to have ended about 1774. The interior of Versailles is the chief example of the style. On this building astounding sums of money were laid out. The style extended to England, and was used by Chipendale, author of a book of designs, who was established in St. Martin's-lane. It still prevails to a great extent, the peculiar character of the ornament adapting itself readily to the finger and thumb of the modern composition-ornament maker; who, in pier-glass frames and console-tables, sometimes contrives to produce a character of ornament,—than which, the wildest extravagance of the Louis Quinze was scarcely worse. The style was succeeded in France, by a manner less eccentric, but quite as deficient in *art*. That again in later times, has been followed in furniture, by the Renaissance, though a style of a higher character than our Elizabethan, and to the same style it would be desirable for English designers to give a little more attention.

In some of the old London houses, in corners of the City and elsewhere, we occasionally meet with charming bits of architecture in interiors—as in staircases and entrances. In other works like the Mansion-house, and in a great number of later buildings, which from their exteriors have a certain reputation, there is an obvious want of art in the interior decoration. That by the mere adoption of a distinct *style* for interiors, what is wanting might be gained, we do not think; and were we of such opinion, we might doubt the advantage of selecting the *Louis Quatorze:* still it is clear to us, that that style attained much of what we want, and that at all events it might well receive more intelligent study than has hitherto been given to it.

ST. MILDRED'S SCHOOLS, CANTERBURY.

THESE schools are now nearly completed, on a plot of ground adjoining the parish church of St. Mildred, Canterbury. The materials are flint and Bath stone dressings. The roofs are covered with ornamental tiles, with an ornamental ridge. The work is being executed under the superintendence of Mr. Joseph Messenger, architect, by the Messrs. Lancefield, builders. There were five tenders sent in, varying from 2,200*l.* to about 1,700*l.* which was accepted.

It is mainly through the exertions of the Rev. W. J. Chesshyre, the rural dean of Canterbury, that these schools have been built. The funds have been raised by grants from the committee of Council, the Diocesan Society, and by subscriptions in the neighbourhood.

THE GRAVE-DIGGER.*

"OLD man! old man! for whom digg'st thou this grave?"
I asked as I walked along,
For I saw in the heart of London streets,
A dark and a busy throng.
It was a strange, wild deed, but a stranger wish
Of the parted soul to lie,
'Midst the troubled numbers of living men,
Who would pass him idly by;
So I said, "Old man, for whom digg'st thou this grave,
In the heart of London town?"
And the deep-toned voice of the digger replied,
"We're a laying a gas-poipe down!"

ST. MILDRED'S SCHOOLS, CANTERBURY.—MR. JOSEPH MESSENGER, ARCHITECT.

ON THE MOSAICS AND OTHER DECORATIONS OF THE CHURCH OF STA SOPHIA, CONSTANTINOPLE.*

I HAVE hitherto only alluded to the gold-ground mosaics; but they are by no means the only kind of decoration, as up to the height of the springing of the main arches supporting the dome, the whole wall is covered with slabs of precious marbles, no doubt in imitation of the wall-covering that helped to make the Pantheon so celebrated a monument, and so worthy of imitation by all the eastern successors to the glories of Rome.

The mosaics of all this wall-covering are very interesting, because they consist not only of slabs of marble put together like the antique, but of marbles cut out and fitted into each other, like Florentine mosaic. In addition to this, in *pietra dura*, there is a curious mosaic made up with a resinous composition. It forms the spandrels of the arches of the *gynæceum*, and other places. Some of the lines in these ornaments are so fine that it was necessary to cut it out of very thin marble indeed, and of various thicknesses. As it was difficult in such delicate work to pierce a thick slab truly, the slabs were thinned down in parts to $\frac{1}{4}$ or $\frac{3}{8}$ of an inch; and where the line required to be very thin, the marble was sloped away at the back, and cut through clean. Resin mixed with marble dust and other substances was poured over it to make what would be less than $\frac{1}{2}$ an inch thick into the thickness of about 1 inch. It was then fastened to the wall with cramps, and more hot resin was poured behind the cramps to make the whole secure. The patterns of this style of work are curious, as they have a mixture of the old Greek in them.

I will now proceed to advert to the historical position which these mosaics occupy.

As we have given (as everybody who looks at Sta. Sophia must) the highest credit to the Byzantines for architectural originality in every form,—in capitals, mouldings, &c.—they can afford to spare a little of the reputation usually attributed to them of being the only mosaicists. Writers constantly allude to "Greek mosaic," as though there were no other kinds. It is to be remembered, on the contrary, that the gold-ground mosaic was essentially an old Roman art. We know that Pliny describes distinctly the introduction by Agrippa of glass mosaic; and we know that the most ancient mosaic was known as *lithostratum*, being made of stones, and was taken from the Greek. As the exigencies demanded by improvements in the art went on, more colours were wanted than could be found in natural substances, and to supply such wants fictile materials were invented. In such glassy substances the Romans produced all the colours employed in the most celebrated antique mosaics, such as Pliny's "Doves," "The Battle of Issus," &c. Pompeii contains numbers of specimens of gold-ground mosaic, perfectly well made, as pure in colouring, as little obscured as when they were first executed, and as excellent in every technical respect as any of the best Greek mosaics. We know that in the house of which Mr. Falkener gave such a beautiful illustration in the Exhibition of last year, there were four columns entirely clad with mosaics. A very elaborate specimen of a column decorated with patterns introducing gold ground mosaic has been lately put into the museum at Naples; and in the house of the Greater Fountain, and of Medusa, there are noble fountains with "conchæ," thoroughly well enriched with mosaics. Pompeii was overwhelmed in the year 79; and therefore in the interval between that date and the time of Constantine—about 330—a very considerable progress might have been made in the art, especially at a period when richness was sought for rather than beauty. From these and other facts it is perfectly clear that the Romans had an immense number of workmen perfectly competent to carry out works in mosaic when Constantine removed the seat of empire to Byzantium. One fact may be mentioned strongly corroborative of this view; namely, that at Rome, whoever wishes it, may find them himself, or have shoals of fragments of gold mosaic brought to him. The poets allude to it frequently, and it is clear beyond all question that the *vitreæ parietes* were essentially Roman.

When Constantine went to Constantinople, he took a certain number of workpeople with him, but perhaps not the greatest number of those who worked at Rome; and even up to the time of Sta. Sophia I believe the mosaics were worked by the regular descendants of the Roman mosaicists, and not by Greeks. We may indeed state broadly that up to the year 500, almost all the churches in Italy were decorated by Roman mosaicists, and after that time by Greek artists. The oldest example of all is Sta. Costauza, the funeral chapel built by Constantine for his sister, adjoining the church of Sta. Agnese at Rome, and there we find the subjects of the catacombs reproduced. The colours are black and white, as in the remains of the baths of Caracalla, and the subject is a large vine, trailing over a "pergola" or framework, and between the branches are genii eating the grapes. The meaning of this is of course the faithful living on the benefactions offered by the church. It is a subject of frequent recurrence in the catacombs. I need scarcely observe that angels were not depicted till a later period, and the angelic idea was therefore expressed by children, or *amorini*.

It may be desirable, before I proceed, to recall some of the subjects of the Catacombs, because, as I have already observed, they gave the first tone to all the early Latin mosaics. The Christians of the first three centuries, in their shelter in these caves, were afraid to express openly the doctrines which they held: they therefore veiled or concealed their sufferings, preferring to proclaim rather their faith in the happiness that awaited them. Thus we find the idea of the Saviour is expressed by a representation of Orpheus winning all to him by celestial music. Again we have him as the Good Shepherd, with his sheep, or disciples: we have representations of a large cup with birds drinking from it, indicating the faithful receiving the sacrament, and stories from the Old Testament, all of which find their counterpart in circumstances connected with our Saviour, but there is no direct representation. Where the resurrection is expressed, it is frequently under the image of the raising of Lazarus; or the escape of Jonah from the whale's belly. Everything is expressed under a symbolical form, and Christ himself is represented invariably "imberbis," and arrayed with eternal youth.

There is no doubt the early Christians followed these types for some time; hence the number of representations of the cross, the vase with birds drinking, green fields with sheep feeding, &c. which are constantly found in all the Latin mosaics. * * * *

Returning to Byzantium, we find that Greek art does not appear to have reasserted itself in the treatment of pictorial subjects till about 120 years after the publication of the edict against the image painters and makers. The Empress Irene found that the feeling of the people was in favour of a somewhat sensual indulgence in pictures and statues, and it was agreed at a general council that paintings should be introduced, but not statues. A discussion of the subjects then began, and authority was given for a certain series, which are embodied in the celebrated "Menologion," one of the most valuable MSS. in the Vatican Library. All the sacred acts depicted are recognised by this as allowed to be painted, and they form the staple materials of ecclesiastical decoration throughout the Norman and early Teutonic periods, and all the Middle Ages.

After the close of the ninth century, during which almost all these great mosaics were executed in Italy by Greek artists, who found very little employment in their own country (the Greek Emperors declining in power) there was again a great lull till about the year 1100. It is true many Greek workmen were employed at Venice about 1020, going steadily on at S. Marco, till 1200 or 1300, both with carved stone-work and glass gold ground mosaics; but their early specimens in the eleventh century were very poor. At the commencement of the twelfth century came an after-crop of Greek art, the great example of which is in the church of S. Clemente, about which Lord Lindsay is so enthusiastic. As far as mechanical execution goes, it is very beautiful—there are a number of little figures of animals and birds of all kinds very delicately executed, and quite reviving the manual dexterity of the best Roman time.

I need scarcely remind you that it was from these artists at Venice that the art of working in mosaics was acquired by Italian artists. Greeks were brought from Venice to decorate the Baptistery and the church of S. Miniato, at Florence, and they became the teachers of the great Italians—Mino da Turrita, Andrea Tafi, Gaddo Gaddi, and others. Furthermore, I have little doubt that the processes of glass-working, which have made the glass of Venice so famous, were almost all derived from Byzantium.

In reference to these Florentine monuments, it is curious to notice the occurrence in Tuscany of a peculiar kind of carved work, cut out with a drill and filled up with mastic, which has puzzled other travellers as well as myself to account for. It may be seen in the pulpit of S. Miniato, and is precisely identical with the carving of foliage, and the mastic inlaying I have pointed out as occurring in the arch spandrels of Sta. Sophia. It occurs also in the font in the Baptistery at Pisa, and I have seen it at Messina. Until I had an opportunity of looking carefully into the details of Sta. Sophia I was unable to find out whence it came, and I was of course pleased to recognise it.

In summing up the general artistic features of novelty presented to us in Sta. Sophia, there are four points (in addition to the great structural novelties) to which I would direct special attention. The publication of M. Salzenberg's detailed drawings and descriptions, if it has done no further good, has at least made it pretty clear that we are indebted to these Byzantine Greeks and to the great impulse given by Justinian;—in the first place, for the introduction of all the processes of Florentine mosaic; in the second, as I believe, for the introduction of stained glass into church architecture;—in the third, for the peculiar mode of sinking carved work beneath bounding lines of form;—and in the fourth place, for the liberties of direct representation of basket-work and other novel features in the capitals and sculptured ornaments.

I shall now say a few words about the technical execution of these mosaics, to which I would specially beg your attention; because I see no reason whatever why we should not practise in the present day exactly what the Greeks and Latins practised of old. The dome arch, or conch, was built with brick or stone, and rendered with rough plaster to make a key for subsequent coatings. Then a strong and fine plaster nearly an inch thick was put upon it. Cartoon or drawings were made, to assist in transferring the subjects to the wall, or they were drawn on the plaster itself;—then, beginning with the most important part, the artist knocked out with his chisel a piece of the plaster corresponding in size to that which would be occupied by a few tesseræ. He then went to the trays in the compartments of which the coloured glasses were sorted, and selected a piece of the vitreous material of the proper colour, which might be of the size of a circle 5 or 6 inches diameter and half-an-inch thick. To cut this to a particular shape, he used a particular apparatus. Placing the piece of mosaic upon a sharp edge of iron, and striking it with an edge-tool exactly plumb with the under iron, he fractured it in a direct line between the two edges. This was the later method, but an earlier one was to draw a hot iron along the line in which it was desired that the material should be fractured. Having thus the small piece he wanted, the artist took some fresh cement (made of one part of lime with two of marble-dust), inserted the piece, and pressed it till it was flush with the adjoining plaster, and he could see whether more cement was wanted, and how the mosaic was bedded; and so he proceeded till he had finished a face, or some other leading feature, when he left off to commence in another place, allowing an inferior hand to work upon the draperies, &c.

We may as well remark, that in the ancient mosaics the cement was made as above described. In the middle ages it was made with lime and travertine stone; and still later, where the work was very fine, and it was wished to retard the setting, lime and linseed oil were used, so

* See p 133, *ante*.

that the mastic remained soft all day; and the mosaics might be eased as they were respectively bedded. There is one peculiarity of treatment which was universally observed; namely, if the artist had to execute a profile of any kind, all the longitudinal joints of the flesh would be parallel to the contour; but instead of the joints of the gold ground abutting directly upon the contour, they followed round it, parallel to those of the outer flesh-colour series: the great object of *this* line of gold ground mosaic was to prevent any interference by the joint-lines of the general ground with the repose of the heads. An inferior workman, who had his cubes of gold ground mosaic ready cut to a rough square on the surface, then put them in as fast as possible. That completed the work, and it set, as we see, for ever. Could we but add up the sums which we pay for painting and repainting our monuments, I think there cannot be much doubt we should find that it would have been far cheaper to have executed our decorations in mosaic.

Some of the mosaics at Sta. Sophia have a peculiar character, which M. Salzenberg observed by the aid of the scaffolding for the repairs; namely, when the mosaics can only be seen from beneath, at an angle exceeding 45 degrees, the pieces are arranged with their upper edges set forward from the wall face in tiers, farther and farther apart, as the angle of vision is increased. By this means the work is saved on much intervening space, and both material and cost economised—in some parts to the extent of two-thirds of the whole. This method had also the advantage of reflecting the light at a better angle to the eye.

These, I think, are the principal technical points connected with mosaic in general, and Sta. Sophia in particular. I must not trespass longer upon your time; but I would, in conclusion, beg you to attend for one moment to what I venture to call the moral of Sta. Sophia. I know of no monument which so satisfactorily and honestly answers the purpose for which it was built; or which so completely expresses in every way its construction and intention. By the exterior you perceive exactly what is internally: there is no fudge, no sham, no concealment about it. Every material is fireproof; and one ever-memorable fact about it is, that although Justinian sent out in all directions for the old materials of temples, precious marbles, and everything of the kind that could be found, I am not aware that there is any piece of old work used in its original state, throughout the whole building. If the artists who designed and executed Sta. Sophia were influenced by tradition, they were, at any rate, no blind copyists: they set a far nobler example to those who succeeded them than Constantine had to those who followed him. Would that the art of the nineteenth century in this country could stand the test of comparison as satisfactorily! Let us remember that it is only by equal truth, honesty of purpose, and originality, that we can ever hope to see realised the day-dream of a Sta. Sophia of our own.

M. DIGBY WYATT.

ENGLISH ARCHITECTS IN THE PARIS EXHIBITION.

As most of our readers must desire to know how English architects and architecture will be represented in the Paris Exhibition, and the list of contributions, from some cause or other, is unfortunately not a very long one, we are glad to be able to print it entire:—

ADEEN, C. B. and DUDGEON, W.
Street Architecture.

ALLOM, T.
A Design for improving the Property on the Banks of the Thames.
A Design from another point of view.

BANKS, R. R. and BARRY, C. Jun.
Bylaugh Hall, Norfolk.
Crystal Palace—Court for the Exhibition of Woven Fabrics.
Designs for the Library and Staircase Hall at Dorndon, Kent, the residence of John Field, Esq.

BARRY, Sir CHARLES.
Bridgewater House.
Bridgewater House—Plan.
New Palace at Westminster.
New Palace at Westminster—Plan.
Clevedon Villa.
Clevedon Villa—Plan.
Original Design for Crystal Palace.

BRANDON, R and RITCHIE, R.
Portswood Church, near Southampton.
Catholic Apostolic Church, Gordon-square.
Public Baths and Laundries at Greenwich.

BUNNING, J. B.
The New Billingsgate Fish-Market.
The New Coal-Exchange.

BURTON, D.
Entrance to the Green-park from Piccadilly.
Entrance to Hyde-park from Piccadilly.
Models of the above.
Athenæum Club, Pall-mall—Plans, Elevations, and Sections.
The Coliseum, London—Plans, Sections, and Perspective View.
Model of the above.

BUTTERFIELD, W.
All Saints Church, Margaret-street—Exterior.
All Saints Church, Margaret-street—Interior.

CARPENTER, R. C.
Exterior View of the Cathedral proposed to be built at Inverness for the Diocese of Moray and Ross.
Abbey Church of St. Mary at Sherborne—Interior of the North Transept, as restored.
Abbey Church of St. Mary at Sherborne—Interior of the Choir, in progress of restoration.

CLUTTON, H.
Chapter House of Salisbury Cathedral, in progress of restoration.

COCKERELL, C. R., R.A.
Wren Testimonial.
Professor's Dream.
Model of the Temple of Apollo at Phigaleia.

DAVIES, J.
Rectory and Campanile, St. Martin's, Cannon-street.
Jews' Synagogue, Great St. Helen's, London.

DIGWEED, I. F.
Study for a Chateau, in the style of the Renaissance.

DONALDSON, PROFESSOR T. L
Hallyburton House, Cupar-Angus; designed for Lord C. Douglas.
Plan of a Design for a Temple to Victory, according to ancient usages; with a view to illustrate all the offices connected with the sacred games.
Perspective View of ditto.
Design for the Royal Exchange, London. One of the first class selected by the Committee in 1841.

FALKENER, E.
Restoration of an Asiatic Greek Theatre.
Tomb in Lycia.
Pompeian Studies—The Atrium.
Pompeian Maritime Villa.
Pompeian Implavium.
Pompeian Triclinium with Pergula.

Façades of the entire Series of the Fine Arts' Courts of the Crystal Palace, Sydenham (Department of Christian Art).
Study of the Arch of Titus at Rome.
Loggia of the Italian Court, Crystal Palace.

DOWNING-STREET IMPROVEMENTS AND PUBLIC BUILDINGS.

YOUR paper of the 3rd of March gives such an extraordinary account of the value of the ground in the neighbourhood of the Bank and Exchange, that again I am desirous of calling your attention to the immense loss the public are sustaining by allowing the large space of vacant ground at Whitehall to remain unoccupied. Either the Government require it, or they do not. If they really need it, is it not time to put an end to an annual rental of 23,000*l.* per annum for offices in separated and unconnected situations? If they do not require it, then let the public have the benefit of the ground-rent.

It should be borne in mind that by the sixth report of the Woods and Forests, 1830, the purchase of the vacant ground of Downing-street was 98,966*l.* 8*s.* and for which immense sum not one shilling has been realized; but in addition a poor-rate to the parish of 100*l.* per annum has been paid, and the interest of the capital expended altogether lost. T. G.

THE LATE MR. GEORGE PAPWORTH, ARCHITECT.

THIS gentleman, who died on the 14th inst. was born about the year 1781. He was one of the ten children of Mr. John Papworth, of Great Portland-street, London, on whose death he became a pupil of his elder brother, the late Mr. John B. Papworth, with whom he remained improving himself by acting as clerk of works, &c. till 1804, when he went to Northampton to take the direction of Mr. Kershore's office. He remained there until 1806, in which year he settled in Dublin, being engaged to superintend the affairs of the company then working the patent of Sir James Wright, bart., for the manufacture of stone-tubes for pipes, &c. In 1808 he married, and began his professional career by designing "a Gothic entrance," to be executed by the company for Mr. Macklin, and in the same year he obtained the patronage of Lords Westmeath and Gormanstown. In the following year the two leading architects in Dublin offered him 250*l.* a year for his services during seven hours in each day, which was declined in 1812 the company sold its business, and he produced his "sawing-machine," and also a "pump," which met with general encouragement, and obtained for him a valuable connection in Mr. Slater's, of Birmingham. In 1812 he was able to call himself "one rich enough to have had losses;" and from the period, 1812, when he first exhibited, until 1818, he was laying the foundations of his reputation, both as an artist and an arbitrator. In the last-named year he was employed upon the Library in D'Olier-street: this was followed by the Court-house at Castlebar, in the county of Mayo (1822); Portumna Castle, county of Galway, for the Marquis of Clanricarde (1824-1826); King's Bridge, over the River Liffey (1827), in consideration of which work he was elected Academician in 1831; the Marlborough-street, and the Whitefriars Chapels, in Dublin; Kilconnan-house, county of Galway, for Sir Thomas N. Redington (1836); Brennanstown-house, county of Dublin, for Joseph Pim, Esq. (1842); Seafield, county of Sligo, for J. Phibbs, Esq. (1842); Kilkenny Lunatic Asylum for the Commissioners of Public Works, in 1849, in which year he was chosen a treasurer to the Academy; and the Museum of Irish Industry, Stephen's-green, Dublin (1851), a building well adapted for its purpose: the roof of the lecture-room, 50 feet by 45 feet, with a central skylight, is admirably arranged, both for the lecturer and the audience. From 1837 to 1842, he acted as architect for the province of Connaught to the Ecclesiastical Commissioners, and lately held the appointments as architect under the Dublin and Drogheda Railway, and the Royal Bank in Foster-place. His latest important building was the mansion of which we append an illustration and description.
